"INTERNATIONAL STOCK FOOD" **3 FEEDS FOR ONE CENT** won the Highest Medal at Paris Exposition in 1900 as a High-Class Medicinal Preparation, made from powdered Roots, Bark, Seeds and Herbs, to give to Horses, Cattle, Sheep, Goats, Colts, Calves, Lambs and Pigs, in small amounts as an addition to their regular grain feed to secure better digestion and assimilation so that each animal will obtain more nutrition from all grain eaten. Scientific authorities prove that the average animal digests 55 per cent. of the average kind of feeds. "International Stock Food" will cause them to digest 70 to 75 per cent. We paid the government \$40,000.00 war tax because "International Stock Food" was a high-class medicinal preparation. Many other kinds did not pay any war tax because they claimed to the government that they did not use medicinal ingredients and did not claim medicinal results. You can afford to use preparations of this kind Only On A Medicinal Basis. "International Stock Food" purifies the blood, "tones up" and permanently strengthens the entire system. It cures or prevents many forms of disease. It will save you \$10.00 per year in the Feed of Every Horse You Work and its use will only cost you \$2.50 per year. It saves grain and 30 to 60 days' time in growing and fattening all kinds of stock and is endorsed by over one million farmers who have used it for fifteen years. It is absolutely harmless even if taken into the human system. Beware of the many cheap and inferior imitations and substitutes. No chemist can separate and name all of the ingredients we use. Any company or chemist claiming to do so is a self-confessed ignoramus or a Paid Falsifier. Insist on having the genuine "International Stock Food." It is sold by 100,000 Dealers on a "Spot Cash Guarantee" to Refund Your Money if it ever fails to give you satisfactory, paying results and its use only costs you **3 FEEDS FOR ONE CENT.** We Have Factories at Minneapolis and Toronto, Canada.

## A \$300000 STOCK BOOK FREE

### IT CONTAINS 183 LARGE ENGRAVINGS

WE WILL PAY YOU \$10.00 CASH IF BOOK IS NOT AS DESCRIBED

The Cover of this Book is a Beautiful Live Stock Picture Printed in Six Brilliant Colors, and Without Any Advertising on it. Size of Book is 6 1/2 by 9 1/2 inches. It cost us \$3000 to have our Artists and Engravers make these Engravings, which are the finest engravings of Horses, Cattle, Sheep, Goats, Hogs and Poultry that you have ever seen. These 183 Engravings are all made from actual photographs and are worthy of a place in any library. It also gives Description, History and Illustrations of the Different Breeds of Horses, Cattle, Sheep, Goats, Hogs and Poultry. It contains Live Engravings of many very noted Animals. It contains a Finely Illustrated Veterinary Department That Will Save You Hundreds of Dollars, because it describes all common diseases and tells you how to treat them. The Veterinary Illustrations are large and absolutely reliable. Correspondence promptly answered as we have an office force of 200 including 106 typewriters.

**WE WILL MAIL BOOK TO YOU FREE POSTAGE PREPAID**

If You Will Write Us At Once, Letter or Postal Card, and ANSWER THESE TWO QUESTIONS:

1st.—NAME THIS PAPER.

**IF YOU ANSWER THE "TWO QUESTIONS" AND SEND FOR BOOK DESCRIBED ABOVE.**

## TAKE CARE OF THE COWS

There is nothing on the farm that will pay as good a profit as the dairy, if the farmer operates it with judgment. Nearly all the profit depends upon the care bestowed upon the cows. Thousands of farmers will expose their cows to all kinds of weather, the heat of the mid-summer sun, the cold blasts of the winter nights, or the chilling storms and rains of early spring, and then wonder why his cows do not yield plenty of milk, or why his cows do not produce as much butter as do those of his neighbor.

The cows should be well housed in clean stables, where they can be sheltered from the storms, and if possible, in the pasture there should be shady places for protection against the intense heat of the summer. Cows love a cool and shady place, and those kept in pastures well supplied with shade always do better than those kept in the sun all the time. Too many farmers will be very particular about the stable for their horses, that it shall be warm and ventilated, while they neglect the cows.

The cow is naturally a very cleanly animal, and very particular about its food. A cow will eat slops, sometimes, but it does not relish such feed, and only partakes of it when driven to do so by hunger. Yet many of those who keep cows for dairy purposes imagine that the slop from the kitchen is the proper thing for them. If you want the best results from your cows, and desire to get the greatest profit from them, you should study as to their food, and watch it from day to day. There is a good deal of what we might call human in the cow. Some people will relish all vegetables, while others can only partake of certain kinds. One person will eat rice and enjoy it, while another can not eat the least quantity without being made sick by it. You may take two cows of the same breed, and the feed which one will readily eat, and thrive on will not be good for the other. To distinguish what is best for each individual animal in the herd needs constant attention.

The quality of the butter, as well as the quantity of milk depends very largely on the quality and quantity of the feed each day. In this connection we call attention to an article on the best food for dairy cows, taken from a late issue of "Farm and Fireside." The suggestions made therein are worthy the perusal and attention of all who desire to secure the best results from their dairy.

Punctuality in feeding, watering and milking are necessary to get the best results. To secure the greatest profit from your dairy the first thing to do is to get the greatest quantity of milk containing butter fat. Milk that contains little or no butter fat is not profitable. This makes butter fat the first consideration, and if you have a cow in whose milk there is only a limited quantity of fat, get rid of that cow, for it does not pay to feed her for dairy purposes. The next consideration is the proper care of the milk. Good butter only comes as a result of proper care throughout, from feeding and watering the cow to the handling of the milk. None of these things are to be slighted if profit is what you are after. You should always remember that the cow has to eat to make flesh, bone and blood, and then milk in addition. It requires a good deal of food, and that of the right kind to maintain a cow in good flesh and at the same time to make from twenty-five to thirty pounds of milk a day. Entering into this problem is a sufficiency of drink, and that of the proper kind. The regularity of the milking will add largely to the yield.

## SAVES HALF THE COWS or Doubles the Profits

### THE HORSE'S FEET.

All remember the old saying of Franklin that we used to repeat in the old log school house: "For want of a nail the shoe was lost, for want of a shoe the horse was lost," etc. The lesson to be taught was the importance of small things, but it incidentally brings to view the importance of the horse's feet. The average farmer needs this lesson. Many may think we are talking of the farmer of the distant past when we speak of the uncleaned stall where the horse is permitted to stand day after day and night after night on from three to six inches of heating manure, but that farmer is still alive and dwells among us. He does not realize that he is not only "cruel to his beast," but that he is "wasteful of his substance;" he is injuring his horse's feet and paving the way for many disorders, and great deterioration of the value of his animal. The place where the horses stand should be kept clean and dry, carpeted with dry, clean litter.

The writer has often noticed hitch-racks in the small towns and villages where horses stood until the ground had been so depressed as to catch "ponds" of water every time it rained. I have seen horses stand hour after hour with their feet in these puddles, working them up into mud sometimes nearly knee deep, and sometimes with ice forming around the edges! Could anything be more cruel, or more injurious to the horse?

The sheep is a profitable animal on the farm, but it requires care and attention to make it so. It is a good forager, and does better than most animals on lean pastures, still the sheep can not thrive without something to eat. Never try to winter sheep on timothy hay. Clover hay, pea hay and corn fodder are the best winter feeds for sheep.

The profitable hog is the one that grows up in a field of clover or rape.

### KA DEXX

#### Cream Extractor

Means less labor, more and better butter, larger profits, because it

#### Separates Clean.

Has three times the separating power of other makes. Does not mix water with milk. Easier to clean and operate. No waste. Durable. Anti-rust throughout. Results guaranteed. Catalog free. Write today. We want good agents. KA DEXX CREAM SEPARATOR CO., 26 Ka DEXX Bldg. ROCHESTER, N. Y.

Millersburg.

### IN THE KITCHEN GARDEN.

May first finds gardens well under way—al made, we may say, and the success of the season depends largely on the work already done. If that has been well done, there need be little uneasiness about the future. It only remains now to keep up good cultivation. Don't permit the ground to crust about the stems of the young plants. To prevent that the ground should be lightly stirred after every rain—not immediately, but as soon as the soil is dry enough to work. Beans must not be worked when the plants are wet, either with dew or rain. Lettuce and radishes should be kept well thinned out. We hope none of our friends have planted in the old-fashioned beds, but in drill rows, and that they are employing level culture. Onions from seed are perhaps just coming up. Raising onions from seed as usually practiced on the farms, is not a success. A friend of ours in New Jersey, however, makes a great success of onion culture by planting the seeds in a hot-bed and then transplanting the tiny shoots in the garden. Watch the weeds. It is much easier to destroy them when they first appear than after they have established themselves by a root and stem growth; by that time they seem to think they have earned a right to live. Lay your plans for taking off each crop as soon as it has done its work, and plant the same ground to something else. In this way a small space may be made to produce a great deal.

I have found a few drill rows of early turnips very profitable; they come in sweet and juicy when such things are most needed. We suppose, of course, you have already made provision for a succession of almost all the garden vegetables. Let nothing cumber the ground until it becomes unfit or table use; keep the choice vegetables by successive plantings, coming on fresh all the time.

Lima beans should now be planted, and no kitchen garden is complete without them. Early cabbage, cauliflower and tomatoes may be transferred to the garden, though in the vicinity of Indianapolis dangerous frosts sometimes come in early May.

But Up-to-Date Farming covers so

vast a territory that timely work can not be given for all localities. About all we can say is to do seasonable work in seasonable time, and do not neglect the kitchen garden; it does more to support the family than any other spot of like area on the farm.

### ASPARAGUS.

Mrs. F. M. Dooley, of Eldon, Mo., writes and asks how to make an asparagus bed, and what to do with an old bed when the roots send up small shoots. Experience has demonstrated that asparagus grows best when planted in rows. Deep trenches should be made, and plenty of manure should be used in the trenches. Drop the roots into the trench, about eighteen inches apart, and then cover until they are about eight inches under the earth. It requires about two years for the plants to mature, and they should not be cut before that time. The plants should be well covered during the winter. Work this covering into the soil in the spring. By this means the roots will not send forth little shoots, but the shoots will all be healthy and vigorous.

\*\*\*

The raising of early vegetables for market is the source of much of the profit of the gardener. The early vegetables always bring the highest prices. Asparagus is a great favorite with nearly all people, and when fresh and early in the season it is a delicacy to be loved.

\*\*\*

Melons do best on deep sandy soil, with clay subsoil to retain the moisture. The land should be broken early. Melons, like all else, need care in selecting the seed, in propagating and in cultivation to get the best results. Melons are very profitable, and pay for all the care bestowed.

\*\*\*

The truck gardener is becoming a much more important personage than formerly, and necessarily has to be more of a student. He cannot trust to luck, but must use rare judgment as well as skill to succeed properly. He must know his soil, how to keep it alive, how to force his vegetables and when to gather his product at its best. He must be an agricultural chemist, as well as a farmer; he must be a botanist, knowing the peculiarities of plants and plant life. If he knows all these things he is a money-maker; if not, he remains a hard-working drudge.

\*\*\*

All soils, to be productive, must have a good supply of nitrogen, phosphorus and potash. If these are absent, or any of them, the soil will fail to be productive. Some plants take from the soil more of some of these chemical qualities than do others. This should be carefully studied by the gardener, and he should just as carefully supply to the soil the elements needed to make it the most productive. If it is nitrogen, add nitrogen. If your plant is not thrifty you may rest assured it is starving for some one of the elements it needs to make its life perfect. In such case examine your soil and find out wherein it is deficient. If your soil is deficient in any of the elements to make your plants thrifty and healthy, plowing or hoeing will not avail. If you have no means of determining just what is needed, feed the soil with a well-balanced ration of nitrogen, phosphoric acid and potash.

### WHAT IS THE MOST DESIRABLE SPRAY AND HOW OBTAINED?

In applying bordeaux mixture or other fungicide to any foliage it is evident that perfect work is done when the spray covers the leaf surface most completely and permanently. The same is true of spraying with arsenical insecticides or other insecticides which are applied to the leaf for the purpose of killing insects by poisoning their food. Experience shows that with liquid preparations this may be best accomplished when the liquid is broken into so fine a spray that it will rest upon the leaf in mist-like particles and dry in that position. In practical operations before every leaf becomes covered in this way the liquid will often drip from some of the leaves. Nevertheless the aim should be to cover every leaf in the manner described and in so doing to avoid as much as possible making any of the foliage so wet that it will drip. Any portion of the leaf surface which is not covered with the spray mixture evidently remains unprotected from the attacks of the fungi. Not only may a much better spray be applied with a perfect mist than with a coarse spray but it may also be applied with less expense of time and of material.

It is beyond question that a pressure of from 100 to 120 pounds gives a finer mist than can be obtained with the same apparatus under a pressure of from 70 pounds to 80 pounds. Herein lies one advantage of so-called "power" sprayers. With these a greater pressure may be easily maintained than it is practicable to keep up with any hand pump.

The character of the spray is determined not only by the amount of pressure but also by the kind of nozzle. No form of nozzle has been devised which gives a better spray than those constructed on the principle of the Vermorel. With such nozzles a fair spray may be had with even fifty pounds pressure. Much profitable spraying has been done with them with no higher pressure than from 50 to 60 pounds. Nevertheless with double that pressure a much better spray is obtained.

There are other forms of nozzles with which a spray may be thrown to a greater distance than can be done with nozzles of the Vermorel type. On this account they may sometimes be used to

advantage but generally speaking it is not good economy to use them. It is better to use a nozzle made on the same principle as the Vermorel and to devise some way of getting it close to the foliage which is to be reached by the spray. This may be done by extension pipes or rods or by putting towers on the spraying rig from which the high tree tops may be reached, or by a combination of both methods.

### THE TAMARIX.

Dwellers near the sea shore often have much difficulty in getting shrubs to grow with any degree of vigor. For such situations the Tamarisks are very useful and by planting the different varieties one may have a display from May to September. The shrubs are of strong, slender upright habit, clothed in light, feathery asparagus-like foliage. The flowers, like the foliage, are delicate and fringing, red, pink, or purple in color. Early in May T. Africana is in full bloom. T. Germanica is a choice mid-summer bloomer with conspicuous light blue foliage. T. Odessana, pink flowers, July to September.

There are in the United States fifty-six factories for the manufacture of sugar beets and that industry has successfully passed the experimental stage. An entire carload of sugar beet seed was recently received at Menominee, Mich., to be planted this spring, and about three cars more are expected to before the demand will be supplied. This will be not much short of 90,000 pounds.

More attention might with profit be paid to the raising of sweet corn for seed. The price is usually good for seed sweet corn and the demand is oftentimes not supplied.

To fight the "worms" that denude the gooseberry bushes: Spray or sprinkle the bushes with a solution of white hellebore the moment a worm appears. A teaspoonful of hellebore to a pail of water will make the solution strong enough.

# Up-to-Date Farm Buildings

EDITED BY E. A. PAYNE

Further information concerning this house, or complete working plans for the same may be obtained at reasonable rates by addressing the architect, E. A. Payne Carthage, Ill.

G. W. PAYNE & SON, ARCHTS.  
CARTHAGE, ILL.

The plan here offered is that of a well arranged and neatly designed frame house. The style of the house should depend much upon the location and the nature of the surrounding landscape. This house has four main rooms on the first floor and three on the second, with a large finished attic chamber over the kitchen, besides vestibules, pantry and numerous closets. The convenience of the interior is apparent on examination of the floor plans. The entrance is from the front through a small vestibule connected with the parlor and sitting room. These two latter are connected by means of wide sliding doors. In the sitting room is a projecting window, with drawers under the stool. The bed room is of fair size. The kitchen is of good size, intended also for use as a dining room except on special occasions. The pantry, opening between the kitchen and sitting room, is well fitted with cupboard, shelves, pastry table and flour bins. A sink is located in the kitchen where shown, provided with drain board and enclosed under for pot closet. The stairway to cellar leads down from the pantry.

Going up the main stairs from a lobby between kitchen and sitting room, we land in a small hall, from which are easily accessible the four chambers on this floor. Each chamber is provided with closet room. The height of the cellar story is 7 feet, of the first story 9 1/2 feet, and of the second story 8 1/2 feet. The foundations are of stone and chimneys of brick. The walls and ceilings of the two stories are hard finished white on two coats of best brown mortar and seasoned lath. The frame of the house is of seasoned pine timbers. All windows are hung with weights. The outside walls are covered with shiplap overlaid with building paper and half-inch siding. The gables and roof are covered with cypress shingles. This house can be built complete for \$1,800.

Highest bank, commercial and customer's references. Address **GLOBE ASSOCIATION,** 232-256 Wabash Avenue, Chicago.

## MAY IN THE POULTRY YARD.

May may be considered just about mid-day in the poultry yard. The great abundance of the spring eggs have already gone to the market, and the bulk of the early hatch is off the nest. It is the poultry raisers' busy time—the young chicks must be saved, and that requires care and watching. I take it for granted that the broods were brought off the nests in good shape, that the mother hens were carefully searched for lice, and thoroughly dusted with insect powder. Don't expect a thrifty brood from a lousy hen. Some grease the hen well beneath the wings, and the chicks on the top of the head. This treatment is more or less effective, but it should be done with care; it is like wetting the chick, and that is not a good thing to do.

Above all things, the young chick must have clean, dry quarters, both night and day. It is well to have a coop from which the hen can not escape, but from which the young chicks may. In sunny days this coop should be placed in a gravelled plot, surrounded by tender grass. It is a treat to see the little fellows scratch and work among the sand and gravel, and pick at the tender gras growing around it, and how they hustle back to the mother hen at the least note of warning.

The early feed and feeding of the little chicks is a matter of importance. They should not be fed too soon after hatch; let several hours intervene between the hatching and the first feeding. Hard-boiled yolk of egg crumbled very fine is a good first, second or third feed. Don't feed too much at a time, but feed often. I have found nothing much better than corn bread baked dry and crumbled very fine. Feed little and often, and when you feed the chicks feed the mother hen. If you are feeding cornbread, break up the crust, and give to her; otherwise have a few grains of corn or other coarse feed for the hen.

Be careful about watering both the hen and the chicks. The practice of putting in the coop a plate or saucer full of water for the chicks to jump into and get wet, or for the hen to step upon and upset, is a bad way to do. There are a number of cheap watering devices that

are very good.

When the chicks are large enough for the hen to be released so as to give them free range, there should be plenty of shelter to which they may escape from the sudden storms so frequent this time of year. A lack of this has cost many a woman many a nice brood of chicks.

Now, I have spoken of a single brood, yet I am writing of poultry on the farm where dozens of broods are taken off every year. Each brood should have its share of attention, and if you are not prepared to thus care for them, you would better limit your output. It is a waste to set a hundred eggs, to hatch sixty chicks, to raise two dozen fowls. The mortality among young chicks is entirely too great, and proper care will reduce it.

## GAPES.

It is about time for this scourge to appear among the young chicks. Of course there are many highly commended remedies, and no doubt they are more or less effective; but prevention is better. If some one could give us a sure preventive that some one would be entitled to knighthood, or, at least, to "spurs" in the poultry yard. The writer's family has raised poultry on the same farm for nearly twenty-five years, and has never been troubled with gapes. About all we do that could be called a preventive is, that we always keep plenty of lime scattered about the poultry yard. This may not prevent the gape germs from getting a lodgement, but it is a good thing to do anyway.

## CLEAN UP.

Keep the poultry house clean now; the entire season's success may depend upon it. Clean out the droppings, whitewash the walls and perches, and sprinkle lime over the floor. This should be done several times during the summer, and as the sultry nights come, look well to the ventilation.

Some of my friends, successful poultry raisers, too, close the poultry house during the hot summer months, and make the fowls roost in the open. I do not think this a good plan, but it is better than to confine the fowls in stuffy rooms alive with mites. Kill the mites, clean the house, give good ventilation, and permit the fowls to live at home in comfort and health, both winter and summer. That is the better plan.

## THE DUST BATH.

Don't neglect the dust bath even in the spring time. In the summer time when everything is dry the fowls will find a dust bath for themselves, but in spring time when showers are frequent, dust out doors may be scarce. Have some corner in the hen house where dust may always be found, and see to it that it be frequently renewed. If a little lime (not too much) or ashes, wood or coal, be added to the dust bath, it will be all the better.

## GET LAMBERT'S

Death to lice—the kind that successful poultrymen have used for twenty years. It kills lice any where—just the thing for sitting hens. Never disappoints—always sure. Sample 10c. 100 ounces \$1.00. "Pocket Book Printers" free. D. J. Lambert, Box 400, Apponaug, R. I.

## Turkey-lene

The Wonderful Antiseptic Remedy and Tonic.

Thousands say "It's Marvelous."

Turkey-lene prevents disease, strengthens, tones and invigorates the birds and keeps them absolutely free from vermin.

Long experience enables us to give valuable practical advice on every phase of Turkey raising. This advice we give free to every purchaser of Turkey-lene.

Send 60c. by registered letter or money order and we will send prepaid enough Turkey-lene for the broods of two hens with full directions how to profitably raise every one of them.

THE NATIONAL TURKEY-LENE COMPANY.

Dept. 126, Washington, D. C.

TURKEYS.

The turkey is a great favorite of mine. I always like to see turkeys on the farm. I can think of no prettier sight than a drove of half-grown turkeys, chaperoned by two or three, or more, watchful mother hens, marching, all abreast, across a meadow. Their orders seem to be, "Let no grasshopper escape," and they obey orders. But the turkey is not a pleasant fowl to manage. The wild instinct that domestication has not yet bred out of them, leads them to wander so far from home, and to hide their nests in such unsearchable places, that gathering their eggs is a task that becomes tiresome before the season is over. And then the young turks are such restless little fellows, and so sure to get into the wrong place at the wrong time.

If Mrs. J. E. Gray's plan, as she gives it in *The Poultry World*, is a success, that is, if the fence she describes will keep the turkeys in, it goes far toward solving the turkey problem. She says:

"By having a lot or an enclosure in which to confine our turkeys at this season all this trouble can be avoided. And as this yard, of one-half acre or more, enclosed by a four foot woven wire fence with barbed wire at the top, is to be devoted to turkeys year after year, it can be made very profitable and more inviting to turkey nature, by planting fruit trees throughout it, such as peaches, plums and berry bushes of all kinds. Barrels for nests can be arranged in quiet nooks and corners and can be made more natural by putting leaves or straw inside and placing brush over them. If the hens are confined within this lot before they commence laying they are usually very content. If more than one hen should take possession of any one of these barrels during the laying season, another barrel can be supplied and placed beside it when they are ready to set. This enclosure is not only an excellent plant for laying and incubating, but an ideal place to keep young turkeys also. Rain proof coops can be

set in convenient places where the hen and her brood can be kept until old enough to turn out on range.

"Everything in the way of feeds, such as wheat, oats and corn, should be supplied twice a day with plenty of sand and grit and fresh water at their disposal."

THE PEKIN DUCK.

A. A. Rieff, St. Peters, Minn., gives some good points on the Pekin duck and how to raise it. Those who have raised Pekin ducks claim there are no more profitable fowls on the farm. He says:

"Pekin ducks were first imported into this country from China in 1872. They are now known in every community in the eastern and central states where they have gained a great reputation for market purposes.

"They are very easy to raise and are not subject to as many diseases as chickens; they lay from 100 to 130 eggs in a season if they get proper care and feed during the egg-laying season.

"While they are a timid bird they are very domestic in their habits and never wander far from their quarters when given their liberty.

"The white plumage of the Pekin is of great value as they are never afflicted with vermin of any kind. There is always a ready market for Pekin ducks and also for their feathers.

"Ducks can be raised without water to swim in, but as a general rule results

are better if they have water to swim in during the egg-laying season.

"A two-foot wire netting fence is sufficient to hold matured ducks, while a twelve-inch board will answer for the young ducks.

"There should be some shade provided for the young ducks in hot weather.

"During the laying season we feed equal parts of bran, shorts, ground corn, ground oats, mixed and moistened with hot water and left until cooled off, before feeding. Every other day we add some boiled potatoes or meat scraps, we also keep a constant supply of oyster shells, sand and water before them.

"In cold weather we aim to keep our duck house floor well covered with dry and clean straw.

"Ducks start laying in March or April and they generally lay their eggs in the

A Chance to Make Money

I have berries, grapes and peaches a year old fresh as when picked. I used the California Cold Process. Do not heat or seal the fruit, just put it up cold, keeps perfectly fresh and costs almost nothing; can put up a bushel in ten minutes. Last year I sold directions to over 120 families in one week; any one will pay a dollar for directions when they see the beautiful samples of fruit. As there are many people poor like myself, I consider it my duty to give my experience to such, and feel confident anyone can make one or two hundred dollars around home in a few days. I will mail sample of fruit and full directions to any of our readers for nineteen (19) 2-cent stamps, which, is only the actual cost of the samples, postage, etc.

**VAIL SEED CO. INDIANAPOLIS**

THIS 50-EGG INCUBATOR  
ONLY \$6.00

The P. S. is a hot air Incubator, built of first-class material, neatly finished and thoroughly tested before leaving the factory. The improvements in this machine have so simplified hatching that a child can operate it without difficulty. The regulator is highly sensitive metal, extending above and beneath the egg tray. It can be set to any desired degree of temperature, and when so set will hold the temperature within the egg chamber without any variation, regardless of any variation of temperature outside the Incubator.

This is the Incubator For You  
OUR OFFER

We will send a P. S. 50-egg Incubator for \$6.00. This machine will hatch eggs just as well as the larger sized ones. It is the best Incubator on the market and every person owning one speaks of them in high terms. The 50-egg P. S. Incubator is 14 1/2 x 24 inches. It has one blank tray, one thermometer, etc. Weight 32 pounds; crated for shipping 45 pounds. Each machine is supplied with complete directions for operating. Cut off the coupon and mail it today.

Look at this record. Do you want anything better?

P. O.....

Freight Office..... State.....

morning and they should be kept shut up until 8 a. m.; then you are sure of getting all the eggs.

"Pekin duck eggs must be hatched out with chicken hens or incubators as the Pekin is no good for hatching out eggs.

"Do not feed young ducks anything the first twenty-four hours. After that feed four or five times a day with corn meal and shorts mixed and scalded before feeding. When five or six weeks old, feed but three times a day and let them run out on some grass after the dew is off and they will catch all the bugs and insects in sight.

"After they are ten weeks old they should be nearly as large as old ducks if they receive proper feed and are the real pure-bred Pekins. Always give ducks plenty of water to drink."

Give the setting hens an occasional dusting of insect powder. The setting hens will dust themselves almost every time they come off the nest, if a good dusting place is handy. A little insect powder sprinkled in this dusting place is just about the proper thing. In the absence of these better arrangements, sprinkle insect powder in the setting nests.

Cedar boughs are said to be good things in a poultry house, and fine twigs of cedar mixed with the material of which the setting nests are made, it is claimed, are very useful in keeping the nests free from mites and lice.

The other day a man was complaining that his hens had not laid a dozen eggs this winter, while another man said his wife had sold \$45 worth of eggs since the first of December. Man No. 1 kept 125 hens and they roosted all winter in a couple of walnut trees, eating with his hogs. Man No. 2 had a 12x20 hen house that cost \$20, wintered 90 hens on wheat, corn, oats and at less cost than those of Man No. 1.

Don't make a floor in the poultry house; it don't pay, and it may serve as a rat harbor. Grade the floor up a little above the ground level with gravel, if you have it, and keep it littered with dry straw or chaff. But clean it out often.

### TO OUR READERS

In this issue appears a page advertisement of Luther Brothers Company. We want all of our subscribers and readers to turn to that page and read their extraordinary announcement, it is worthy of your attention.

It is hard to add anything to what is said in the advertisement. If there was ever a fairer proposition made to our readers we do not remember it. You may test the Bi-Pedal Grinder for thirty days, on your own farm—in your own barn—doing your work, your neighbor's or anyone else's. If you don't want it then—if you think it is not worth \$8.50—send it back, and Luther Bros. will pay the charges. However, if you find the machine worth every cent of the price send the manufacturers the regular price and it is yours.

There are many agents making a good thing out of the agency for the Bi-Pedal Grinder. While the associate editor of UP-TO-DATE FARMING was talking to Mr. C. J. Luther of the firm in their office some days ago he brought out orders from agents sending for as high as a dozen machines at one time. One man has sold 60 machines in a few months. If you don't want a machine for your own use, investigate them with a view to being their agent in your territory.

The offer Luther Bros. make is certainly very liberal, you may try the Bi-Pedal Grinder for 30 days free. They want to hear from every farm owner and every man who runs a farm. Write to the Luther Bros. Co., 24 Penn St., N. Milwaukee, Wis.

### FOUR CONDITIONS MAKE BETTER FRUIT

There are four fundamental operations upon which all permanent success in most kinds of fruit culture depend—tillage, fertilizing, pruning, spraying.

The three first have been partially understood for ages; but the last operation—we have much to learn about.

Frosts, insects and fungi are the three principal fruit enemies. The first we cannot control; but the destruction caused by the last two we can anticipate and prevent to a considerable degree by spraying.

A fully illustrated catalog of good spray pumps can be had free by any one writing a letter to the Hook-Hardie Company, 64 Main St., Hudson, Mich. The latter half of this catalog is given up to reports from experiment stations, formula, and directions for spraying. It will pay any fruit grower to send for one.

**PATENT YOUR IDEAS**

# SPECIAL BUGGY ANNOUNCEMENT

This is Our Celebrated

**Split Hickory Special**

It is the King of all Top Buggies. It is made the best that skilled labor and money can make it. We send it anywhere on

**30 Days Free Trial**

A similar buggy not as good would cost at least \$75.

**\$50**

We have so extensively advertised

and it has had such a wonderful sale everywhere that we find, from our mail, some people seem to be under the impression we only make this one particular Buggy. We beg to announce to the readers of this paper that

**We Manufacture Over 100 Styles of Split Hickory VEHICLES**

and sell them all direct from our factory to the user at factory prices. This line comprises Buggies, Phaetons, Surreys, Doctor's Phaetons, Stanhopes, Driving Wagons, Road Wagons, Platform Spring Wagons, Delivery Wagons, Road Carts and a complete line of all styles of Harness. Every vehicle we sell is a Split Hickory Vehicle and has many points of merit not found in other vehicles.

We sell them all on

**30 Days Free Trial**

Our reputation for fair dealing is unquestionable and our **Two Years Guarantee** goes with every vehicle we sell.

This is our **\$37.50 Split Hickory Top Buggy**, not as good as the Split Hickory Special, but a world beater at the price we ask for it.

This is our **Split Hickory Extension Top Surrey**, complete in every detail, and, taking into consideration the quality and the fact it is a Split Hickory Vehicle, the price **\$75** is wonderfully low.

**\$37.50**

We do not attempt to make a buggy for around \$25 simply because any fair minded person who knows anything whatever about buggies knows that a buggy that is worth anything cannot be produced for that price. Split Hickory Running Gears and Wheels are all made of straight grained Split Hickory, **NOT SAWED**. Write for our **FREE 136-page Catalog**, which tells all about Split Hickory Vehicles and gives description and prices of our full line of Harness.

**The Ohio Carriage Mfg. Co., (H. C. PHELPS, President), 5422 Sixth St., Cincinnati, Ohio.**

## MILLET AS A FARM CROP.

Each year shows an increased growth of millet in the United States. There are, of course, many varieties of millet, but German millet seems to be the most popular as a farm crop. The following is from Albert N. Hume, of the University of Illinois:

"Millet will thrive on quite a variety of soils, although it does best on soil that is inclined to be warm and sandy. It is rather a gross feeder, and its shallow root system does not return much to the soil. It can be sown broadcast usually at the rate of about one bushel per acre, although smaller amounts are sometimes recommended. In case millet is intended for hay, it should be more thickly sown than if intended for seed. When seed is desired, better results can be secured by sowing in drills at the rate of one peck per acre, cultivating between the rows. It is possible to get a good stand for hay by sowing only one-half bushel of seed, sowing broadcast.

Millet is usually grown in this country as a forage plant. It comes into use mainly for covering up shortages in other hay crops, and is to be highly recommended for that purpose, although it will hardly come into universal favor as a hay crop to be depended upon. When millet hay is well cured, it is very well relished by all kinds of stock. Care should be taken in curing the hay, and it seems to be the general opinion that it should not be cut either too green or too ripe. Probably about the right time for cutting is when the seed is in the dough.

A somewhat general complaint that the feeding of millet hay to stock causes sickness and sometimes death has at least some foundation. Dr. McIntosh, the veterinarian at this university, has told of some cases where horses' mouths were made sore by the awns or bristles. The writer has also known of some such cases. Cases of impaction have been recorded, due to over feeding of millet, but it is believed that this was a result of the hay being cut when too ripe, and so having large amounts of seed. Probably millet hay has never done any harm when fed carefully in combination with some other roughage.

The hay can be cut like other hay, but should be put into cocks before it is too dry. When it becomes too dry, the stalks get hard and woody, and the leaves are shattered. When piled into cocks, it may be left standing for some days if necessary, as it will turn rain much better than clover. Millet may be expected to mature larger crops of forage than either clover or timothy under favorable circumstances."

## PROFITABLE FERTILIZING.

Manure from all the domestic animals, including that of fowls, contains an excess of nitrogen. Nitrogen is the most costly element of fertility and potash and phosphoric acid are the cheaper elements. Hence by adding to said manures a sufficiency of the latter elements to procure a proper balance, a great saving can be effected. This saving is such that no farmer should invest a red penny for ready mixed goods until all of said manures have first been properly bal-

anced and applied.

Horse and cow manures are the principal manures of the farm, and corn and cotton are the principal spring crops, of the South at least.

Under average conditions a fertilizer for corn should contain, according to formula in "Farmers' Guide," 2 per cent. nitrogen, 7 per cent. potash and 6 per cent. phosphoric acid.

According to the same authority, a ton of 2,000 pounds of horse manure contains 10 pounds of nitrogen, 10 pounds of potash and 5 pounds of phosphoric acid.

## HORSE MANURE BALANCED FOR CORN.

In order to bring a ton to the above formula (2, 7, 6), it will be necessary to add 25 pounds each of potash and phosphoric acid. Of potash add 50 pounds of muriate of potash. For phosphoric acid add 200 pounds of acid phosphate. When kainit is used, the balancing dose will be 400 pounds for each ton of manure, which will increase the manure to 2,400 pounds. This quantity of balanced manure is equivalent in agricultural value to 6,000 pounds of unbalanced manure.

## HORSE MANURE BALANCED FOR COTTON.

According to formula in said work (Farmers' Guide), a fertilizer for cotton should, under average conditions, contain 3 per cent. nitrogen, 4 per cent. actual potash and 8 per cent. available phosphoric acid.

In order to bring a ton of stable manure to the above formula (3, 4, 8), it will be necessary to add 7 pounds of muriate of potash or 28 pounds of kainit in lieu of the muriate of potash, and 155 pounds of acid phosphate.

## COW MANURE BALANCED FOR CORN.

According to data in "Principles of Profitable Farming," a ton of cow manure contains 6.8 pounds of nitrogen, 8 pounds of potash and 3.2 pounds of phosphoric acid.

In order to bring a ton of this manure to the above formula for corn (2, 7, 6), it will be necessary to add 32 pounds of muriate of potash or 128 pounds of kainit in lieu of the potash and 125 pounds of acid phosphate.

## COW MANURE BALANCED FOR COTTON.

In order to bring cow manure to the above formula (3, 4, 8), it will be necessary to add to each ton 4 pounds of muriate of potash or 16 pounds of kainit in lieu of the muriate of potash, and 110 pounds of acid phosphate.

From the foregoing it is apparent that, as a general thing, each crop requires a special balance. Hence the fallacy of applying ready-mixed goods indiscriminately, as is frequently done, to any and all crops.

## PROOF THAT THE ABOVE BALANCING DOSES ARE CORRECT

We will take as a sample cow manure balanced for cotton. Before balancing, a ton contains a total of 18 pounds of plant food. After balancing it contains a total of 34 pounds, distributed as follows:

- 6.8 pounds nitrogen.
- 9.0 pounds potash, and
- 18.1 pounds phosphoric acid.

(In order to avoid tedious fractions I combine decimal and vulgar fractions.)

We wish to procure a number that 6.8 will contain three times. We, therefore, divide 6.8 by 3 and procure 2.2 2-3. We will now divide 6.8, 9.0 2-3 and 18.1 1-3 by 2.2 2-3. We procure, as a result, 3, 4, 8, which is positive proof that the balanced manure contains the elements of plant food in proper proportion.

In the same way the correctness of the remaining balancing doses can be proven, all being based on the same general principle.

# Up to Date

## HOME ON THE FARM

We invite correspondence for this department. Address all communications to Mrs. Eva Alice Morse, Ed., "Home on the Farm," care of Up-to-Date Farming, Indianapolis, Ind.

### THE FARM HOME.

It doesn't take a palace to make a home. Some of the most beautiful homes we ever saw were the most unpretentious. The surroundings have much to do with a pretty home, and the "finish" does the rest. The costliest material and the most expensive workmanship may leave a home anything but pretty, while common material and the most ordinary workmanship may make a beautiful home.

Of course the first thing to consider is comfort and convenience. Every unnecessary step the home arrangement requires must be charged up against the home. Where is the woodshed, the water supply, the waste drains, etc.? We are writing for the country home. How far away is the kitchen garden and other points that must be visited every day, and perhaps oftener than once a day? If there is a cellar, how convenient is it to the kitchen? These are practical, every day, real-life features, and enter prominently into the arrangement of a home.

But there are other things which contribute to the enjoyment of life, and go to make the home as it should be, "a thing of beauty and a joy forever." These things do not depend so much upon an outlay of money as upon the employment of a little taste and effort. Don't neglect the finish either inside or out. This may be very pretty or it may be the reverse. The difference is not so much in expense as it is in taste and judgment. Paint and polish do more to change the appearance of a house than all the other work put on it.

Keep the premises cleaned up and fresh looking. This should be done no matter how humble the home. If there be obstructions not easily removed—stumps, stones, mounds, or anything like them, invite nature to clothe them for you with vining and flowering plants. She will do so if you but deposit the seeds in the proper places; and that costs nothing. Don't have too much shrubbery in the yard and lawn. Here is where most country home makers score a mistake. There may be some—roses, lilacs, syringes, etc.—but they should be in rather out of the way

places—places that would seem lonely without them. Have shade trees rather than shrubbery; they do not so much interfere with the green of the lawn. Nothing is much more beautiful about the home than a smoothly trimmed, well kept lawn, dotted with dandelions or flecked with white clover.

The outbuildings and outside premises must not be neglected. Broken fences and knock-down gates and unhinged doors must not be permitted. A handy hatchet and a frequent nail or screw put where it will do the most good, and just at the right time, keeps a place constantly in repair, and the envy of all passers-by. Keep everything dressed up, and you can't help but have a pretty home. The farmer and his family may do more in this way to increase the value of the farm than can be done in any other way with so slight an expenditure of labor any money. This kind of work sets off the farm and the home as grooming does the horse.

### THE HOME LIFE.

What is the home life on the farm. Is it such as to make every member of the family prefer to be at home? Whenever the writer thinks on this line the pictures of two homes always rise before him. One is that of a very humble home, a pioneer cabin in the midst of a clearing; but it had life and thought within it—a father and mother and several rapidly growing boys. Only two members of the family could read—the mother imperfectly and one of the boys. But papers came to that backwoods home, and books occasionally found their way there, and a night was seldom passed without reading aloud in that family, every member taking keenest interest in it. There was scarcely a break in that family, while the mother lived, and no other home had attractions for them.

The other home was also a humble one, but it had passed out of the clearing in the forest to a country, village and later to a more inviting farm. In that home there were both boys and girls as well as the father and mother—boys and girls ambitious and aspiring, and all could read. Books, papers and magazines came, and were eagerly devoured, not so much by one reading for all as each reading for himself. But the reading was done, the subjects and characters were discussed, the home was

## ROLLMAN FOOD CHOPPER

Will chop a given quantity of meat or other food  
with less labor than any other household machine  
made.

Will cut a given quantity of meat or other food  
as quickly as any household machine if you reckon  
on the time required for cleaning the machine.

Cuts all meats and foods with less waste than  
any other machine.

Is small and of light weight, is convenient to  
handle and infinitely better adapted to household  
use than the old style cumbersome machines.

IT OPENS

EASY TO CLEAN

TWO PARTS

Has Steel Cutters—fine, coarse and nut butter  
cutter. Chops three-fourths pound raw or cooked  
meat per minute, fish, vegetables, fruits, nuts,  
spices, coffee, etc. A handy and efficient house-  
hold tool, adapted to all household requirements.  
This chopper will cut one pound of meat quicker  
and with less waste than any household machine  
made if you reckon time for cleaning machine  
easiest cleaned.

**OUR OFFER.** For 75 cents we will send you  
Up-to-Date Farming one year, "Kitchen  
Krinkles" a book of recipes by Mrs. S. T. Rorer,  
and full directions. For \$1.00 (25c extra) we will  
deliver it to you anywhere in the U. S. Give  
Express office as well as P. O.

**UP-TO-DATE FARMING**  
IND'ANAPOLIS, IND.

### To Women Who Dread Motherhood!

Information How They May Give Birth to Happy,  
Healthy Children Absolutely Without Pain  
—Sent Free.

No woman need any longer dread the pains of  
child-birth; or remain childless. Dr. J. H. Dye has  
devoted his life to relieving the sorrows of women.  
He has proved that all pain at child-birth may be  
entirely banished, and he will gladly tell you how  
it may be done absolutely free of charge. Send  
your name and address to Dr. J. H. Dye, 112 Lewis  
Block, Buffalo, N. Y., and he will send you, post-  
paid, his wonderful book which tells how to give  
birth to happy, healthy children, absolutely with-  
out pain; also how to cure sterility. Do not delay  
but write to-day.

made attractive and an intellectual atmosphere filled it. Those children left home only to make homes of their own, and to fill honorable places among the people where they lived.

The point we wish to make is this: Let there be kindness, love and thought in the home. Let the mind be fed and nourished with the body, and see to it that no home in the locality can be more inviting and attractive. Keep higher and better constantly in sight, and the time may come when the question, amounting almost to a despairing cry: "How shall we keep the children at home?" may not be so often asked.

### HOME WATERWORKS.

The new system of underground "air pressure" water tanks for farm and villages promises to revolutionize that class of homes as much as did the wire fence telephones, as it gives to the farmers all the water privileges enjoyed by their city cousins. With a small outlay of from \$40 to \$50 every one in the country may have water "under pressure;" i. e., for the bath-room, closet, kitchen, sink, stock water, lawn sprinkling, and last, but not least, for fire protection. The principle involved in this new luxury is as old as the "penstock" of 1840, by which our grandfathers conveyed water from the spring on the hillside to the watering trough at the house through hollow logs. The wind mill or gasoline engine now takes the place of the hillside spring; iron pipes displace the wooden logs and the faucet holds the water in reserve until it is needed. Science has, however, added a new feature, viz., the air-tight, underground iron tank, either new or second-hand.

Into this from the underside the water is forced by the wind mill until the air is compressed into one-half its normal volume. This furnishes a pressure of from 25 to 50 pounds per square inch, equal to the normal pressure of the "holly" or elevated tank. Again from the under side of this iron boiler the water is taken in iron pipes underground, below frost, to the barn, kitchen, truck patch or through the fire hose to the top of the house. Any plumber who can cut a thread or wipe a joint is capable of fitting up a practical plant of this kind. Indeed, if the plumbers are awake to their opportunities, they will find an unlimited amount of this kind of work, as every man who owns a wind mill must soon see the advantage of this system over that of the open trough or elevated tank. The material and labor needed to carry the water a hundred feet from the wind mill into the house should not cost over \$100. It consists of a one-inch galvanized pipe, a plain ordinary "cut off," and iron boiler of any size, the dimensions to depend upon the size of the pocket-book. A small one will act as perfectly as a large one, the only advantage the latter has over the former is that

"When the winds blow (not)  
The waters flow" (still).

Supposing the wind mill is in operation, a hundred feet of iron pipe should not exceed \$16; the boiler, 2x7, capable of sustaining a hundred pounds per square inch, should not cost more than \$46; an automatic cut-off, \$1; four faucets, \$5; a steam water gauge to register the pressure, \$16; the labor of digging should be but little, and a plumber's time may cost \$12, making a total of \$105, which will add to the convenience and protection of the home more than a like amount expended in almost any other direction. There is no good reason why every wind mill owner should not enjoy

this luxury. At some later date will explain how the hand-force pump proposition will give a constant and even pressure of water from the cistern when forced through an air-tight chamber to different parts of the house or barn. So far as I know there is no patent to bar anyone from using this greatest of blessings, free water.

CLARENCE D. SKINNER.

Topeka, Kas.

### A CHARMING ROOM.

The room that gives most comfort and joy is not the one containing the costliest furniture or the richest hangings. Books, magazines, a flowering pot or two, with, perhaps, a few pleasing pictures, will make a room attractive despite worn carpets and faded furnishings. A room that is lived in possesses a charm that neither oriental rugs nor priceless bric-a-brac can bestow.

### EXCELLENT FURNITURE POLISH.

Shake in a bottle equal parts of vinegar and linseed oil, and apply a very little with a piece of flannel, and then polish off with a soft cloth. Remember that the polish should be applied sparingly, but not the "elbow grease," of which a good supply is needed if you would see your furniture looking its very best.

### FARM TELEPHONES

The day is not far distant when the rural districts of this country will be as completely covered with telephone systems as are the cities today. Progressive farmers, ranchmen and fruit growers are taking an active interest in telephones and they are eagerly seeking knowledge on the subject. The Julius Andrae & Sons Co., of Milwaukee Wis., one of the largest manufacturers of telephones in the world, have just issued a book containing full and complete information on telephones. They advise us that a copy of this book will be sent free of any charge to those of our readers who are interested in the subject. The book can be secured by addressing the Julius Andrae & Sons Co., 520 West Water St., Milwaukee, Wis.

# FARMER'S INTEREST CORN

**Absolutely without a peer as a profitable variety to grow  
Unequaled in productiveness  
and all fine qualities**

THE FARMER'S INTEREST CORN has an enviable reputation of winning the leading prizes at all corn shows and expositions where exhibited, including Indiana State Fair for the past nine years. Nine prizes at Illinois State Fair 1902, one of which was for the best bushel of corn open to the world AND GOLD AND SILVER MEDAL AT PARIS IN 1900. Also has won hundreds of prizes at county fairs where exhibited by our customers. It has proven THE LARGEST YIELDING CORN KNOWN IN THE CORN BELT, on all kinds of soil.

It shells heavy and weighs heavy, is high in protein and has high feeding properties. It is a corn that would increase the corn yield many millions of bushels if generally grown solely on account of its superior yielding propensities. A thorough bred corn like FARMER'S INTEREST would be cheap at \$10.00 a bushel for seed to any farmer who has been planting mongrel kinds in the past. The best seed is none too good on such an important crop as corn, and the FARMER'S INTEREST is the best variety for all sections south of Michigan that can be found if you would travel the country over. We challenge comparisons and tests.

160 Page Catalog FREE, if you have not received it, where this remarkable corn is fully described.

**Price** By mail, pkt. 10c, large sample ear 30c. 1 qt. 40c, 3 qts. \$1. By freight or express, 1-4 bu. 75c, 1 bu. \$2, 2 1-2 bu. in 1 bag, \$4, 5 bu. or more \$1.50 per bu. A certificate of genuineness is given to each purchaser.

Photograph of one bushel of Farmer's Interest Corn. This was the highest scoring bushel of corn on record

**J. A. EVERITT, Seedsman, Inc., Indianapolis, Indiana**

## PUNGENT PARAGRAPHS.

A rabbit's foot may bring luck sometimes, but the farmer who takes out a membership in the A. S. of E. this spring will be more certain of a good price next Autumn.

"The mill never grinds with the water that is passed," and farmers will never get a profit out of crops sold below their value. A fair price is worth more to the farmer than an increased yield.

"The mills of the gods grind slowly"—so slowly that some farmers do not seem to know they are between the upper and nether mill stones.

"Present neglect makes future regret." This applies to the man who refuses to join the A. S. of E. for controlled marketing and price making.

"As the wind blows, so set your sails." The wind is now blowing toward "the Million United Farmers." Nearly one hundred thousand have their sails set now to catch the breeze.

"An intense hour will do more than dreaming years." Yes, a minute spent now to join the grand movement to bring "farmers to the front" will do you more good than years of thinking about it.

The old plant trees that the young may have fruit. Should not the farmers of the present fight for victory that those of the future may enjoy its blessings?

Many things have been done that the wise of other days said was impossible. May not one other thing be done which the selfishly wise say can not be—may not farmers by co-operative marketing secure steady and equitable prices?

The price is to the producer what the food is to the animal. If the food does not exceed the wear and tear and outlay the animal dies.

"Feed the soil and the soil will feed you"—provided you get a reasonable price for its products.

The success of the farmer is in the control of his own stuff, and not that of some one else.

The A. S. of E. is the first society that ever taught the farmer to attend to his own business and let the other fellow attend to his.

"Plow deep while sluggards sleep, and you will have corn to sell"—at a reasonable price if you mix a little brains with the selling.

## QUICKEST GROWTH THE MOST PROFIT.

A friend of the writer, who is an extensive hog grower in Northern Illinois, always sells his pigs at about a hundred pounds, and this hundred pounds he puts on them as rapidly as possible. He breeds well, and always manages to have a nice bunch, uniform in size and color, to attain that weight just about the time some one wants such a bunch to feed, and his being so attractive always bring a little more than the market price, and, he claims, a much greater per cent. of it is clear profit.

This agrees with what was recently said by a well-known worker in farmers' institutes:

"The man who sells the yearling sells grass and growth. He furnished the grass, the yearling harvested it and furnished the growth. The man who finishes the 'long two-year-old,' grew two

crops of corn, harvested it, and fed it to the steer. He sold fat and corn against grass and growth of the man who sold the yearling. But there must be growers and there must be feeders, and neither can well exist without the other.

The small farmer who can grow a few cattle, and a few hogs, and fatten them on the products of his fields, has the best of either the man who grows to sell as feeders, or the man who buys feeders to finish up."

# \$50,000.00

## Cash Given Away

### TO USERS OF

# Lion Coffee

We are going to be more liberal than ever in 1904 to users of *Lion Coffee*. Not only will the Lion Heads, cut from the packages, be good, as heretofore, for the valuable premiums we have always given our customers, but

## In Addition to the Regular FREE Premiums

the same Lion Heads will entitle you to estimates in our **\$50,000.00 Grand Prize Contest**, which will make some of our patrons rich men and women. You can send as many estimates as desired. There will be

## Two Great Contests

The first contest will be on the July 4th attendance at the *St. Louis World's Fair*; the second relates to *Total Vote for President* to be cast Nov. 8, 1904. **\$20,000.00** will be distributed in each of these contests, making **\$40,000.00** on the two, and in order to make it more interesting, in addition to this amount we will give a

### Grand First Premium of \$5,000.00

to the one who is *nearest correct on both contests*, and thus your estimates have two opportunities of winning a big cash prize.

Five Lion Heads cut from Lion Coffee Packages and a 2c stamp entitle you (in addition to the regular free premiums) to one vote in either contest:

Printed blanks to vote on found in every Lion Coffee Package. The 2c Stamp covers the expense of our acknowledgment to you that your estimate is recorded.

### WORLD'S FAIR CONTEST

What will be the total attendance at the St. Louis World's Fair on July 4, 1904? At Chicago, July 4, 1893, the attendance was 283,273. For nearest correct estimates received in Woolson Spice Company's office, Toledo, Ohio, on or before June 30, 1904, we will give first prize for the nearest correct estimate, second prize to next nearest, etc., as follows:

1 First Prize .....	\$2,500
1 Second Prize .....	1,000
2 Prizes—\$500.00 each .....	1,000
5 " — 200.00 each .....	1,000
10 " — 100.00 each .....	1,000
20 " — 50.00 " .....	1,000
50 " — 20.00 " .....	1,000
250 " — 10.00 " .....	2,500
1800 " — 5.00 " .....	9,000
2139 PRIZES	TOTAL, \$20,000

### PRESIDENTIAL VOTE CONTEST

What will be the total Popular Vote cast for President (votes for all candidates combined) at the election November 8, 1904? In the 1900 election 13,959,653 people voted for President. For nearest correct estimates received in Woolson Spice Company's office, Toledo, Ohio, on or before November 5, 1904, we will give first prize for nearest correct estimate, second prize to next nearest, etc., as follows:

1 First Prize .....	\$2,500
1 Second Prize .....	1,000
2 Prizes—\$500.00 each .....	1,000
5 " — 200.00 " .....	1,000

## WHOLESONE LITTLE STORIES WITH A MORAL

HENRY BURNS GEER

### ON THE FIRST RELIEF

Bill didn't intend to eaves-drop. It just so happened that he couldn't help himself. He had been settin' up with Mary Darsey for about a year, and was satisfied in his own mind that he was first in her heart and mind—until he happened to find out something. It was on a blustry night in March—one of those nights when the doors, the shutters, the windows, and every other inanimate object seems to have voices. Some merely whisper, others whistle and still others shriek and moan, like the wailing of lost spirits. The Darsey home was built on the old Southern plan, with a wide hall running back from the indispensable front veranda. On the occasion of which we write the wind was singing a dirge—the sear and withered honey-suckle vines were swinging and swishing wildly about, as Bill stepped up on the veranda. The front door was open—another freak of the wind—but the parlor door opening into the hallway was closed. Bill smiled. He had an idea. He would give Mary a happy surprise; and so he ignored the door bell and stepped softly into the hall. To the left, where a faint streak of light shone through the key-hole, he heard voices:

"It's an ill will, indeed, Katie, that blows no one any good. If it will only keep him away, what a great relief it will be."

The smile faded from Bill's face, for it was Mary's voice. uBT it was for a passing moment only. "Yes, he'd better stay away," iBl thought to himself. He had in mind Frank Ellis, who had been "bothering" Mary right sharply of late, as she had assured him. He started to enter the parlor then, but the girls began a little love song, and he hesitated. He would stay in the hall a bit longer and hear them through. The girls carried the minor notes up to a beautiful finish, and then, as they descended, a strong, clear and firm bass voice struck n. This was not on the program Bill had in mind, for it was none other than Frank's voice—a voice noted for its heavy bass notes. As the last notes died away a girlish voice exclaimed:

"How delightful it is to have some one with us who can sing bass. Girls' voices

alone are insipid; it relieves the 'sameness' to have a gentleman's voice carry the proper parts." This was Miss Katie speaking. Bill, who couldn't have sung a note correctly to save his life, felt himself getting red behind the ears and warm in the collar. He would have taken a sneak out then, but the wind had come to a lull, and a single step would have been a giveaway. So he just reached out boldly, pushed the parlor door open and entered. Mary sprang up from the piano to greet him:

"Why, Mr. Wilson, when did you come in?"

"I came in on the first relief," said Bill, coolly. Mary's face flushed up quickly. Frank rose up, and so did Katie. The latter tossed her head back and laughed. Then she looked Bill straight in the eye as she said:

"This is an open market, Mr. Wilson."

Katie frequently attends the local meetings of the Nelson County Union, and reads "Up-to-Date Farming."

### A TEST OF HONOR.

Marguerite had, from the outbreak of hostilities, longed to do something for the cause of the South—something that would be a demonstration of her devotion to the cause of her section, and worthy of a daughter of a colonel wearing the gray. True, she was an active member of the Ladies' Auxiliary Society, and had assisted in the preparation of all manner of necessities and comforts for the soldier boys at the front. But this kind of service did not satisfy Marguerite's ambition. She wanted to signalize herself—to do something daring, something that would live in history. She was ardently Southern and despised anything and everybody connected with the Union cause. And, as the months and years of strife passed, she grew more and more bitter in her sentiments. An uncle and brother fell on the field of honor. The homestead was despoiled, and all semed gone except honor—and two milk cows that were the main support of the two white ladies keeping lonely vigil in the almost deserted mansion.

One bright May morning—the last May morning before the final cessation of the great struggle, as Marguerite came out of the house and passed down to the stable lot to milk the cows, something she had learned how to do from sheer necessity, she was indignantly surprised at seeing two negro men driving the cows down the lane leading from the house. To her commands to them to desist they gave no heed other than an insolent laugh. Marguerite's anger, indig-

nation and mortification knew no bounds; but all her efforts to save the cows from the free-booters were in vain; when suddenly, to her happy surprise, a man dressed in the uniform of a Confederate Lieutenant suddenly appeared in the woods bordering the meadow and gave sharp command to the negroes to drive the cows back to the lot instanter, his commands being intensified or emphasized by the display of an "Army Colts." The men headed the animals about and sullenly obeyed. Marguerite greeted the rescuer of the family support warmly:

"O, how can I ever thank you sufficiently for your providential appearance at such an oportune moment and your noble action."

"Do not thank me," the soldier replied gravely; "no true man could have done less under the circumstances. Hark!" he exclaimed with a look of anxiety; "they are coming. It is a squad of Confederate cavalry, and they are searching for me, for I am a Union spy. Will you show me to a place of concealment?"

Marguerite turned deathly pale for an instant, and then flushed scarlet, while a look of indignant scorn shone from her dark eyes—a look that changed rapidly to one of triumph:

"You are my country's enemy!" she cried. The soldier folded his arms and faced her in silence. The hoof-beats sounded nearer and nearer. Soon the cavalry would be upon the scene. The girl looked again at the man. He did not reproach her, nor upbraid her. Rising above the tree-tops a cloud of dust was now visible to the southward.

"You were in hiding, why did you come out?" asked Marguerite. The man made no reply. Then a new, soft light shone in the beautiful eyes: "You did it to protect a defenseless Southern woman, and a devastated Southern home. How narrow I am. Come, please, sir."

She pointed to the back porch. "Up there behind the cluster of honey-suckle

**START** Local Factory on \$5; illustrated book free **MIXERS GUIDE**, Fort Madison, Iowa

CASH PRIZES	
FIRST PRIZE	\$50.00
SECOND PRIZE	20.00
THIRD PRIZE	10.00
FOURTH PRIZE	5.00

**WHO ARE THEY?** Valuable prizes to those who can tell **25 Eminent American Statesmen**  
If you can tell who they are, you can win a valuable prize. We take this method of introducing VICK'S FAMILY MAGAZINE which has been published for nearly thirty years. Any publisher or bank will tell you that we are reliable. We mean just what we say and will give all prizes as agreed.

**CONDITIONS** Make a list of as many as you can of those whose pictures appear above, and send to us at once with 25c to pay for a year's subscription to VICK'S FAMILY MAGAZINE. This is a special price which we are making for a limited time to introduce it into thousands of new homes, the regular price is 50c a year. VICK'S has been known and loved in tens of thousands of homes for over a quarter of a century and during all of these years has proved a great inspiration to all who loved flowers and the garden. These departments are now better than ever before, and many new ones have been added, such as Poetry, Fruit, Household, Nature Study, Mothers' Meetings, Childrens' Department. Also excellent stories, poems, etc.; thus making it a **Home Magazine for the Whole Family**. Should you not care for the magazine yourself you can have it sent to any other person and your name will be entered in the contest. The one guessing correctly the largest number of the men in above picture will win first prize, the second largest the second prize and so on. In case of a tie the prizes will be divided equally between those tying. Tell others about this contest. Read up your history and try your hand. You are as apt to win one of the prizes as any one. VICK'S is just the publication for those interested in Nature Study. Send 10c additional and we will mail you postpaid two beautiful charcoal landscapes (new) by Fisher, the celebrated landscape artist. Size of pictures 12½x17 inches. They are just what you want to decorate the home or school room.

**SPECIAL WEEKLY CONTEST**  
If you can name three or more of the men correctly you will be registered in a **Special Weekly Contest** in which a valuable prize will be given each week. If you win a weekly prize you will still be entitled to participate in the main contest.

**VICK'S FAMILY MAGAZINE CONTEST DEPT. L. 62 State St., ROCHESTER N. Y.**

vines above the eaves—"O, be quick, please." The man saw the point of vantage, and with a few steps, a hand-over climb, he settled down behind the fragrant blooms and bright green leaves just as the cavalymen drew up at the side gate.

"We're after a Yankee spy, who's headed this way. Seen anything of him, lady?" asked the Captain of Marguerite.

"I've seen no man excepting those who wore the gray since the war began," responded Marguerite, calmly.

"That infernal spy's liable to wear Jacob's coat, or anything else," muttered the aptain, as he deployed his men about to search the premises—a search that was futile. And then, as they resumed their mounts and galloped on down the road, Marguerite went to the little back porch and said, coldly: "Come." The soldier sprang down, touched his cap formally and moved off with the regulation stride. As Marguerite watched his retreating figure she thought:

"Could I have done otherwise. It was a question of honor." And it is this sense of honor—a sentiment so strong and deep that it protects one's enemy—that makes the American character the grandest and noblest of all the earth.

\*\*\*

#### THE PHANTOM OF THE ROAD.

It's a creepy place out there where Indian creek empties into Duck river. They say that years ago, when the red man inhabited that section, "Lame Bear," an Indian chief, who was denied the young squaw of his selection, threw himself off the bluff just at the point where the waters of the creek and the river first mingle; and they do say, further, that on certain nights during the Indian summer his spirit can be seen sitting idly on the bank of the creek, or rowing a canoe up and down the stream; and that on some wild and stormy nights it comes further inland—as far as the railroad, and runs wildly about through the woods.

John Sebastian, engineer on the N., C. and St. L. railway, was perfectly familiar with all these traditions, but, like most men of his calling, he knew nothing of fear, and scouted the idea of "spooks" or spirits stalking about the earth. Nothing was farther from his thoughts than the departed spirit of "Lame Bear" when he pulled out of Redwood on No. 36 one wild and stormy night last June. The wind was blowing a cyclone tune, and the rain was swishing and swashing alongside and in front like the breakers on the beach, when the old reliable "36" shot around the curve with her load of human freight and took straight trail through the flat where "Lame Bear" was said to sport on such nights. The headlight made a ghostly pathway down the track, through which the rails glistened like ribbons of steel. John was keeping a vigilant lookout ahead, when suddenly he uttered an exclamation of surprise, which the roar of the storm and the rushing of the train cut off from the fireman behind him. "Bosh," muttered the engineer, rubbing the glass front with his shirt sleeve. But he could not rub away the vision before him—an Indian on the track, leaping, bounding, flying, but ever the same distance down the track ahead. John threw the throttle wide open and set his jaws firmly together. It was of no avail, for he did not gain a foot on the flying phantom ahead. Down hill, through valley and up hill, it kept ever the same distance—an Indian racing ahead of No. 36. Through way stations, farm lands and meadows, the race was ever the same. Neither gained an inch. Now the cold sweat stood out in great beads on the engineer's brow. His face was pale, hard-set, but fearless. "I'll run the d—n thing into Salyerville," he muttered. Salyerville was the first stop, and as they drew near the phantom still danced along the track ahead. The whistle blew, the massive engine slowed up—came to a standstill; and likewise the Indian spook afar down the track ahead. John stepped from the engine, moved

around to the headlight, and there, stuck tight to the front glass-plate of the light, were two wet leaves entwined so as to make a fantastic shape. With an oath John wiped them off and stepped back into the cab—the phantom had disappeared.

There are lots of people like the engineer on "No. 36" who go through life chasing phantoms of fear and mistrust, which a little sober reflection and investigation would wipe off the headlight of their lives.

\*\*\*

#### THE THIRD BROTHER.

Just how he happened to get in the revival meeting with that letter in his pocket, Sam, Knowles couldn't understand. But, he was there, and the preacher was saying:

"It's like this, there's Bill and John, they are brothers, and they are both well off, and it's 'Howdy Bill,' and 'Howdy John.' Their families visit, and they seem to think a great deal of each other. But, ah, it's different when it comes to brother Tom, for he's a poor devil, he is, regular 'black sheep,' and while he may be honest, he doesn't dress well, nor does his wife and children, and he works in the mines and—O, well, it would be sorter letting themselves down for brothers Bill and John to chum in with him." O, ye Pharisees and whited sepulchres, all fair without, and foul within." And then it seemed to Sam Knowles that the preacher looked straight at him. And the letter—Oh, yes; it was from his brother Fred, and it read: "Sam, I'm in a bad run of luck, have been sick, and wife's sick now, and the little one has the measles. If you could spare me twenty-five till I get straight again, I'll send it back—every dollar of it, and be eternally grateful to you." He knew Fred was honest, and would keep his word; but then, why should people get in hard luck, why should his brother, and then come to him for help. He was a tub that stood on his own bottom (he had forgotten how the old man had started him in business, being the eldest son), and why couldn't Fred stand on his. And here was this fool preacher, a preaching on the very sore point in his mind.

"If thy brother fall seven times seven times, help him up," continued the preacher. Then somehow Sam Knowles felt ashamed of himself, and he thought of their mother, and the good old happy days when they were all happy boys at home. Mother hadn't made any distinction in them. She seemed to love Fred just the same as she did him, or the other boys. The preacher ceased, and the large congregation filed out.

"I'll do it, God bless him, he deserves assistance," and, after the letter was mailed to Fred the next day, with a check four times as large as he had asked for, Sam Knowles felt happier and more kindly towards the world, than he had felt in many a day.

"Why, my dear, you seem so happy," his wife said to him that evening, as she noticed his smiling face at tea.

"Yes, Martha, I am happy," he replied, telling her all about it later.

He was happy, because his heart, and his business sense had co-operated in bettering the condition of his fellowman and brother.

#### THE NARROW-GAUGE MAN.

Kenner Brown was what the boys called the "narrow-gauge" man of our district. He was one of the most selfish, avaricious, and close-fisted cusses that ever lived. It was said of him that he made his children sleep three in a bed and use one pillow just to save bed-space and feathers. Yet, as a farmer, he thought he was a leader. Somehow, he couldn't see himself as others saw him. He was too stingy to feed his stock up to a thrifty condition, and then affected injured innocence when he had to sell below the current market price. His cattle looked like frames with skins stretched over them, and yet this man could not, or would not see that it was all his fault. One cold, frosty morning after a rainy spell, when the earth was frozen down two or three inches, several of his cattle were down, some of them frozen to the earth in what was soft

## RHEUMATISM

**Wonderful New External Remedy  
Curing Thousands. Any Rheumatic Sufferer May Try It  
Without Cost.**

**Send Your Address and Get  
A Dollar's Worth FREE.**

I have a sure, quick and lasting cure for Rheumatism. I cure it by means of Vibro Discs, a wonderful new appliance which is used exter-

nally and draws out the poison from every part of the system. It is the wonder of the age, and a godsend to Rheumatic sufferers. There is nothing like it, and nothing equal to it. It banishes pain as if by magic, and conquers this dread disease in all its cruel forms and stages. It is safe, simple and convenient for home use and roots out the acid venom so thoroughly that no relapse or fresh attack can occur. Prove these claims yourself by testing the remedy at my expense. I will send you, absolutely free, four of these Vibro Discs—

a full dollar's worth—if you simply send me your name and address. This is an absolute gift, and I shall neither ask nor accept pay for it now or in the future. Can you afford to continue in pain and misery when you can get this marvelous new and guaranteed treatment simply for the asking? Write me to-day and I will send you the treatment at once and with it an elegant illustrated book on Rheumatism, all free and prepaid. Don't send any money—not even a postage stamp—but send your name and address **THIS VERY DAY.**

mud the night before, and he sent over for Fred Parsons, a good thrifty farmer to come over. Fred went:

"What you low is the matter with my cattle, Mr. Parsons, don't you reckon it's hollow horn?" said Brown.

Fred walked about, looked at the poor weak looking beasts, with a sense of sympathy and pity in his eyes; and then he faced their owner and said:

"The only trouble I can see with your stock, Mr. Brown, is that they have the hollow belly."

Brown was a regular bargain hunter. He never bought anything fair and square, and paid out a good equitable price. He always wanted it knocked off to him at a sacrifice price. He got it one morning right, and the neighbors have hardiv ceased talking about it yet. He was out in the barn-lot milking, when a stranger came up riding a fine looking grey mare, which he offered to sell to Brown for twenty dollars, which was about one-fourth her market value. Brown kicked a milk bucket over in his haste to look at the animal's teeth and sound her all over. Then he got on and rode about the lot; then took the saddle off, put a harness on, and tried her to a spring wagon. She went all right both ways. He offered the man fifteen dollars, and finally got her at eighteen dollars. The stranger took the money, asked the way to the river, and when the next boat would be along, and lit out. It was only two miles to the landing, and it was packet day, and by four o'clock that evening Brown heard the boat whistle, and then he knew his man was off for the South. But, he hadn't counted on something else, and that was some one looking for the mare and the thief who had stolen her. They came the next day, the sheriff from up about the German settlement and a lot of his friends and friends of a man who said he had lost a mare. They were all big square built fellows of the type who have helped to make Milwaukee famous. The minute they saw the mare they claimed her; and what's more, they made Kenner Brown prove his own character, which passed for honest in the estimation of his neighbors, by a narrow margin only; but, fortunately, he had a witness that he had bought the mare; but nary cent would they pay him, as he had bought stolen property, and so Brown lost his eighteen dollars. It made him sick for a week, and now he won't buy anything without getting it's pedigree for several generations back.

This thing of beating down prices, and taking advantage of misfortune or crime, is certainly a questionable practice, and quite the reverse of equity.

A NEW HAY PRESS

An old reliable manufacturing firm of machines for farmers' use has added to their line a new hay baler. The machine is called Triplex Hay Baler. Owing to the firm's large experience in building machines, the new baler will be up-to-date and first-class in every way. Back of it stands the reputation of the DeLoach Mill Mfg. Co. Send for their new catalog of Triplex Balers and Saw Mills. Address DELOACH MILL MFG. Co., Box 850, Atlanta, Ga.

This illustration shows the Man-Weight Cultivator saving a plant that was out of line with the others in the row. Either or both drag bars may be moved to right or left or up or down without changing the direction of the wheels.

MAN-WEIGHT GARDEN TOOLS

Solve the Labor Problem Indispensible to every person who wants to get the Greatest crops and the most money from a minimum of time, effort and land.

Different from all other hand machines. THE WEIGHT OF THE BODY DOES THE WORK; instead of the weight being lost on the ground through the feet it is applied to the machine by the lean of the body. Can be used day after day with less fatigue than with hoe or any other machine. It may astonish you to know that ONE man with a MAN-WEIGHT can do more work and do it better than ten men with hoes, or FIVE men with five hand-push machines, yet it is a fact. This is one way to solve the labor problem. If time is money, or ease of doing your work an object, you cannot possibly afford to do without a Man-Weight combination.

The machine is propelled by the weight of the body. No muscular effort is required through the arms. The hands guide the tools all around the plants just like a hoe in the hands. When you go over a field with a Man-Weight you have both cultivated and hoed. You can now begin to imagine the advantages of these great and almost marvelous machines.

MANY MACHINES IN ONE

The Man-Weight Combination is really multum in parvo. It comprises, plows, hoes, cultivators, harrows, single and double wheel. It is the most complete outfit on the market today, some of its exclusive and superior features mentioned above. Why buy a machine for each kind of work when you can get all in one. Why buy any other machine when you can get a strictly up-to-date Man-Weight Combination? Why take any other kind as a gift if you can get a Man-Weight at any price? This will save time, save money, enable you to tripple your acreage and greatly increase your crops. It will save you its cost in several ways several times a season. Read the following letters and send for catalog if you want more information.

READ WHAT USERS SAY

Your Man-Weight Cultivator received and put to good use. Find it is the biggest little machine we have ever used or seen.—A. A. SANDERS, 507 E. 7th St. Brooklyn, N. Y., June 1, '03.

Your Man-Weight is a great improvement. I find that it largely increases one's capacity. It is as great a help, as the improved horse cultivators are over the double shovel. A 120 pound man can do more work with a Man-Weight than six big men with hoes and do it better.—S. LEE COX, Oakwood, Ill., January, 1903.

After a few days' use of the Man-Weight Cultivator, I can say it fills all the claims you make for it.—J. F. BRINKERHOFF, Cuyahoga Falls, O., June 1903.

The Man-Weight Cultivator came to-day. We tried it along with a . . . . . All present thought that the Man-Weight was the best. The soil was very heavy but the machine did excellent work. We tried it in cabbage, tomatoes, beets, onions and corn.—W. G. SPEEDLOVE, Harrisville, Mo., June 3, '03.

PRICE Man-Weight Cultivator, 5 set of tools, complete combined single and double wheel (without drill) \$8.00

FREE TRIAL If you are still skeptical about the merits of the Man-Weight Machines, or if you are still unconvinced as to their superiority over the old style machines, write us to that effect, and we will send you one of these Man-Weight Cultivators on a week's FREE TRIAL. Use the machine for 6 days, and on the seventh day remit us the price (\$8.00) if you are satisfied with it. OR IF YOU ARE NOT SATISFIED with the machine, and do not desire to keep it, write us NOT LATER than the seventh day, advising us of this fact, and we will send you shipping directions for same.

We want you to take advantage of this offer. We want every gardner in the U. S. to know about our labor saving garden tools. Just as soon as they all know about the Man-Weight and are convinced of its advantages, we will have nearly all of the garden tool trade in the country QUIT HAND HOEING! CURE THAT BACKACHE! THROW AWAY THOSE OUT-OF-DATE GARDEN HOES YOUR GRANDFATHER USED! BE UP-TO-DATE!

GET A MAN-WEIGHT

CAUTION:—In order to take advantage of this free trial offer, it is only necessary to convince us that you are a person of responsibility, that you really need such a machine, and that you are not just some curious person wanting to see this tool. Therefore in sending in your order cut out the coupon attached, and besides giving your own name thereon, give the name of some other responsible party, preferably a bank or business house, to whom we can refer if necessary.

J. A. EVERITT, Manufacturer  
Indianapolis Indiana

This illustration shows the Man-Weight Cultivator in high stuff and the operator walking between the rows. This construction is very popular, particularly if the plants are wet

# The Black Wolf's Breed

## A Spirited Romance of the Time of Louis XIV By Harris Dickson

Copyright 1899 by the Bowen-Merrill Company

### CHAPTER XIX, Continued.

It thrilled me with a new hope. Who could guess but my relations with Colonel d'Ortez might throw me again in her way. I took her hand again, making pretence to examine the ring more curiously. She made slight demur, and I pressed my first fervent kiss upon the hand of woman. Man's fortitude could stand no more. Tossing honor, discretion, duty to the winds, I bolded her close, closer yet, and kissed her brow, her hair, her eyes—her lips, she struggling like a frightened nestling all the while. It was done.

Ashamed but impatient—it was too new, too sweet to wish undone—I loosed her gently, and kissed her hand but once again, then left her standing where the light from the mullioned window in halos wreathed my saint. It was thus I ever afterward remembered her.

She made no other sign; I withdrew swiftly as I came. From across the wall, unobserved, I watched her leave the place, downcast of eye and slow of step. In rebellious and uncertain mood I rode away.

Though the relish in my task was done, I made all haste toward Dieppe. Scarcely stopping for food, changing horses as often as I could, I pushed on without adventure until I reached the Chateau Cartillon, then a formless ruin.

Here my saddle girth broke and I was nearly thrown to the ground. I scrambled off, walked to the little inn where I inquired how far I had yet to go.

"Three leagues yet to Dieppe," the host replied, "but Monsieur can not go on to-night; he must wait the morrow; he can go with comfort in the morning."

I sent my groom for a new girth and found it would take quite an hour to procure one from the village.

"Probably Monsieur would visit the castle upon the hill there," persisted the landlord, pointing across the way, "it is worth his while. It is said to have been destroyed by the Great Henry in his wars with the Duke of Mayenne. True it is that sounds of battle and screams are yet heard there on stormy nights. Probably, Monsieur would rest here several days—"

I essayed to silence the fellow, for I was in no mood to listen to his clatter. Yet there was something in his eulogy of the locality, which he gave as a hawk crying his wares, that fixed my unwilling attention.

"And, Monsieur, perchance you may see old mad Michel. What! you know naught of him? Country folk do say his grandam witnessed the murder of the Count, and that it sent her feeble mind a-wandering. Her child through all her life did fancy herself the Count, and made strange speeches to the people's fear. And now this grandson of hers has grown old in frenzy like his mother and grandam, possessed of an evil spirit which speaks through him betimes—it is a curse of the blood. Monsieur, a grievous curse of the blood."

It aroused something of a curiosity within me, yet I was loath to pause upon my journey. Forced, though, to wait an hour, I thought to walk over to the Chateau a couple of hundred yards distant. Taking a lad who lounged about the inn, to show me the way, I sauntered up the path, pausing a while at a long-disused spring, and idly plucked an apple from a branch which overhung it. A little further up, and mounting the steep acclivity, I stood within the ancient fortress.

This castle, since rebuilt, you, my children, are of course familiar with, for you were all born here. At that date the great central tower alone stood erect amid the universal destruction. A black wolf's head reared itself high above the portcullis. The moat was filled with drift of crumbling years, and the walls, fallen in many places, ran hither and thither in aimless curves and angles, much as they do to-day.

Up to this hour my chronicle has been only of such adventures as might befall a soldier upon any enterprise, but now a strange thing happened. Until that moment I had never seen the Chateau Cartillon, still there was not a corner or a passage which did not

seem well known to me. My feet fell into paths they seemed no strangers to. I seemed to know intuitively what each building was for, and even imagined most vividly scenes which had transpired there. The whole place had the most intense personal interest for me, why, I knew not.

I am not superstitious, but the ruin oppressed me, made me restless and uneasy; yet I was loath to leave. The loneliness of it all filled me with vague apprehensions as I picked my way across the grass encumbered court-yard toward the road again. A thousand haunting fancies of half familiar things thronged from out each dismantled doorway. Faces I all but recognized peered at me through the broken casements; voices I almost knew called to me from many a silent corner. Yet all was still, all was solitude. Heartily ashamed at my quickening step I hurried on and having consumed a quarter of my hour, sat down by the spring mentioned before, just beyond the castle's utmost boundary.

The haze of late afternoon had deepened into night upon the peaceful meadows and lazy sweep of river. A distant peasant's song came faintly from the fields.

While sitting there beside the spring, gazing listlessly into its placid depths, an uncanny figure made its way through a breach in the bastion, and stood before me. At first I confess I was startled, the wild uncouth thing, bent and decrepit, with hair of

long and tangled gray, fiery sunken eyes, seemed born of another world than this. He bent his gaze with searching scrutiny full upon me.

The lad whispered: "It's old mad Michel; he lives up there," pointing to a tumbled

## I Cure Women

### OF FEMALE DISEASES AND PILES

I Will Cure You So That You Will Stay Cured—Women No Longer Need Submit to Embarrassing Examinations and Big Doctor Bills.

To Show Good Faith and to Prove to You That I Can Cure You I Will Send Free a Package of My Remedy to Every Sufferer.

I hold the secret of a discovery which has never failed to cure women of piles or female weakness. Falling of the womb, painful menstrual periods, leucorrhoea, granulation, ulceration, etc., are very readily cured by my treatment.

I now offer this priceless secret to the women of America, knowing that it will always effect a cure, no matter how long you have suffered or how many doctors have failed.

I do not ask any sufferer to take my unsupported word for this, although it is true as gospel. If you will send me your name and address, I will send you a trial package absolutely free, which will show you that you can be cured. The free trial packages alone often are enough to cure.

Just sit down and write me for it today. Mrs. Cora B. Miller, Box No. 137 Kokomo, Ind.

## As True as You Live

It is of supreme importance to keep the bowels regular and open. Unless they act regularly and thoroughly, it is impossible to remove the impurities that constantly accumulate in the system. These waste matters generate poisons that create Biliousness, Indigestion, Headache and many other complaints, that are directly caused by Constipation.

## BEECHAM'S PILLS

act pleasantly on the Bowels and Liver. A few doses will effectually cleanse the system of all harmful matter and gases. Taken as directed BEECHAM'S PILLS will establish a healthy and regular bowel action that will bring about an improved appetite, good digestion, sound sleep and a marked improvement in the general health.

BEECHAM'S PILLS have been before the public for over half a century. Their genuine merit has given them a high reputation as a reliable family medicine. They have come to be regarded as the "Little Doctor" on the farm. Always keep a box in the home and avoid serious diseases.

The present popularity of BEECHAM'S PILLS proves them to be of high merit. Old friends show their appreciation by continuing, year in year out, to rely solely on their remarkable curative and tonic qualities. No other medicine is taken and none is needed; and it is to the steady recommendation of all who take them that the widespread fame of BEECHAM'S PILLS is due.

Sold by Druggists at 10c. and 25c. Or mailed by B. F. ALLEN CO., 365 Canal St., New York City, if your druggist does not keep them

"THE BLACK WOLF'S BREED" began in the September first issue of UP-TO-DATE FARMING. The sixteen back numbers containing the first instalments will be sent for 35c. UP-TO-DATE FARMING, Indianapolis

down tower, "and believes himself the Count—the Count, and him long dead lying yonder in the well."

The boy shuddered and crossed himself.

The old man gazed steadily at me for some moments then bowing low, he cried:

"Hail! Son of d'Artin! Hast come to view thine own again? Let us into the walls."

"Let us go, Monsieur, quick," urged the lad, tugging at my coat, "it is late."

The dusk in fact was coming on apace and climbing shadows crept round the grotesque masonry. Unheeding the lad's fear, I was strongly impelled to talk with the daft creature. It was an impulse born not wholly of idle curiosity. I felt strangely moved.

"What do you want of me, old man?" I asked.

"I am Henri d'Artin, by murder's hand laid low; I would tell you much."

"Let us go, Monsieur, let us go. He speaks of unholy things," the boy pleaded fearfully. Meeting no response, he turned and fled down the slope, away in the twilight beneath the trees.

"Dost hear the clanking arms, the rolling drums of war? List unto the shouts, the cries within. Does not know it is the day after the feast of the most Blessed Saint Bartholomew?"

The man's wild earnestness fixed a spell upon me, and to the end of his narrative I listened until the tale was done. I can not hope to set down here as I heard it what the madman said, nor to have my lines breathe forth the vigor of his speech. Carried beyond mortal energy by his frenzy, overmastered by some mysterious power of which we men know naught, he threw into his strange, weird story a life and action which entered my very soul. And as he spoke he seemed to live through the scenes that he so vividly described. It was as though grim drama were being enacted for my enlightenment. So well as I can tell it, the tale ran thus:

On yesternorn my wife, my daughter and little boy, committed to the charge of old Gaston, had driven into Rouen to spend the day. I rode along after them to learn the news from Paris. We of the Reformed Faith hoped for great things from the meeting of our leaders with the Duke of Guise and the Queen Mother, for King Charles seemed kindly disposed toward us. But, God of Mercy! what scenes there was in Rouen; everywhere was slaughter, everywhere was murder. I found my carriage overturned in the streets, covering the dead and mutilated bodies of wife and daughter; the babe, unhurt and unnoticed in the carriage, had escaped. Throughout the city were prowling bands wearing the white cross in their caps, the white sash on their arms, which designated the followers of Guise, and with cries of "Death to the Huguenots" and "No quarter to the enemies of Holy Church," they slew without mercy. I had now no idea but to put my boy in a place of safety, and with him before me rode straight for the nearest gate. I passed unmolested through the streets, and by avoiding the public places, drawing out of the way of murdering bands, thought to evade them and reach the river gate south of town. My whole soul revolted at leaving the bodies of wife and daughter in Rouen, but the living child must be considered before the dead. At the turn from out the obscure Rue St. Croix into the open square at Vieux Marche I heard a shout, "Here he is, this way," and saw a man at arms stationed in the square beckoning to his comrades who came clattering down the Rue de Crosne. This blocked the path along which I intended to leave the town.

Riding at their head I recognized my old time enemy, my half brother, Pedro Ortiz, a man of whose prowess and cruelty terrible stories were told.

Fight willingly would I have paused to give him fight, but for the babe. The fellow who had raised the cry now threw himself full in my way with the evident purpose of engaging me until the others came up. I made straight at him, but he stood his ground bravely, and encumbered as I was with the child, he succeeded in wounding me twice before I could pierce him through the throat and drop him from his horse. Verily, his courage was worthy a better quarrel.

This, in full sight of the oncoming band, fixed their attention, and raising the shout of "Death to d'Artin," they spurred their horses to a gallop. I had barely disappeared down the deserted Rue Cornelle when they debouched into the square, spreading out and circling round as hounds hunt upon a scent. Here they were at fault, not knowing whither I had turned among so many narrow and irregular streets. Before they found me again I was well upon the high road to Cartillon. The superior speed of my horse gave me easily the lead.

I soon overtook Gaston, drawn aside in the bushes, wounded and bleeding, waiting for me. At first I upbraided him fiercely, but a frightful gash across his head, dabbling his gray hairs in blood, stopped my wrath. On the ride home he told me of the day's disaster. Pedro Ortiz and his cut-throats had set upon them in the name of the church. He was soon cut down and left upon the street, recovering consciousness only to find his murdered mistress lying dead beside him. He had then crawled away to warn me, for

the whole object of Ortiz seemed to be to take my life.

Gaston's distress was pitiful; as his mute eyes now and again sought mine, I could not find it in my heart to censure him. Having distanced my poorly mounted pursuers I stopped to water my horse at the spring before riding the few hundred yards to the gates of Cartillon. While yet waiting by the spring I was horrified to see men struggling on top of the great tower. Their arms, were thrown violently to the court-fight was brief and decisive. Two of them, one being Maurice my most trusted man at yard below. Of the others, some were killed, some overpowered and carried below again.

All of this took only an instant, for it appeared but the end of a desperate encounter which had been raging elsewhere. The time, however, was long enough for me to see that those of the larger party wore the white sash and cross which distinguished my assailants in Rouen.

"God in heaven, what murder's work have we at Cartillon?" I cried aloud in my misery. Then one who could answer came running toward me from the castle, gashed, with snapped sword in hand.

"Oh, master, master, the Catholics, the Catholics," was all he could speak out before he fell a senseless mass at my horse's feet.

Cartillon was not now a refuge. Immediately the distant sound of hoof

beats came loud and louder yet, from the direction of Rouen. Ortiz was coming.

"Quick, Gaston, we must fly."

My overtaxed horse failed me now. Pulling the rein he only sank slowly to his knees, and after a few spasmodic twitches, stiffened out forever upon the rocky road. I stood erect a moment, child in arms, irresolute. There was short shrift to think. My blood rebelled at flight.

"Here, Gaston, take the boy; hide in the wood. Carry him to the Abbot of Vaux, and conjure the good priest, by our fathers' love and ours, to save my baby."

Gaston had hardly passed from sight among the trees before a dozen well-armed horsemen, bearing the same white cross in their caps, spurred round a curve in the forest road, coming suddenly upon me beside my fallen steed. Sword in hand, I fronted them, determined, come what would, to fly no further. The evil face of Ortiz shone with gratification at so unexpectedly finding me alone.

"Now, yield thee, sirrah," he cried, as his men surrounded me. A quick sword thrust through the body of his horse, brought him to the ground.

"Not yet, thou slayer of women; here, upon equal footing, thy life shall pay for those of wife and child."

(To be continued)

# MYSTERIOUS POWER OVER DISEASE

## Wonderful and Miraculous Cures Performed by a Mighty Healer

### At Last There Seems to Have Been Discovered the Secret of Long Life and Perfect Health

(From Hearst's Chicago American)

FORT WAYNE, IND., (Special Correspondent) In response to numerous requests your correspondent called on the now famous Dr. James W. Kidd to learn, if possible, the secret of the mysterious power by which he was effecting so many wonderful cures. Dr. Kidd was found at his office busily engaged in answering the hundreds of letters of inquiry which he is daily receiving from all over the world regarding his remarkable discovery.

"It is hardly necessary to say that I am busy" said the doctor. "In those files are thirty-five thousand letters that we received and answered last month, but I am always willing to explain, as far as possible, my discovery, especially to newspaper men, because I know that they will publish the information, and I want the whole world to know that there has at last been discovered a remedy which will cure every ailment."

Will it cure every case?  
"It will cure every disease that I have been called upon to treat in my experience in thousands of cases, and has positively cured thousands of afflicted people who thought that they were beyond all earthly help."

What do you call your discovery?  
"The Elixir of Life." Dr. Kidd here showed the correspondent a number of small egg shaped capsules containing various colored liquids in which floated small tablets, and said: "Doctors have known and used nearly all the remedies which constitute my discovery for years, but the proportions and the method of compounding are my secret."

Do the doctors accept or use your discovery? was next asked.

"Not as a rule, because I do not care to explain or give my secret to them. It is the result of a lifetime of study and experiment and naturally I am jealous of the honor which it brings me."

Do your patients seem to appreciate what you do for them?

"Yes, indeed. In this set of letter files are thousands of letters from grateful cured patients, and I am receiving more every day. They are the greatest source of pleasure and satisfaction to me, and the only pay that I ask for the years of study that this discovery cost me. Here are a few which are particularly interesting to me, because they are patients whom I cured two years ago, when I first made my discovery, and before I was as sure of the results as I am now. They are all enjoying perfect

health now. You may publish as many of them as you like, as I have their permission."

Your correspondent copied the following extracts word for word, from a few. The following from Miss Sarah Penington, Milton, Iowa, tells a thrilling story of her cure: "It does not seem possible that a person paralyzed as I was could be cured in 18 days. When you got the statement of my case, I was perfectly helpless, had to have a friend write to you in my name. Now I feel that I am cured. I will always praise and thank Dr. Kidd for what he has done for me. You cured me when others had given me up to the grave."

A. C. Blair, a prominent attorney of the firm of Blair & Green, Charleston, W. Va., writes as follows: "I received your treatment for nervousness, indigestion, stomach, kidney and bladder trouble, twenty days ago. It is truly 'The Elixir of Life.' I am agreeably surprised at the wonderful result. I have suffered for more than five years and was getting worse all the time. I have improved daily since beginning your treatment. I now feel ten years younger. Instead of having to pull myself up the court house steps by the railing I now run up as I did ten years ago." Ten days later Mr. Blair reports as follows: "I am restored to perfect health, sleep well, eat hearty, digestion good, kidneys and back cured, nerves in fine shape."

Your correspondent was shown hundreds of other testimonials telling of miraculous cures of apparently every disease with which man or woman was ever afflicted, and was firmly convinced that Dr. Kidd only too modest in his claims for his marvelous discovery.

Can your "Elixir of Life" be used by patients at home?

"Yes, with my instructions and with equally as good results."

Is it true that you are giving away treatments to all applicants?

"Yes, and I expect to continue until its virtue is known all over the world. You can tell your readers that I will send every sick or afflicted person a course of treatment prepaid especially for their case by mail postage paid and absolutely free. To be sure of personal attention ask them to describe their case and address my private office as follows: Dr. Jas. W. Kidd, 83 Baltes Block, Fort Wayne, Ind."

As the doctor asks for no money, it would seem that every reader afflicted in any way, no matter the disease, should take advantage of this liberal offer.

# WHAT IS YOUR EXCUSE?

**IF** it is offered to you, OFFERED TO YOU FREELY, and you do not accept, what is your excuse? If you are offered happiness and refuse it, WHAT IS YOUR EXCUSE? If some one offers to SUPPLANT misery, suffering and distress with peace, comfort and enjoyment of life, and you refuse it, what is your excuse? WHAT IS YOUR EXCUSE if you refuse to accept the offer of a package of Vitae-Ore on thirty days' trial—YOU TO BE THE JUDGE? The Theo. Noel Company, of Chicago, who make the offer, take ABSOLUTELY all of the risk. YOU HAVE NOTHING TO LOSE. You are to be the judge. If you are not satisfied, if you do not want to pay for the package, if you think you should not pay for it, you are NOT ASKED to pay for it. What is your excuse?

YOU WANT HEALTH; your family wants you to have it; Noel, the discoverer of Vitae-Ore, wants you to have it; the Company wants you to have it; the editor of this paper, your friends and your associates, ALL want you to have it. VITAE-ORE OFFERS IT TO YOU, offers it just as plainly as though it could be placed on a platter and brought to your table. The Theo. Noel Company is the waiter, ready, willing and anxious to serve it to you. You have but to ask, but to say the word, and you will be helped to your share—A GOOD SHARE. How can you refuse? What is your excuse? You are to be the judge! Read our special offer!

## WHAT VITAE-ORE IS!

Vitae-Ore is a natural, hard, adamantine, rock-like substance—mineral—ORE—mined from the ground like gold and silver in the neighborhood of a once powerful but now extinct mineral spring. It requires twenty years for oxidation by exposure to the air, when it slacks down like lime and is then of medicinal value. It contains free iron, free sulphur, and free magnesium, three properties which are essential for the retention of health in the human system and one package—one ounce—of the ORE, when mixed with a quart of water, will equal in medicinal strength and curative value 800 gallons of the most powerful mineral water drank fresh from the springs. It is a geological discovery, in which there is nothing added or taken from. It is the marvel of the century for curing such diseases as

Rheumatism, Bright's Disease, Blood Poisoning, Heart Trouble, Dropsy, Catarrh and Throat Affections, Liver, Kidney and Bladder Ailments, Stomach and Female Disorders, La Grippe, Malarial Fever, Nervous Prostrations and General Debility.

as thousands testify, and as no one, answering this, writing for a package will deny after using. VITAE-ORE has cured more chronic, obstinate, pronounced incurable cases, than any other known medicine, and will reach such cases with a more rapid and powerful curative action than any medicine, or doctor's prescription which it is possible to procure.

## MEDICAL SCIENCE HAS FAILED

to improve upon, or even equal, the remedies found in a free state in HEALING MINERAL SPRINGS. Physicians, the oldest and best, the newest and learned, acknowledge this to be a fact when they encounter a disease which is not amenable to the action of drugs, they pack the patient off to CARLSBAD, SARATOGA, BADEN, there to drink the waters which contain the essential properties for the restoration of health, and the patient returns, FRESH, HEALTHY, IN MIND AND BODY. If the sufferer cannot afford the trip—and few but of the wealthy can—they must continue to suffer, as the waters deteriorate rapidly, and when transported fail to procure the desired results.

A LETTER TO THE THEO. NOEL COMPANY, CHICAGO, will bring a healing mineral spring to your door, to your house, your chamber—will bring to you VITAE-ORE, a mineral spring condensed and concentrated, a natural God-made remedy for the relief and cure of the ills with which man is afflicted. Why continue to suffer when this natural curing and healing Ore, nature's remedy, can be had for the asking, when the poor as well as the rich can have the benefit of healing springs?

## READ THIS SPECIAL OFFER!

**WE WILL SEND** to every subscriber of UP-TO-DATE FARMING, or worthy person recommended by a subscriber or reader, a full-sized ONE DOLLAR package of VITAE-ORE, by mail, POSTPAID, sufficient for one month's treatment, to be paid for within one month's time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs and dopes of quacks or good doctors or patent medicines he or she has ever used. READ this over again carefully, and understand that we ask our pay only WHEN IT HAS DONE YOU GOOD AND NOT BEFORE. We take all the risk; you have nothing to lose. If it does not benefit you, you pay us nothing.

## YOU ARE TO BE THE JUDGE!

VITAE-ORE will do the same for you as it has for hundreds of readers of UP-TO-DATE FARMING, if you will give it a trial. SEND FOR A \$1 PACKAGE AT OUR RISK. You have nothing to lose but the stamp to answer this announcement. WE WANT NO ONES' MONEY WHOM VITAE-ORE CANNOT BENEFIT. YOU ARE TO BE THE JUDGE: Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it, would hesitate to try VITAE-ORE on this liberal offer? One package is usually sufficient to cure ordinary cases; two or three for chronic, obstinate cases. WE MEAN JUST WHAT WE SAY in this announcement, and will do just as we agree. Write today for a package at our risk and expense, giving your age and ailments, and mention UP-TO-DATE FARMING, so we may know that you are entitled to this liberal offer.

## ITS CURES ARE PERMANENT

It Isn't the Medicine Which Does You SOME Good Which Counts, But the Medicine [THAT CURES! VITAE-ORE is That Kind! It Cures and Its Cures are Permanent!

## THIS PROVES IT

SPRINGFIELD, MO.—I was attacked with Pneumonia, attended by Fever, and when the Fever was broken up, Rheumatism settled in my left knee so badly that I was hardly able to walk except on crutches. I saw an advertisement of Vitae-Ore, sent for some and used it according to directions. Before one package was entirely used, I DISCARDED THE CRUTCHES and took to a cane. I sent for another package, used it and am happy to state that I now walk the earth A MAN FREE FROM RHEUMATIC AFFECTIONS. I honestly believe it to be the best medicine on earth for most of the ills flesh is heir to. This was two years ago and I have had no return of the trouble, and am willing to have this published for the benefit of suffering humanity. Every one here that has used Vitae-Ore is well satisfied with it, and all speak very highly in its praise.  
JEREMIAH W. BUTLER, 2200 Springfield Ave.

If you are sick with any disease of the Circulation, the Stomach, Liver, Kidney, Bladder or Throat, VITAE-ORE WILL CURE YOU.

NOEL is the discoverer of Vitae-Ore, has been familiar with its wonderful properties for two generations, has watched its remarkable action in thousands upon thousands of cases and HE OUGHT TO KNOW.

NOEL SAYS he doesn't want your money unless Vitae-Ore benefits you. NOEL is old enough to know what he wants. NOEL says that the Theo. Noel Company has instructions to send a full-sized one dollar package on thirty days' trial to every sick or ailing reader of UP-TO-DATE FARMING who requests it, the receiver to BE THE JUDGE, and not to pay ONE CENT unless satisfied; and NOEL is the President and principal stockholder of the Theo. Noel Co., and what HE says goes. Here is his Signature on it.

*Theo. Noel*

## NOT A PENNY UNLESS BENEFITED!

This offer will challenge the attention and consideration, and afterward the gratitude, of every living person who desires better health or who suffers pains, ills and diseases which have defied the medical world and grown worse with age. We care not for your skepticism, but ask only your investigation, and at our expense, regardless of what ills you have, by sending to us for a package.

# UP-TO-DATE FARMING

*A Magazine of Up-to-Date Methods on the Farm  
For Up-to-Date People and those who want to become Up-to-Date*

MAY 15 1904

50 CENTS A YEAR

J.A. EVERITT, PUBLISHER, INDIANAPOLIS

# HOW TO CO-OPERATE AND WITH WHAT BENEFITS

This is a great subject for farmers. Every other important business is organized and co-operating. There is more reason why farmers should co-operate than for any other class. Also, contrary to the general opinion, they can co-operate with as definite results and greater benefits than any other class. You can learn how in the new book,

## THE THIRD POWER, Farmers to the Front

J. A. EVERITT, Indianapolis, Indiana

This is the greatest book ever written. It should be read by every person in America, and particularly by farmers. Read a few extracts from many letters.

Here is indeed a great book for farmers and for all people interested in social problems from the farmer's viewpoint. \* \* The book is ably and forcibly written, displays an intimate acquaintance with agricultural conditions. \* \* It is the thought and purpose of a man of affairs and a patriot as well that reveal themselves in the pages. "THE THIRD POWER" ought to do much to stir up our American farmers to a sense of their power and responsibility as citizens of a republic and conservators of our liberties. \* \* I most heartily recommend this book, particularly to farmers everywhere.

THE AMERICAN CO-OPERATOR,  
Lewiston, Me.

It will create a new mind in the reader.

W. P. BRYANT,  
Corona, Cal.

\* \* \* "THE THIRD POWER" teaches the more humane idea that co-operation is the life of trade. It is a sign that the thoughts and purposes of men are changing for the better. \* \* Thoughts and efforts are heaving the world's wide breast, and betoken coming changes that shall bring about better things for humanity. THE SUNDAY PATRIOT,  
Jackson, Mich.

"THE THIRD POWER" is worth ten times its cost. Its teachings are plain and explicit; its objects are noble and just; its truthfulness cannot be disputed. It is a book that should be in every home in the country.

H. F. MARCUSON,  
Harpers Home, Va.

"THE THIRD POWER" is ripe fruit—it is wheat without chaff. \* \* The manner of treatment is bold and original, with new and valuable thoughts scattered all through. \* \* The one opened question—that of united action and consequent success, is laid down at the farmers' feet, and the road is pointed out with no uncertain hand. It shows that a mighty effort is being made to get the forces on the farm in line for the great victory that is within their grasp, when they shall rise up as one man, and planting themselves squarely in the highway of iniquity, shall stand there as a great tower of strength—the greatest power on earth, the grand and new—the third power. A power that shall cause a parting of the ways; that shall obtain equity for the farmers because it is their right. "THE THIRD POWER" is a book that must be read to be appreciated. \* \* \*

HENRY BURNS GEEB,  
Nashville, Tenn.

\* \* To my mind "THE THIRD POWER" has only one equal in late economic literature, viz. Edward Bellamy's "Looking Backward," which contains idealisms without immediate practicability. "THE THIRD POWER" may be called the "Looking Forward" for American farmers with all its ideals immediately practicable and possible. \* \* Many a farmer will be started to thinking on sound lines by its perusal. \* \* The principles it teaches must be known, understood and put in practice ere farmers will come to their own, and agriculture be put on a sure footing for prosperity. It should be studied.

C. H. TAYLOR,  
Gillaspie, Va.

I would not be deprived of the valuable information contained in this "Gem of the Library" for any money consideration. I have boys now merging into manhood, and in this, if I can leave them nothing else, I will give them a legacy far superior to dollars and cents.

J. M. DUNLAP,  
Vicksburg, Ky.

I believe it is the most thorough and complete analysis of the present industrial condition, and in my estimation it proposes the most reasonable and practicable remedy for correcting the evils that now exist industrially, politically and economically, of anything I ever read.

R. R. SMITH,  
Howell, Mich.

It is the only exact presentation of the actual conditions effecting the farming class, ever written.

W. C. PITTMAN,  
Hillyard, Wash.

It is a strong and masterful portrayal of the benefits to be derived by farmers through co-operation.

GEO. G. WINANS,  
Hamburg, Mich.

It is just the right thing to set farmers to thinking. Your statements, statistics and deductions are beyond refutation.

EDWARD MURPHY,  
Crary, N. D.

\* \* \* It aims at something higher than merely mercenary results. It aims at giving agriculture its proper place amongst the noblest of industries, and enable farmers by co-operation to secure rights and benefits to which they are justly entitled, but which they can never expect to gain without organization.

THE JOURNAL,  
Indianapolis, Ind.

"THE THIRD POWER" is prompted by a desire on the part of the author to have farmers reap the profits of their toil instead of the speculators and brokers. The manner of treatment is bold and original. The style is fresh and interesting. \* \* The entire book possesses the deepest interest and value, not only for the farmer—the class most deeply concerned—but all those who are interested in social problems.

AGE HERALD,  
Binghampton, Ala.

It is a plain, straightforward, forceful, convincing argument, and since an opinion is about, that either a farmer's union or a land trust is the inevitable outcome of present economic tendencies, capitalists and financiers as well as farmers and labor organizers are interested in looking the matter straight in the face. The ordinary single handed farmer, \* \* is "sweated" in a manner not dissimilar to the slaves of the sewing machine. The producers of food and the makers of clothes—that is to say the two most indispensable laborers in the organization of society, and therefore theoretically the most independent—appear to be the most oppressed; they can earn only a bare subsistence. \* \* \*

BROOKLYN EAGLE,  
New York.

I cannot find words to express my opinion of "THE THIRD POWER." To say that it is the best work on the agricultural industry I have ever read, but

feebly express my opinion of it.

J. B. THORBUEN,  
Sec. State Board of Agriculture, Guthrie, Okla.

"THE THIRD POWER" opens up a new field of literature. The object of the book is the betterment of conditions now existing among farmers of America. The argument, though radical, is clear, forceful and concise. The book makes interesting reading. That the author has given much attention and study to the questions under discussion is shown in the way he has handled the subject. \* \* He does not write modestly but makes his assertions boldly and in language simple but strong. His statements may be practical, but they are decidedly startling. Laying all this aside, it is safe to assert that the book will be read with interest.

ADVERTISER, Newark, N. J.

"THE THIRD POWER"—The attention of every person interested in agriculture should be directed to this work. \* \* The present discouraging conditions of agriculture are forcefully discussed. The benefits of industrial co-operation are clearly and logically presented, and the opportunity is given to every farmer to throw off sluggishness and indifference, and assist in promoting one of the greatest and best movements of the age. The rapidly increasing popularity of the society (which "The Third Power" represents) indicates that the commercial emancipation of the long ignored and down trodden farmer has begun and that the rights of the ruralists will not only be defended but respected.

TIMES, Albany, N. Y.

"THE THIRD POWER" is apparently published in the interest of the new farmers' movement, The American Society of Equity, though not in a narrow sense. It is really a general plea for justice to the producer of what is most important for man's material welfare. Mr. Everitt's book is of special interest, as representing the spirit of the hour in favor of co-operation for mutual protection, with special reference of course to the farmer.

BROOKLYN TIMES,  
Brooklyn, N. Y.

There has been much written on the benefits of organization and co-operation by farmers in late years, but "THE THIRD POWER" is the most ambitious effort yet made as well as the most complete. It is written with a thorough understanding of the subject in hand. \* \* In the space allotted for review it is impossible to set out even briefly the line of argument the author follows, but the reviewer can say without over-stepping proper limitations, that the book is one that every farmer can read with profit, and one that politicians would be wise to read and ponder.

SENTINEL, Indianapolis, Ind.

"THE THIRD POWER" is well written, an intelligent, earnest appeal to the agricultural class to rouse themselves and become the power in the world that their labor entitles them to. There can be no manner of doubt that the place of the practical farmer in the general economy of things is not what it ought to be, and not what it might be. The only reason they are not what they might be is because he has not taken it. EVENING TELEGRAM,  
Philadelphia, Pa.

Will these statements start you to thinking? Will they cause you to act and secure the only work ever written than tells you all the troubles affecting agriculture; also, clearly points out the remedy and provides the plan for applying the remedy? All farm problems are solved by the Third Power.

It will be a crime to refuse knowledge and light on dark subjects that generations have waited for when it is within your reach. If the owner or operator of any farm will not rise above any sluggishness and indifference that may dominate him and reach out for this fruit of knowledge, we urge the boys to send for THE THIRD POWER so they may not live in ignorance and under the uncertain, vicious system that has prevailed with agriculture in the past. Or if the wife and girls want less of drudges and more of pleasure and luxury in their farm home let them see that a copy of THE THIRD POWER is obtained without delay.

## SPECIAL OFFERS

**NO. 1. FOR 75 CENTS** and return of coupon we will send Up-to-DATE FARMING one year and a paper cover copy of "THE THIRD POWER" all post-paid.

paid. This is the offer you should accept as you will prize this book and want it to last many years. Also you may want to send it around amongst your neighbors.

Indianapolis, April 25, 1904

To whom it may concern:

I, S. E. Cullum, being duly sworn upon my oath depose and say that I was in charge of the press on which was printed the April 15, 1904, number of Up-to-Date Farming and that the number of complete copies printed was 100,000. S. E. Cullum.

State of Indiana } Before me, Charles E. Brigham, a notary  
Marion County } ss public personally appeared S. E. Cullum and  
wears to the foregoing. Charles E. Brigham.  
[Seal] Notary Public.

Dollar Wheat!

Renew your subscription at once, if not already attended to.

Keep your membership alive by keeping your subscription alive.

What are you doing to guarantee the price when your 1904 crop is ready?

Hogs are going down in price. Cattle are not going up. Read how to make price on these crops in this paper.

It is the duty of farmers to frown on everything that opposes their attempt to control marketing to make the price.

The editors who teach that farmers have no right to control their marketing to make their price may fool some of the people for awhile, but they can't fool them forever.

### ON TO KANSAS

National Organizer C. O. Drayton will make his headquarters in Kansas for an indefinite length of time. The A. S. of E. is determined that the 20 cents per bushel that the speculators are taking off of wheat for future delivery shall go to the farmers; or that the new crop of wheat shall bring \$1.00 instead of 80 cents. This will be a battle royal, and Kansas will be the principal battle ground. If Kansas has its usual large crop, we can say "as Kansas does on wheat so does the county."

Mr. Drayton's headquarters will be at Great Bend, Barton Co., the heart of the great wheat section, and a Mass meeting of farmers from Barton, Rush, Pawnee, Stafford and Rice counties will be held at the Great Bend, Saturday, May 21st, to inaugurate the campaign. The National organizer will make dates for other meetings. Correspond with him.

The speculators are selling your '04 wheat crop at 80 cents a bushel for September delivery. What do you think of that?

A million farmers can control marketing, make prices, and, in short, regulate or revolutionize the business of this country.

Farmers are on the right track at last. They will come to the front if enough of them accept this paper as their counselor and guide.

With controlled marketing "heavy receipts" and "light receipts" will be conditions of the past. Uniformity of receipts and prices will then prevail.

Good prices cannot be made and maintained by a large capital. Controlled marketing is the only way on earth to regulate the price.

A granary on the farm is many per cent. better than an elevator, and less expensive.  
Build that granary.

National Organizer C. O. Drayton is in Kansas. What Kansas does on wheat, so does the country. Therefore, let the Kansas wheat growers organize.

State Organizer George G. Winans is giving the bean trust something to think about. The bean growers must have a fair price. The A. S. of E. will get it for them.

Officers of local unions are requested to report to the National Union all matters of importance. They are also urged to see that other unions are organized.

If we can prevail on each local union to organize another, and these new ones to organize another, the million would soon be reached. Why could not this be accomplished?

Much has been said of the collective products of our farms and the collective wealth of our farmers. Now let some person figure the individual wealth and how much they make clear on a year's operation.

## GOOD PRICES FOR BEANS

Bean growers are organizing. They can get a fair price for the 1904 crop. If you live in a bean growing district will you be indifferent to your interests? Won't you get active and help? See your neighbors, agitate the matter, and send for particulars as to how to organize. If you live in Michigan, send to Geo. G. Winans, State Organizer, Hamburg, Mich, otherwise send to National Union, Indianapolis, Indiana.

## POULTRY AND EGGS

Anything that contributes to the income of the people, the industrial people, is a proper subject for the application of equity in marketing, pricing and distribution. To this class belong poultry and eggs and all poultry products. The poultry interest of the United States is much greater than those who have not considered it, realize. The census of 1900 gives the poultry statistics for the calendar year 1899, and a comparison with that of the preceding census shows that this is not only a great industry, but that it is a rapidly growing one and very profitable. The egg production in 1899 was 1,293,818,144 dozen, which was 474,095,228 dozen, or about 36 per cent. greater than was produced in 1889.

The value of the poultry as shown by the census of 1900, was \$85,794,996, and George F. Thompson, of the U. S. bureau of animal industry, figuring from the census reports, estimates the value of the poultry held as capital stock and kept for breeding purposes at \$70,000,000. This stock, he says, produces for market in one year, poultry worth \$136,891,877, and eggs worth \$144,286,370, or a total value of \$281,178,247, an income on the capital invested of 400 per cent.

To further show the importance of the industry we may indulge in a few comparisons. Mr. Thompson, in the Year Book of Agriculture for 1902, declares that the value of the eggs produced in 1899, the year preceding the taking of the census, and which the census statistics cover, exceeded the combined product of the gold and silver mines of the United States during any year since 1850, with a single exception, that of 1900. The poultry alone, leaving out the eggs, exceeded the product of the gold and silver mines for every year since 1850, with but two exceptions, those of 1899 and 1900, the combined value of eggs and poultry for 1899 exceeded the annual gold and silver product of the world since 1493, excepting the two years 1898 and 1899. The poultry and eggs of 1899 exceeded in value the total exports of animals and animal products for all the year up to and including 1900. These exports cover all the animals, hoofs, horns, bones, glue, bristles, grease, hair, hides, hide cuttings, boots and shoes, leather of all kinds, dairy products, sausage casings, and wool and wool manufactures. The poultry sold in 1899 was worth \$91,168,138 more than all the wool sold that year, and the eggs produced were worth \$98,563,232 more than the wool, the entire wool product being less than one-third of the combined poultry and egg product. Again, the poultry and egg product of 1899 was worth \$91,304,937 more than all the animals slaughtered on the farms during that year.

Mr. Thompson concludes by saying that if the egg crop were loaded into a single train of cars at their ordinary capacity, the train would be 868 miles long, or would extend from Chicago to Washington, and then have several cars left on the siding.

Eggs, at the time of which we are writing, 1900, bore a higher price in Alaska than in any other place under the American flag, being 43 cents per dozen; Hawaii comes next at 29 cents. Of the United States proper, Nevada rates highest at 20.8 cents per dozen, and Texas lowest, at 7.7 cents. These are the averages for the year. The average

farm price for the whole United States was 11.15 cents per dozen, and the number of eggs per capita was 203, which at the average price per dozen equaled \$1.89 for every man, woman and child in the country.

What we would like to get at is the range of prices during the year, but we have no data at hand from which to determine that, but it is known to be very great. While it is true that eggs are produced more or less every month in the year, it is also true that the egg has its harvest time—the spring of the year when the bulk of the eggs are produced and the minimum price reached. Here is another clear case of flooding the market at one time and leaving it bare at another, thus giving the producer the lowest prices when he has the article for sale, and making the highest price when some one not the producer gets the benefit. In other words, the bulk of the year's supply of eggs goes into the market in about three months instead of being furnished throughout the year as consumption requires them.

Can this be otherwise? We think so. Millions of eggs are now bought in the market centers during the 'egg harvest' when prices rule low, and kept until the minimum of egg production is reached and prices go to their highest; they are then put upon the market at an immense profit—a profit of millions of dollars which equity demands should be fairly distributed among the poultry raisers.

But this involves cold storage, which we believe is entirely practical even in rural communities. Local cold storage would not only be worth millions to poultry raisers, but it would be equally valuable to fruit growers. We urge its discussion in the local unions. The university of Illinois has been experimenting with cheap cold storage with a view to the very use of it we are discussing, and at an early day we hope to place before our readers the results of those experiments, which we are assured, have been entirely successful.

## WILL BIG CROPS LOWER PRICES

Some who see the reasonableness of the claim that farmers may control the marketing of their own products, fear that bumper crops would break the prices and defeat their plans. Let us go to the record. We take wheat as a product of universal demand, and yet one whose consumption has a definite limit; when the world's hunger is appeased no more will be eaten. Hence, this is the best possible product to take for a test, though the same facts and reasoning apply to all others.

"The wheat crop of the world for 1902 was 3,124,422,000 bushels, the largest ever produced." We quote from the Year Book of the Department of Agriculture for 1902, page 768. And also, "The crop of the United States totaled 670,063,000 bushels. Prices held steady and higher than during the past ten years, excepting the wide fluctuations in 1897 and 1898. The monthly average prices in Chicago ranged high, and the yearly average was about 74½ cents. Other leading markets ruled steady and strong."—Same authority.

While it is true the crop of 1902 was not the largest ever produced in the United States, that of 1898 being 675,149,000 and that of 1901, 748,460,000, the crop of that year was the largest world crop, and, following upon the heels of the bumper United States crops of 1901, makes that year's crop a supreme test of the question at the head of this article.

Note that the unequaled crop of more than three billion bushels, preceded as it was by the largest crop ever produced in the United States, was all taken, and as the Secretary of Agriculture declares, "prices held steady and higher than during the past ten years." In the face of these facts bumper crops need not be feared.

Besides our contention is so reasonable and so simple. There can be no over-production until every hungry soul is satisfied, and this point has never yet been reached, because no crop has ever been produced that has not been consumed, and all through the year of the largest one prices ruled "steady and high." And this under the prevalent gambling system of price making and the ruinous uncontrolled flood

method of marketing—of throwing a year's supply on the market in a few month's time.

Our contention is that the crop of a year should come from the centers of production in quantities sufficient, and only sufficient to meet the current demands in the centers of consumption, and that the price paid the producer and that charged the consumer should be equitably based upon a comparison of normal consumption with actual production for that year, the difference between the price paid the one and charged the other being only the necessary cost of getting the raw material from the producer, and the finished product to the consumer, said cost of course to include fair remuneration for all labor and processes between the two.

Whatever others may say, this is simple; it is equitable and it is right. Bumper crops will not interfere with the plans of EQUITY.

### STILL HARPING, ETC.

From newspapers whose editors feel that they must say something, we frequently receive clippings to the effect that there must be some ulterior motive behind the A. S. of E., that some particular person is to reap special benefits from it. It is strange that this "African in the fuel" is never thought of by these editors when great schemes are being promoted to plunder the farmers and "all the rest of mankind." No "ulterior motives" behind the steel trust, the packing combine, the stock yards monopoly, the beef trust, the railroad mergers, the grain pits—the whole satanic brood. These are all right because they are bred in the Godless womb of insatiate Greed and nursed from the paps of universal plunder. But let any one suggest the right of agriculture to strike a blow in self defense, and there is a "negro in the woodpile," and claret in the startled editorial eye. It takes neither brains, nor sincerity, nor honesty to say "thief;" any idiot may be taught to do that. But if a man of sense indulges in that kind of "argument," it may be taken for granted that he has sought every other possible field of opposition, and finding no point of attack, falls back upon the "fool's argument."

If anything ever be done for the farmer, it must be done by concentrated action and co-operation, that co-operation must be directed from a central headquarters, from which the organization must be pushed to the remotest points occupied by the interests to be served, and the expenses of this work must be met by the beneficiaries. This is all that is asked by the A. S. of E. Much of the great work that is being done, is done absolutely without reward or the hope of it, other than the consciousness of duty done and the improvement of the condition of the hardest worked and most niggardly rewarded of God's people.

When Greed sets out to gratify its lust it at once inaugurates schemes of capitalization—incorporates, issues stock, sells bonds—piles up money. Not so the A. S. of E. It goes about its work unselfishly, modestly, economically, but effectively, with no financial schemes in its curriculum.

But why write these things? A fool's argument deserves no answer, and the wise who can find no other may well be left "alone with his glory."

### THE POSSIBILITIES.

"It is not among the possibilities to control the prices of staple farm products."

So says the editor of a more or less prominent farm paper. Ah, indeed! In the language of the thoughtful but doubting German, "Ish dot so?"

Up to 1492, it was "not among the possibilities" to guide a vessel out upon the western waters and discover a new world. In staid New England little more than two hundred years ago, it was "not among the possibilities" that witches should live within the pales of civilization; they must be hanged or burned. Before Franklin's days it was "not among the possibilities" to catch the lightning leaping from the clouds, and until Morse and Edison came it was "not among the possibilities" to make it click intelligence from one side of the earth to the other, or to talk in actual words to be heard by ears a thousand miles away; or to catch and hold it

until it makes light as day the darkest night. (It does seem to be among the impossibilities to illumine some editorial minds.)

There are so many things that, only a few years ago, were regarded by the wisest as "not among the possibilities" but which are now as common as breathing air, that prudent editors should be careful in putting things in the "not-among-the-possibilities" column.

Besides the matter of controlling the prices of farm crops is already an accomplished fact; it is done now, and has been done for years. But it is done by the wrong fellow, and it is sometimes controlled up and some times controlled down because there are two of him, one of him pushing up and the other pulling down. When the "push" part of him is strongest the price goes up; when the "pull" part of him is strongest the price goes down. What this double monstrosity has done and is doing is not among the impossibilities, and the farmers themselves, the producers and original owners of the staple farm products, can, by co-operative action, control the prices of those and all other products, and they can do it all the more certainly because there will be neither a pull nor a push in it, but a steadiness based upon equity, and a market supplied but not "glutted."

### THE TOBACCO QUESTION.

#### TO UP-TO-DATE FARMING.

I have just read an article in April number on Tobacco. I think the whole tobacco business is a curse to any people professing equity. You had just as well encourage the liquor business because a few farmers make a profit in growing the raw material. Statistics tell us that more money is being spent for liquors and tobacco than for bread and meat. If the people who are spending their hard earned dollars that way are getting equitable value, I wish you would show us Missourians, as we don't so see it.

B. F. WAMPLER.

Carthage, Mo.

Your strictures on tobacco are not without some show of reason, but that has nothing to do with the principle of equity, which is equality and fair dealing between man and man. It does not take hold upon the morals or the religion of a people; that is left to the preachers and churches. So far as the principle is concerned there may be equity (or the lack of it) even in the infernal regions, and if we were in that unhappy country and publishing a paper, we should condemn the big devils if they did not treat the little ones with fairness and equity.

What we mean to say is this: Our sympathies are with labor in whatever field. That the product is undesirable is no reason why the producer should be victimized by the greed which does much more to encourage its use than the toiler who works in the fields where it grows. We might cheerfully join our correspondent in a crusade against the use of the article, but we would begin at the other end of the line. We would much prefer to see a cabbage head grow where a tobacco stalk grows, or a hill of potatoes or a stalk of corn, but that it does not is no reason why any one's toil should be taken without equitable reward. While it is produced we demand that the producer be not robbed. If the tobacco growers of Kentucky received a just and equitable price for their product, it would not increase the use of it a particle, but it would enable them to buy a great many more of your Missouri mules.

### CO-OPERATION IN A NUTSHELL.

A KNOWN, EQUITABLE PRICE.

DON'T SELL UNTIL YOU CAN GET YOUR PRICE.

SELL ALL THE BUYERS WILL TAKE AT YOUR PRICE.

STOP THE MOMENT THEY WON'T TAKE ANY MORE.

The result will be controlled marketing; the demand seeking the supply; marketing a year's supply over a year to meet a year's demand. No temporary surplus as at present.

These things the farmers can do without an effort when a million or more receive the same advice at the same time about the same things. If you don't fully understand the matter send for pamphlet "To make a new country."

Buying co-operatively is not nearly as important as selling co-operatively. However, the advantages of co-operatively buying should not be ignored. Local unions can buy their binder twine, and many other things at wholesale prices. It is time now to consider these matters. Always give the local merchant the preference.

### THE TOBACCO CAMPAIGN

As announced in former numbers the campaign to organize the tobacco growers for profitable prices has been started. In fact, it is well under way and results are already apparent, as tobacco has advanced from two to five cents a pound, depending on grade. We will not claim that all of this is due to the campaign of the A. S. of E., but we do claim that the advance has all been brought about by the action of the farmers. This, if we are correct, proves the correctness of our claim that farmers are all powerful in making prices.

Tobacco was down to the lowest point that it was possible to force it—it was selling below the cost of production. No business could remain on this basis; therefore, many of the growers concluded to go out of the business; they did not sow plant beds, and those sown are very backward on account of the cold spring. Do the best they can there will be a short crop planted. Consequently prices would be higher. The trust and independent buyers saw this condition and knowing that tobacco bought at present prices would be good property if it did not go up, and would be very good property if it did go up, they suddenly became active. Instead of sitting in their office and waiting for farmers to come to see them, they are scouring the country to buy all the crops they can. This increased competition and urgent demand has made higher prices. Now the farmers are organizing to hold their crops for higher prices and we predict fair prices will prevail in a short time.

The progress of President Everitt and Asst. Nat. Organizer Sherman through Kentucky was really a triumphal march. At every county seat town or city crowds came to see and hear them. People came many miles in wagons and on trains. They came to hear the good tidings, learn the only practical plan of co-operating, and they also became members of the great army and then went home to organize all the other farmers into the A. S. of E. Kentucky farmers and business men are awakened as they never were before, and we look for an era of prosperity for that State never before surpassed.

James W. Lee, of Morganfield, has been appointed as general organizer for the Western section of the State, and Mr. Sherman will devote his time to the central and Eastern part until he finds the right man to turn the balance of the State over to.

We urge farmers who have their crops on hand to regulate and control the marketing, so the demand will seek for the supply. We don't take much stock in the claim of overproduction, and we predict when tobacco growers make a firm, united stand the buyers will want it very badly. Low price is not an indication of overproduction when the other people make the price. The farmers have been ground down to the last notch, so as to increase the bank account of those captains of industry who have no trouble to make the trusts and boards of trade pay.

#### NOTES

"At Morgansfield about three hundred members of the A. S. of E. were present. There are ten local unions in the county.

"At Dixon court was in session and we could have the use of the room only about an hour. More people wanted to hear than the court-room would accommodate. A strong union was organized and arrangements made to organize the county.

"At Henderson we struck a heavy snow storm that continued until afternoon. The attendance was light, but the interest high. We are much indebted to Henderson Local Union No. 1 for efforts that would have made the meeting

a record-breaker if the weather had not prevented. T. F. Barrett, Henderson, Ky., will take an active interest in the work in Henderson county.

"Owensboro is a city of 18,000 inhabitants and a great tobacco market. The merchants reported that last winter was the dulllest they experienced in many years on account of the low price of tobacco. The interest was intense in this movement. The meeting was the largest of the series. We were surprised at the number of members present, wearing the badge of the society. One organizer explained it this way: 'Well, Mr. Everitt, your paper comes into the country, the people read it, are converted to your plan of co-operation, and start out and get other members and organize a local union. The unions are springing up all over this section, just like plants from seeds dropped by the birds.' And thus we expect the A. S. of E. to spread all over the country.

"Cloverport was an extra meeting. Mr. Everitt was persuaded to stop over there and although without previous announcement or advertising nearly three hundred people assembled in the hall Saturday night to hear the true way to co-operate to control marketing and make prices. This section is well organized, under the leadership of E. D. Oglesbie, and the organization work will now go forward with a rush.

"Meetings have also been held at Sebree, Princeton, Hickman and Madisonville by Mr. Sherman. Future dates and places are as follows:

"Hodgensville, Larue county, Ky., May 4; Hardinsburg, Breckenridge county, Ky., May 9; Leitchfield, Grayson county, Ky., May 11; Brownsville, Edmonson county, Ky., May 12; Franklin, Simpson county, Ky., May 13; Bowling Green, Warren county, Ky., May 14; Gallatin, Sumner county, Tenn., May 16; Springfield, Robertson county, Tenn., May 18; Elkton, Todd county, Ky., May 19; Russellville, Logan county, Ky., May 20; Clarksville, Mont. county, Tenn., May 21; Hopkinsville, Christian county, Ky., May 23; Glasgow, Barren county, Ky., May 25; Munfordville, Hart county, Ky., May 26; Elizabethtown, Hardin county, Ky., May 27; Shepherdsville, Bullitt county, Ky., May 28; Bardstown, Nelson county, Ky., May 30; Springfield, Wash. county, Ky., June 1; Owenton, Owen county, Ky., June 4.

"All meetings will be held at 2 p. m., unless otherwise arranged for. Correspond with the National Union, Indianapolis on all matters relating to these meetings and of future appointments."

### PRICE THE GREATEST INCENTIVE

Questions for farm papers and Institute workers.

1. The average yields per acre of corn in the United States for ten years were as follows: 1888, 22.5 bu.; 1894, 19.4 bu.; 1895, 26.2 bu.; 1896, 28.2 bu.; 1897, 23.8 bu.; 1898, 24.8 bu.; 1899, 25.3 bu.; 1900, 25.3 bu.; 1901, 16.7 bu.; 1902, 26.8 bu. It can readily be seen that the average has not increased after all these years of teaching to increase production. Therefore how long will it require to bring the average up to 50 bushels per acre as it should be?

2. The average yield of wheat in the United States is 13 bushels per acre. The average price for 27 years 84c per bushel. The average yield is not increasing. How many years of teaching will be required to raise the average to 25 bushels, what it should be?

3. France is a country not as large as our State of Texas, yet it raises half as much wheat as the United States does. The average yield of wheat in the United States is 13 bu. per acre and the average price is 84 cents. The average yield of wheat in France is 37 bu. per acre and the average price is about \$1.25. Is not the encouragement of price more incentive to raise large crops than all paper, book and speaker instructions that can be given?

Again we request our subscribers and correspondents to give full address every time they write. When changing address give old as well as new address. These instructions are very important. If any subscriber receives more than one paper, notify us.

We have always claimed that the United States being the largest surplus producing country of farm products sets the price for the world, also we have contended that the price was set too low.

Years ago this country had a large export trade in farm products, particularly wheat, with France, Germany, Italy and other European countries, but we set the price so low that farmers in those countries could not compete and they imposed heavy tariff taxes against our grain. On wheat, France imposes a tax of 36.8c. per bu., Germany 32c., Italy 36.8c., etc. The result was we lost our export trade to those countries, the farmers of those countries were encouraged by the high prices the tariff made for them, and they have brought their farms up to produce averages of 35 to 38 bushels per acre.

There is only one European country that now takes a large quantity of our grain. It is England and she is agitating the tariff question with a prospect that we will lose that market. The only salvation for our farmers is to put the price of our product on an equitable basis. They must do this at once to preserve the foreign markets they have. England will not dare to impose the duty tax on our grain if farmers in this country will maintain a fair, high level of values. As sure as the farmers of this country keep wheat at the dollar mark it will make the price the same in Canada, the English colonies will be benefitted without the duty, and if to this duty was added as proposed the price would be higher than the English consumers would stand.

We claim low prices have lost us our markets in the European continental countries, and the only way to keep what we have left is to put a decent price on all the products of the farm. Also, in this way coupled with friendly negotiations, we can win back the lost markets.

#### HE COULD EVEN DO THAT.

Some of those whose tongues work with much greater rapidity than their brains, contend that for farmers to control prices of their products, they must have warehouses, elevators, packing houses, etc. Of course we do not think all that is necessary, but if it were, they could even do that. One of the leading commercial papers of the country had this to say a short time ago, about the farmers' ability to do things:

"The American farmer is the wealthiest person in the world. In 1900, according to the census, the value of his products was \$4,739,118,000. This year their value will be in excess of \$5,000,000,000. The farmers of the United States employ over 9,000,000 persons and pay out in wages every year over \$300,000,000.

"Not only is the American farmer the wealthiest, but he is also the most important person in the world. The railroads, employing over 1,000,000 people, depend largely upon him for their traffic. Thousands of ships, flying the flag of every civilized nation, draw their earnings from the business given by the American farmer. The King of England, the Emperor of Germany or the Czar of Russia may die, and the commerce of the world will go on as before, and even the working classes in the dead ruler's own country will be in no way affected by the incident. But let the crops of the American farmers fail, and railroad earnings immediately fall off and trade begins to react, while the cost of living, not only in this country, but in England, Germany and France as well, will immediately rise."

No less a personage in the financial world than Mr. A. B. Stickney, recently said in a public address:

"The aggregate value of the products of all farms of the country, in the census year 1900 was \$4,739,118,000—an aggregate income sufficient to purchase all the enormous bond and stock issues of the huge steel trust in the first two months of the year, all of the stock of the Standard Oil Trust at 700, which is about its market value, in the next two months; all the stocks of the minor trusts in the next two months; to buy all the national banks in the next two months; to pay the bonded debt of the government in the next two months; to retire the greenbacks in less than one month, and still have about \$500,000,000 left over. The American farmer comes pretty close to being it."

These great financial authorities were not talking to tickle the ears of the farmers, but for the commercial world, for men of their class, and it looks like, in the face of such

declarations, coming from such sources, farmers themselves should not belittle their ability.

#### EFFECTS OF LOCAL FAILURES

How will an equitable price work when the Eastern States have almost a failure and the Western States have an abundance?—J. B. D., Good Harbor, Mich.

The failure of crops in any section cannot affect the equitable price, except that it may cause the minimum price to be put higher than it otherwise would be. The statistical board has the actual production for the entire country; they also have the normal consumption; a comparison of these determines the minimum price at the market centers, to and from which shipments must be made. The local prices, whether crops be meager or abundant, must be the minimum price with transportation added or deducted. It simply eliminates the element of speculation which is so prone to take advantage of people's necessities.

#### THE OUTLOOK.

Farm work has been delayed and farm plans badly disarranged this spring. The wheat crop in Indiana, Ohio, Mich., and Kentucky shows about as bad a condition as possible without being a total failure. Western Kansas and Oklahoma have poor prospects. Taken altogether \$1.00 may not be enough for the 1904 crop.

This country need not be much concerned about foreign crops this year, as under good conditions from this time forward we cannot well raise more than a home supply. September speculative wheat is about 20 cents below the cash article. This difference will go glimmering as the time approaches and all the Central States millers rush to Kansas for wheat and they will find it bottled up by the farmers in the A. S. of E., only to come out at their price.

The failure of the wheat crop, coupled with the inability to put in the usual crop of oats will lead to an extraordinary acreage of corn. This is something quite unexpected in the calculations of the A. S. of E. and we advise holders of corn to let their corn go to market at a price that affords them a profit. Fruit prospects are good considering the cold, stormy and frosty spring. The cotton situation is treated in Mr. Saunders' article in another column.

The A. S. of E. is preparing to secure reliable crop reports on wheat and other crops as they approach maturity, and after all probabilities of material change in yields and conditions have passed. This will be the basis for the price for the next year.

Subscribers to UP-TO-DATE FARMING whose subscription is paid in advance can become members of the A. S. of E. by remitting only 50 cents.

Just a few months more and the 1904 crops will be ready to market. Have you done your part toward getting a profitable price?

Every crop you produce this year should be controlled for marketing, which will compel a fair price. You cannot intelligently co-operate to do this unless you read UP-TO-DATE FARMING.

If every other industry in the country spends money to find good markets why should the farmers not spend a little? In the farmers' case a very small sum will suffice on account of the desirability of their goods. We believe \$1.00 per farm will do the trick.

On account of the good prices prevailing for wheat, potatoes and cotton, growers are warned to not go wild on those crops. Diversified crops will give the best average results, and just as sure as you neglect other crops and put out an unusual acreage of these you will reverse conditions and make the cheap high-priced and vice versa.

Of what benefit are the unreliable crop reports now being circulated, to the farmers? They won't make the crops a bushel more or less. Farmers are doing their best to produce good crops and when the results are known is time enough to decide what the price shall be.

# THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS  
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

The local union at Cloverport, Ky., adopted strong resolutions on the occasion of President Everitt's visit there, and pledged themselves anew to battle for the cause of equity.

The meetings held during the latter part of April in Kentucky were very successful. There was large attendance and much enthusiasm. President Everitt's reception at all of them was highly gratifying and he feels to thank the good people of that State for many courtesies, and hopes they will push on until the tobacco-producing interest is thoroughly organized.

The Kentucky press has been very generous in their notices of the recent A. S. of E. meetings in that State, both in giving the meetings publicity and in reporting them after they were held. The people of Kentucky will appreciate their friends.

Deputy J. W. Lee, who has charge of the A. S. of E. work in Western Kentucky, is an earnest man and efficient worker, and we expect there'll be "something doing" over there before the next tobacco crop is on the market, and there may be some surprises in store for the tobacco trust.

Mr. H. B. Sherman, who accompanied Mr. Everitt into Kentucky last month, is an effective speaker and does excellent work. Wherever he goes he will be well received.

The National Union supplies the general force; the local union is the machine to use at home.

Can the local unions realize how rapidly this movement is growing, and what a tremendous influence the farmers are getting ready to wield?

There could be no ocean if each drop of water refused to cling to its neighbor; no fertile land if every particle of soil repelled every other one. So there can be no local union unless neighbor will stand by neighbor, and no great society unless the local unions gather in the people.

"Wheat is looking very bad, much below the average," writes S. R. Portius, secretary local union in Seneca county, Ohio. A pointer for more than dollar wheat.

Republic local union, of Ohio, adopts resolutions of respect on the death of E. B. Williams, who was an original member of the union, and a constant worker for the cause of equity. Death is no respecter of persons, and we are glad to see the local unions testify their appreciation of merit.

Some of the local unions are encouraging their members not to make to the constituted authorities statistical reports of crops. We doubt the wisdom of this course. Such reports may be taken advantage of to some extent by the spec-

This is the co-operative farmers' own department. It is the desire to make it the life and strength of the Local Union. Every member is a welcome contributor, and every communication will have courteous consideration. Address JOHN P. STELLE, care Up-to-Date Farming, Indianapolis.

More than politics should be the A. S. of E. to you. More than the voting place your Local Union. Here your troubles will end and your triumphs begin. All credit to the Local Unions. They are your forts—your strength. Stand by them as you would by your guns within the real fort to repel the enemy.

ulators, but they are of great benefit to the general public, and requested by proper officials, we believe it is a mistake to withhold them. The important thing is to make them correct.

H. M. Conert, of Oklahoma, referring to resolutions not long since adopted by Rob Roy local union, and, in the main, endorsing them, says: "There is nothing too good for industrious farmers who feed and clothe the world." We subscribe to that sentiment, and we are bending every energy to place Up-to-Date in the front rank of farm papers. Remember, other papers have taught how to produce crops, but this is the only one that ever demanded better prices for them.

Keep this picture before you. The National Union furnishes the power, but the local union is the machine through which that power must be applied to the reaping of a universal harvest of equitable prices.

"A year's crop so marketed as to supply a year's demand!" This is the Alpha and Omega of the price problem, and it is a good subject for discussion at every local union meeting. It can be done, and it will be a great benefit to the entire world.

Some of the "workers" are not workers, and some of the local unions may not be doing what they ought. "Behold the axe is laid at the root of the tree," etc.

Local unions should make arrangements to purchase binder twine in club lots from their dealers. In this way you can secure attractive prices. It might be well also to have your secretary or president write direct to manufacturers for large and small lots. Good twine is cheap at a fair price, see that you get good quality.

The local unions may well discuss the question of granaries and local storage. This presents no serious problem, and it is the only special change in farm economy that the A. S. of E. sees before it.

## THE LOCAL AT THE CROSSING

### FIFTH MEETING

The president was a little late in taking the chair, and all the members seemed rather dull and dispirited. Things were evidently not going just right. The unusual backwardness of the season, the cold disagreeable weather, and the unfavorable conditions for farm work, had a depressing influence which it was difficult to shake off. On taking the chair the president said:

"I see in all your faces the feeling I have my self, a kind of stupid can't-help-it-ness which is not easily overcome. But we must not give way to discouragements. Life is too short to justify us in entertaining the blues. The

conditions which seem so discouraging now will not last always. Before the summer is ended the sun will shine as brightly as ever, and the birds will sing as cheerfully. I expected our spirits would be rather low to-night, and I have arranged a little diversion for you. It is a song recently written and set to music by Mr. John P. Stelle, editor of the Local Union Department in Up-to-Date. Johnny Gilbert will sing it for us to the tune of "Columbia, the Gem of the Ocean."

Johnny Gilbert, who is but sixteen years old, sang as follows:

### HONOR THE FARMER

Oh, ye farmers, the pride of the nation,  
Ye great hearted sons of the soil,  
You stand in a God given station,  
Ye undaunted victors of toil.  
The world looks to you every minute,  
For the wherewith they are to be fed;  
E'en the monarch must live on your products,  
Though a crown rests secure on his head.  
Then honor be given to you,  
All honor be given to you,  
You stand in a God given station,  
Then honor be given to you.

The forest has fallen before you,  
The beast has retired to his lair;  
On earth's surface you've written your record,  
While the plow traced your signature there.  
Shall the trusts' feeble power dismay you?  
Shall monopoly fill you with dread?  
In your hand God has placed all his people,  
And without you the world cries for bread.  
Then honor be given to you,  
All honor be given to you,  
In your hand God has placed all his people,  
And without you the world cries for bread.

The effect of the song was electrical. Before it was completed the shadows were all gone, and as soon as the applause that followed it had subsided the president said:

"Now, I think we are ready for business. What shall we take up this evening?"

James Barton—I like that song. It tells a truth we have heard a thousand times, but it tells it in such a different way as to stir a fellow up. I was reading in Up-to-Date the other day about the greatest profit being in the hundred-pound pig. I had thought differently, but I am not "set" in my belief, and I would like to hear from some of these practical farmers on that subject.

George Bowers—I believe Up-to-Date is right. Indeed, about everything we read in Up-to-Date is from the pen of practical farmers. I am well acquainted with the principal writer on that paper, and know him to be an actual farmer, who, in less than twenty years, has brought an old wilderness of a deserted farm up to a high agricultural standard, and made it one of the most valuable farms in his locality. But this does not mean that we should take everything that is said without consideration. We are here to discuss things, and the subject suggested is a good one for discussion. In the case of the most profitable pig, I would not make a hundred pounds the limit; though if I had a satisfactory offer at a hundred pounds I would sell. I would make the limit a single season. I would like pigs farrowed in March or early April. Then I would never let them see a hungry minute. This can be done through the spring and summer and fall, cheaper than at any other time. The first few weeks the feed for the pigs must be given to the sow, and it should be pretty strong in grain and abundant in rich, fresh slop, never sour. By the time the pigs are ready to eat, I would have a good growth of rape ready for them, and in a day or two I would begin to diminish the expensive feed, though still adhering to the less expensive slop. But when I say slop, I don't mean sour swill. I would not feed filthy stuff of any kind. The kitchen slops may be used profitably, but they should be used fresh.

Joe Riley—I ask pardon for interrupting, but the best way to use the kitchen slops is to have a pig in a pen or lot not

too far from or too near to the kitchen. Give this pig to the "boss of the kitchen" and she'll do the rest. If she need a little corn or other feed to help out the slops, she is entitled to it. There'll be just about as much clear profit in that pig as any other on the farm.

Mr. Bowers.—I agree with Mr. Riley, and I am glad he spoke. As a next move for my pigs, I would have a field of stock peas, with the pods just beginning to ripen, to turn them into. The sows need not follow them into this field, in fact, they may have been taken from them some time before while in the rape. If the peas and rape are adjoining so that the pigs can go back and forth it is all the better, as a sudden change from one pasture to the other is not conducive to best results. This just about finishes the course, and your pigs should be ready for the market in September or October, as 200 or 250 pounders, a little corn towards the last will add rapidly to their weight, and you have some cheap made hogs. There is one thing, however, which I have not mentioned, but which must be carefully looked after all through the season, and that is plenty of good, fresh water—don't depend on a stagnant pond or filthy mud hole. If the pigs can have access to a clover field from both the rape and the pea field, the results will be all the better, and a little salt occasionally will be beneficial.

Mr. Lambert.—Mr. Bowers has given us an excellent treatment for bringing hogs early and profitably onto the pork market, but it over-reaches the subject in hand—that of selling pigs around a hundred pounds to those who wish to grow them into hogs for the market. To do that I would recommend the plan followed by Mr. Bowers, though I would like the pigs to come a little earlier, and then I would put off two lots in a season. Early March pigs could be brought to a hundred pounds in June; June pigs could be brought to a hundred pounds in September or October. Both of these periods are auspicious times for selling a bunch of pigs to feeders. At each farrowing time have several sows to farrow as nearly as possible at the same time, so that the litters may be doubled up, giving to each sow eight or ten pigs, letting the others go dry to be bred again. This is not at all difficult and it works a great saving. Have all your hogs well bred, and then they will be uniform in size, form and color, just right to please the feeder and to bulge the market a cent or two. The main idea of profit is to make the pounds out of pasture instead of the costly winter feed. Winter none but the breeding stock.

The President.—I am a little surprised at this meeting. At its opening I thought we never had a more unpromising one, but we have had some excellent talks on an important subject, and it all came so unexpectedly. It leads me to believe that we need never look for anything but interesting and profitable meetings. I believe we should close this meeting as we opened it, with that stirring song. Will our young friend kindly repeat it for us?

Johnny did so, and the meeting dispersed with lighter hearts than they brought with them.

#### LARGE MEETING IN KENTUCKY.

From The Farmers Home Journal, Louisville, Ky., April 30th

One of the largest meetings of farmers ever held in Kentucky was the meeting at Owensboro last Friday. The meeting was for the purpose of organizing a branch or local union of the American Society of Equity. This society is a national organization. One of the important purposes is to gather statistics of crop productions and from the statistics thus gathered to recommend a minimum price which farmers should insist upon.

#### DON'T BE STAMPEDED.

Wheat growers don't want to be stampeded by the speculators who put prices up or down on slight pretexts and most frequently on false reports manufactured for the purpose of creating conditions to help their gambling business. When we announced in 1903 that farmers could put wheat to \$1 a bushel by controlling their marketing and letting the supply come on gradually, the idea was scoffed at, but they did it. Prices were lower then than they are now. Speculators, millers and others may tell you now that if you hold for your price you will not get a market. Don't believe them. You marketed the 1903 crop gradually, yet the market was so hungry for your wheat that they paid a higher price and farmers had less left in their hands in March 1904 than for twenty-three years before. Who dare display the nerve to tell you that the remnant of your 1903 crop won't bring on the basis of \$1 if you demand it? If you believe that, you will believe anything. As to the future, wait until the crops are secured, then is the time to think about the price. April is not the time to decide what the 1904 crop of wheat will be equitably worth in July or September.

If they tell you that Canada or Russia or Argentine will ship wheat in if you hold for a fair price, tell them to go and learn their lesson. When any of these countries ship wheat into the United States, it means 25 per cent. duty. Thus, if your price is \$1 the foreign shippers would get only 75 cents, or if they sent it on the basis of a 90 cents exportable price it will raise your price to about \$1.15. This tariff on wheat which was never expected to benefit farmers, may play an important part in the economic conditions of the country. For instance, how would it be to set aside one-fourth or one-fifth of your wheat crop for export, and the balance for home sale. If you can export on the basis of 90 cents you can get \$1.15 for the balance for home consumption. This is exactly what manufacturers do and you have been buying machines, clothing, etc., on that basis for years.

Farmers, there are many interesting problems in your business. Join the A. S. of E., read the official paper and you will learn all of them; also, you will learn that co-operation, control of your goods and price making are easy for you to accomplish. We have no doubt that the world's markets will come to yours on wheat always, as they did the past year, because the United States is the largest surplus producer; the world must have our wheat, hence the surplus of this country does fix the price on the world's crop. It has done it in the past and fixed it too low. It can do it in the future as long as the price is equitable. On corn, meat and cotton there can be no doubt of our ability to make prices on account of our great preponderance of production.

## \$250 FOR A NAME

We want a good name for the most practical, strongest and best engine for light power purposes ever produced. This name should express as far as possible, the many uses to which it can be applied.

### OLDS GASOLINE ENGINE

We will pay for ideas as follows:  
For best name a complete engine; second best \$50 cash, third best \$25 cash; next ten best \$5 each.  
The average man can get more work out of this Olds Engine at less expense than out of any other engine made.

**THERE IS NO REPAIR BILL** because every part does its work without undue wear—easily cared for—has fewest parts—solid cylinder head—no gaskets to burn out—every part easy to get at—easy and economical to operate and keep in working order—consumes less gasoline for power given than any other engine. 4x6 cylinder—300 to 600 revolutions a minute—2 to 3 horse power, depending on speed.

Every engine guaranteed for one year. For full information send for our catalog No. 17A, mailed free. Write today for our special pre-paid freight offer.

Olds Gasoline Engine Works, Lansing, Mich.

*On pastures green  
May now be seen  
The quiet grazing heard  
With Polished pail,  
The milkman's hail,  
In morn' and eve is heard,*

—J. P. S.

Are the cattle having plenty of salt? Soot, such as used to gather in the chimneys above the old fashioned wood fires, mixed with the salt is good. A little hard wood ashes mixed with it is not bad.

Are you sure of the pasture fences? A little attention to them now may save loss and worry later.

How about those calves? The summer bare-and-dry-lot calf is full brother to the winter straw-stack calf. They both belong to Uncle Threadbare.

Horns? No, you don't like horned cattle, and a great many don't like to take the horns off. Don't let any horns grow; it is easy to kill the horns while the animal is a young calf, and never make a sore.

Are you selling the calves for veal? Don't do it. Prices are a little tempting sometimes, but keep the little fellows growing, growing, growing, on good rich pastures, and by and by they'll bring in a "wad."

Don't sell an animal until he is ready for the market. Don't you know the best cherries are in the top of the tree? And the best price is at the top of the market. It is awful nice to know that one's stuff went "at the top," and then it is felt in the pocket book.

How about those choice colts? Sometimes a colt of excellent parts fails to develop into a good horse. Generally it is not the colt's fault. Are you knocking dollars off the value of the future animal to get a few cents additional work from the mare? Don't do it.

Uncle Threadbare's best colt was making a great racket in the barn the other day. It had become troublesome in the field, so he left it in the barn while he worked the mare—left it there to starve a whole half a day, to gorge itself on

hot, feverish milk at noon, the same process to be repeated in the afternoon, with the same gorge at night. No body does this but Uncle Threadbare, and no body expects him to raise good horses.

Not satisfied with the milk you get? May be you haven't good cows. Lots of cows do not pay in milk and butter for their keep. If you are in the dairy business and want milk and butter, see to it that your cows are profitable ones in these lines—the best are none too good, the worst burn holes in the pocket book.

A subscriber asks what feeds to use to make the milk of his cows richer—richer in butter fat, we suppose he means. Feeds won't do it. At least, that is the decision of scientific men on this question. Changing a cow from poor and scant feed to abundant good feed will increase the quantity of her milk, but it will not improve the quality of it. She will make more butter because she gives more milk, but she will make no more butter to the pound of milk. "So they say." Guess they are right. So if your cow don't give milk rich enough to suit you, get another cow.

Are you raising lambs for market? Pretty good stuff to sell in June or July. But they should be fat and plump, and weigh from 65 to 90 pounds. This means that they should be on good pasture, and if the lambs were taught to eat some grain or ground feed, and could be fed in pens with openings large enough to admit the lambs without the ewes, they will pay well for the feed. But this is no very easy thing to arrange.

"Lambs strong," says a recent market report. All right. Lambs strong, and strong lambs. That's about it.

A good authority on the subject is reported to have said he never saw prices for horses of good, useful kinds so high as they are at present, and he predicts that the prices for good business horses will remain high for a long time to come. Here is a pointer for horse raisers.

#### LIVE STOCK AND FERTILITY

We often see long list of what are called abandoned eastern farms. These farms have become so unproductive as to be no longer tillable at a profit. They were not always so. The occupants of these farms were once well-to-do people, and they then raised quite large numbers of live stock which grazed upon pastures rich in clover and nutritious grasses. These pastures, of course, grew richer in plant food every year, and rotating every few years from pasture to cultivated crops, the farmers always had fertile lands to cultivate.

But when the great western railroads opened up the wild ranges of the west, and brought east the immense herds that were soon raised there, the farmers that were pasturing the high priced lands of the east felt that they could not compete and went out of the live stock business. This meant more to them than the loss of the income derived from the stock—it meant the loss of the fertility of their farms. Running constantly to

## Sharple's Tubular SEPARATORS

How would you buy a million dollars' worth of separators? You would learn everything about them. Try them everywhere, everywhere. Investigate from "A" to "Zard." The John Deere Plow people did so and have bought, outright, after exhaustive trials and thorough examination, nearly

### A Million Dollars Worth

of Tubular Cream Separators. They bought to sell—staked a million, and a world wide reputation, on Tubular quality. More positive proof of Tubular superiority is impossible. The low supply can—simple, easy to wash, tubular bowl—are found only in Sharple's Tubular Separators. Big implement dealers—the strongest houses in the world, those who get first choice—know this and select the Tubular. Such are the Dairy Outfit Co., England; Richter & Robert, Germany; S. Plissonier, France; Newell & Co., Australia; Runciman & Co., Argentina. In their judgment Tubulars are best and their judgment is dependable—is right. Ask for catalogue No. D-136.

It will save labor and make more butter. Agents wanted.

SUPERIOR MFG. CO.,  
400 E. Louisiana St., Indian-  
apolis, Ind.

cultivated crops soon exhausted the plant food, and the yields became less and less year by year. An attempt was made to supply the deficiency by the use of commercial fertilizers, but this could not be made to equal the rest and pasture crops, and the droppings of the stock. Hence the lists of abandoned farms.

Something is now being gained by growing and turning under green crops for fertilizers, but it will be long before the original fertility be restored, if indeed it can be without a return to live stock. But these "abandoned farms" teach a lesson which should not be lost on those whose farms have not reached that point, but are tending in that direction. Don't give up the pastures and live stock; make and use every possible ton of barnyard manure, and supplement these with green crops—clover, peas, rye, etc., turned under.

#### RANGE COMPETITION

The production of live stock on the great western ranges has passed its zenith. The following paragraph is the expression of one of the largest range sheep raisers of the West:

"Range sheep raising, which has for so many years been profitably conducted in Montana because of the advantages offered in free range is undergoing a radical change, owing to constantly changing conditions. The open pasture, no longer the heritage of all comers, is being confined and restricted by settlement on one hand, and large purchases and unlawful appropriations by corporations and large stockmen on the other, so that today it is a difficult matter to procure a location not already occupied, or without encroaching upon territory claimed by others."

The same kind of talk comes from the cattle men. It is entirely true that conditions to-day in the great west are altogether different from what they were a few years ago, and present conditions are well expressed in the above extract. This means much to the farmer stock-grower. There will still be large shipments in season, of cattle and sheep from the western ranges, but they will not be what they once were, and they will not be put upon the market so cheaply as heretofore. Hence the future demand must look more to the farms for a supply and better prices may be expected.

#### FEED THE HOGS

The writer's first knowledge of hog raising was when bountiful nature furnished the feed and scattered it down from the spreading branches of the great forest oaks. These were the days of the "razor back and hazel splitter." Sometimes the hogs were gathered up in the fall, and fed some corn just before the killing, but they were often killed in the woods off the mast and made what was then thought to be very good meat.

But the forests disappeared and with them the acorns and the "razor backs," and in their place came the improved hog, and entirely different methods of feeding. After the acorn came the exclusive corn diet and disease. People were slow to believe that the hog was a pasture animal and such a thing as a hog pasture was not spoken of; he was put in a field not as a pasture, but merely as an enclosure.

It is now understood, that to raise a hog profitably it must be largely done in pasture, and if he grows up in health it must be on other than an exclusive corn diet.

Most of the ailments of the hog may be traced to indigestion and bowel trou-

bles. Corn is an expensive food, and it is a waste to gorge the hog upon it, even during the fattening. He will eat more than he can digest and assimilate, and all that he fails to assimilate is a clear loss. Corn is a great heat producing feed, and quantities of it continually eaten, heats up the animal, impairs the digestive powers of the stomach, and is liable to inflame the intestines. A clover lot is a good place to fatten hogs in, so is a field of stock peas, so is a patch of early sown rye—sown say in August if you wish to fatten in September and October. A patch of artichokes is also a good place, but it is not well to turn in on them until the blossoms fall—they kill out too easily when in bloom.

Pumpkins is a cheap but excellent feed to mix with the corn at fattening time. We like to feed them in the morning in

such quantities as will be pretty well cleaned up by the next morning. With this feed of pumpkins, the hogs will not eat more corn than they can digest and assimilate. Some think it better to remove the seeds before feeding, as the seeds are medically a diuretic, but we have never done so, and have never seen any bad results. Pumpkins may be grown very cheaply in corn, but the surest way is to grow them in a patch to themselves, planted six or eight feet apart each way, and lightly cultivated a time or two before the vines spread much. They are also an excellent side feed for cattle that are being fattened on corn. For cattle it is better to cut up the pumpkins in "mouthful" pieces, and remove the seeds. If the seeds be cleaned and saved there is generally a good market for them.

The Ohio Carriage Mfg. Co., H. C. PHELPS, President, 5722 Sixth St., Cincinnati, O.

We take a great deal of pride in having every buggy sent out of our factory perfect. It is the way we have built up our immense business. You take no risk in buying a Split Hickory Vehicle because back of it stands the Split Hickory Factory. We positively will not have a dissatisfied customer. Every one of our buggies—and we manufacture over 100 different styles—is Guaranteed for Two Years.

We sell them on  
30 Days Free Trial.

This is our Split Hickory TOP BUGGY not quite as good as the Split Hickory Special, but the best ever made for anywhere \$37.50 near the money. Two years guarantee. Sold on Thirty Days Free Trial.

Winter holds the sleeping bud.  
Spring bursts it into bloom,  
Summer paints the blushing cheek,  
Fall fills the storage room.

—J. P. S.

Have you sprayed? Too late for the first time. Full late for the second. Go in for the third.

If the canker worms appear in the orchard—those little fellows that always have a rope to hang to when they fall, and that “hump themselves” when they travel—get after them with a spray of Paris green.

The apple trees that were heavily mulched last fall or winter, will do the best this summer.

Better not mulch, manure nor cultivate the Kiefer pear trees after they are two years old. No matter; we shall stick to that. Keep the grass and weeds mowed down. Sod the pear orchard if you want to.

It's a good thing to let the chickens and ducks and turkeys (no, we didn't say geese) run in the orchards. The pigs and sheep may do so too after the trees come into bearing. But if the sheep get real hungry, or are “starved to death” on grain, they may gnaw the trees.

Clover and cow peas are good things to grow in an apple orchard. Pasture them with hogs.

If your fruit trees are too full, thin them out. It takes courage to do it, but “none but the brave deserve the”—big Baldwins, Rome Beauties and Ben Davises.

Watch for the tent caterpillars. The orchard has many worse enemies, but even these should be destroyed.

What would you think of joining with other fruit men and put in a cold storage plant at the county seat? Would your fruit bring more towards spring than at picking time. Not if you all held until towards spring, but if it were put on the market so as to meet consumption it would bring more all the time, and the growers would get it instead of the other fellows.

Apple trees are like tramps—a wash of soft soap is a mighty good thing for them. And peach trees ditto.

Don't try to keep the chickens out of the plum orchard.

Watch for the gooseberry and currant worm. Dust lightly with air slacked lime. If that won't do, give 'em a dose of Paris green.

Grapes are a delicious and healthful fruit, but all farmers do not grow them. There are boys and girls now reading Up-to-Date that never tasted a tame grape. “Brethren, these things ought not so to be.” Grapes are too easily grown not to have them.

Watch for the scale insects in the orchards. If you find any of them, particularly the San Jose scale, write to your State experiment station about it.

A good, loamy soil, neither light sand nor heavy clay, I regard as the ideal strawberry ground, says Kellogg, the Michigan strawberry man.

How many farms visited regularly by Up-to-Date has a patch of tame blackberries? Every one ought to, of at least two varieties, early and late; and then the old canes should be kept well cleared out, and the new ones topped as soon as they get four or five feet high.

#### EARLY ORCHARDING

The first apple growing in this country was in Massachusetts, in and around Boston. In 1625 or 1626, Rev. William Blackstone had an orchard on the west slope of Beacon Hill. Governor Endicott established nurseries in Salem as early as 1628, and in 1648 sold five hundred apple trees to William Trask for 250 acres of land. Governor Winthrop was very prominent in horticultural matters as early as 1630, having land on the Mystic river and a garden at the foot of School street, and also another one at Governor's Island. The Colonial Legislature granted him the use of this island for a rental of two bushels of apples, one for the governor and one for the Legislature.

#### TREES REFUSE TO BEAR

To Up-to-Date Farming:

I have a grafted apple tree eighteen years old and quite a large tree that has never had a blossom on it. I have another not so old, that grows very fast and is now ten inches or more in diameter. It has borne from two to six apples three different years, but they fell off before fully matured. What can I do to these trees to make them bear?—B. V. B., Weedsport, N. Y.

We do not know. Were the cases less marked we would make suggestions. Sometimes trees bloom and don't bear because the flowers are imperfect and fail to fertilize. This may be partially remedied by fertilization from other trees growing close to them. Some times also trees that grow very fast do not produce fruit buds and thus fail to bear. But this should not be the case with trees growing in clay land as yours are. Your treatment of wood ashes was good for the general health of the trees. The rapid grower might be benefitted some by severe root pruning, but it is our opinion if you need the ground where those trees grow, the best thing you can do is to cut them down.

**GUERENSEY CATTLE, CLOVER KNOLL HERD**  
Send for Circular. M. SAGER, Orangeville, Pa.

**DEATH TO HEAVES**  
Guaranteed  
NEWTON'S Heave, Cough, Distemper and Indigestion Cure. A veterinary specific for wind, throat and stomach troubles. Strongly recommended. \$1.00 per can. Dealers. Mail or Ex. paid. The Newton Remedy Co., Toledo, Ohio.

Buy your carriage, buggy, surrey, etc., direct from our factory and gain the profits that go to the jobber and the retailer. We are manufacturers and sell only high class vehicles and harness direct to our customers at factory prices.

**PROFITS SAVED**

We give a broad guarantee. If goods not entirely satisfactory we will refund money and pay freight both ways. Write for our free catalogue which shows our immense stock and explains our plan.  
**THE COLUMBUS CARRIAGE & HARNESS CO.**  
Columbus, Ohio.

## CELERY

A Minnesota subscriber asks for an article on celery culture—blanching and double row culture.

We referred this matter to two of our readers who are experienced growers of celery, one in Ohio, the other in Michigan. We give the result:

"Celery may be grown with very little labor, but it must be done in a very rich soil, containing an abundance of, well-rotted manure. A moderate treatment of salt well worked in several days before the plants are set will be beneficial.

"Perhaps one of the greatest difficulties is starting the plants. This is better done in the open garden than in a hot bed or cold frame, but the bed must have special preparation—the top soil must be thoroughly pulverized; if passed through a moderately open sieve all the better. Cover the seeds very lightly, and press the soil down upon them, and keep very moist (not wet) until the seeds germinate. The plants will then pretty well take care of themselves, though weeds must not be allowed to grow among them, and the soil must not be permitted to dry out. Slightly shading from the strongest sunshine is beneficial, and lightly topping the plants makes them more stocky.

"Care must be exercised in transplanting, which should be done late in the

evening, and the plants well watered, covering the wet earth with dry so there can be no baking around the plants. I do not set in deep trenches any more, but on the level, rows about three feet apart, and the plants six inches apart in the rows. Transplanting may be done as late as August.

"Cultivate well but not deep. 'Handling' should begin in about six weeks after transplanting, and that should always be when the plants are dry—not wet with rain or dew. The object is to make the plants grow upright. Gather the leaves together and hold them so with one hand, while with the other the soil is drawn around them, being careful that none gets in among the stems, as that would likely rust or rot them. This should be repeated every few days, whenever the leaves begin to spread out; the purpose is to blanch the stems as well as to hold them in an upright position."

Our Michigan correspondent gives so nearly the same process that it is unnecessary to repeat it, but he mentions what he calls a new method, that of making a bed as rich as possible, and setting the plants six to eight inches apart each way, much after the old plan of planting onion sets. In this way, he says, the plants will blanch each other if they have a very rich soil and plenty of water. Neither of our correspondents refers to double row culture.

## HORSE RADISH

There are few more important relishes or condiments than the root of the horse radish, usually served grated and moistened in vinegar. The United States Dispensatory, as much an authority in medicinal properties as the Supreme Court is in law, thus gives the properties of horse radish:

"Horse radish is highly stimulant, exciting the stomach when swallowed, and promoting the secretions, especially that of urine. Externally it is rubefacient. Its chief use is as a condiment and to promote appetite and invigorate digestion; but it is also occasionally employed in medicine, particularly in dropsy attended with enfeebled digestion and general debility. It has, moreover, been recommended in palsy and chronic rheumatism, both as an internal and an external remedy, and in scorbutic affections is highly esteemed."

In circular No. 15 of the United States Department of Agriculture, Division of Botany, horse radish is thus treated:

"The horse radish is much like other root crops as far as soil is concerned, and will do well in almost any ground except the lightest sand and the heaviest clay. In fact, on account of its adaptability to various situations and soils it is frequently neglected, being relegated to out-of-the-way places in the garden and to poor soils in the field. While in these uncongenial places it will more than pay the rent of the land it occupies, it will yield best returns in a soil of medium texture in which there is a good supply of plant food and an abundance of humus. If choice can be made, moist, not wet, soil should be chosen for this plant, since it there thrives best and forms roots of the finest quality and the

largest size, while in very dry situations the roots will be small and woody and will lack, to a large extent, the pungency so valued in this plant. The greater the depth of the surface stratum the better, since horse radish is fully as deep-rooted as other root vegetables. The subsoil should never be hard and dense, since this character tends to induce branching of the root. Although the plant loves moisture it will not tolerate excess, and drainage is essential.

"Since the horse radish very rarely produces seed the grower relies upon the small roots produced upon the 'sticks,' as the marketable roots are called, for forming his plantation. These laterals are removed at the time of digging, are trimmed ready for planting and stored in bundles in root cellars or buried in the earth. Any part of the root will grow, but it is found that pieces four or more inches long and a quarter of an inch or more in diameter give the best results. The longer and the thicker the set, as a rule, the larger and finer the root it will produce."

## A FORTUNE IN EGGS

I get so many letters from my old home about preserving eggs, that I will answer them through your paper. I started 1888 with \$26, bought eggs at 8 to 10 cents in summer, preserved them and sold in winter at from 25 to 30 cents a dozen. I preserved eggs 12 years and made \$30,000. My niece started in 1894, with \$10, which she reinvested each year, with the profits and now she has \$16,346.00 made from \$10, reinvested for eight years. You can buy eggs very cheap now and sell them from 25 to 30 cents a dozen. I can't answer letters as I travel, but any person can get desired information by addressing the PEOPLES' SUPPLY CO., No. 79 Moore Block, New Concord Ohio; they started me. This is a good business for city or country. C. GREEN

## Send No Money

Just write to-day for our all-wool samples to select from and our new catalogue showing the latest styles. We guarantee our \$10.00 Tailor Made Suits to be as good as suits you have paid \$13.00 to \$15.00 for. We give you five (5) days time to examine one in your own home before deciding whether or not you wish to keep it. Isn't this a fair proposition?

**10,000 Pairs of \$5.00 Tailor Made Trousers FREE**

with the first \$10.00 order. **OUR OFFER:** Providing you will agree to hand 10 envelopes, containing our All Wool Suit and Pants samples, catalogue, tape measure and Special Offer, to ten men who in your judgment would be likely to buy clothing from us on our liberal offer. We will give you a pair of our regular \$5 Tailor Made Trousers (any pattern you may select from our samples) **FREE**

with one of our \$10 ALL WOOL TAILOR MADE SUITS. We make your suit and extra trousers as ordered, send them to you by express, and allow you five (5) days time to examine them in your own home. If, at the end of that time, you and your family and friends find the suit is well tailored, stylishly cut, a perfect fit, and the extra trousers as good as are commonly sold for \$5.00, keep them! All the full tailor-made suit and extra \$5.00 trousers will have cost you is \$10.00, and the little work of handing out ten (10) envelopes.

If for any reason you find after five (5) days that they are not perfectly satisfactory return them to us and we will refund every cent you have paid out. Remember, we run all the risk.

The ten envelopes you are to distribute will be sent in the box with your suit. Read this offer over again carefully, then write to-day for free samples of our \$10 Suits (including Clay Worsteds, Tibbets, Serges, Cassimeres in Black, Blue, Brown and Gray and Handsome Mixtures), also separate Trousers samples, Catalogue, instructions for taking measurements and Special Offer.

## DON'T BUY GASOLINE ENGINES

less to buy and less to run. Quicker and easier started; has a wider sphere of usefulness. Has no vibration, can be mounted on any light wagon as a portable. Weighs less than half of one-cylinder engines. Give size of engine required. Especially adapted for irrigation in connection with our centrifugal force pumps. (Sizes 2, 2 1/2, 4, 5, 6, 8, 10, 12 and 16 Horse Power.) High-grade Gasoline Engines, 3 to 6 horse power—adapted for Electric Lighting, Marine and Pumping purposes. Please mention this paper. Send for catalogue. **THE TEMPLE PUMP CO., Maunfrs., Meagher and 15th Sts., CHICAGO, ILL.** Established in Chicago, 1852.

—UNTIL YOU HAVE INVESTIGATED—  
"THE MASTER WORKMAN"

The editor of this department will be glad to hear from Up-to-Date readers. Address Poultry Department, Up-to-Date Farming, Indianapolis, Ind.

*There is music in the cackle  
Of the faithful little hen.  
As she tells the watchful farm wife  
She has done her stunt again.  
And the little chicks a-twitter  
In their coops so neat and clean,  
While the rooster struts around them,  
Proud as haughty king or queen.*

—J. P. S.

Is there plenty of grit and gravel in the poultry run, and can the little chicks get where they can scratch in sand?

\*\*\*

Can the young chicks get clean fresh water without getting themselves wet?

\*\*\*

It will pay you to read the article among the editorials of this issue of Up-to-Date, headed "Eggs and Poultry."

\*\*\*

Is there lime about the poultry yard where the chickens can get to it? It will pay to put it there.

\*\*\*

Have you plenty of shelters where the chickens can easily take refuge in case of a storm? When you lost those fine broods last year you said you would have.

\*\*\*

Are you neglecting the lice and mites in the chicken house? Please, Mr. Farmer, let the other work go long enough to clean out and whitewash the poultry house. And when you get at it do a good job of it.

\*\*\*

The ducks may have passed their busiest season when this paper reaches you, but if you will not neglect to pen them of nights you will still get eggs.

\*\*\*

Crossing the Pekins on the common little native ducks results in ducks as large or even larger than the Pekins and very rapid growers.

\*\*\*

Ducks are great crawfish catchers.

\*\*\*

Take good care of the early pullets; they are to be the winter layers. And it is a good thing to select early your strongest, most vigorous cockerels for next year's matings—the healthiest and most rapid growers from the eggs to maturity. Mark them so as not to lose sight of them.

\*\*\*

Being a man, I, of course, am not much in love with roosters on the farm.

but I may venture to whisper that there are few fowls more profitable. They are hardy, their feathers are always in demand at a fair price, and they themselves bring a good price. If they have a pasture with water in it, where they can be confined, they are little trouble, and the goslings are easy to raise. Goslings must not run to a pond, though, that is stocked with tadpoles; they'll eat enough to kill themselves sure. And very hard, dashing rains are apt to drown goslings if unsheltered. As to varieties, I believe the Toulouse are best, though the eggs do not hatch so well as the smaller kinds.

#### VARIETIES OF FOWLS

No prudent writer would venture to say this or that is the best variety of barnyard fowl. There are several classes grouped as to peculiar fitness for certain purposes, but even in these classes there are varieties so nearly equal in the qualities which identify their class, that, after all, selection is as much a matter of taste or attachment as it is of excellence.

Of the egg-producing class we think it may be safe to say that consensus of poultry opinion places the Brown Leghorn at the head and the Rose Comb just a little bit ahead of the Single Comb, though the latter claim is based solely on the less liability of the Rose Comb to suffer from frost.

Of the heavy or flesh-producing class, the Asiatics, we suppose we shall not meet with serious controversy in naming the Brahmas first, and in placing the Light Brahmas at the head of this list, though we know no reason why the Dark Brahma should not be as popular as its lighter colored relative. Indeed, without knowledge different from what we now possess, we would prefer the Dark Brahma, though the Light is far more popular among poultry raisers.

For an all-purpose fowl, we can do no better than point to that American triumph, the Barred Plymouth Rock. It is large enough to be profitable for its flesh production, and, under suitable treatment, is a profitable egg producer.

There seems to be a mania among poultry raisers for splitting these varieties up into special types, characterized by difference in color, etc. We do not take very kindly to these "sports," though we have to confess to an exception in our preference for the Rose Comb Brown Leghorn, as the Single Comb is the original type, and the rose comb is borrowed from the Hamburg.

#### BRONZE TURKEYS

Taken all in all we believe the Mammoth Bronze turkey is the best variety for the farm. He is a wide ranger, and this may be urged against him as an objection, but his other good qualities lead us to try to overcome this fault, which may be done to a very great degree by gentle treatment, home feeding, good range for them, not too far away, and by watchfully thinning out the worst rangers among the old hens.

The bronze turkey is an attractive bird and it is large. Some, in their eagerness to increase size, make a mistake by using male birds that are too large. There is nothing much prettier than a full plumaged bronze turkey, showing in the sunlight the glitter of nearly all the metals and the hues of the rainbow, and at market time the price is usually just about as attractive as the bird.

#### Turkey-lene

The Wonderful Antiseptic Remedy and Tonic.  
Thousands say "It's Marvelous."  
Turkey-lene prevents disease, strengthens, tones and invigorates the birds and keeps them absolutely free from vermin. Long experience enables us to give valuable practical advice on every phase of Turkey raising. This advice we give free to every purchaser of Turkey-lene. Send 60c. by registered letter or money order and we will send prepaid enough Turkey-lene for the broods of two hens with full directions how to profitably raise every one of them.  
THE NATIONAL TURKEY-LENE COMPANY, Dept. 126, Washington, D. C.

It isn't raining rain to me,  
It's raining daffodils;  
In every dimpled drop I see  
Wild flowers on the hills;  
The clouds of gray engulf the day,  
And overwhelm the town;  
It isn't raining rain to me,  
It's raining roses down.

—R. Loveman.

Virtue may smile through tears as flowers through dewdrops.

The old-fashioned rows of flowers on each side of the door yard path, are still blooming in many hearts that have grown old but are still warm.

God could have made plants without flowers, just as He could have made hearts without love, but He didn't do it.

Can you imagine a happy home without flowers about it?

A flower bed may be ever so modest, but the sun seems to shine a little brighter there than anywhere else.

It is beautiful for each member of the family to have his (or her) favorite flower, and then for each to give that flower special attention. It ought to be a dearer memory all through life than that of the class colors at school.

Raise cabbage, lettuce, peas, beans, etc., for the stomach; raise flowers for the soul.

Our dearest memory of the old cabin home is of the hollyhocks, the four-o'clocks, the touch-me-nots, the morning glories, the cypress vines—those dear old names. Don't let the children grow up without flowers blooming around them.

Everybody is familiar with the Caladium (elephant's ear) as a foliage plant, but few have ever seen it in bloom. A magnificent variety has been introduced from Central America which is a fine bloomer. The flowers are shaped like those of the calla lily, and are from seven to eight inches long and about the same in width. It is a little late to start it now, but we have seen grand plants from bulbs that were put out the middle of June. It must have rich soil and plenty of water.

An excellent vining plant, a hardy, rapid grower, to cover stumps or like objects about the lawn, is Cardiospermum or Balloon vine, the Love Puff of our boyhood days. It is too old to be called a novelty, but it is hard to beat for the purpose named. Mixed with cypress vines and morning glories a striking effect may be produced.

Who can forget the bed of carnations "our mothers used to have?" Those were not to be compared with what we can have now—double, as roses, variegated

as a sunset, and exquisitely sweet. And they are so entirely hardy that one can have them anywhere.

We don't know whether we should call it a "Chrysanthemum craze," but the world is nearly crazy over chrysanthemums, and when we see the wonderful flowers that are being produced we have to admit that there must be "method in this madness." And these flowers may now be produced from seed the first year. Everybody knows how to grow them.

The Globe Amaranth, the old Bachelors' Buttons greatly improved, is worthy of a place in any flower bed. The young folks used to make garlands of them, and they will last and retain their beauty for a long time; if taken care of, for years.

As a "porch climber," or to cover lattice work or a trellis, the Cinnamon vine can hardly be surpassed. It is a rapid climber, a profuse bearer of clusters of delicate white flowers that send out an amount of cinnamon-like fragrance that is truly wonderful. It is easy to cultivate, has no insect enemies, and is very little affected by drouth. The vines die in the fall, but they come up again very early in the spring, and grow like they had to make up the time they lost during their winter's sleep.

One of the most beautiful flowers in this country, from Indiana and Illinois southward, is the least noticed because it is so common. It is a trumpet creeper, Tecoma radicans. There can be nothing more beautiful than its great clusters of bright scarlet trumpets, and it has benevolently clothed in beauty many an unsightly old snag or fence post. But it has bad habits, and persists in going where it has not been invited, and where it is not at all welcome—into the cornfields and meadows, where its long creeping vines are given the sulphurous name of "devil's shoe strings."

All remember the old asparagus (sparrow grass) bed, and how the young people always had a spray of it in their bouquets. There is now a trailing kind, asparagus Sprengerii, that is excellent for hanging baskets, covering all with its beautiful spray of lovely green foliage, which can be cut freely. It is a strong, vigorous plant, very easily grown, requires but little care, and, as a

house plant, keeps on growing fresh and green year after year.

Some do not succeed with Cannas as they think they ought, and it is all because they fail to observe some essential matters. To do their best, Cannas must have a light, deep and very rich soil. We have seen them at their very best in old, well-rotted manure piles; but they must have plenty of water. Cannas are Baptists; sprinkling does them no good. When you go to water the Canna bed, give it a soaking a foot deep or more, and do it once or twice a week in dry weather. Try this and see if your Canas don't improve.

## CINNAMON VINES

Beautiful Rapid Growing Vines For All Situations

A Native Climber and one of the most beautiful in cultivation. A profuse bloomer, bearing lovely clusters of rich, deep purple flowers with a delicious violet fragrance. It is a wonderful robust grower, attaining a great height, its vines and dense foliage resembling the common Wistaria. The bulbs are perfectly hardy, absolutely sure to grow, no protection and last forever when once started.

PRICE, 5cents Each; 6 for 25 cents; 50 cents a Dozen.

—ADDRESS—  
**J. A. EVERITT, Seedsman**  
Indianapolis, Indiana

*What's the use of worrying,  
Of hurrying  
And scurrying,  
Everybody flurrying  
And breaking up their rest,  
When everything is teaching us,  
Preaching and beseeching us,  
To settle down and end the fuss.  
For quiet ways are best!*  
—Selected.

Do the men folks keep a good supply of fuel handy to the kitchen?

Is there a pig handy to consume the kitchen slops without too many steps for the dish washer? And does that pig, with all its "lands, tenements, goods and chattels," belong to the "boss of the kitchen?"

What about the crusade against carpets? Oh, no you won't give up carpets, and we will not ask you to do so, but they are in partnership with the doctor.

How many trips are made to the cellar when one would do if you could only think what you would want from there in the next hour or two.

The slovenly house keeper is to be condemned; the one that wears herself out in half a life time trying to do everything, is not to be commended; the one that knows what to leave undone and what trips to leave unmade and yet keep her house clean, tidy and attractive, is to be imitated.

The home where each does his part to keep the house in order and everything in its place—where the boy never throws his cap on the floor and the girl never leaves her cloak on a chair—where nothing is thrown about for mother to pick up—is a well kept house.

The man that never brings his field and barn lot worries into the house is worthy of a jeweled crown. We do not mean that he ought not to talk of these things in the family, but he ought to get over his fret and worry first.

The girl that knows all about what is going on on the farm and can tell each day what the men are working at, and in what field; knows just how many calves and pigs and lambs there are, and how they are getting along; how many acres of each crop has been planted and what are its general prospects; can call each horse by name and knows in what position it does its best—such a girl is worthy of a prince for a husband; or, what is better, is worthy of the most intelligent, most progressive and kindest young farmer in the entire land.

The farmer boy, growing up in an ideal up-to-date home, accessible to a good country school of which he takes full advantage, has no superior on earth, if he lives up to his great privileges. But he must not be afraid of people, nor must he be impudent or impertinent—just a straightforward, kindly, polite and respectful boy.

Not every woman that works herself to death is the best housekeeper, but most likely the one that can make each trip do the greatest number of errands.

The nicest boy I ever saw was washing dishes and sweeping the room for his tired mother, and the prettiest girl was feeding the hogs and horses, and doing other outdoor chores to rest her father. They were just an ordinary boy and girl, but they were nice and pretty.

#### THE HAPPIEST LOT.

The happiest woman in the world is not the one, says one of our exchanges, who is filling some lofty seat in the full glare of the public eye. It may be right for that woman to be there. It was not meant that all women should be happy to their fullest capacity. Doubtless, she is of great use there. But she is not the happiest woman in the world.

The happiest woman in the world is she who is contentedly serving those she loves.

That is the truth in a nutshell, and any honest woman who looks into her own heart with understanding eyes will confess it.

What is life, anyway, but service? All of us find that out, sooner or later. And the woman whose privilege it is to minister to those she loves—whose place in the world is to make life glad for those who love her, is the happiest woman in it.

It is a privilege not given to all. Other tasks call some too loudly to be ignored.

But let those to whom it is given—the sweet, home-makers, the loved wives and mothers and sisters—awake to their joy while they yet have it, and sing all through these glad days of springtime, for theirs is the happiest lot on earth.

#### EARLY DECAY

The American woman is the American homemaker, and as such, she is the most interesting figure in American citizenship. Each one, then, must note with regret, if not alarm, the too undisguisable proofs of her too early loss of youthful beauty and vivacity. We do not like to say that, but it is seen everywhere. One would least expect to find it on the farm where life is so exhilarating and fresh air is so abundant, but it is there. The unmarried woman may longer remain young and beautiful, but the young wife and mother ages faster than her years. Is there home drudgery that is responsible for this? Or neglect, or recklessness of her own welfare, or failure to properly care for her on the part of those to whom she looks for every care and attention? Whatever the cause, it should be sought out and removed.

A thoughtful writer has this to say on the subject:

"There is no reason why a woman should not grow more attractive personally as she advances in years, provided she lives in harmony with the laws of nature. A woman should be at her best in middle age. She should be more beautiful at 40 than at 16, if she is not a victim to the ravages of disease. Most of the world-famous beauties reached their zenith at 40. Helen of Troy was first heard of at that age. Cleopatra was considerably more than 30 when she first met Antony. Aspasia was 23 when she married Pericles and was still a brilliant figure twenty years later. Anne of Austria was 38 when pronounced the most beautiful woman in Europe. Catherine of Russia ascended the throne at 33, and reigned thirty-five years. Mlle. Recamier was at her zenith at 40. From 35 to 50 should be the richest and best years of a woman's life."

# From the Workers

AT BOONEVILLE, ARK.

## To Up-to-Date Farming:

Booneville Local Union No. 1 of the A. S. of E., met on the 9th inst. and elected officers for the ensuing year. All the former officers were re-elected unanimously. We had a good turn out of members and people in the community. All the members and the people generally were very much interested in the society. We meet twice each month and discuss important questions of general and local interest, and we also have recitations by the boys and girls, which afford amusement and attract attendance and secure good order.

We are one of six unions in the immediate vicinity of Booneville. We believe the A. S. of E., is the right organization. We commenced one year ago with only ten members and we now have sixty-two. We are in for success and we believe any community can do as well as we have done. If they would do so, we would at once place ourselves on an equal footing with all other organized powers.

A MEMBER.

## AMONG THE COTTON GROWERS

### To Up-to-Date Farming:

Through the kindness of friends I have had the pleasure of reading your paper. It is indeed Up-to-Date and I regard the A. S. of E. as truly the farmers' opportunity. It is not so much the growing of larger crops that we need as it is a better system of marketing. Cotton is the principal crop here. It matures about the same time in all the states and is gathered as quickly as possible to avoid loss; and it is generally put on the market as fast as it is gathered. This gives the speculators a chance to enter their plea of overproduction and enforce lower prices. In a short time, it occurs to me, the A. S. of E. can be strong enough to control prices by gradually supplying the demand, and thus get an equitable price. By weighing bolts of cotton goods of almost any kind, it will readily be seen that the price paid for the raw material and that charged for the finished product are not on an equitable basis. For instance, we may sell cotton at 7 cents a pound and buy it back in the form of prints at about 48 cents a pound. There is no equity in that.

Our town is anxious to organize and I have been asked to write you for papers, etc., to enable us to do so.

W. D. WILSON.

Note.—Mr. Wilson, whose home is in Arkansas, has caught the grand central idea of the A. S. of E., which is to market the year's supply during the year, and at an equitable price. All that is necessary to accomplish this is organization and co-operative marketing. Such a course may easily secure to the producer better prices and a steady market, and yet the manufacturer may get his supplies for less money than he now pays—the mountain of speculative profits between the two is what is crushing the life out of both. We shall be glad to hear from our friend again.

## FARMERS MUST THINK

### To Up-to-Date Farming:

The above was the heading of an article which appeared in Up-to-Date Farming some four years ago, and it set me to thinking. I was at that time working on a farm that I had worked and paid for. It lay at the foot of a mountain, about 80 acres cleared, but covered with stones and thickly set with bram-

bles; the rest was covered with fine timber, but all in the mountains. I was twelve miles from a railroad and three miles from school, mill and store, and the land was very poor for farming.

I began to think; Up-to-Date put me at it. I was twenty-two years old, and had a pretty little 18-year-old girl for a wife, and a bright little 1-year-old boy baby. It did not take a very vivid imagination to see myself an old man, broken down with hard work, my children all grown up in that rough woodland as ignorant as myself! What a thought for a poor fellow that knew nothing but farming! I would sometimes dream of being out in the open country among up-to-date farmers, and my heart would throb with new and strange emotions. But what was I to do?

I went to town and listed my farm with a real estate agent. My wife did not take kindly to the idea of selling; she feared we might not be able to buy in a better place, but I argued that we could at least rent land where people live.

This was early in the spring, and I kept on farming, but cut no more timber. About the middle of June, while I was plowing corn, a carriage drove up with two occupants. One was my real estate agent. Was the other a purchaser? I told my wife to fix the best dinner she could while I went to receive the visitors and care for their team. It was sure enough a representative of a lumber company looking for timber land, and my heart beat quick and fast. On our way to the house, we passed some cherry trees red with the most luscious fruit, such, it must be confessed, as the Virginia mountains alone know how to produce. The town men were soon in the trees, where they regaled themselves until dinner was ready. The wife had taken the cue, and had prepared a sure enough, old time dinner, such as are read about—ham, fried chicken, eggs, butter, cherry pie and milk. We were putting our best foot front, you know. And didn't those fellows eat? If ever anybody wanted to sell a mountain we did.

After dinner we walked through the timber, and how the lumber man admired the tall oaks I was so anxious to get rid of. Then he asked how far it was down the hollow to the public road, and could a tramway be built there. I felt sure of a sale. Then we dug in a bank rich with iron ore, and back we went to the cherry trees. Starting time came and still nothing about trading. I could not refrain from asking. No, he thought my land would not suit his company. A cold wave swept down that mountain side and my hope dropped to zero.

I returned to my plowing, but the stumps seemed bigger and the stones harder than ever before.

At last it was rumored that a railroad was to be built out through the mountains, and I went to town. Calling upon the president of the lumber company, I did my best to sell him the place. He liked my timber very well, but he did not want to buy. However, he had some bottom land from which he had taken the timber, and for which he had no further use, that he would trade for my place. He little knew that was exactly what I wanted, and I was soon on my way to see it, not over rocks and hills twelve miles from town, but seven miles of beautiful pike. How do you suppose I felt as I stood in the midst of that 85 acre tract by the side of the prettiest spring I ever saw, and thought of a 40-acre tract of timber I could get not far away? That lumber company got a trade, and I left the mountains whence even hope had never dared to climb. I now have the prettiest place in Virginia, where I can hear the bells of three graded schools and four churches, and the hum of two roller mills and see lots of houses, occupied by the best of neighbors. My buildings are all that could be desired, and my farm is stocked with shorthorn cattle. And all because Up-to-Date taught me how to think.

Virginia.

C. H. BOURNE.

## A GLIMPSE OF OKLAHOMA

By One Who Sees it Every Day.

I will first mention the fact that we are second in a list of twenty in our standing in the A. S. of E., and had Oklahoma and Indian Territory been reckoned together, as they might well have been, we would have headed the list.

Our people are God loving, charitable, sociable and kind; generous hearted, educated, and up-to-date in every respect. We pride ourselves in having fine churches, school houses, court houses, and the best of roads and telephone system.

Through the A. S. of E. and the farmers institute, we are irrigating, or, rather, some of our up-to-date farmers are putting up individual irrigation plants, which will test its possibilities.

Our productions are so varied that, no matter how unfavorable the season, our farmers are certain of some of their crops. The seasons, though, are seldom unfavorable, as the record for the last seven years shows. Our great staples are wheat, cotton, corn and Kaffir corn—all are successfully grown. No other section can excel Oklahoma in fruit—all kinds of fruit are successfully produced on the same quarter section of land, together with a dozen other different crops. Sugar beets, melons and garden vegetables are going to be far ahead of those of the Rocky Ford district of Colorado. As to climate there can be no better, and our farmers are prosperous and contented.

The prosperity of many of our wheat growers is due to the work of the American Society of Equity, and the advice given in Up-to-Date Farming—they held their wheat for a dollar and got it. The crop of 1904 we propose to hold—wheat for \$1, corn for 60 cents, cotton for 15 cents, Kaffir corn for 90 cents, prairie hay for \$9 and alfalfa for \$12, unless we are advised otherwise by the National Union. We are going to make the A. S. of E. a success.

The farmers institute and the local unions of Washita county will hold a joint carnival in the near future. Our secre-

tary of the Board of Agriculture is wide awake, and is a strong believer in the right of the farmers to control their markets. No better selection than Joseph B. Thorborne, could have been made for that place. What he advises can be done with confidence, and he has developed a magnificent growth during the past year along the lines of better farming for Oklahoma.

WILLARD J. CONOVER.

Oklahoma.

### TO ORGANIZE A COUNTY UNION

#### To Up-to-Date Farming:

A part of the unions of Marion county, Ill., met at Centralia, April 16, and learning our strength in the county, we decided to organize a county union, and called a meeting for that purpose at Love school house two miles south of Odin for that purpose for May 14. Each union is requested to send at least one delegate.

W. L. SUTHERLAND.

(Note.—We regret we did not receive the above notice for an earlier issue of Up-to-Date.—Editor.)

### WANT BETTER ROADS IN ILLINOIS

#### To Up-to-Date Farming:

You are correct in saying that "no class of American citizens are more deeply interested in having good roads than the farming class." The plan of the A. S. of E. calls for good roads in order that we may be able to put our produce on the market any month in the year. The rural route service and the country schools, both so necessary to the development of greater intelligence among the rural classes, make good roads a necessity.

The roads in Illinois are a disgrace to the State, but I suppose not more so than are those of many other states. President Roosevelt says: "Roads are a symbol of civilization." If he had gone with me last winter over our Illinois roads, I do not know where he would have placed us in the scale of civilization. We are the richest country in the world, and we have more bad roads than any other.

The only way I can see to get good roads is through National and State appropriations. The wealth of our rich agricultural sections has been poured into the large cities, and they should bear their part in constructing country roads.

If one million farmers will stand together in compact organization, no political party will refuse to grant our reasonable demands; and they will never fully consider our interests until we are organized. The A. S. of E. is educating the farmers along the line of using their mighty power as nothing else has ever done.

C. O. DRAYTON.

### FOR FARMERS' WIVES ONLY

#### To Up-to-Date Farming:

This article is dedicated to the wives of farmers and their husbands have no call to read it.

I am not, and never have been an advocate of "woman suffrage," but I firmly believe women are, as a general rule, as well posted on current events as the men. I also believe if they had control of our governments, there would be fewer wars, less expense for standing armies and more internal improvements. Farmers, scarcely ever consult their wives in regard to what crops will be the most remunerative, or in regard to improvements that should be made; but the wife consults the taste of her husband, and puts her best efforts upon the food he likes best. Women do more work during the year than the men. "Man's work is from sun to sun, but woman's work is never done." That is old, but it is too near the truth. I am going to ask them to find a little time to help in the struggle for better prices for farm products. Your influence over the sterner sex is greater than you realize. Take a little nooning and read to your husband while he is resting. Read about necessity of organization. Read Up-to-Date. Send to Mr. Everitt for his great book, "The Third Power." Don't let him rest until he becomes a member of

the American Society of Equity. Urge him to read and become posted, and thoroughly awake on the subject. He may thus become a power for good to his country and its people. Urge him to get others interested, and get a local union formed and then hold the products of the farms until you get the prices established by the Society. Quit sending the crops to the market; let the markets come to the crops. I can remember when three or more wheat buyers would get on my load of wheat, and bid against each other as they do at auctions. But that is all changed by the co-operation of millers and grain buyers until the old maxim "competition is the life of trade," has given place to "combination is the despot of trade."

If your husbands would devote as much time to bringing their own business to the basis on which all other business is conducted, as they do to politics and other outside matters, they would do themselves and their families a much greater service, and at the same time contribute to the building up of the most demoralized industry in the world. Excite his indignation by telling him that the speculators on the Board of Trade have already quoted new wheat at Chicago for September at 80¢ cents, while the condition of wheat at present writing, at least in Michigan, indicates that we may have to bring wheat from other states to supply our people.

You can easily get better prices for your butter and eggs by clubbing together and getting regular customers in your own city. Go to hotels, boarding houses, hospitals and private houses, where they will be glad to get nice home butter and fresh eggs, even at a little more than they pay at the stores, and if you always give them good goods on set days, rain or shine, you will never lose a customer. Organize and advertise, and you will soon be doing a good business, and setting others a good example. Shame the men by showing them what you can do along this line.

Go with your husbands to the local unions, and let your approving voice be heard by every non-union man, and they will not ignore your plea for equity. We need your aid to make this the grandest and greatest achievement for all industrial classes.

S. W. CLIMAX.

Michigan.

### THE LORD TO JUDGE IN EQUITY

#### To Up-to-Date Farming:

I have received a copy of "The Third Power," and find that Mr. Everitt hews to the line all along. That book should be read by every laborer throughout the United States.

If farmers would only think a moment and open their eyes to see how they support thousands of gamblers, speculators and middlemen, who labor only to get farm produce at the lowest price, they would strike for equity. The head rules the body; the hand does what the head commands; so do the feet. Amputate the limbs, and the body still lives; cut off the head, the body dies.

If the farmers stop the business of the world must stop; but speculators and others may stop and the world will go on. The farmers, therefore, have the reins in their hands, and may it be God's will for them to wake from their slumbers, and handle those reins wisely. Let us live in equity "Before the Lord; for He cometh to judge the earth; with righteousness shall he judge the world, and the people with equity."—Ps. 98:9. Wishing the A. S. of E. great prosperity.

DENNIS BRIDGES.

Georgia.

### MORE FROM MICHIGAN

#### To Up-to-Date Farming:

We organized Roscommon Union No. 1, April 12, and had a good meeting. Charles A. Cook addressed the people and urged the necessity of organization. I would like to see every farmer join the A. S. of E., because it presents the only plan ever yet offered by which the farmer may secure the right enjoyed by every body else, of putting a fair price on the products of his labor. This So-

ciety is a God send to farmers, and each one that hears about it should join, so that we may present a solid front and keep the ball rolling. I believe that every member of Roscommon union stands ready to explain the workings of the society, and get new members.

Michigan.

OLIVER B. SCOTT.

### HIGH COMPLIMENT FROM NEW YORK

#### To Up-to-Date Farming:

Thousands like myself read and profit by the very able sayings which are printed in that greatest of all farmers' journals, Up-to-Date, and I can truly say that in my estimation the farmer who does not read this journal neglects his duty to himself and his farm. In your March 1st issue I read, with deep interest, the article "The Farmer and the Presidential Election," and I wish to bear testimony to the truth of the words in that article. I think we cannot too persistently keep before the agricultural masses the importance of careful discrimination in depositing the votes which fill our important official stations.

E. W. LANE.

Suffolk Co., N. Y.

(Note.—While Up-to-Date takes an abiding interest in all elections, it is entirely non-partisan, and cannot urge the claim of any particular parties or candidates.—Editor.)

### ON A WARM TRACK

#### To Up-to-Date Farming:

My daughter takes Up-to-Date and it expresses my sentiments exactly. We are all hunting for the dollar and in the A. S. of E. we think we have a lead hound on a good warm track. We need an organization in every township to push ahead after our rights. Let's put our shoulders to the wheel, and get what belongs to us. We pay too much taxes, too much interest and too much for all of our supplies compared with what we get for our products. I see no way except by co-operative organization to bring the prices of our products up to an equitable level with the prices other combinations compel us to pay. The way farmers can get help in this matter is to take Up-to-Date Farming and live up to its teachings.

Iowa.

T. L. BOOZEL.

### THE RIGHT SPIRIT

#### To Up-to-Date Farming:

Please find enclosed 50 cents for my renewal. I did not know my time was out, and I thank you for reminding me. I am not farming now, but I like the paper for its real up-to-date methods.

I would like to hear from some one about cows care, feed and breed, most suitable for a small dairy of four cows to sell milk in a small village.

Wisconsin.

E. P. WILSIE.

(Note.—If you have a good pasture, Holstein cows will no doubt be your most profitable ones. They are greater eaters than the Jerseys, but they are also greater milk producers. If you are to feed entirely, clover hay and wheat bran makes a good ration. We have an excellent article on the Holstein for this issue if it be not crowded out. If so, look for it in a later issue.—Editor.)

IS YOUR ORDER HERE?

Notwithstanding the frequent reminders to our correspondents, subscribers and customers to always give their full name and address, here are a surprising number that fail in this particular. Below is a list of orders received this year without complete address. If you have one in the list please let us know and be sure to mention amount. Repeat your order and don't fail to give address in full. In this list D. B. stands for due bill. The list follows:

J. B. Scott, Box 72, 5c; Charlie Evert, 5c; F. A. Rine, Ohio, 9c; Victoria Forester, 8c; Wyandot, Okla, 8c.

The following sent 10c each: Effingham, Kan.; Minn.; Jas, M. McDowell; B. F. Barnett; and D. B.; W. R. Robinson, R. R. 6; Junction City, O.; Geo. B. Foster, Adrian; Enoc Jennings, Roxbury, Ohio, Box 2; Amanda Wade, Oden, R. R. 3; A. C. Conrad; Solon, Ind.; Jos. Engel; Dodge City, Kan.; Mrs. John Garrett, Henryville; J. E. Goren.

Black Laper, 12c; 12c; 13c; 15c; 15c; Miss Rena Lambert, R. R. Belmont Co. Ohio; Sallie, Hawks Nest, W. Va., 15c; 15c; Mrs. Harvey S. Sleighter, Chamoess, Pa.; 16c; Mrs. John Beahm, Fox Lake, 16c; Montpelier, Ky., 18c; H. W. Shuck, 20c; Vincen, W. Va., 20c; 20c; 20c; Mopkins, Mo., 20c; 21c; 23c; 24c.

The following sent 25c each: Mrs. L. Hall, Hall Lodge; C. W. White; C. E. Tolson, Stevensville; J. V. Marshall; W. T. Berry; Rebba Ade; Winchester, Ind.; Mrs. H. Shertzer, Hayfield Farm; Minnie Godfrey; J. B. Kaler; Decatur, Ind.; Oliver Holsington; Morris, Ind.; Danville, Ky.; H. S. Kein; J. H. Robinson. Also six others without name or address.

26c; 26c; 27c; Lizzie Abbe, West Va.; 27c; 28c; 28c; 29c; 30c; 30c; Susie Drennan, Mt. Juliet, 30c; 32c; 32c; Reedsburg, Ohio; 33c and D. B.; E. Lauder, 34c; Mrs. R. N. Beauchamp, 35c; 35c; 35c; Ephriam Webb, Towns City; C. S. Fleming, 35c; 35c; Wells, 38c; Hoagland, Ind., R. R. 1, 39c.

The following sent 40c each: Mrs. Rayseott; Mrs. Anderson Brown, Blue Ridge; Alonzo Paige, Byron; Gazel, W. Va.; Mrs. Anna Sweigart, R. R. 3, New Holland. Also four others without name or address.

Dabney, Ark, 42c; 41c; 43c; 43c; F. H. Mills, Hancock, R. R. 15, 45c; Mrs. J. B. Moses, Rockdale, 45c; 45c; Yale Kans., 45c; 46c; 49c; Calie Wilson, Morgan Mill, 49c; Pecan Gap, Tex., 49c.

The following sent 50c each: Springdale, Wash.; Buckland; Mrs. Mary Troyer, R. R. 1, Sull Co., Mo.; Alonzo Carpenter; J. W. Hughart; A. W. Barba, and D. B.; Levi M. Kerney; G. H. Souhamus; Worcester, Mass.; Luther Shearer; E. M. Coe, Holtville, Cal.; J. W. Nelson; Little Rock; Lancaster, Mo.; Lynn Childress, Dickson; Henry Gertley, Sr., Princeville; J. D. Scarbough, Fayette Co., W. Va.; M. O. Clutter, Mexico; Jane Lew, W. Va.; A. W. Wall; Mrs. Marion C. Martin; John Heimdal, Park City; New London, Ohio; Mrs. T. Ry English; New Athens, Ill.; W. D. Carrico; W. S. Bell; Cambridge, Ill.; Dr. Colson, Box 19, Ky.; J. W. Collins, Holbrook; Burlington; Carl Weiland; Dodd Wash.; A. F. Samples; Susan E. Hinton; Kate Peters; Mrs. Lovina Barnes; Adamsville, Ohio; E. C. McGill; Hadley, N. Y.; Sag, W. S., Mich.; Annie B. Engelstad, Stoughton; St. Jacobs, Ill.; Pomery, Wash.; Sparta Mich.; David Murphy, Trainers Sta. (or Trainers Bank); R. J. Burgin, R. F. D. 1, East Hane, Pa.; W. T. Parsons; W. C. Marvel, Gill, Mass.; H. R. Frook, D. P. Creek, Ind.; Union Plain, Ohio; Geo. F. Pixley, Downing; H. W. Fulmer, Richland Center, R. R. S.; H. Palier, Arkansas; J. T. Hunt; W. H. Grant, order for "The Third Power;" Mrs. Jno. Gally, Kings Co., N. S.; Milford's Mill, Pa.; Amy; R. S. Garner; Collier, Mrs. Alice Gohns, Kempton, R. R. 2. Also ten others without name or address.

52c; Trinity Springs, Ind.; Greensboro, N. C., 53c; Henry Beerbower, 54c; W. H. Still, 54c; 55; Belzana, 55c; J. B. Wentzel, Greensburg, R. F. D., 55c; W. W. Marlan, 55c; Cowden, Ill., 56c;

Mrs. S. T. Tanner, 59c.

The following sent 60c each:

Matt Munn; Bennings, S. C.; Pea-ridge, Ark.; Ed Mahan, Fitzgerald; Miami, Mo.; Tuckern. Also four others without name or address.

Matilda Daron, R. R. 4, York Co., Pa., 61c; 63c; 63c; Salt Lick Tenn., 68c; 70c.

The following sent 75c each:

Annie E. Demain, S. Morgan; Geo. Kingsland; Dodge City, Kan.; D. L. Dozier, Bellefonte; H. L. I. Seely; Angelica; T. R. Wells; Mrs. J. J. Hess; Miss Emma Gosnell, Box 41, Ver. Co., Ind.; Mervin DeWalt; Trenton, Ill. Also four others without name or address.

Joe Montgomery, 82c; 84c; A. E. Brown, Oneido, 85c; Ivan Tex, 85c; Mrs. P. C. Bechdolt, 92c; Foston, Mont., Cedar Bayou, Harris Co., Tex.; John G. Kettoman, 96; 97; Melbourne, Mo.

The following sent \$1.00 each:

Elmer Simmons, Mich.; Omelie Massa; Clinton Falls; Miss Gusta Rieff, Bo. 188, Brown Co., Wis.; C. C. Wilcox; Henry Meyer, Sr., R. R. 1, Floyd Co., Ind.; Jno. W. Gettner; Waynesboro, Tenn.; John & Emily Hiscock; Claud Miller; Clyde Thompson; McDonalds Mills, Va.; Geo. W. Wheeler, Alano, R. R. 13; Birmingham, Ky.; Jno. L. Baker; Alvin Wick-ersham; So. Paris; John Rudolph, Sr., Oldenburg; Pocono, Pa., (?); M. C. Call; Jno. S. Davis; J. M. Amos; Mrs. B. F. Hurt; Mrs. S. D. Gaskill; Talma, Ind.; Jno. Bowen, Ill.; Ky.; Sulli- van, Ind.; & D. B.; Also thirteen others without name or address.

Shullsburg, Wis., \$1.02; \$1.04; \$1.05; \$1.10; Marmaduke, Ark., \$1.13; Geo. Losey, Hancock, \$1.14; Lancaster, Ky., \$1.19; \$1.22; Argos, Ind., \$1.25; Mary E. Morris, Westfield, \$1.25; \$1.25; \$1.15; N. A. C. \$1.25; A. J. Jenkins, \$1.25; \$1.25; A. M. Kevelle, \$1.25; Eugene Ackerman, \$1.25; Suncook, N. H., \$1.30; \$2.36; J. N. Wannan, \$1.40; Mercers- burg, Pa. \$1.40; \$1.45; Pincastle, Ky., \$1.45; \$1.50, Smith Mullin; \$1.50; \$1.50; \$1.50; Jas. Lugene deer, Winchester, \$1.50; Temple, Tex., \$1.50; Elmer W. Glad- den, \$1.50; Mrs. Henry Hall, N. C., \$1.60; Miss Laura Buckner, \$1.60; 70c; Akers- ville, Ky., \$1.70; Jos. S. Hazen, Felix, 70c; \$1.75; \$1.75; B. H. Hammer, Langs- ton, \$1.75; \$1.80; S. & Tom. Kellet, \$1.84; \$1.85; G. W. Duncan, Dewey Co., Okla. \$1.89; Madisonville, Ky., \$2.00; J. T. Inghram, \$2.00; J. D. Baily; \$2.90, \$3.00; Sharpville, Ind., \$3.97; Sharp- ville, Ind., \$3.37; Geo. H. Lane, R. F. D.

Farmington, \$3.75; Blandsville, Ky., \$4.00; Cadiz, Ohio, (on envelope), \$4.74; A. S. Smith, R. R. 5, Davis Co., Ind., \$5.00, Jacob Seybold, R. R. 3, Montgomery Co., Ohio, \$5.00; Elnora, Ind., \$5.55; Loda, Ill., \$6.00; Eubanks, Ky., \$6.00; Cow- anesque Depot, Pa., \$6.03; Rich Valley, Ind., \$7.95; \$12.00; Geo. Hadesty, Gor- don, \$14.25.

The following sent Due Bill:

John Thompson; A. L. Barrison; L. Kraft; 35c & D. B.; John White; Mrs. W. F. Foreman; A. Peterson; A. C. Bante; Brazil Ind.; Mo.; M. C. Call; S. A. Dotter; R. F. Byan; Raltee L. Ball; Huntsville, Ark.; J. L. Collier; Shelbyville, Ind.; Theo Giwett, N. Y.; Mrs. E. L. Pepper; Frank Avery; L. H. Burkholder, Man- golia; O. A. Huffman, Frankfort; Boat- land, Tenn.; August Hamburg; Mrs. M. A. Black, Fairfield; Elk City, Kan.; Hills, Iowa; Daniel L. Yoder; B. F. Bull- foul, I. T.; D. B. & 3c; Ausable Forks, N. Y., D. B. & 68c; J. D. Farris, D. B. & 14c. Also five other D. B. without name or address.

J. A. EVERITT, Seedsman, Indianapolis, Ind.

**BIG BARGAIN**—Formula for making Wonderful Heal- ing Ointment for only 25 cts. Cures sores on man and beast like magic. Also burns, cuts, catarrh, piles, etc. Ad- dress, C. R. DALBEY, Washington, C. H., Ohio

**LOVERS' PUZZLE GREAT FUN!** You can "Pop the Question" with it. Mysterious—Fascinating! Easy when you know. Doesn't show in pocket. A beautiful trinket. Has Wedding Emblems, Ring, Musical Bell, Heart, Big Question-point and "Sign of the Honeymoon," all bright metal—Puzzle, get the Ring!—Amuses every- body. Agents, make money on it. It sells at sight. By mail sealed with directions 20c in stamps. Send now. **THE JOY NOVELTY CO.,** Lock Box 140, A, Akron, Ohio.

Have You Ever

been called up in the middle of the night to fetch the doctor? Does not your experience recall to your mind many an occasion when a good corrective like

**BEECHAM'S PILLS**

might have saved a nocturnal tramp or a turnout of the buggy after your horses had been stabled? BEECHAM'S PILLS always kept in the house may save many a hitch-up after dark. Save yourself worry and expense by always having "the little doctor" on the farm in the shape of a box of BEECHAM'S PILLS

Sold by Druggists at 10c. and 25c., or mailed by B. F. ALLEN CO., 365 Canal Street, New York City, if your Druggist does not keep them.

The "Plymouth Rock" Combination Repair Outfit

A Complete outfit of Tools for General Boot, Shoe, Rubber, Harness and Tinware repairing, including a RIVETING MACHINE. Consists of 40 First-Class Tools and Materials shown in cut.

The Most Complete and Practical Outfit Made

This is the most complete and desirable outfit made. The Lasts and Stands are strong and heavy, and every article is strictly first-class, the best there is made, and the same that practical mechanics use.

The special feature of this outfit is that it contains one of the latest im- proved Automatic Riveting Machines for setting tubular rivets. With it any one can do all his own harness, strap and belt repairing. The saving on these items alone will pay the user the cost of the outfit in a year, to say nothing of the saving on re- pairing one's boots, shoes, rubbers and tinware.

Each Set Packed in a Neat Wood Case Weight, 22 pounds. Price per set, ONLY \$2.00.

PEOPLES WHOLESALE STORE, Indianapolis

# COTTON INDUSTRY IN INDIA AND OTHER COUNTRIES, AND ITS EFFECT UPON THE COTTON GROWER IN THE UNITED STATES

Next to the United States, India is the largest cotton producing country in the world. Bombay is said to rank third among the cities of the globe as a cotton market, New Orleans ranking first and Galveston second. The export of India has never reached \$50,000,000 in any one year. The southern part of India produces the greater part of the crop. The average acreage is about 14,000,000 a year and the average yield per acre in lint cotton is about 56.5 pounds. The average yield per acre in the United States of lint cotton for the year 1899, was 194.8 pounds or very nearly three and a half times that of India. This difference can be accounted for in part by cotton in the latter country being grown in conjunction with some other crop. It is a well established fact that cotton planted in conjunction with other crops does not do so well in the United States as when planted alone. There are portions of India where two crops a year are produced on the same soil. If the entire cotton area of India could do this, and the yield per acre, increased to equal that of the United States for the year 1899, then their annual crop would be 16,260,000 bales as against the present average of 2,009,500 bales.

India could, with her cheap labor, force the southern farmer out of the cotton growing business, if the said climate and condition were the same. Two dollars a month being considered good wages for an able bodied man to work in the cotton fields. Wages are incredibly low in every line of business. In the cotton mills for instance the wages range about as follows:

Card Room.....	Per mo.
Head Ministry.....	about \$11.00
Card Cleaner.....	" 2.81
Spare Hands.....	" 2.17
Mule Room.....	Per mo.
Head Ministry.....	about \$12.00
Minder.....	" 2.35
Spare Hands.....	" 2.15
Weaving Dept.....	Per mo.
Ministry.....	about \$5.88
Healer.....	" 2.34
Weaver.....	" 3.05
Finishing Dept.....	Per mo.
Washing & Bleaching Min.....	about \$7.01
Dyer.....	" 2.01
Finishing Man.....	" 2.16
Engineering Shop.....	Per mo.
Boiler Ministry.....	about \$3.35
Engine Man.....	" 4.82
Oil Man.....	" 2.19
Boiler Man.....	" 2.41
Carpenter.....	" 3.85
Blacksmith.....	" 5.23
Fitter.....	" 4.61

Postmen get from \$3.08 to \$3.50; mechanics and ordinary blacksmiths from \$2.50 to \$3.50; clerks and those having indoor employment get from \$4.10 to \$5.50 per month.

Manufacturing thus far has developed very slowly, but the Government is giving every encouragement to its increase and we may expect marked results along this line in a few more years. The local mills of India already consume about fifty per cent of the cotton grown in that country. The export of cotton from the United States in 1899, was 62.2 per cent of the entire crop grown, the remaining 37.8 being divided between the northern and southern mills, thus we see that India comes nearer consuming her entire yield than the United States.

Now what is to be learned by the cotton grower in the United States by a close analysis of the preceding facts?

1st. The cotton producer in the United States can not compete successfully with the producer in India, due mainly to the difference in the cost of labor; this item alone being about five times as much in the former as in the latter. True, this item is to some extent eliminated in the former, by improved implements used in planting and cultivating, and also by the increased yield per acre, but no doubt by an introduction of the same implements and system in the latter country the results would stand as they first appear, to-wit: Cotton in India owing to cheapness of labor can be produced for about one-fifth of what it costs in the United States.

2nd. We see, that should the farmers of India increase their yield per acre to equal that of the south for the year 1899, that the annual yield of that country would be, if

one crop a year only is grown on the land, 8,130,000 bales of 400 pounds each and if two crops be grown on the same land the yield would be 16,260,000 bales of 400 pounds each, equal to 13,008,000 bales of 500 pounds each, or 2,408,000 bales more than the entire crop

of the United States as estimated for 1903-4. It is not probable that such developments will occur again in the near future, but no doubt, there will be rapid improvements, not only in India, but in the European colonies in Africa, where strenuous efforts

## \$50,000.00 Cash Given Away TO USERS OF Lion Coffee

We are going to be more liberal than ever in 1904 to users of *Lion Coffee*. Not only will the Lion Heads, cut from the packages, be good, as heretofore, for the valuable premiums we have always given our customers, but

### In Addition to the Regular FREE Premiums

the same Lion Heads will entitle you to estimates in our \$50,000.00 *Grand Prize Contest*, which will make some of our patrons rich men and women. You can send as many estimates as desired. There will be

### Two Great Contests

The first contest will be on the July 4th attendance at the *St. Louis World's Fair*; the second relates to *Total Vote for President* to be cast Nov. 8, 1904. \$20,000.00 will be distributed in each of these contests, making \$40,000.00 on the two, and in order to make it more interesting, in addition to this amount we will give a

### Grand First Premium of \$5,000.00

to the one who is nearest correct on both contests, and thus your estimates have two opportunities of winning a big cash prize.

Five Lion Heads cut from Lion Coffee Packages and a 2c stamp entitle you (in addition to the regular free premiums) to one vote in either contest:

Printed blanks to vote on found in every Lion Coffee Package. The 2c Stamp covers the expense of our acknowledgment to you that your estimate is recorded.

#### WORLD'S FAIR CONTEST

What will be the total attendance at the St. Louis World's Fair on July 4, 1904? At Chicago, July 4, 1893, the attendance was 283,273. For nearest correct estimates received in Woolson Spice Company's office, Toledo, Ohio, on or before June 30, 1904, we will give first prize for the nearest correct estimate, second prize to next nearest, etc., as follows:

1 First Prize.....	\$2,500
1 Second Prize.....	1,000
2 Prizes—\$500.00 each.....	1,000
5 " — 200.00 ".....	1,000
10 " — 100.00 ".....	1,000
20 " — 50.00 ".....	1,000
50 " — 20.00 ".....	1,900
250 " — 10.00 ".....	2,500
1800 " — 5.00 ".....	9,000
2139 PRIZES	TOTAL, \$20,000

#### PRESIDENTIAL VOTE CONTEST

What will be the total Popular Vote cast for President (votes for all candidates combined) at the election November 8, 1904? In the 1900 election 13,859,653 people voted for President. For nearest correct estimates received in Woolson Spice Company's office, Toledo, Ohio, on or before November 5, 1904, we will give first prize for nearest correct estimate, second prize to next nearest, etc., as follows:

1 First Prize.....	\$2,500
1 Second Prize.....	1,000
2 Prizes—\$500.00 each.....	1,000
5 " — 200.00 ".....	1,000
10 " — 100.00 ".....	1,000
20 " — 50.00 ".....	1,000
50 " — 20.00 ".....	1,000
250 " — 10.00 ".....	2,500
1800 " — 5.00 ".....	9,000
2139 PRIZES	TOTAL, \$20,000

### 4279—PRIZES—4279

Distributed to the Public—aggregating \$45,000.00—in addition to which we shall give \$5,000.00 to Grocers' Clerks (see particulars in LION COFFEE cases) making a Grand Total of \$50,000.00.

Complete Detailed Particulars in Every Package of

## LION COFFEE

WOOLSON SPICE CO. (CONTEST DEPT), TOLEDO, OHIO.

are being put forth by the English, French and German Governments, who are trying to grow enough cotton to supply their mills without having to depend upon the United States as at present. It is worthy of note just here, that the countries named above offer as their principal reason for this change, that owing to non-existence of suitable laws in the United States to prohibit speculation or cornering upon the products of the country by a set of gamblers, non-producers or trusts, who can manipulate the market at their will, setting an arbitrarily low price on staple products while in the hands of the producers, and as soon as it has passed from the hands of the producers, or a sufficiency to control the price of that particular product, then they set an arbitrarily high price, forcing the manufacturer to pay enormous profits on the purchase price of the staple. What cotton producer is so ignorant that can not see the impending dangers with which he is threatened under the present system of marketing?

Can we expect, State or National laws to control marketing of cotton to such an extent that will stop this arbitrary price fixing by the gamblers in cotton both in leaving the producers hands and in reaching the manufacturer? No. Then, what is left for the farmer to do? He must either organize to control the marketing, or expect the gamblers in cotton to get all the profits, with the ultimate result of our foreign trade on this staple being greatly damaged if not entirely destroyed, by the countries of Europe growing enough cotton in their colonies for the consumption of their mills. Very few southerners, as a rule, consider that there is any danger coming from the experiments being made by the European countries in cotton growing, but the writer, by a close study of the subject, makes no hesitancy in saying, that he expects the most startling developments on this line in the next decade. The United States, as is supposed, isn't the only country that can grow cotton.

Suppose, experienced cotton growers from the United States are employed by the European Governments, (which really is being done now) and sent to Africa, China, Egypt, India, Peru and other South American countries, Russia, South-West Australia, etc. Can we safely say that failure will be the result, while some of the countries are already making the industry profitable under the most primitive modes of cultivation? It should be remembered that labor in each of the countries named is much cheaper than in the United States.

The purpose of the writer in making mention of these facts is to call the attention of the cotton growers in the Southern States to the importance of watching these developments, and not only, of watching them, but to study the situation in a way and manner, as will best enable them to deal with the subject with common sense and business judgment, by reducing and diversifying their crops to meet the exigencies.

Every cotton grower in the United States should see and realize the importance of curtailing the production of cotton in the South in the same proportion that the yield is increased in India and other countries producing the staple, with an allowance for increased population and demand, if he expects to receive equitable and remunerative prices for that produced on his farm.

The labor in all countries producing cotton other than the United States, range from one-fifth to one-half of what it costs in the South; therefore, it is useless for the farmers of the South to undertake to create a monopoly on the cotton industry to the extent of driving the African, Egyptian, Indian, Persian or Russian farmers out of business.

So the only safe business method of dealing with the subject is to curtail and regulate the output; never allowing a surplus to accumulate. The cotton growers of the South had better produce five or seven million bales at a profit than ten or fifteen million at a loss. They should keep well posted on the yield of cotton in other countries producing the staple, and the demand for the same under normal conditions, and increase or decrease their crops accordingly.

If Egypt and India want to grow cotton by excluding food crops, then plant food crops to feed their famished millions, and if to grow food crops by the exclusion of cotton, then increase your cotton acreage to clothe her naked millions, but at all times and under all circumstances, holding yourself within the bounds of a profitable yield.

Grow just what you can dispose of at a profitable price, and no more, for what

benefit would you get by doubling your yield if by doing so you should force the price down one half?

There is no doubt in the writer's mind, that the farmers of the United States are devoting too much time, in trying to grow larger crops and too little time in "marketing" what they do grow.

It is an old maxim in the mercantile line of business, that goods "well bought," are goods half sold. Now if this be true in a mercantile sense, why can we not apply it in an agricultural sense, by saying, that cotton "well sold," is cotton half produced? What benefits are derived from agricultural products, other than a living for the farmer and his family and a profit on the surplus for having grown it? None whatever. Then why, produce anything that does not bring with it a remunerative price for the time and worry spent in making it?

Would it not be better to spend the time in adding comforts to your home for wife and children or reading and studying plans of co-operation with your fellow farmers, by which you could free yourself from the grasp and dictation of trusts, monopolies and other combinations, which are all hurtful to the farmer, because being combinations, "individuals," can not thwart or pass without injury, their avarice and oppression.

The farmers of the South must co-operate to control the marketing of their cotton, vegetables, fruits and dairy products, and the farmers of the East, North and West must co-operate for a similar purpose, so let all sections come together, under one common cause for good to all American citizens, not for the farmer alone, but for the good of every individual engaged in a legitimate and righteous business.

When the condition of the farmer is bettered every other occupation is bettered because he is able to buy more of the products of others. The average farmer works from ten to sixteen hours a day the year round, and gives little time to the investigation of different markets, that he may know where his produce can be disposed of at the most profitable price, relying simply upon the old custom of dumping it upon the nearest market and at any price that may be offered by the speculators or middlemen. My farmer friends! is it not high time you were making some changes in this abominable and ruinous practice? This rule may have worked well in the days of your great-grandfathers but it will not work well at the present time among combinations, corporations, labor unions, syndicates, trusts, etc., through which every other industry is protected and you are forced to buy at these protected prices, on one hand, and forced to sell at unprotected prices on the other.

It is highly amusing to read the letters and opinions of learned men, on the "possi-

bilities," of cotton culture in the South. Some say the plant is deteriorating and it is only a question of time until it can not be grown profitably. Others say, that its limit has not been reached, and even go further, by saying that on the same area, that the farmers have been cultivating to grow 10,500,000 bales, if conducted intelligently by skilled labor, 16,000,000 bales could be produced. It is such a pity that the cotton growers of the South are such "ignoramuses," as to sustain an annual loss of 6,500,000 bales of cotton.

The farmers ought to have some of these "Solomons" to teach them a lesson or two in the science.

One writer says that the South has a capacity of producing 80,000,000 bales without seriously affecting its food crops. Still another says, that it will require 50,000,000 bales of 400 pounds each to raise the world's standard of consumption to what it is among the civilized nations of the earth. This estimate may be, approximately correct, if we use as a basis of comparison the American "dude" with six shirts a day, and the African with none. No one knows the possibilities of the South in the production of cotton better than the producers themselves.

It is to be hoped that the farmers of the South will not let these delusions turn their heads from sober thoughts and better judgment, but proceed with the problem, with a view to profit making instead of trying to prove some writers delusive speculation.

If the world's consumption should require a 50,000,000 bale crop, do not grow it unless it can be sold at a price that would insure a reasonable profit for growing it.

Just let a twelve or fourteen million bale crop be insight and see how quickly some of these same persons will cry out "overproduction."

# The Black Wolf's Breed

## A Spirited Romance of the Time of Louis XIV By Harris Dickson

Copyright 1899 by the Bowen-Merrill Company.

CHAPTER XIX—Continued.

I verily believed the Almighty vengeance was in my blade, and doubt not I should have slain him despite his troopers but for a crushing pike blow over the head, so swiftly did it all come about.

My brain reeled; the sword dropped clanging from my nerveless hand. When I recovered, I found myself bound upon a horse behind one of the men.

"On with him, men, to Cartillon; there we rest this night in the King's name."

In this wise we rode along; Ortez openly exultant, I silent and scornful.

"Aha, my fine brother," he spoke low at my saddle, "thy father's son has thee in his power now. And shall I not revenge upon thee the wrong our father did my mother for thine? Didst know the story?"

I made no reply, but he went on unmindful.

"To my mother he gave his love but dared not give his name; to thy mother he gave his name but could never give his love. So thou art the proud Lord of Cartillon, and I the outcast soldier of fortune, the nameless adventurer, slayer of women—what thou wilt. But things are changed now. Before many hours I will be the Count d'Artin, and thou a dishonored corpse, sweet brother."

"Thou! Thou my brother?"

I turned upon him a look of incredulous contempt, yet, for I had heard some such tale of my father's youth, I asked:

"Thy mother was—?"

"Nanon Esculas, whom thy father abducted in Spain to desert in France."

"My heart sank; I had seen the woman, and knew her son for one of the most courageous and unprincipled adventurers who hung about the Court and held their swords for hire. When the noisy troop rode up to the gates of Cartillon their leader paused, a head appeared upon the battlements.

"Guise," cried Ortez, giving the watchword of that day of slaughter. The drawbridge lowered, and open swung the gates.

"Welcome to Cartillon, d'Artin," Ortez bowed. "Here at last we find rest and refreshment. Let a feast be spread in the great hall, ransack the place for good cheer. We've done brave work this glorious day, my lads, and a merry ending we'll have before the night is gone."

Everywhere in the courtyard were evidences of bloody conflict. Singly, in groups and in hideous crimson-splashed piles lay Catholics and Huguenots together, peaceful enough in death.

"By my faith, and a gallant set of gentlemen we have here," laughed Ortez. "What think you, brother mine?"

And even as he spoke he leaned from his saddle to strike down a half dying wretch who lifted his head from among the slain.

"Perez," he called to his sergeant riding behind him, "dispose of these bodies. Throw the heretic dogs into the old well yonder. Give our martyred friends Christian burial."

He sat on his horse idly toying with his dagger, and forced me to watch my servants, the wounded and the dead, being cast into the yawning darkness of the well.

"Gods blood! here is our sweet young Philip. What, not yet dead! Why, it matters not, cast him in." This in answer to a questioning look from the more merciful Perez.

The men at arms had extricated from a heap of slain the limp body of my youngest brother, a boy of twenty, his pallid face gaping open from a cut across the cheek. He lifted his eyes languidly to mine.

"Oh, brother, you are come. Some water, water," he murmured.

"Throw him in, men," Ortez interrupted. Perez yet hesitated.

"Shall we not first dispatch him, sire?"

"No, I would not harm my gentle brother; throw him in. Be not slow about it either, thou chicken-hearted bullies; pitch him in."

The men started to obey this savage order. "Hound of hell!" I screamed, tortured beyond endurance, and struggling at my bonds.

Ortez slapped me in the face with his gauntlet, then laying his hand upon my shoulder said with assumed gentleness:

"Calm yourself, my dear brother; think of your unbandaged wounds; they may bleed afresh."

Philip was conscious as the men bore him to the edge of the well, but powerless to resist four stout fellows who cast him headlong amongst the dead and dying to mingle his groans and blood with theirs. Oh, that God should permit to men such deeds, and grant that men should witness them! When the last body had been disposed of, Ortez led the way to the banquet hall, inviting all his

rabble to join the feast. The banquet hall, used as it was to scenes of turbulence, never perhaps had looked upon such a throng as that. I occupied the head of my own table, strapped helpless in my seat. On either side were vacant chairs. Ortez sat at the foot. Between, the soldiery ranged themselves as they pleased. One of the troopers coming in late would have taken his place beside me, but his Captain stopped him:

"Not there, Gardier; we have other and fairer guests for whom those seats are kept."

Almost as he spoke the chairs on either side of me were slipped away, and after awhile as silently returned to their places.

Sacrament of passion! In one of them was bound the mutilated corpse of my queenly wife, her fingers hacked off and her ears torn out for the gems which had decked them. Upon my left sat little Cella. But for one lurid stripe of crimson across her girlish breast she might well have asleep, so lightly death had touched her. Behind them I saw a tall, gaunt woman, wearing a man's helm and carrying a pike. She directed the men. This was a woman's hellish work.

Ortez rose with studied politeness:

"Your wife and child, d'Artin; our charming family reunion would be incomplete without them." And the woman laughed aloud.

My brain burned; something seemed to strain and give way. I lost all sense of pain, all capacity to suffer. How long this lasted I know not. When the revelry was at its height, when the wine had dulled every human instinct of these rough "Soldiers of the Church," Ortez raised his voice above the tumult; he knew his men were in the humor for a diversion he was about to propose.

"Now comrades," he said, "for the crowning joy of this most blessed day, now for our last sacred duty to Mother Church."

He came round the table and taking a cord from the hands of one of his men he threw the noose over my head. With feet bound together, hands free, I stood amongst them, this throng of butchers, each with the white Cross of Christ in his cap, the white scarf of Guise upon his arm, drunk and eager for blood.

"Henri Francois Placide d'Artin, what hast thou to say why we shall not declare thy blood attainted, thy name dishonored, thy estate forfeited, why we shall not hang thee for a Huguenot dog, traitor to King and church? Speak."

All the defiance of my race burned fearless in my eyes; I felt my face flush an instant at the shame of such a death, but replied as steadily as might be:

"Not a word to you, thou infamous one, thou baseborn coward, murderer of the helpless; not to you!"

The cool, polite manner of Ortez fell from him like a mask. He seized the cord with his own hand, jerking me prone upon the floor and commenced to drag me from the hall. A dozen willing hands lent aid. I clutched instinctively at everything which came in my way, being torn from each hold by the ruthless villains at the rope.

Desperate, I grasped the leg of a trooper, but a savage kick in the face wrenched him free, and down the stair they started for the open court. At the end of the cord came tumbling, rolling, bumping down the stone steps this almost senseless heap which was yet a man.

Arrived beside the well, whose great overhanging sweep offered a convenient scaffold, Ortez paused to look at his victim. My breath came slow, I could hardly hear their words.

"Think you his senses will return?"

"Possibly, sire," replied the man to whom

# RHEUMATISM

Wonderful New External Remedy  
Curing Thousands. Any Rheumatic Sufferer May Try It Without Cost.

Send Your Address and Get A Dollar's Worth FREE.

I have a sure, quick and lasting cure for Rheumatism. I cure it by means of Vibro Discs, a wonderful new appliance which is used exter-

nally and draws out the poison from every part of the system. It is the wonder of the age, and a godsend to Rheumatic sufferers. There is nothing like it, and nothing equal to it. It banishes pain as if by magic, and conquers this dread disease in all its cruel forms and stages. It is safe, simple and convenient for home use and roots out the acid venom so thoroughly that no relapse or fresh attack can occur. Prove these claims yourself by testing the remedy at my expense. I will send you, absolutely free, four of these Vibro Discs—

A full dollar's worth—if you simply send me your name and address. This is an absolute gift, and I shall neither ask nor accept pay for it now or in the future. Can you afford to continue in pain and misery when you can get this marvelous new and guaranteed treatment simply for the asking? Write me to-day and I will send you the treatment at once and with it an elegant illustrated book on Rheumatism, all free and prepaid. Don't send any money—not even a postage stamp—but send your name and address THIS VERY DAY.

**S. E. FERRY, 842-844 Capitol Ave. N., INDIANAPOLIS, U. S. A.**

this was addressed.

"Then we will wait; my sweet brother would weep to miss so brave a spectacle as his own hanging."

He sat there upon the edge of the well, whence came the groans of the dying, the hot, fresh odors of the dead, and waited, frowning in the patient ferocity of his more than mortal hate.

After a little I opened my eyes and stared about me, scarcely comprehending where I was or what had happened. Ortiz called upon his men to raise me. Being placed erect the cord was drawn just taut enough to sustain me standing. Now the ghastly woman I had seen in the hall pushed her way through the crowd.

"Her son," she hissed, and savagely struck me in the mouth until blood followed the blow. The cord instantly tightened and I felt myself swing across the well. First only a dizziness and a parched mouth. Then the tumultuous blood surged to my throat, beating, struggling, gurgling like some pent-up mountain stream against the rocks. I threw both hands up to grasp the rope—heard a laugh, not a human laugh, yet it sounded so far, so very far away, away back upon the earth.

A gigantic merciful hand seemed to take my head within its gripe and press out all the pain.

Fiery circles swam before my eyes; great crimson blotches floated about in restless clouds of flame; then dreams, dreams, long delicious dreams. And out of endless years of rhythmic music, the laughter of low-voiced women, and many colored lights, came at length oblivion."

Thus the tale ended. It was the same I had heard in far away Louisiana, told again with all the grim earnestness of desperate truth.

I stood now in the great courtyard again, beside the ancient well, drinking eagerly every inspired syllable. When the speaker had done, he shrank back into the darkness, and was gone.

It was as though I witnessed in my own person the wretched death of Henri d'Artin, and stood within his castle's court when the ruthless deed was done. Verily man knoweth not the rebellious vagaries of an unbathed brain; knoweth not what he but unmeaning phantasies, or what be solemn revelations from the very lips of God.

In the deep gloom the ruined castle loomed darkly, a ghastly monument of evil deeds. I looked about for the madman but saw him not. The weirdness of the place, the horror of its secret, crept into my blood. I became afraid. Down the bleak road I picked my way, glancing fearfully over my shoulder. I fain would have fled as had the lad.

I found my horse re-equipped. Still shuddering I mounted, scarce daring to look backwards at the cursed pile. Then, with the madman's story surging in my brain, I dug savage spurs into my steed and galloped desperately onward through the night.

CHAPTER XX.

—From the Path of Duty.—

It was about ten o'clock when I reached Dieppe. Soon thereafter I was well aboard le Dauphin, Serigny himself meeting me at the vessel's side.

"Hullo, Placide," he cried. "All goeth well, and the passing night gives promise to us of a brighter day."

Later, in his own cabin, he told me of a brief meeting he had with Louis.

"For the time we are safe. The King is restless about the safety of the province, and he trusts Bienville as a soldier. The Spanish intrigue keeps our enemies so busy they have not time to disturb us. The King has a man who can take Bienville's place. Well, it's all happily over, and I am as delighted as a child to be at sea again. We would sail at once, now that you are come, were it not for de la Mora; he, with his wife and another lady, are to bear us company. The Chevalier is a thorough soldier, and I welcome him, but like not the presence of the ladies. We may have rough work betimes."

I knew my face grew pale, and thanked the half-light for concealment, or he must have noted. Who that "other lady" was, possessed for me no interest, and I never asked.

De la Mora. This was terrible, and so unforeseen. Full well I knew I could not spend five long weeks in daily contact with Agnes and give no betraying sign. I must needs have time to think, and that right speedily.

"When do they come, sire?"

"Any moment; they left—or should have done so—the same time as yourself. His orders were the same."

Rapidly as a man could think, so thought I.

"How long will you wait for them?"

"Until dawn, no longer. Then we sail."

A glimmer of hope—de la Mora might be

delayed. Without any clearly defined purpose I went on and carefully gave Serigny every detail of information which could be valuable touching the expected trouble in the colonies. Of this my hands should, in any event, be clean. I even handed him the King's new commission directed to Bienville, whereof I was so proud to be the bearer. Whilst ridding my mind of these matters, I could not have said what course I meditated. A boat grating against the vessel's side set me all a tremble, but it was only a letter of instructions. Making some poor excuse to Serigny for the moment, I entered the yawl as it left the ship to go ashore. A well-known voice hailed us ere we made the land.

"Ahoy there, the boat," and through the shadows I made out the form of him I dreaded most to see.

"Boatman, can you put three of us aboard yonder vessel?"

"Aye, sir, it is from her I have just come."

"Is thy craft a fit one to carry ladies?"

This dashed down the hope he had left his wife behind.

"Aye, sir, it is a safe craft, but not a fine ladies' barge. We can go with care and run into no danger. The wind is low."

"Twill serve."

I jumped ashore and would have slipped by without speaking had he not recognized me.

"By my soul, de Mouret, it is you; and we are to be companions on the voyage. Bravo."

He approached me frankly, with outstretched hand and hearty greeting. I would fain have avoided touching his honest palm, but there was no way for it.

"I see you are surprised. Yes? I was suddenly ordered to sail in le Dauphin, and report to your good Governor, Bienville. A most sturdy soldier from all report. Heaven send us a sharp campaign. I am weary of these puny quarrels. We will have brave days in the colonies."

This open-hearted way about him struck a new terror to my heart; I could face his sword but not his confidence. His cheeks glowed with martial enthusiasm and I almost caught again the hot lust of battle.

"And Agnes, with her sister, is at the inn. Yes," he continued, noting me step back a pace in protest, "it is a rude life enough for tender women, but they come of stock that fears no danger, and it's better there than at the court of Louis."

I hardly heard the man. To meet his wife day after day, to associate on terms of cordial intimacy with this honorable gentleman, to enjoy his confidence, my heart filled the while with guilt too strong to conquer—the thing was torture not to be endured.

"Come with me to the inn; let us get the ladies and their luggage aboard. Agnes will be glad to meet you; she says she has great curiosity to see what you are like."

I excused myself most lamely upon the plea of some duty to be performed.

"Ah well, on board then; she will have abundant time, aye, abundant time."

From a dark place near the inn door, I watched their departure. Poor weakling that I was, I could not deny myself. The Chevalier, with Agnes and another lady, took their way toward the waiting boat, a flickering lathorn being borne in their front. His words, "Agnes will be glad to meet with you; she has great curiosity to see what you are like," recurred again and again.

(To be Continued.)

# Cure Women

## OF FEMALE DISEASES AND PILES

I Will Cure You So That You Will Stay Cured—Women No Longer Need Submit to Embarassing Examinations and Big Doctor Bills.

To Show Good Faith and to Prove to You That I Can Cure You I Will Send Free a Package of My Remedy to Every Sufferer.

I hold the secret of a discovery which has never failed to cure women of piles or female weakness. Falling of the womb, painful menstrual periods, leucorrhoea, granulation, ulceration, etc., are very readily cured by my treatment. I now offer this priceless secret to the women of America, knowing that it will always effect a cure, no matter how long you have suffered or how many doctors have failed. I do not ask any sufferer to take my unsupported word for this, although it is true as gospel. If you will send me your name and address, I will send you a trial package absolutely free, which will show you that you can be cured. The free trial packages alone often are enough to cure. Just sit down and write me for it today. Mrs. Cora B. Miller, Box No. 137 Kokomo, Ind.

### 3 FEEDS FOR ONE CENT

"INTERNATIONAL STOCK FOOD" **3 FEEDS FOR ONE CENT**—It won the Highest Medal at Paris Exposition in 1900 as a High-Class Medicinal Preparation, made from powdered Roots, Barks, Seeds and Herbs, to give to Horses, Cattle, Sheep, Goats, Colts, Calves, Lambs and Pigs, in small amounts as an addition to their regular grain feed to secure better digestion and assimilation so that each animal will obtain more nutrition from all grain eaten. Scientific authorities prove that the average animal digests 55 per cent. of the average kind of feeds. "International Stock Food" will cause them to digest 70 to 75 per cent. We paid the government \$40,000.00 war tax because "International Stock Food" was a high-class medicinal preparation. Many other kinds did not pay any war tax because they claimed to the government that they did not use medicinal ingredients and did not claim medicinal results. You can afford to use preparations of this kind only on a medicinal basis. "International Stock Food" purifies the blood, "tones up" and permanently strengthens the entire system. It cures or prevents many forms of disease. It will save you \$10.00 per year in the feed of Every Horse You Work and its use will only cost you \$2.50 per year. It is absolutely harmless even if taken into the human system. Beware of the many cheap and inferior imitations and substitutes. No chemist can separate and name all of the ingredients we use. Any company or chemist claiming to do so is a Self-Confessed Ignoramus or a Paid Fakeliff. Insist on having the genuine "International Stock Food."—It is sold by 100,000 Dealers and "Spot Cash Guarantee" to Refund Your Money if it ever fails to give you satisfactory, paying results and its use only costs you **3 FEEDS FOR ONE CENT**.—We Have Factories at Minneapolis and Toronto, Canada.

## 111 PIGS FROM 5 SOWS IN 6 MONTHS

INTERNATIONAL STOCK FOOD CO.,

Minneapolis, Minn.

COIN, IOWA.

DEAR SIR:—I have been feeding the "International Stock Food" for the last three years and find it to be all that you claim for it. Last April I had five sows that farrowed 61 head of pigs. Four of the sows had 12 head each, the fifth one had 13 head. Fifty-five head of these pigs will average over 200 pounds each at 6 months old, and I must give "International Stock Food" credit for at least part of the large litters and the great growth of my pigs. These same five sows farrowed 50 head of pigs in the September following, an average of 10 pigs to the sow, making 111 head of good, strong pigs from 5 sows in less than six months. The sows and pigs were Poland-China. Who is next?

Yours truly,

A. G. HULLMAN.

Beware of Inferior Imitations and Substitutes. Write Us About "International Stock Food." We Have Thousands of Similar Testimonials and Will Pay You \$1000 Cash If They Are Not Genuine.

## A \$3000.00 STOCK BOOK FREE

### IT CONTAINS 183 LARGE ENGRAVINGS

WE WILL PAY YOU \$10.00 CASH IF BOOK IS NOT AS DESCRIBED

The Cover of this Book is a Beautiful Live Stock Picture. Printed in Six Brilliant Colors, and Without Any Advertising on it. Size of Book is 6 1/2 by 9 1/2 inches. It cost us \$3000 to have our Artists and Engravers make these Engravings, which are the finest engravings of Horses, Cattle, Sheep, Goats, Hogs and Poultry that you have ever seen. These 183 Engravings are all made from actual photographs and are worthy of a place in any library. It also gives Description, History and Illustrations of the different Breeds of Horses, Cattle, Sheep, Goats, Hogs and Poultry. It contains Life Engravings of many very noted Animals. It contains a finely illustrated Veterinary Department that will save you Hundreds of Dollars, because it describes all common diseases and tells you how to treat them. The Veterinary Illustrations are large and absolutely reliable. Correspondence promptly answered as we have an office force of 200 including 106 typewriters.

## FARMERS!

### Will these Facts Start You to Thinking?

The National government appropriates nearly \$4,000,000 for the good of Agriculture annually.

The various states appropriate probably \$1,000,000 more.

Farmers pay in tuition to colleges probably another million dollars.

Farmers pay in subscriptions to the various farm papers about one million.

The grand total is approximately \$7,000,000. Nearly all of this is devoted to the objects of better farming, larger crops, better markets and better prices. If it is not so we want to be enlightened.

### HERE ARE THE RESULTS

We find the average yields and prices of wheat for eleven years have been as follows:

	1892	1893	1894	1895	1896	1897	1898	1899	1900	1901	1902
Yield Per Acre	13.38	11.44	13.19	13.72	11.35	15.43	13.33	12.27	12.29	15.01	14.03
Price Per Bu.	.79	.68	.57	.62	.67	.86	.90	.71	.71	.72	.75

Of corn for eleven years have been as follows:

Yield Per Acre	23.06	22.48	19.38	26.21	28.19	23.76	24.76	25.31	25.03	16.07	26.08
Price Per Bu.	.39.4	.36.5	.45.7	.25.3	.21.5	.26.3	.28.7	.30.3	.35.7	.60.5	.40.3

Of oats for ten years have been as follows:

Yield Per Acre	24.43	23.42	24.50	29.57	25.66	27.16	23.35	30.23	29.6	25.8
Price Per Bu.	31.66	29.36	32.45	19.85	18.73	21.18	25.50	24.89	25.8	39.9

Of potatoes for ten years have been as follows:

Yield Per Acre	62.	70.26	62.38	100.59	91.14	64.71	75.19	88.63	80.8	65.5	96.0
Price Per Bu.	41.71	33.43	26.73	26.08	35.37	31.11	34.60	34.78	50.27	45.22	

Of cattle for ten years we have:

Average Price (1903-5.75)	6.25	5.15	5.15	5.55	7.25	7.50	7.25	8.15
Per Cwt. (1904-5.22)								

Of hogs for ten years we have:

Average Price (1903-5.55)	4.50	4.70	5.55	5.62	6.89	7.00	7.83	8.95
Per Cwt. (1904-5.17)								

We might show yields and prices of cotton, tobacco and other crops with the same result.

\* \* \* \*

From the above showing can it be claimed that the average yields and prices of crops have increased?

To carry the illustration farther: We find that France and Germany raise average yields of wheat of 30 to 37 bushels and the price on account of prohibitory duty against our wheat, ranges about 40 cents per bushel higher than the American farmer receives. The yields of other grain and potatoes and their prices are in the same proportion. Therefore, does it not appear that the inducement of price is a greater incentive to increased production than all the teaching that can be given?

Unless good prices can be made and maintained for our farm products, the fertility of our farms will be exhausted to such an extent that they will refuse to produce even the present low averages.

No amount of teaching will ever secure for farmers good prices while they allow a class of non-producers to make their prices.

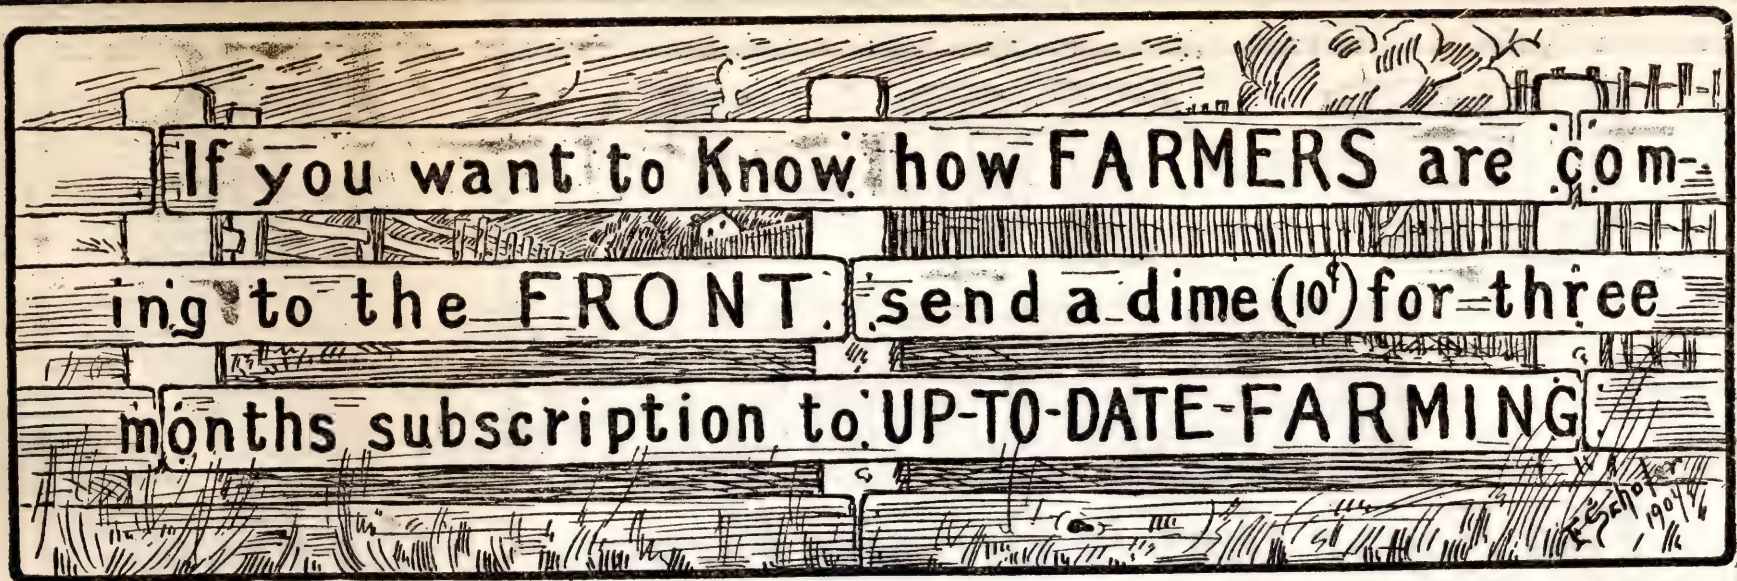

Any effort made by Agricultural Colleges, Experiment Stations, Farmers Institutes and Farm papers to teach how to farm better without including the feature of price making is lost, as the evidence above clearly shows.

The time has come for farmers to rise up and demand of their institutions of learning, the press and the government, help to kill speculation in farm products and advice as to how to control marketing to guarantee profitable prices always.

At present there is only one institution in the country working for these things. It is the American Society of Equity. There is only one paper that is teaching how to do these things. It is Up-to-Date Farming.

Publisher Indianapolis

# Make more Money on the Farm

## A REAL PROFIT IN FARMING

Will never prevail until farmers learn how to market so as to get a profitable price for every crop they grow. This can be done. It will come through EDUCATION, ORGANIZATION and CO-OPERATION. It can be done by the new plan. In fact it is largely done already. Soon farmers can make their own prices as certainly as do merchants and manufacturers.

## THE AMERICAN SOCIETY OF EQUITY

Is being organized to bring farmers to the front where they will be when the uncertainty of values is removed; when speculation in farm products is at an end; when farmers make the prices on all their crops before any other person can touch them. PROFITABLE PRICES ALWAYS will solve every problem the farmers have to contend with. And why should not farmers get profitable prices? Their goods are more desired than those of any other class. In fact the other people MUST HAVE THE FARMERS GOODS ALL THE TIME while everything else can be done without a long time. Do you see the strength of the farmers' position? All that is needed is to teach farmers how to market when consumers will always pay them a good price.

## UP-TO-DATE FARMING

Is teaching farmers. It has converted 100,000 to this improved plan of marketing already although the movement is only a little more than a year old. It will keep right on until the gamblers and speculators in farm products will never price another pound or bushel of your products, until the middle men will buy at your price. Nothing is impossible in the light of Twentieth Century progress and farmers have only waited for the experience of other successful co-operations and the right plan to achieve a success not dreamed of in the old days of the grange, alliance, etc.

All we ask is that you investigate and understand this plan. To enable you to do this we make the following special offer:

### UP-TO-DATE FARMING 3 MONTHS FOR 10¢

Three months of education, six issues, for 10 cents. These (6) issues will be edited with the special view of educating readers in the only practical way for farmers to co-operate to make prices. Every farmer who will read Up-to-Date Farming three months will have his eyes opened and his mind changed on many of the most important problems of the day. He will be a different man, and will be ready to enter the Army that will revolution agriculture and make a NEW COUNTRY. BUT GREATER THAN ALL THIS! Beginning with next issue (June 15th) will begin to run in this paper the remarkable new book.

## THE THIRD POWER

This book will be printed as a serial. Do you know what "The Third Power" is? It is a book of 275 pages written by J. A. Everitt, President of the American Society of Equity and Editor of Up-to-Date Farming. The price is \$1.00 in handsome cloth binding. It is in many respects, the most remarkable book ever written. The third edition is nearly exhausted and its sale will probably reach to millions. Read extracts from some letters:

"Its objects are noble and just. Its truthfulness cannot be disputed." Many a farmer will be started to thinking on sound lines by its perusal. "The most thorough and complete analysis of the present industrial condition with the most reasonable and practical remedy." The only exact presentation of the actual conditions affecting the farming classes ever written. "It is a strong and masterful portrayal of the benefits to be derived by farmers through co-operation." "Just the right thing to set farmers to thinking. Your statements are beyond refutation." "It aims at giving agriculture its proper place among the noblest of industries." "Prompted by a desire of the author to have farmers reap the profit of their toil instead of the speculators and brokers." "Opens up a new field of literature." "A plan for justice to the producers of what is most important for Man's Material Welfare." "An intelligent, earnest appeal to the agricultural class to rouse themselves and become the power in the world that their labor entitles them to." "The Third Power solves every problem with which farmers have to contend." "The greatest and best book ever written and next to the Bible will do the greatest good to humanity—if it is read and its teachings are carried out."

In future issues will be printed many reviews by the leading papers of the country which are the strongest ever written for any book.

## A MILLION, A MILLION UNITED

We must have. Farmers every where must learn of this movement. Up-to-Date Farming and "The Third Power" must be read by a million people. They will do the work. We now appeal to every present subscriber and reader. How many 3 months trial subscriptions will you send at 10 cents each? Everybody you ask will gladly give you a dime. Ten names can easily be secured. One hundred can be secured if you make a little effort. Single names will be thankfully received but a club of ten or more counts faster. How much time will you give to this movement? If you will give each Saturday afternoon this summer to the cause the results will be great. We want every farmer's name in your community reported to us on this offer and we will take care of the rest. Right now is the time. Rigue want your help.

## EVERY TRIAL SUBSCRIPTION WILL STOP

When the time is up. We don't believe any farmer can read Up-to-Date Farming and "The Third Power" without being an enthusiastic co-operator for good prices. Do you, Mr. Subscriber, who have been reading the paper?

## WE REPEAT THE OFFER

Up-to-Date Farming three months for 10 cents covering June 15th to Sept. 1st numbers inclusive. The paper will positively stop at expiration of the time. "The Third Power" book will begin to appear in June 15th issue. Each subscriber will receive just these numbers (June 15th to Sept. 1st). Back numbers will be sent as the term advances. This is not a change in subscription price in any respect. This offer is to new subscribers only.

## HOW MANY COPIES WILL YOU SUBSCRIBE FOR?

You have friends in distant parts of the country whom you can't see. You cannot do more for them and for yourself than to give them a 3 mo. subscription to Up-to-Date Farming. The paper is bringing farmers to the front. We want clubs of ten for \$1.00. One dollar of your money will make ten converts and bring the time nearer when the million co-operating farmers will bring certainty out of uncertainty. This is the best investment you can make.

## THERE SHOULD BE A REGULAR LANDSLIDE

Of farmers to embrace this offer. This offer should bring the million to learn how farmers are to come to the front, and organize the army of a million united farmers. We want you to circulate this copy of your paper. Send it around until it is worn out and then send for another.

Let us teach you and your neighbors how to get profitable prices on every crop you grow.

Write your name in the blank at once and sent it to us.

Do not delay.

Do it to-day.

FILL OUT THE BLANK, CUT IT OUT AND MAIL TO

## UP-TO-DATE FARMING Indianapolis, Ind.

The Paper that is Bringing Farmers to the  
Front.

10 cent orders appreciated but make it five for 50 cents or  
ten for \$1.00.

# UP-TO-DATE FARMING

Official Organ of  
The American Society of Equity

PUBLISHED SEMI-MONTHLY  
At 227 West Washington Street

Entered at the Indianapolis  
Post-Office as Second Class Matter

VOLUME 7

INDIANAPOLIS, JUNE 1, 1904

NUMBER 11

UP-TO-DATE FARMING  
Official Organ of the American Society of Equity

J. A. EVERITT, Editor

Subscription Price 50c a Year

PAYABLE IN ADVANCE

The emblem of the A. S. of E. as shown above, is symbolical of PRICE, being on an equality with PRODUCTION and CONSUMPTION.

## TERMS TO CLUB RAISERS

Any person may make up a club. (A club may comprise new subscribers or renewals of old subscriptions) as follows:

A Club of 2 for \$ .75

A Club of 3 for 1.00

A Club of 10 for 2.50

## ALTERNATING PLAN

If you have not time to make up a club, we will accept

Your Own Subscription

2 yrs. for \$ .75.

Your Own Subscription

3 yrs. for \$1.00.

For Membership in the

A. S. of E. add 50c to

any offer, for each

member.

**Acknowledgment.** The date in connection with your address on wrapper, informs you of the time your subscription expires. Change of date indicates that your renewal was received.

Many club raisers fail to indicate their name separately from the club. We want to know who our workers are, therefore always write: "this club was sent by (name.)"

**Always state if a renewal or a new subscription. Don't Neglect This. See Special Subscription Offer elsewhere in this number.**

**Your Address** should always be written very plainly. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. H.

**Renewals and Change of Address.** Give the same name as before. If a change from one member of the family, so state. If you change your post-office, give old office as well as new.

**Advertising Rate** 50 cents per agate line each insertion; 10 per cent discount when two or more consecutive insertions are taken. About eight words make a line, and fourteen lines make an inch.

**Only Reliable Advertisers** are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurrence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date when you write.

## THE CHANGE

You noticed it as soon as you got this paper. Well, we just had to do it. Our family got so large that we could not serve enough victuals at the little table we had, nor serve them fast enough. We are now printing on our lightning press, and we can serve a million if you will come and set around our table. We invite *everybody* to the grand special banquet prepared for them. See second page of this number. The price to participate is only *ten cents*, and it will last *three months*.

While the printing on the rapid press is not quite as good as on our old slow one, we know our readers will excuse this. We will give them more down to date news; the matter will be better displayed, the paper we believe is more readable and thus we get the greatest results in our campaign of education. We ask as a special favor, to us, and urge for your own benefit, and the good of your brotherfarmers, that you pass this paper around to be read until it is worn out. We will then send you a new copy if requested.

Saturday, June 4th, a great Mass Meeting of farmers will be held at Rochester, Minn. National President J. A. Everitt, will be present.

What are you doing to help the three (3) months campaign?

If you like this paper send us 50 cents for 50 copies and give them to your neighbors to help get the million.

One million co-operating farmers by next fall will do more good for this country than both of the political parties.

Will politics be first this year or will your farm interests receive your best attention.

Every reader of this paper has one or more neighbors who would join the army of a million if you would ask them. We know it.

Every farmer who will read Up-to-Date until harvest will surely be converted to the A. S. of E. plan of controlling crops and marketing prices.

We have issued a new enlarged and improved Dollar Wheat Circular. It will convert the worst non-believer. 15c per 100 post paid.

Let us see if either of the political parties will have anything in their platforms about killing speculation in farm products and preventing the adulteration of food products.

Tens of thousands of farmers must get more money for their crops to repay their bankrupt farm (bankrupt in fertility) or the farm will bankrupt them.

All orders for official stationery have been printed on the Harris Automatic press and shipped. We are now ready for a flood of new orders.

EDUCATION, ORGANIZATION, CO-OPERATION, CONTROLLED MARKETING, PRICE MAKING. The three (3) months trial offer in this number is the opportunity for the first. The others follow as natural results. Cheap, isn't it when results are considered?

Let us hear from you, comrades, what you think of this idea. Everybody think, grain growers, stock growers, fruit growers, truck growers, cotton growers, tobacco growers, etc. etc. Hurrah for the worlds fair and work and shout for the million.

If it ever comes to the time when this country over produces in food products it is of the greatest importance that the farmers be organized so they may reduce acreage or may hold the surplus against short years. Unorganized, over production is ruin to the business.

Have you read "The Third Power?" To read this book is to gain power. When a million farmers understand the contents of this book the third power will have arrived, a revolution will have been peacefully worked out, and a new country made.

50 copies, 50 cents.

We will send 50 copies of this paper to any address post paid for 50 cents. Send in your order for a bundle.

50 copies may make 50 converts.

Politics is getting red hot in the cities now. It is the time when they fix things all cut and dry for the voters. After a little while these people will be looking after the farmer vote to elect them. But ask yourself what they are going to do for YOU after they are elected.

Next thing will be a weekly. Say, honest now, wouldn't it be fine to have such a paper as this every week? You can have it sure enough if you will hustle in the subscribers and members. A dollar don't rest in the treasury long at headquarters; it is started out promptly to get more soldiers for the army of a million.

We can now turn out a million copies of Up-to-Date in a week if we are called upon to do it. Formerly it required fifteen days to produce one-tenth of a million. Bombard the fort now with subscriptions and members. We will take care of them.

Every newspaper that opposes the effort by farmers to control their marketing to compel a fair price is the enemy of the farmers and does not deserve their support. Every newspaper that does not help farmers in their effort to control marketing and compel a fair price is not a friend of the farmers and does not deserve their support.

It will be good news to our thousand or more workers to know that we have put in a Harris Automatic Press for circulars and envelopes. It prints 8,000 pieces, circulars or envelopes, an hour. Have just printed 100,000 "The Equity of Dollar Wheat" circulars, the bulk of which will go to Kansas. Come, fellow workers, we can now supply you with ammunition as fast as you fire it off.

Farmers, you have spent \$7,000,000 yearly for the past ten years for instructions how to farm better, raise larger crops and get more money, yet you have not increased your average yields a fraction of a bushel, nor raised the price a cent. Now tell us, how many more years you must keep this up, with your farms constantly losing in fertility, until you reach bankruptcy?

## GOING TO THE WORLDS FAIR

By a letter just received from Virginia we are notified that the members from a district there are going to the worlds fair in one or more special trains via Indianapolis, and will stop over at headquarters. Good, comrades! Come along ten thousand strong. But this starts a new line of thought. Why should not members of the A. S. of E. and non members too, from other states do the same thing? Why should not farmers have a great rally week at the worlds fair? Let us farmers show the country and the world how we can turn out. Let us go to St. Louis and have A GREAT PARADE and carry banners with lettering as follows: "Farmers to the Front" "Speculators to the Rear," "Profitable Prices for Farm Products," "Lower prices for the consumer" "Equity to all" "The Farmer Feeds Them All" "The Farmer Clothes Them All" "We Own the Earth" "Farming Exists by Divine Right" etc., etc.

Do you catch the spirit? Does it fire you with zeal to do something that may be the greatest spectacle the world ever saw? Why should not the most numerous class, the wealthiest class show the world, by a great outpouring in the city where the world will be represented, that they are coming to the front? This may be turned to great advantage for the A. S. of E. and for agriculture in America. The movement for equitable prices wants such an opportunity to show the world what this country is doing. This is the opportunity.

Every body will want to go to the Worlds Fair. By joining a movement such as this the lowest rate will be possible while every farmer should calculate on the good it will do the cause of superior business methods.

## WHAT 10 CENTS WILL DO

It will pay for this paper three months six issues, and teach you how to solve the farm labor problem, how to keep the boys on the farm, and hundreds of other things that farmers want and can get.

## THE SITUATION

It is too early to make any predictions on any of the Spring sown crops. Although the season was backward over most of the country and in many sections the crops were put in late, this is not an indication that the harvest will be short. The very cause of delay of Spring work, viz, storms of snow and rain have given to the ground an abundance of moisture, which, with good warm weather from this time forward will force vegetation at a surprising rate.

The winter wheat crop can however be forecasted with some degree of accuracy. It is certain that a large acreage has been abandoned and much of it ploughed up. This removes absolutely from the final crop calculation about 15 per cent of the acreage sown last fall. This is the government estimate and our own advices bear out the estimate as not being exaggerated. Taking into consideration the abandonment and bad prospects in all the winter wheat states east of the Mississippi river a very peculiar, if not to say alarming situation presents itself.

With good weather from now to harvest, we cannot imagine how the country can raise within 80,000,000 bushels as much winter wheat as was raised last year, whatever that crop was. In as much as last year's crop has gone into consumption largely in this country, and was sought after more eagerly than any crop raised in recent years, it does not require much strength of the imagination to think that lively times may be ahead for wheat growers and wheat buyers.

Certainly millers east of the Mississippi will look to the states west of the river for much of their supplies if they keep their mills running. The farmers west of the Mississippi (as well as east) have learned the lesson of controlled marketing, and are preparing to keep the supply at home in granaries or in stacks. This is all that will be necessary to insure an equitable price, whatever that is decided to be, when the crop is secured. Farmers may safely calculate on dollar wheat and possibly more.

The organization of the tobacco growers is going forward at a lively pace. The whole western half of Kentucky has been covered with a series of meetings at the county seats in each county and the campaign reached a few counties in Tennessee. At Clarksville a great meeting was held and an unusual feature was presented. On the day of the meeting a person on horseback appeared on the streets with a saddlebags full of circulars with flaming headlines:

AMERICAN TOBACCO GROWERS CORPORATION. PROPOSED INCORPORATED UNDER A SPECIAL CHARTER. AUTHORIZED CAPITAL STOCK \$5,000,000.

Although the circulars were distributed on the street and in the room at the time of the A. S. of E. meeting the effect was favorable to our cause rather than otherwise. A local union of 19 was organized and the nucleus for others started for other parts of the county.

Cotton growers will be interested to know that plans are making for the A. S. of E. to invade their belt soon. Price of that staple is going down so fast that something must be done. There are, however, thousands of loyal soldiers in the army in Dixie land who can keep the work going until the National organizers arrive.

In conclusion, the outlook for crops is fair, if not flattering. The outlook for better prices than have usually prevailed is flattering, and the outlook for better business methods on the farm is better now than at any time in the history of agriculture in America.

## THE AIM OF MONOPOLY

### TO CONTROL EVERYTHING

We do not seek to be classed as an alarmist, but it is not the part of wisdom to close one's eyes to events that are constantly transpiring, and that point unerringly to such a combination and concentration of wealth as shall leave among the people little more than the name of liberty. The progress that has been made in this direction within the last decade, is itself sufficient to be alarming; but other steps which are now proposed and are actually in process of being taken ought to startle the most unconcerned.

We are told under prominently displayed headlines, by one of our leading and most conservative journals, that the Standard Oil Company is even now engaged in pushing plans to control every commodity in the country. Their control of the railroads, coal, steel, and iron business, through the various trusts bearing the respective names, is well known, and that they have been reaching after control of the grain productions of the country, the paper referred to declares is known to close observers in commercial circles.

Now it is learned that this same combination of capital in endeavoring to get complete control of the wholesale grocery business. This is to be accomplished, our informant thinks, through the Eldridge & Higgins company of Columbus, Ohio, a controlling amount of whose capital belongs to the Standard company. The company has already bought, says the paper, wholesale grocery houses in Cleveland, Dayton, Hillsboro, Jackson, Washington, and Marietta, and the buying out process is to continue until the business of Ohio is under complete control. And it is declared further that what is going on in Ohio, is being done also in New York, Pennsylvania, West Virginia, Michigan, Indiana, Illinois and other states, and this is to proceed, it is declared, until the Standard Oil Company will dominate all the necessities of life in all the States of the Union.

If this were something new it might be dismissed as chimerical, and little thought be given it, but in the light of what has already been done in the way of combination of capital, the above declarations carry with them a significance that is justly alarming.

And history is not without a warning precedent. When Rome was at the height of her power, and dominated the world, her great wealth was very equally distributed among her people; that is, there were none immensely rich, and there were very few paupers. The great wars of conquest over, the active minds of the ambitious were directed to the accumulation of wealth, and very soon the wealth of the great empire was in the hands of the few who dominated everything. History finishes the story in two words: "Rome fell!"

What is the lesson for America? The United States still has a reserve power, mighty but conservative. It is the tremendous hosts of agriculture. Our farmers are yet independent. They largely own their homes, and they are thoughtful, intelligent and observant; rather slow to act but irresistible when once in motion. They begin to feel the chains which are already being forged around them, and they are chafing under the knowledge that the profits resulting from their labors are being absorbed by those who do not toil. This is the power that alone can stay the course of monopoly's sweeping tide, and save the latest great Republic from the fate of Rome. The Third Power must organize.

### FARMERS' INSTITUTES

We do not antagonize farmers' institutes; we favor every educational influence that can be brought within reach of the farmers—everything that will open up to them increased opportunities, and bring them nearer to the enjoyment of the rights and privileges that justly

belong to them as a class. Farmers' institutes undoubtedly belong in this category. Yet, when we come to figure on results, and note that average yields have been very little affected by their teachings, and average prices not at all improved, we may wish they were more effective in these important directions. But there is another feature which the public may be pardoned for considering. Take the state of Wisconsin, which is considered to have one of the best institute systems of the country. The state appropriates for that work, \$12,000 annually. Supt. McKerrow is reported to have announced that there can be no institutes in that state this summer because there is no money to meet the expense of holding them. Of the \$12,000 appropriation, \$4,000 are used for printing the reports, \$3,000 for administration—for running things at headquarters—and \$5,000 for institutes. It seems a little like this: The state appropriates \$12,000 for holding farmers' institutes, but it takes \$7,000 of it before they can get to the farmers, and then there is not enough steam left to run on.

### INCREASE SUPPLY

The world seems to be crazy over quantity. Indeed those who speculate in raw material are interested in quantity—it gives them a greater range of speculation—a greater opportunity to beat down first prices, the prices paid the producer, and also a better opportunity to push up the price on the second purchaser. Pres. Walmsley, of the New England Cotton Manufacturers' Association, in a recent speech before a meeting of that body, declared, "that the supply (of cotton) from our fields must be increased." Why? That the growers may receive greater rewards? Not much! That the trade may be free from "unlawful high prices." That is the slogan everywhere. "Raise more and sell for less." Not so with Up-to-Date. We want the farmers to produce all the world needs, all it will consume—at a fair price, and let the toil of the producer be rewarded first. Under no circumstances do we want them to produce so much that it puts them at the mercy of speculators and capitalists. We also want to see farmers in a condition where if they over-produce one year they may hold the surplus on the farm and bring it forth in seasons of scarcity. This will be much better than holding surpluses—whether real or only temporary—in elevators or warehouses.

### "SHUT DOWN AND SHUT UP"

This is the advice given by the Northwestern Miller to the great flouring mills of the Northwest. The flour trade became dull and prices sagged. What were the mills to do? How could they maintain prices?

"Shut down and shut up," says the Northwestern Miller. "Shut down the mill and shut up the safe. Hold fast to what has been made. Shut down so as to avoid piling up flour which is not demanded for immediate consumption. Shut up, so as not to offer flour unless there is a profit in the transaction."

Exactly. And not a single agricultural paper says to the millers, "You can't do it," and not a single one of them sneers at the Northwestern Miller, "There's a negro in the woodpile."

"Shut up and shut down." That is all Up-to-Date has advised the farmers to do. Shut up your granaries and feed lots and pastures, so as not to offer your products "unless there is a profit in the transaction." That is all there is to it. We don't want to starve anybody; we don't want to hurt anybody; we don't want to clog the wheels of business or stay the tide of progress. We merely propose to "shut up until there is a profit in the transaction." Can Up-to-Date be blamed if we sneeze when the Northwestern Miller takes such big pinches of snuff, and can the farmers be blamed if they learn lessons from the great mills of the Northwest?

### THE WOOL CROP

This is another one of the important American industries. January 1, 1903, there were in the United States, 63,964,876 sheep, the largest number on the first of January of any other year since records have been kept. These sheep at that time represented a value of \$168,315,750. We have no report of the amount and value of the wool clip of that year, but the total clip of 1902 was 316,345,032 pounds. The prices of wool, best tub washed in the leading cities, May, 1902, about the time the clip went on the market, was: Boston, 27 cents; New York, 27½ cents; Philadelphia, 27 cents; St. Louis 25 cents. In December of the same year it was, in Boston, New York and Philadelphia, 32 cents, and in St. Louis 29 cents, the range being from four to five cents. This at the lowest range, four cents, represents a profit of \$12,653,841 to those who bought and held the wool of 1902 from May to December. Here is clearly another loud call for Equity. This twelve million dollars divided among the wool growers of the United States, would materially increase their profits and build up their bank accounts.

But there is another fact which enters largely into the consideration of this subject, and that is the fact that the wool growers did not receive the prices quoted, little more than half those prices perhaps, which would make the margin of profit between the producer and final purchaser almost twice twelve millions. To be fair, though, it must be admitted that the prices received by the producer were mostly for wool in the dirt, hence, the figures of twelve millions are sufficiently close to illustrate the profits of the sheep industry to those who do not raise sheep, and to point to the necessity for organized co-operation.

### FUTURE OF THE RANGES

Up-to-Date has said before that range competition with farm stock raising will never again be what it has been in the past. Repeated declarations of the range men themselves confirm this opinion. Settlers are pushing westward and crowding the ranges. "There are too many kids and dogs" declared a South Dakota cattleman the other day. "Every kid," he continued "can ride, and his favorite pastime is chasing cattle. Each kid is followed by one or more dogs, and it is a combination that renders the making of fat beef on the range almost an impossibility. Every new settler means more kids and an aggravation of the dog nuisance."

Of course the thing complained of is the children of the settlers, aided by their dogs, driving the range cattle off their farm lands.

Another prominent range cattleman said:

There is too much chance about it. I've had enough and to spare. The settler can take a whirl at it now. I could get the cattle cheap enough this year but we've no place to put 'em. The range cattleman is cleaning up, at least that is his intention."

And we may quote this from another rangeman of equal prominence:

"My object now is to gather in my money and put it out at 5 per cent. The cattle business is a good proposition for a young man who will ride the range and devote personal attention to his business. It cannot be handled successfully at long range."

While these declarations are all of the same tenor, they cover a wide range of the Western cattle country, and may be taken as a fair expression of sentiment there. Whatever the future may develop, this is evidently the feeling now; and it may be taken as pointing to the fact that there is to be a greater demand for farm made beef; or at least, that farm made beef is to have less competition from the West.

### PECULIAR VIEWS

Some people and some papers have very peculiar views. For instance, there now lies before us a paper of considerable prominence, in which is expressed the hope that farm organizations will soon be strong enough to make the speculative world feel their power. Then speaking of an organization to which it refers, it expresses the opinion that as a

state or local organization it may succeed, but declares that, to become national would "compass its destruction." Then it concludes that the military plan is the plan upon which the farmers should organize, so that the farmer may learn "obedience to authority, as the soldier must be obedient if he is to participate in the fruits of victory."

What a vague idea such persons have of the spirit of the American republic, especially of the unyielding freedom and independence drawn in with the unconfined air breathed by the American farmer. Military rule will not win here; the farmer does not propose to surrender his identity, and will not place himself in a position where he must be "obedient to authority as the soldier must be obedient." He does not believe any such position is necessary. He realizes that what is before him is a plain business proposition, that it is to be worked out on business principles, and that victory must be won by business methods. There is no stronger tie than the tie of self-interest. People adhere to benefits, and the organization which brings relief to the farmers, will do so by holding the farmers to co-operation by the benefits derived. So believes the A. S. of E.

### STRING THEM ALONG

An eastern cattle buyer has this to say to the Live Stock World:

"If the country would adopt a policy of distributing receipts more evenly through the week, and follow that policy to the letter it would not be long until eastern houses that have buyers on this market would become educated to the situation, and we would have our buying orders strung out in accordance. As it is, we get our big orders on Monday because it is on that day that we are sure to have big supplies to select from."

The World emphasizes the proposition thus:

"It is certainly not to the interest of sellers to have more than half the week's total of cattle receipts bunched in here on Mondays, as has frequently happened of late months. It invariably results in a break in prices on opening day, while with a more even distribution, a good, active, healthy market might have been had for the entire week. Stop thinking you will slip in on Monday when the other fellow won't be here, distribute receipts persistently through the week and educate the buyers."

This is precisely what Up-to-Date contended for, not in the matter of live stock only, but of all farm products, and not through one week only, but through out the entire year. Congested markets are the things to avoid. Distribute a week's supply throughout the week, and a year's supply throughout the year. This is entirely practicable. It benefits the producer; it does not hurt the consumer, but it demoralizes the business of the speculator who buys on the congested market, and holds until the market gets so hungry that he can rob the consumer.

### TO ENCOURAGE FARMER BOYS

The farmer boys are not all needed in the cities, nor in the so-called higher walks of life; and not all who go to the cities succeed. Many who went from good homes and opportunities on the farms with high hopes of great achievements, are now in the most menial positions, and passing lives that might have been useful in the country, but in the city they are only drifting trash on the human sea.

Nor would we have the farmer boys believe there are no positions of preferment on the farm, or means of developing the talent which nature may have given them. Talent is needed a little worse on the farm than anywhere else, and when conditions for which Up-to-Date is striving, are secured, there will be no place where it will be better rewarded, or where success will lead to greater honors. Boys, help along the work of organizing.

Conditions have changed within the last twenty years. Combination, combination everywhere crushing the weak, combination cornering the markets, combination overriding and destroying the law of competition, combinations of great elevator companies which fix our grades, determine what our prices shall be, places us entirely at their mercy.—Senator McCumber, of North Dakota.

## CO-OPERATIVE DIFFERENCES

The Grange ranks as the pioneer of farm organizations, and as such it is entitled to the kindly consideration of the agricultural world. It has had its ups and its downs, but through all the vicissitudes of rural thought and progress, it has maintained a more or less active existence. In its earlier days it was much more aggressive than it is in its "sere and yellow leaf," if indeed we may yet place it in that period of its existence. It has had an important educational influence and to it may fairly and justly be traced accomplishments which would not now be surrendered under any conditions, and which will stand as cherished monuments after the last grange shall have disbanded.

It is said that age brings wisdom. So it does. But it also brings conservatism, and extreme age brings decrepitude. Conservatism is not always to be condemned, it is better than fanaticism, but it too often sits down, content with what has been done, and henceforth becomes a brake upon the wheels of progress rather than a power to impel them onward.

These reflections are the result of a careful reading of the report of the national grange committee on co-operation. The grange has always been a more or less co-operative body, and as the report admits, has had its failures and successes in co-operative enterprises. Had it been a little more explicit, it would have admitted that its failures had been far more numerous than its successes.

Co-operation, like a great many other good words, is seriously abused; or rather, it is used in a great many different senses. As generally employed it is intended to represent business enterprises of which the patrons are the joint owners and jointly share the profits, or in which they jointly pay the expenses of operating, and recognize no profits, the benefits coming to all alike in proportion to business done, in the cheapness of service.

All this kind of co-operation implies the establishment of enterprises antagonistic to existing ones, with which they must enter into competition. They must therefore, fight their way to success with vast odds against them, a fight which cannot end until one side or the other is complete victor and the other is driven from the field. In a fight of this character it is not difficult to see on which banner victory must ultimately perch.

In the light of these facts and of Grange experiences, the report in question is not a surprise. It talks learnedly on the subject and it talks all around it, with nothing definite in any part of it. Indeed, the politician may see in it a reflection of his own best efforts when he desires to say much to be heard and nothing to be acted upon.

The Grange recognizes, however, that a new element has entered the co-operative field, that brought to the front by the American Society of Equity, co-operative price making and marketing. "Just at this time," says the report, "co-operative selling seems to be receiving more attention than co-operative buying," but the learned committee gropes in the dark, because its society cannot see far enough through its conservatism to grasp the idea of a co-operation which involves the establishment of no rival enterprises, invites no antagonism, stirs up no hurtful competition, trenches upon no body's rights, disturbs no existing business relations, but brings more benefits to the participants than all the previous attempts of the Rochdale plan, the Grange and all other societies that have followed it. All this because it confines itself to the business of the co-operators, and simply assumes for them the rights enjoyed by all others, of pricing and marketing their products. This right enjoyed by the farmers, and the whole problem of co-operation is solved, because all its benefits are at once secured. The farmer, though doing business through the established channels, is master of his own, and is prepared to meet on his own ground whatever his antagonists (if any may be called antagonists) may do. If prices are unfairly raised against him, he does not need to pull those prices down; he increases his own to correspond with them, and thus maintains the equilibrium and secures equity, without rivalry or the disturbance of the smooth flow of business. This accomplishment is the mission of the A. S. E.

## COUNTRY STORAGE

## SUGGESTION FOR GRAIN HOUSE

The holding of grain in the centers of production until it is called out by the actual demands of consumption, involves the question of storage. As has been well remarked, "there are granaries and granaries," and all sorts of plans and specifications may easily be obtained—good, bad and indifferent. It is not our purpose to discuss these at this time. The large grower, who measures his grain by the thousands of bushels will readily adopt plans and buildings to suit his own needs and fancy; but the small grower may be aided by simple suggestions along this line. In future issues we may give more elaborate plans, for we know our readers are never satisfied with anything but the best. To this end we will be glad to have plans of granaries and storage houses submitted for our consideration. Reasonable compensation will be allowed for accepted plans, specifications, drawings, etc., of this kind.

The moderate farmer may easily and cheaply build a granary in some convenient portion of his barn, or at some convenient place outside, and for which no special suggestions could be of service, other than to impress the fact that the success of any grain bin or granary depends upon the strength of material,

Foundation of Grain House ready for floor.

substantial construction, tightness and convenience. But a neighborhood, a township, or even a county, may co-operate in building a grain house at the shipping center, and it may be so constructed that each farmer may have his separate bin or bins, and absolute control of his own grain unmixed with that of any one else. There are many arguments in favor of such co-operative building, prominent among which is cheapness of construction, the same foundation, outer walls and roof answering for all; but more important even than that, is the

Bins laid off and ready to set up studs.

hauling of the grain to the shipping point when the roads are good.

We suggest a building 24x30 feet. Make a very solid foundation; this is necessary to sustain the great weight of grain. Have six rows of pillars, two rows in the middle four feet apart from center to center, with two rows on each side of these, the outer ones, of course, under the outer sills, the other rows midway between. The pillars should be six feet apart in the rows, which will require 36 pillars to the building, and the bottom of the sills should be a foot or more above the surface of the ground. The sills should be not less than 8x10 inches, and the joists not less than 2x8 inches and not more than 16 inches apart. (See 1st cut.) Floor very tightly with carefully selected matched lumber. The floor must be solid and tight.

Now lay off the bins. The intention is

to have a four foot passage in the center with five bins on each side, each bin 5½x8 feet, and if built so as to be filled to a height of 7 feet, each will have a capacity of about 250 bushels. The dimensions given for the bins admits of a passage way all around between them and the outer walls, so as to insure dryness, and permit a watchfulness to discover leaks, etc.

Mark the bins off on the floor and spike to the floor two rows of 2x4's four inches apart (see 2d cut) to receive the studding, which should be securely spiked, ( toenailed) to the floor, and to the 2x4's on each side of them, and they should be 7½ or 8 feet long. Two by 4's spiked on the top will be sufficient for plates.

The doors all open into the hallway, and they are closed by matched boards which work in grooves so that they can be taken out or put in one at a time. The door can then be closed from the bottom as the bin is filled, and opened from the top as it is emptied, involving the least possible amount of labor in handling the grain. In addition to these boards the doors may have regular shutters provided with locks if desired. The bins may be covered or not as the parties wish.

The outer walls may be sided and the roof constructed the same as a barn or other building.

## PRESERVING EGGS

An Oregon correspondent asks for a means of preserving eggs and keeping them fresh for as long a period as eight months.

Various methods have been employed for preserving eggs, several of which have been fairly successful under favorable conditions, but none of them have proven entirely reliable. The salt and lime method or methods are two well known to need describing here. Eggs have been kept in salt and lime solutions in a fair condition of freshness for some months, but they are not so fresh as to be beyond detection, or as to go into the market as fresh eggs. The water glass method is perhaps the most successful of any, but it cannot be called perfect. Water glass, so called, is a silicate of soda solution, and when eggs are immersed in it a transparent coating is formed upon them which excludes external air and prevents the development of the germs of decay. Farmers' Bulletin No. 103, of the Department of Agriculture, says:

"It was found in these experiments that a 10 per cent. solution of water glass preserves eggs so effectively that at the end of three and one-half months, eggs that were preserved the first part of August still appeared perfectly fresh. In most packed eggs, after a little time, the yolk settles to one side, and the egg is then inferior in quality. In eggs preserved for three and one-half months in water glass, the yolk retained its normal position in the egg, and in taste they were not to be distinguished from fresh, unpacked eggs. Again, most packed eggs will not beat up well for cake making or for frosting, while eggs from solution in water glass seemed quite equal to the average fresh eggs of the market."

The Year Book of the Department of Agriculture for 1902, page 848, has the following on this subject:

"For the farmer and the small dealer the use of water glass is to be recommended. It is commonly sold in two forms; a sirup-thick liquid, of about the consistency of molasses, and a powder. The thick sirup, the former, perhaps most usually seen, is sometimes sold wholesale as low as 1½ cents per pound in carboy lots. The retail price varies, though 10 cents per pound seems to be the price commonly asked. A solution of the desired strength for preserving eggs may be made by dissolving 1 part of the sirup-thick water glass in 10 parts, by measure, of water. If the water glass powder is used less is required for a given quantity of water. Much of the water glass offered for sale is very alkaline. Such material should not be used, as the eggs preserved in it will not keep well. Only pure water should be used in making the solution, and it is best to boil it and cool it before mixing with the water glass. The solution should be carefully poured over the eggs in a suitable vessel, which must be clean and sweet. If wooden kegs or barrels are used they should be thoroughly scalded before packing the eggs in them. The packed eggs should be stored in a cool place. If they are placed where it is too warm, silicate deposits on the shell and the eggs do not keep well. It is best not to wash the eggs before packing, as this removes the natural mucilaginous coating on the outside of the shell. One gallon of the solution

is sufficient for 50 dozen eggs if they are properly packed."

The last sentence evidently means one gallon of the solution as purchased, diluted with 10 gallons of water, making 11 gallons of diluted solution for the 50 dozen eggs. The eggs must be entirely covered with the solution, and they should be stored in a dry, cool, dark place.

But cold storage is the most perfect means of preservation, and of this we shall treat at greater length in future issues, but that method is not practicable for the individual farmer.

## THE BUSINESS FARMER

Here is the general idea of the business farmer. We clip from a leading publication of the day:

It is generally conceded today that the successful farmer is the business farmer, the one who runs his farm on strictly business principles. He keeps careful account each year of what every department has cost him and what returns it has brought, and if the balance is not on the right side he immediately investigates. Perhaps he has not secured the net profit which the size of his crops warranted him in expecting. This may be due to the fact that labor cost him too much or that his binder was old or too flimsy to do the work quickly and thoroughly.

Now isn't that nice? Doesn't it tickle the farmer's ear? Keep accounts. Watch your business. If you find no profit, you pay too much for labor. Cut down the hired hand. Raise more and raise it cheaper. But there is no thought that you may not get enough for it. Don't bother about the price. Others will attend to that. And so it goes *ad nauseam*. Never a suggestion of the possibility of better prices. And yet in price is the trouble, and in price lies the remedy. Insure the farmer better and steady prices, and he'll keep up the business end—he'll be a business farmer.

## ANOTHER FAKE

A body calling itself some sort of a free employment association is already blowing a blast through the press as to what a vast number of harvest hands will be needed in Kansas and Nebraska during the pending wheat harvest. Of course this is simply a "bear" movement to pull down the price of wheat. None of our advices indicate such a need. A year ago these same fellows or others like them, on the same story told for the same purpose, sent hundreds of young men into Kansas, some of them from the colleges and universities, who went there full of big promises, and came back empty of everything but experience.

## WH 'S WRONG WITH CHICAGO

Stocks of contract wheat in Chicago at the present time are the lightest for five years, and compare as follows: May 1, 1904, 681,300; May 1, 1903, 3,043,000; May 1, 1902, 5,143,000; May 1, 1901, 9,056,000; May 1, 1900, 10,060,100.

Chicago and other cities that in the past have held great stocks of grain are not likely to do it in the future. The new method is in operation. Farmers control their marketing. The supply is kept on the farm until the demand seeks it. The demand exists at the thousands of mill all over the country, where it is received and distributed to the consumers, Chicago, Indianapolis, Cincinnati, Buffalo, New York, Baltimore, Philadelphia, etc., we predict will never carry the tens of millions of bushels of wheat and corn and oats like they have in the past. The farmers have done the very thing we said they could do. They raised a good fair crop of wheat in 1903. The consumption in this county is increasing rapidly, and it went into consumption via the shortest route. That is what's wrong with Chicago. Chicago's loss is the country's gain.

## WHEAT DOES NOT BREAK

Wheat does not break, and it seems most extraordinary. There couldn't be better weather; there couldn't be a meaner flour situation; Europe couldn't take a more utterly discouraging situation. The entire seaboard, New York, Boston, Philadelphia, Newport News and Baltimore, cleared only 2,900 bushels of wheat in the whole of April. It isn't any wonder everybody is surprised at the 6c advance in wheat the last three days, and no wonder everybody is expecting and trying to get a share in the coming reaction. Minneapolis decreased its wheat stock 700,000 bushels in five days, with only two-thirds of its mills running.—Chicago Record-Herald.

This is just what we predicted. Conditions have been produced exactly as we desired. There is no power as strong as the farmers' power. The farmers have the wheat situation under control and they will not let the price break. Notice how the speculative price moves up to the cash price as the date of delivery comes. Note May wheat which had been selling several cents under the dollar, went to \$1.00 on May 19th; so will July, September and December.

This is the co-operative farmers' own department. It is the desire to make it the life and strength of the Local Union. Every member is a welcome contributor, and every communication will have courteous consideration. Address JOHN P. STEELE, care Up-to-Date Farming, Indianapolis.

More than politics should be the A. S. of E. to you. More than the voting place your Local Union. Here your troubles will end and your triumphs begin. All credit to the Local Unions. They are your forts—your strength. Stand by them as you would by you guns within the real fort to repel the enemy.

The colleges and institutes  
Teach farmers how to plow,  
How to fertilize and rotate,  
To fill crib and bin and mow,  
But somehow all their wisdom  
Don't increase our yields a bit  
Which makes people 'gin to wonder  
If they've struck the key note yet  
Try it once on better prices,  
Give the farmers what's their due,  
And see if then the acres  
Don't bring more to me and you,

J. P. S.

I appreciate the excellent work the American Society of Equity is doing for the farmer, and I congratulate you on the successful fight made for dollar wheat, and I am glad to know you are succeeding in organizing the tobacco growers.

(PROF.) ANDREW M. SOULE,  
Sec. East Tenn. Farmers Convention.

Now for a Summer push. Let every local union do its duty.

"A long pull, a strong pull, and a pull all together." That is just about it.

Kentucky is getting her back up; that is, her to-bac-co people are waking up. Tennessee will follow Kentucky; then comes Virginia and North Carolina. Yes, and Pennsylvania.

Who cares for the tobacco trust? Guess they won't buy at starvation prices unless somebody sells.

Mr. President, What is the subject for discussion this evening? Hadn't thought of any? Get your thinking cap on.

The agricultural papers, colleges, experiment stations and institutes have worked manfully, and spent lots of public money. How much have they increased the average yield of farm crops? I wish the local unions would give that question a little whirl.

Let the world's hungry stomachs be filled from the farm, but let the farmers pockets get something in them on the farm. There is surely nothing wrong about that.

While you are plowing this summer make a few speeches to yourself. Who's going to get the surplus? is a good question to discuss.

"The Third Power." Do you know that is the best missionary in the business? Every local union should be an agent for the sale of that book.

"It isn't all of life to live;" nor is it all of farming to work. The work must not be neglected, but it should be mixed with a whole lot of thinking—think who is going to get the surplus?

Whatever a person creates is his, isn't it? You are creating a lot of farm produce this summer. Is it yours? Not if somebody else can put a price on it and take it.

I don't see how a local union can have a dull meeting, the farm world is so full of subjects for discussion.

Don't lay this paper down until you read the letters in it from all over the country. Don't you think the pot is beginning to boil?

Any body can write a letter, and we want lots of them; but let them be short. The best letter is short and crisp—two or three telling points—tell what you are doing that others, "seeing your good works," may go and do likewise.

Are you co-operating? How about binder twine and other summer supplies? We advise no antagonism with home

merchants; but sometimes a local union may co-operate in the purchase of some article needed by many of the members, and at the same time not interfere with the general trade of the home merchant.

A president said,  
As he uncovered his head,  
This local must get up and hustle.  
Our crops, don't you know,  
Are beginning to grow,  
And we'll price them or there'll be a tussle.

Whatever you may think of tobacco, the tobacco grower is going to "plug" it to the tobacco trust, and the beef raisers are making up their minds to beef the beef trust. It only remains now for the corn men to get the corn gamblers by the ears, for the wheat raisers have already thrashed the wheat speculators.

What are you doing towards the million?

Which with you would be the greatest incentive to increased effort, greater yields and lower prices, or the assurance of a steady, remunerative market? Every influence but Up-to-Date is directed to an increased yield, not to a better price. Up-to-Date alone stands for a better price.

What have you done towards a million?

Will it be said of you after awhile, "The harvest is past, the summer is ended, and yet you are not" a member of the A. S. of E.? Talk this to the neighbors.

What are you going to do towards the million?

Each farmer is as much interested in the success of the A. S. of E. as the most earnest worker at headquarters. What are you doing as your part of the effort.

Among other things, local unions may very profitably talk about home improvements. Let's make the whole country take on a newness of life. Just as well begin it now, for it will come when the farmers win their present fight for equity.

Reforms never go backward. The local unions may be sure that the seeds of truth they are now sowing will germinate and grow and yield fruit. This agitation will not be devoid of results. Farmers have ideas on price making they did not deem possible a year ago. Think they'll stop now before they get it? Not much—not while the blood of Stark, and Wayne, and Houston, and hundreds of other determined ancestors, flow in American veins.

D. Phillips, of Nebraska, is at work with lightning speed out in that state. He has arranged for telephone connection over quite a large area, and proposes to make an A. S. of E. speech by lightning. That'll strike somebody.

#### QUESTIONS FOR DISCUSSION.

Deputy A. R. Carhart proposes the following questions for discussion in local unions:

1. Can there be any permanent prosperity without stability of equitable price?
2. Will not the best interests of humanity be conserved by transferring the price making ability from the purchaser with money to the producer by labor?
3. What should be the annual increase of money that the financial standing of producer and consumer be maintained in equilibrium; that is, that neither shall gain at the expense of the other?
4. Resolved that the volume of business a country may do is measured by the value of the products of the soil and of labor.
5. It is of vital interest to business men and boards of trade to co-operate with farmers and laborers to secure stability of equitable price for farm products.

## Legally Robbed--Wheat the Growers Victims

Senator McCumber, of North Dakota, has a bill before congress providing for the national inspection of grain. On the 30th of March he made in the senate in advocacy of his bill a most remarkable speech, whose revelations are sufficient to startle the world. We make some extracts. Wheat growers ought to write to the senator at Washington, for the speech in full:

Every great elevator company which buy this wheat and sells it again is interested, first, in buying as cheaply as it can, and selling at as great an advance as it can; and, second, in buying in at as low a grade as it can and selling out at as high a grade as it can secure.

Nearly every bushel of wheat raised in North Dakota and sold is transferred either to Minneapolis or to Duluth, Minn., or Superior, Wis., not only that grain destined for Minneapolis and Duluth, but also that shipped to Superior, Wis., is inspected and graded by persons appointed under the Minnesota grading and inspection laws. The farmers of our state have no voice whatever in determining directly or indirectly the personnel of the force which passes upon the grade of every bushel of wheat which they sell. They have no means of securing any redress in case of combination or corruption in any manner which affects their grades, and necessarily, therefore, the amount they will receive for their products.

First, no No. 1 hard wheat was taken in this elevator during this time. No. 1 hard is the highest grade of grain raised in the northwest and brings the highest price. There was, however, shipped out 23,313 bushels. Where did it come from? There was taken in No. 1 northern, 2,511,937 bushels. There was shipped out of No. 1 northern 3,080,339 bushels and there still remained in the elevator on hand 30,000 bushels of No. 1 northern. Where did this extra amount come from? It is evident, therefore, that of wheat taken in graded lower than No. 1 northern 598,403 bushels became No. 1 northern. How was this made up? Let us see. There was taken in 2,088,754 bushels of No. 2 northern. There was shipped out but 585,639 bushels of No. 2 northern and there remained in the elevator 60,000 bushels of No. 2 northern, or a total of 645,639 bushels. That leaves 1,443,815 bushels of No. 2 northern to be accounted for to a great extent by converting it into No. 1 northern. There was 307,752 bushels of No. 3 northern taken in, that is what they paid the farmers for. Now what has become of it? Looking over the amount shipped out we find No. 3 northern, none. All of this 307,752 bushels changed into a higher grade after it got into the elevator. There was 290,284 bushels of rejected taken in, nearly 300,000. There was shipped out only 93,000 bushels of rejected. What became of that low grade? There was taken in of wheat without grade 1,675,289 bushels; there was none shipped out, and but 94,000 of rejected and no grade on hand. Now, it must be remembered in addition, as I understand it, that this grain was inspected into and inspected out of the same elevator by the same system and the same inspectors. Now, the value of this grain as shipped in, even after the dockage had been taken out was \$5,209,330.24. The value of this grain as shipped out was \$5,540,207.50, leaving a clear profit on manipulation of grades, of \$330,877.27. It is important to note in addition to this after deducting the dockage and losing to the farmer 172,074 bushels that the amount shipped out together with the amount on hand was nearly 30,000 bushels more than the gross amount received in the elevator before its dockage. So that while the farmer was docked 172,000 bushels the elevator sold about 30,000 more than the gross amount received without the dockage.

The Senator then quotes from the Superior Evening Telegram of May 2, 1903:

"I wish here to state the astounding fact that the official reports of the Minnesota grain inspection department together with the reports of the Duluth board of trade, show that during the past ten years the amount of wheat shipped out of the grain elevators at the head of Lake Superior was 26,868,000 bushels more than the total amount received during the same period by the same elevators. The amount of wheat in store at the beginning of this period was about the same as the amount in store at the end of the period. That is the wheat received in Superior and Duluth during the past ten years weighed 26,868,000 bushels more when it was weighed out of the elevators than it did when it was weighed in—all of which surplus of wheat, worth at 75 cents per bushel more than twenty million dollars, was net profit, clear unearned gain, for the elevator companies. As the elevator people have to give full weight when they sell again, the presumption is that the grain growers of the northwest were robbed in the weight of their grain in a manner that would make Dick Turpin green with envy. Twenty million dollars is enough to lay a dollar on every foot of distance of 3,787 miles.

Mr. McCumber then gives the following as a statement given to him as absolutely correct:

"In 1898 a Duluth firm with offices in Minneapolis sold to Joseph Leiter, or his representative at Duluth, 200,000 bushels of No. 1 northern wheat. When the time for delivery drew near the selling firm was unable to obtain the necessary wheat of that grade at Duluth. It shipped from Minneapolis this amount, that is 200,000 bushels of wheat out of the Peavey elevators at Minneapolis, where it was inspected by the Minnesota grain inspection department as No. 1 northern. The cars arrived here, but the deputy inspectors refused to put a grade of No. 1 northern on the wheat on account of the poor quality. The receiving firm called for reinspection, but the chief inspector at Duluth also refused to mark the grade No. 1 northern as also did the board of appeals which is supposed to be the highest court as far as inspection at the head of the lakes is concerned. The difference in price at that time between No. 1 northern

and No. 2 northern was in the neighborhood of 6 cents a bushel, making the difference in price in 200,000 bushels of No. 1 northern and No. 2 northern, \$120,000.00. Through the influence of the grain ring of which the selling firm was a leading member, they succeeded in having the Minnesota inspection department send a special inspector from Minneapolis with instructions to grade this lot of wheat of 200,000 bushels No. 1 northern. This was done and the grain ring made a profit of above difference in price."

There never was a time when the property of the African slave was taken from him with such high handed recklessness, nor is the most hopeless criminal in the penitentiary permitted to be so plundered.

#### FARMERS ARE PRICE MAKERS

Farm, Stock and Home, of Minneapolis, April 15, copies the following from the Chicago Post of March 23. What is the matter now with those who said "It can't be done?"

"Farmers of the United States may also take the advice and hold all their good No. 1 or No. 2 red wheat for at least a 20-cent per bushel advance from prices now ruling. The price may be held down for a short time longer, but the intrinsic or milling value of good, sound wheat will surely assert itself long before another crop is raised and harvested."

"The best millers of the country must of necessity keep up their high standard of flour, even if they had to pay \$1.50 per bushel for wheat to do so."

"There is the demand, it may not be quite so easy to sell flour from the mill at \$5.50 or \$6.00 per barrel, but it can and will be done without doubt."

"A few years ago wheat sold here at 43½ cents per bushel, cash No. 2 spring; flaxseed No. 1 at 65 cents per bushel. It was the policy of men influential in making prices then to allow the farmer for his labor just common laborer's pay, or about 90 cents per day, as we were then in panic times."

"Now times are different. Farmers have something to say as to whether they shall be classed with common laborers or not. At least those of them who have good, sound wheat which will fill contracts are masters of the situation, and can command their own price if it is within reasonable bounds."

"The poor or low grade wheat it is wise to sell now. Get it out or off the farm before another crop is raised, but hold your good wheat for a time longer."

#### PROOF OF HOW PRICES ARE FIXED

The following dispatch, which we clip from a leading daily paper, gives official proof that live stock prices are fixed exactly as Up-to-Date has contended. When anybody disputes our position, show them the record:

Chicago, April 23.—In the investigation of the beef trust made by James R. Garfield, as chief counsel for the Department of Commerce and Labor, it was developed that prices of cattle in this market are thoroughly in the hands of the packers. They meet every morning and fix the maximum price that will be paid. Then the buyers, beginning below that figure, do the best they can with the shipper. Thus there is apparent competition, but in reality no competition whatever, since none of the buyers can go above the figure fixed for the day.

"The shipper who holds out the longest gets the best price, providing, always, the packers have not succeeded in getting their quota at lower figures. Railroad charges, feeding charges and rentals are not calculated to induce the shipper to hold his stock an hour longer than necessary to find a buyer."

#### AN ERA OF STABILITY AND PROGRESS

From the Chronicle, Princeton, Ky., April 21, we clip the following words of truth and wisdom:

"Our opinion has frequently been asked of the American Society of Equity, and we have always held that the farmer owed it to himself to organize as closely as capital or labor and to acquaint ourselves with the aims and objects of the movement we have procured literature and read and studied the same. \* \* \* By united efforts they propose to better the conditions of themselves and their wives and babies and yet not do so at the expense of their fellowman. If they organize they will become what may be called the "third power." The time has come when individual man can do but little by himself and with capital and skilled labor organized the producer of both capital and labor must organize or deteriorate; but when organized will become the balance wheel or governor of both capital and labor and then all three will work in harmony and an era of stability and progress as never seen before will reign. The farmers and their friends have it within their power to either win or defeat the objects aimed at."

# UP-TO-DATE FARMING PRODUCING AND MARKETING

The man afield  
May strive for yield,  
And think he's making gains,  
But in a trice  
Down goes the price,  
And naught for him remains.  
J. P. S.

Each issue of Up-to-Date Farming contains enough good material for two weeks' digestion for the most thoughtful farmer  
Madison Co., Mo. JAS. BACHLER.

Where is the biggest leak on the farm? Find it and stop it.

Don't feed the horses at noon until you have watered them.

Did you clean everything off the meadows as you intended to?

Are your tools in good condition? If not, stop right now and make them so.

Does Up-to-Date say too much about price? Well, the other fellows don't say enough about it.

Have you got the ginseng craze? That is a good disease to get rid of. The department of agriculture thinks there is no chance to make ginseng culture profitable in the United States.

"Farmers have a right to put a price on their products, and by co-operation they can do it." So says Up-to-Date Farming, Indianapolis, Ind., and it is the only paper on earth that says so.

No, your horse don't do exactly to please you all the time. And you don't always do to please your Master. Be patient.

Uncle Threadbare was careless with his harness, and his horses have sore shoulders. We would not mention it, but Uncle Threadbare is so many.

Are you planning to raise more corn than you did last year? That is all right, but who is going to get the surplus? You, or the fellow that puts the price on it?

We have no sympathy with the man who will not work, no matter what his calling, but with the average farmer it is not so much a question of more work as it is of more pay—better prices.

The farmers have never struck for eight hours a day. They have never struck for anything. But they are getting ready to strike—for the right to put a price on their own products. And they propose to strike hard.

Yes, you need a new plow, and will have to have one before another year. Who will put a price on it? The fellow that sells it. And you will sell a fat hog after awhile. Who will put a price on it? The fellow that buys it, of course. Well, I would like to know where you come in.

Are you worrying about the weather? Never mind, you didn't make the weather, and the weather didn't make you. Neither is responsible for the other, and life is too short to worry over it.

They are coming around. Even the Farm Journal says: "The high prices of nearly all kinds of food to consumers makes it hard for all but the rich to live in comfort. And yet the prices the farmers get are not high in most kinds of produce. The middlemen and the railroads get more than their share." That is so. Let's have EQUITY in price.

Look a little out for vetch. It is highly commended as a pasture plant for hogs and sheep, but in portions of Michigan it is becoming a very troublesome weed, and is doing much mischief in the wheat fields.

A farm paper which will not admit that the farmers can put prices on their products, concedes all the most rabid A. S. of E. ever claimed. "As the prosperity of the country is measured by his crops, the farmer surely holds the entire situation in his hands." Certainly, that is what we said.

G. Len Hungate, of Thompsonville, Ill., writes:

"I don't want to miss a single copy for each copy is well worth a year's subscription to me."

## CLOVER AND ITS TROUBLES

In the leading agricultural states, excepting perhaps, the newer states in the West where alfalfa is "to the manor born," common red clover is the most important forage crop that has been given the farmer. Its great value as a pasture plant, as a hay producer, as a renewer of the soil, as a gatherer and distributor of nitrogen, as a restorer of humus—all these combine to make it a plant of inestimable value.

But people get discouraged in its production sometimes on account of difficulties they encounter in getting a stand. Sometimes it catches in patches, and sometimes it misses in patches. Sometimes it makes a fairly good stand, but the plants dwindle and do no good. Then the land is said to be "clover sick."

Clover cannot stand acidity in the soil. Clover sick land is acid land, and almost invariably fields that catch in patches are acid except in patches, and fields that miss in patches are acid in patches. Just why these things are so is not necessary for our present purpose to inquire. It is true, though, that a field may be acid at one time and not at another, and at some seasons lands are more acid than at others. The acidity of land may be easily tested. Blue litmus paper may be obtained at almost any good drug store. Bury a bit of litmus paper in the ground from three to six inches deep, pressing the earth down firmly upon it. Let it remain there twenty-four hours or more. If the ground is acid it will turn red, or take a reddish tinge; though ground may not be sufficiently acid to react upon the paper, and yet be too acid for clover to do well upon it. Still it is an interesting experiment.

Well drained land, especially under drained, is not so apt to be acid as undrained land, and land containing plenty of humus is not so liable to acidity as land deficient in humus; and land is not so apt to be acid in dry seasons as in wet.

In all cases of acid land a treatment of lime is indicated, not as a fertilizer, but to neutralize the acidity. Wonderful results in the growth of clover have been secured by even light applications of lime, the waste from lime kilns which may be obtained very cheap in carloads.

## MORE TROUBLE FOR THE RANGE MEN

There are said to be about 400,000 head of cattle in the Choctaw nation, owned by persons who are not citizens of the Territory. An act of the Choctaw council approved by the President last March, levies a tax of 20 cents ahead on all cattle held in the nation by non-citizens. A census is now being taken preparatory to the collection of this tax, which, on the above number of cattle will amount to \$80,000, which is held as a reserve fund for the tribe. The tax in the Chickasaw nation is 25 cents a head.

## SOY BEANS

The soy bean is one of the richest, if not the richest of all the beans in fat and flesh forming matter. Not like cow peas, rich in protein and poor in fat, or corn rich in fat and poor in protein, but rich all around as we want it, especially for milch cows and growing stock.

Bulletin 58, page 14, Department of Agriculture, says: Soy beans contain almost 2½ times as much digestible protein and over 5 times as much fat as common roller-process wheat bran.

They contain 8 times as much crude protein and nearly 3½ times as much fat as oats; nearly 3½ times as much protein and about 3 times as much fat as corn.

Soy beans resist drought and water damage and are consequently, under ordinary circumstances, surer to succeed than most other crops.

The following table of comparative values will throw light on the subject:

Soy beans cut and cured for hay contain: Protein 15.4 per cent. (flesh and muscle forming matter.) Carbohydrates 38.6 per cent. (fat and heat producing matter.) Fat 1.5 per cent.

Threshed seeds contain: Protein.....34.09 per cent Carbohydrates.....28.08 " Fat.....16.09 "

Cow Peas cut and cured for hay contain: Protein.....16.6 per cent Carbohydrates.....42 " Fat.....1.5 "

Threshed seeds contain: Protein.....28.8 per cent Carbohydrates.....55 " Fat.....1.7 "

Authorities differ as to the contents of soy beans and cow peas. One authority places the protein in cow peas at 20.2 per cent. The above may be considered a fair average. The yield of soy beans is another

thing in their favor. At the North Carolina Experiment Station an acre produced 2½ tons of well cured soy bean hay, while an acre of cow peas, under similar conditions, produced less than a ton.

The soy bean is a legume and draws its nitrogen principally from the air. Hence the large yield makes it one of the best crops to be turned down for improving the soil.

## 100 BUSHELS PER ACRE

Mr. James Bellwood, of Virginia, reports that he grew on rich bottom land over 100 bushels of soy beans per acre.

## SOY BEANS AS A BALANCE

At the Kansas Experiment Station one part soy beans and five parts Kaffir corn mixed makes double the amount of pork over Kaffir corn alone.

One part soy beans to three parts of corn will largely increase the feeding value of the corn.

If soy bean hay be mixed with corn fodder, shredded corn stalks or timothy hay, half and half, a great saving will be effected over feeding the different foods separately. There appear to be at least three varieties of the soy bean—the Early Yellow, the Medium and the Mammoth. The Medium Green is a good all around variety, but at the Kansas Experiment station the Early Yellow gave the best satisfaction.

## TIME AND METHOD OF PLANTING

For hay soy beans may be planted in drills 2½ to 3 feet apart as early in the season as the weather will admit of, say about the 15th of May. Single seeds may be dropped in the drills from one to three inches apart.

Cut while in bloom or soon after the pods form. A mixture of soy beans and Kaffir corn, three to five seeds of each per foot, makes an excellent hay. If planted early the hay harvest will come off about the 15th of August, when we are apt to have fine weather for curing.

For seed they may be planted in drills 3 feet apart from June 15th to July 10th. Single plants may be left in the drills 12 to 18 inches apart. The soy bean is a bushy, upright plant from 3 to 5 feet high and requires distance. Late beans, to mature a little before frost, are not apt to be molested by weevils.

The large percentage of fat in soy beans is apt to cause them to heat in bulk, thus destroying their vitality. Therefore, they should remain in the hull until thoroughly cured.

Whether soy beans be grown for hay or seed, thorough cultivation from start to finish will be necessary. If soy beans be thus treated they make an excellent soup. In their natural state they appear to be too strong.

The ranker the growth, the more nitrogen will be drawn from the air. Therefore it pays to fertilize liberally.

## FERTILIZER FOR SOY BEANS

Mix 400 pounds of muriate of potash with 1,600 pounds of acid phosphate, and apply of the mixture in the drills, preferably a few weeks before sowing, 400 to 600 pounds per acre, mix with the soil and plant as aforesaid.

BRYAN TYSON,  
Carthage N. C.

## SOME PUMPKINS

The Farm Journal agrees with us on the pumpkin, question and gives some good points as follows:

Yes, sir, pumpkins are a very profitable crop to grow. Grow them among the corn. Make a hole in each hill after the corn is up—a sharp stick about half an inch in diameter, or a little more is just the thing—drop in the pumpkin seed and close the hole with your toe. Do not do this until the corn is up nicely. Then the pumpkin vines will not be very long before the cultivation of the corn is completed, and there will be plenty of time for a big pumpkin crop. Pumpkins are a good preventive of hog disease.

## THE FARMERS NEED THE LANDS

Millions of acres of land, which the farmers actually need for agricultural purposes, have been fraudulently taken under various land laws. Read the following quotations:

Senator James H. Berry, of Arkansas, says:

"I wish to say, that in my judgment there have been millions of acres of the public land secured under the law by the fraudulent acts of persons who procured men to go upon the land under these various acts by a previous arrangement, furnishing them the money, and where they violated these laws in order to get the holding of thousands of acres of land into the hands of a few individuals or wealthy corporations."

"The Secretary of the Interior says that the frauds which have been perpetrated in some of the Western States under the desert land act, under the timber and stone act, and under the commutation clause of the homestead act are perfectly appalling."

"The Senator from Montana (Mr. Gibson), who made a report in favor of the repeal of these laws during the last Congress, recites case after case where lands have been procured from this Government by the means which I have named and where thousands of acres are held by single individuals or by corporations, upon which they are grazing sheep and cattle to-day, and the provisions of the desert-land act have never been complied with in a great many hundreds of those cases."

In a recent congressional investigation the fact was brought out that \$50,000 were annually contributed by certain railroad companies to the national irrigation association. But our editorial friends of the agricultural press, see no negro in the woodpile there.

**20th CENTURY Wagon Box and Rack**  
One of the most convenient, useful, and labor-saving articles ever offered to the farmer. Substantially made and finished from best materials. Malleable castings and very strong. When closed it is available for hauling corn, potatoes, wood, live stock, etc. By suspending canvas or muslin from top, inside, will hold 100 bushels of bulk grain.  
**SIDES CAN BE LOWERED INSTANTLY**  
And it becomes a solid rack for hauling hay, straw, fodder, sheaf wheat, etc., with ample strength and capacity for three tons. Very convenient for husking corn with side lowered as shown in cut. Made 14 feet long and regular widths. Sold direct to farmers at manufacturers' prices, freight prepaid. Write for Catalogue and prices.  
**MODEL MFG. CO., Box 18 Muncie, Ind.**

**ONLY \$21.95**  
**Farmer's Handy Wagon**  
Only 25 inches high. Steel Wheels. 4 inch Tires. Carries any load two horses can pull.  
We furnish any size steel wheels, of any width, for any axle. Catalogue free.  
**Empire Mfg. Co., Box 120 Quincy, Ill.**

**BALES 15 TONS A DAY HAY**  
Our catalogue gives valuable pointers about Press construction and operation. Our 37 years' experience make the Gem and Victor Presses most durable, easily operated and least expensive. Send postal for book. **GEORGE ERTLE CO., Quincy, Ill.**

**DE LOACH PAT. SAWMILLS**  
Variable Friction Feed.  
Save Power and Repairs. Make Smooth Lumber. Suited to 4 H. P. up—for the farmer or the lumber man. Also Shingle Mills, Lath Mills, Burr Mills, Planers and Hay Presses. Catalog FREE.  
122 Liberty St., The Loach Mill Mfg. Co., St. Louis, Mo. New York, BOX 850, ATLANTA, GA.

**CIDER MAKERS' MACHINERY**  
Best and cheapest. Send for catalogue.  
**BOOMER & BOSCHERT PRESS CO.,**  
414 West Water St., SYRACUSE, N. Y.

**The Most Cider**  
of the BEST QUALITY and the PUREST form can be secured from a given quantity of apples by the use of the **HYDRAULIC CIDER PRESS.**  
The only press awarded medal and diploma at World's Fair. Get our free illustrated catalogue before buying.  
**HYDRAULIC PRESS MFG. CO.,**  
18 MAIN ST., ST. CINCINNATI, OHIO.

**SAVE YOUR BACK**  
Save time, horses, work and money by using an **Electric Handy Wagon**  
Low wheels, broad tires. No living man can build a better. Book on "Wheel Sense" free.  
**Electric Wheel Co., Box 170, Quincy, Ill.**

**The Lipper Well Drill**  
The Drill That DRILLS Made at TIFFIN OHIO LOOMIS MACHINE CO.  
LATEST BEST

**WIRE FENCE** at Wholesale. A 48-inch stock fence 25¢ per rod. Send for price list and FREE catalogue of Wire Fence and full line of Fence Supplies.  
**W. H. MASON & CO., Box 71 Leesburg, Ohio.**

**WE START YOU** in Mail Order Business. Particulars and samples free.  
**AMERICAN SPECIAL AGENCY, (U. P.) Milwaukee, Wis.**

**LAWN FENCE**  
Many designs. Cheap as wood. 32 page Catalogue free. Special Prices to Contractors and Churches. Address **COILED SPRING FENCE CO., Box 418 Winchester, Ind.**

**YOU PLAY SAFE**  
when you buy **Advance Fence** because we sell it on **30 Days Free Trial**  
If at the end of that time you are not satisfied, return it to us at our expense and get your money back. We take all the risk.

**ADVANCE**  
We Sell Direct to Farmers at **Wholesale Prices** thus saving you the dealer's profit. **Advance Fence** is constructed on the right principle. All wires connected. No ends of wire to become unfastened. Our Free Fence Book tells all about it. Write today for Book and Wholesale Delivered prices.  
**Advance Fence Co., 7459 Old Street, Peoria, Ill.**

# UP-TO-DATE LIVE STOCK RAISING AND MARKETING

The lowing herd,  
The cheerful word,  
Are heard athwart the fields  
For hope or gain  
Is here again  
If price accord with yield.  
J. P. S.

I am well pleased with seeds and Up-to-Date Farming. I do not see how you can give so much for 50 cents. The paper is worth two times as much as you ask for it.  
A. A. McLAUGHLIN.  
Markle, Pa.

Those work horses. They deserve good care and kind treatment.

Keep an eye on the calves and colts. The best are none too good. Plenty to eat and drink.

How do you feel when your suspenders are out of shape and your clothes hang awry? Uncomfortable? How about the horse when the harness is out of shape and not well adjusted?

The cow that is supplying you with milk and butter deserves a kind word and an extra bunch of grass, with a lick of salt between.

Now is the time to see to those pigs. They are laying a foundation for profits or losses—which?

Are the sheep and lambs doing their very best? They are actually changing weeds and grass into money if conditions are favorable. Mix a little salt with the green stuff.

Is the two-year-old learning bad habits in the field, by breaking out to get with the other horses when it gets lonesome? Fix the fence so it can't, and have a better horse.

The yearling steers and heifers ought to be licking themselves, kicking up their heels, and having a good time. They won't if they're hungry.

It's a good time for the sheep and pigs to be in the orchard; especially the pigs.

Clear and clean water. The stock can't do well without it. The milk of a cow that drinks from a mud puddle is not fit to use.

It is doubtful if turning the work horses on a pasture at night is much benefit to them. They can't stand work so well when they are full of grass. Good hay at night is better than grass. You wouldn't like to work on a mush and milk breakfast. A run on the pasture Saturday night and Sunday is restful, but they should be brought up Sunday evening.

Don't give up the idea of thoroughbred males. You may use common or grade females, but stick to the thoroughbred males—they are the stock improvers.

The stock men of the West are organizing a lobby to work on congress. No good. The same money directed to securing regular shipments as consumption requires would be more wisdom and less meanness.

A little hardwood ashes mixed with the salt given to horses or cattle is good for them, especially in the spring of the year.

## THE AMERICAN DRAFT

The Live Stock World pays this tribute to the American draft horse:

The American draft horse has achieved the distinction of being the leading market horse, the industrial horse of the age, that breeds into more money, whether grades or pure-bred, than the grades or pure-breds of any other stock. He has brought a new prosperity to the farm never before accorded to horse breeding.

Good draft horses bring good money, no matter how the times are, and the farmer who breeds good ones is sure of good prices, while the small common horses, mules and little trotters find no market demand.

A pure-bred sire will improve the stock to suit the markets, and the high prices for good horses should induce farmers to breed to the best stallions to get into the best markets.

## MUD FEVER.

As a rule the United States is a "muddy" country. We do not know that this is any disparagement, for it takes rich soil to make mud, though we confess to an acquaintance with the putty-like mud of our fine clays. But what we commenced to talk about is "mud fever" in horses, which is thus spoken of in the English Live Stock Journal:

"Mud fever is so prevalent at this time of the year that a few lines may be de-

voted to the subject for the benefit of those uninitiated in the mysteries of horse-keeping. It consists of inflammation on the under part of the belly, arising from an eruption, which causes the skin to become hot and tender and the hair to appear rough and ragged. If not attended to the latter will drop off and sores be formed, with the result that the horse is in state of fever, and very often falls lame, so that he is quite unfit for work. The treatment consist of rest, warmth, a dose of physic, soft food and the application externally of a dressing of glycerine or olive oil four parts and Goulard's extract one part. In acute or tedious cases, of course, professional advice should be procured, but under ordinary conditions, and especially if taken in time, an attack of mud fever will yield to the above treatment."

## MAINLY ABOUT HOLSTEINS

Calmly chewing their ends in comfortable stalls in a model barn on the World's Fair grounds at St. Louis, are fifteen big Holstein cows on which the Holstein Friesian Association pin their faith and are confident that they will demonstrate the superiority over all other breeds of cattle.

In other stables near by are representative herds of Jerseys; Devons, Brown Swiss and Shorthorns, and the same degree of confidence is evinced among the followers of each breed.

E. B. Von Heyne, who has earned an enviable reputation as a developer of milch cows, is in charge of the Holsteins at the World's Fair. He thinks this breed is the best in the world, and he says that the present test will surely settle the question and demonstrate that the Holstein as a dairy cow especially, as well as for general purposes, has no equal.

"Yes," said Mr. Von Heyne as some of the Jerseys were driven by, "the Jersey cows won in Chicago, but then they had no competition. The Holsteins did not participate in that test, but this time it will be different. We are here to win that prize," and the superintendent leaned back in a self-satisfied manner as though it were all over but the shouting.

"The Holsteins," said Mr. Von Heyne, "have been bred in Holland and the Friesian islands for more than 2,000 years," and he thinks that in that country the science of dairying is as far advanced as in any other country of the world.

The Holstein cow is angular of frame, rawboned and big. The Holstein colors are pronounced and unmistakable—the black and white mottled. The good cow is never fat. Mr. Von Heyne explains this by saying that the ideal cow is a machine and that her mission is to assimilate her food and convert it into milk. The milch cow is not bred for the flesh.

"A good Holstein cow is never fat," said Mr. Von Heyne. "She is a machine for the manufacture of milk—not tallow."

The first importation of Holstein cattle to America was made in 1621. Other importations were made at later dates, but no attempt was made to keep the breed pure until 1861, when W. W. Cheney of Belmont, Mass., brought over a herd. Since then many other herds have been imported and there are as many pure blood Holsteins in the United States now as there are Jerseys.

"While I confidently expect to triumph over the Jerseys and all other breeds here at the World's Fair, I want to say that we did not consider it necessary to go to the length that the Jersey people did. They selected the choicest specimens from all over the United States. They assembled their cows at Jerseyville, Ill., near St. Louis, and have kept them in training for a year.

"When the Holstein Friesian Association decided to enter the contest I went out into one county in New York state and bought some of the cows. The remainder will come from Wisconsin. They are just good, average, pure-blooded Holsteins the same as may be found on any first-class dairy farm. There is no need to spend time in acclimating Holsteins. They do well in Russia and equally as well in South Africa or any climate in the world.

"The milk of the Holsteins is not quite as rich as the milk of the Jerseys, but it more than makes it up in the quantity. A Holstein cow at the International Agricultural Exhibition at Amsterdam, from Sept. 7, 1883, to June 7, 1884, produced 14,223 pounds of milk. The record of Pietertje II for one year is 30,182 pounds of milk.

"Mercedes Julipes Pieterje, a cow I developed myself, produced as a six-year-old in an official seven-day test, 29 pounds and 8 ounces of butter.

"Sadie Voll Concordia, the present World's champion, not alone among the Holsteins but of all breeds, produced in an official test in seven days, 697 pounds of milk which yielded 30 pounds and 10 ounces of butter. This test was made in New York state at the Cornell experiment station in 1903. This cow at the age of 13 years sold for \$2,300. A calf from this splendid cow at the age of four weeks, sold for \$4,000.

"Now the Holstein is not only a milk producer without an equal, but she is a beef producer as well. We will compete with the Short Horns on the beef production, a thing the Jerseys would never attempt. The Holstein is the practical and economical breed of cattle for the United States and it will be proven at the test this summer."

## A YEAR'S CATTLE LOSSES

The April Crop Reporter, issued by the Department of Agriculture, gives an interesting table showing the losses of cattle from the two causes of exposure and disease for the year ending March 31, 1904. The total loss from these two causes is 2,676,463 head, or 4.4 per cent. of the cattle of the country.

Texas was the heaviest loser, her loss being 543,508, or a little over 6 per cent. of her entire stock. Minnesota lost 136,238 head, but that was only about 1 per cent. of the cattle of the State. Nebraska lost 117,225, or nearly 4 per cent. California lost 110,400, which was nearly 8 per cent. of her entire stock. Iowa lost 136,238, which was only one per cent. Arizona was the heaviest loser in percentage, her loss being 67,357, or nearly 12 per cent. of her stock. Florida lost 10.5 per cent., or 63,911 head. North Dakota lost 9.5 per cent., or 75,455 head. Illinois lost 61,581, but that was only a little more than 2 per cent., and Missouri a little more than 3 1/2 per cent.

The condition in Illinois is 93, and in Indiana 93, while in the eight main cattle feeding states it is 94.5, and in the whole country it is 91.

## SHEEP, CLOVER AND RAPE

A farmer of much experience in things practical says:

"I believe that for capital invested the amount of labor involved and the risk, that sheep pay larger dividends, year by year, than any other stock we keep. For example, take \$100 which will buy twenty good breeding ewes in the late summer; they should produce twenty-five lambs at least, and the lambs ought to, and will, if properly managed, bring \$4 a head off grass, or if kept for winter feeding until they will be worth \$5 per head or more, making the amount of investment, at \$4 per head, and \$25 more at \$5 per head, if you feed them on, with the wool extra. What other animals will, for so small an outlay and for so little work, return as much? These 20 ewes and lambs can be kept on an average quarter section farm at a very small cost. By gang plowing the stubble ground intended for corn and roots immediately after harvest, sowing one-half bushel of rye and three to four pounds rape seed per acre, one will get a lot of fall and spring pasture, will also germinate weed seeds which will be destroyed by the winter and spring plowing, and land will be in better shape for next crop.

I am firmly of the opinion that the sooner farmers take hold of this rape question the sooner it will revolutionize the sheep industry for us. Sow two or three pounds per acre along with clover seed, when seeding barley or oats; sow it in the corn at the last cultivation. If you have any trouble getting a catch of clover, try gang plowing the wheat stubble immediately after harvest, sowing three pounds rape with clover seed, and unless the season be too dry, you will get a stand of clover that will come through the winter all right. This is no untried theory, as we have had several heavy crops of hay seeded in this way."

## SHEEP AND WOOL.

The outlook for sheep husbandry is good. We quote from Senator Power, of Montana, a man of life experience on the sheep ranges:

"The sheep proposition looks like a good one for all time to come. Consider first our rapid increase in population and the taste the American people are developing for mutton. There is a steady tendency toward increase in the production of beef, while on the contrary both mutton and wool production is decreasing. Once New England was full of sheep; where are they now? The flocks of the great southwest have been reduced until they are no longer an important factor in the national supply of either mutton or wool. In the lower altitudes of the country few sheep are raised and the number is decreasing annually. Out here on the northwestern range, the natural habit of the sheep, the industry has reached its maximum height and is now on the wane. An overstocked range, destruction of natural grasses and gradual settlement of the country tells the story eloquently but briefly. With the past year the flocks of the northwest have decreased 20 per cent and prognostication of further decrease seems logical. As I said before, the tendency is toward an increase in the production of beef, but a decrease in wool and mutton."

## BRITTLE HOOF.

This is a trouble quite common among horses, more common in the cities perhaps than in the country. The hoof becomes so brittle that it easily breaks, sometimes almost crumbles, so as to frequently expose the "quick," and then the horse goes lame. The hoof becomes too dry as a result of exposure to fermenting manure in filthy stables, where the hoof becomes saturated with ammonia. Or it may be induced by leaving the feet covered with mud to dry upon and induce inflammation. The remedy suggests itself: Remove the cause or causes, see that the feet have plenty of natural moisture, free from ammonia or other hurtful elements. Turn into a pasture or grass lot where the foot need not be in mud, but where the morning dews may supply needed moisture in the best possible way. Take care of the horse's feet.

# Sharple's Tubular SEPARATORS

## GREAT SEPARATOR CONTEST

Held Dec. 17, 1903, at Minnesota Dairymen's Convention

Our Claim  
We will place a Sharple's Tubular beside any other separator and guarantee the Tubular to cut in half any record for clean skimming the other machine can make.

The Challenge  
Three competitors, each beaten hundreds of times singly, band together and enter a contest against the Sharple's Tubular. Providing the "combine-of-three" are allowed to furnish the milk. Providing the "combine-of-three" dictate temperature of milk. Providing the "combine-of-three" dictate quantity of milk. Providing the "combine-of-three" run three machines, and if any one leaves less than double the fat of the Sharple's Tubular they win. The "combine-of-three" select cold, hard-skimming cows' milk (85° to 70°) 300 lbs. at a run.

The Result  
Sharple's Tubular..... .95  
"The Combine" Alpha De Laval.. .175  
"of Three" United States.... .125  
"Empire"..... .450  
The report was signed by Robert Crickmore, Creamery Mgr.; A. W. Tracy, Pres. Minn. Dairymen's Assn.; and E. J. Henry, Babcock Tester Expert, the judges mutually agreed upon. Write for complete report and catalog E-134.

# Spavin

Bone Spavin, Bog Spavin, Ringbone, or any kind of blemish—we have what you need to make a certain cure. Guaranteed always—money right back if it ever fails.

Fleming's Spavin Cure (Liquid)  
for the soft bunches—Paste for the hard ones. A 45-minute application and the lameness goes. Lots of blemish information in the free book we send.

# Fistula and Poll Evil

Do yourself what horse doctors charge big prices for trying to do. Cure Fistula or Poll Evil in fifteen to thirty days.

Fleming's Fistula & Poll Evil Cure  
is a wonder—guaranteed to cure any case—money back if it fails. No cutting—no scar. Leaves the horse sound and smooth. Write for our free book on diseases and blemishes of horses.  
FLEMING BROS., Chemists,  
307 Union Stock Yards, Chicago, Ill.

# KA DEXX Cream Extractor

Means less labor, more and better butter, larger profits, because it

Separates Clean.

Has three times the separating power of other makes. Does not mix water with milk. Easier to clean and operate. No waste. Durable. Anti-rust throughout. Results guaranteed. Catalog free. Write today. We want good agents.  
KA DEXX CREAM SEPARATOR CO.  
26 Ka DEXX Bldg. ROCHESTER, N.Y.

# CREAM EXTRACTOR FREE

This is a genuine offer made to introduce the Peoples Cream Extractor in every neighborhood. It is the best and simplest in the world. We ask that you show it to your neighbors who have cows. Send your name and the name of the nearest freight office. Address

PEOPLES SUPPLY CO.  
Dept. 183 Kansas City Mo

# THE 4-LEAF CLOVER Cream Raiser.

Don't mix. Has utmost cooling surface. Inner can quickly removable. No water needed in winter. Cold air chamber over whole can. Very easy to clean. Patent faucets and many other desirable features described in our FREE catalogue.  
PLYMOUTH MFG. CO., Plymouth, Ohio

# GEMMER Gas and Gasoline Engines

Built to fulfill your particular requirements for power. Economical, safe and satisfactory. GUARANTEED in every respect. If you are interested in securing a High Grade Engine for a low price, write our Consulting Engineer for Gas Engine information of value, FREE.  
GEMMER ENGINE & MFG. CO., 1620 Park Street, MARION, IND.

# ONYX HILL HERD OF BERKSHIRE SWINE AND JERSEY CATTLE

Bred direct from the World's most famous Prize-winning families. 76 Spring pigs for sale, sired by Uncle Sam, Fries Lee and Philip Baltimore. Also gilts bred for fall farrow. Prices equitable; satisfaction guaranteed. Write for what you want or come and see stock.  
HAMMACK & SONS, R. R. 4, Pinckneyville, Ill.

# DEATH TO HEAVES Guaranteed

NEWTON'S Heave, Cough, Dis-temper and Indigestion Cure. A veterinary specific for wind, throat and stomach troubles. Strong recommendations. \$1.00 per can. Dealers. Mail or Ex. paid. The Newton Remedy Co., Toledo, Ohio.

# FREE TRIAL of the BEERY BIT

Even a Lady can hold an ugly horse. Cures hickers, shyers, runaways etc. FOUR bits in one. TEN days TRIAL. PROF. J. N. BEERY, Pleasant Hill, Ohio

# UP-TO-DATE DO IT YOURSELF PRODUCING AND MARKETING

*It seems a little thing to do,  
To lay a dozen eggs or two,  
But when the eggs are gathered in,  
Correctly counted—swapped for "tin."  
It's clearly seen the little hen  
'S done better work than lots of men.*

—J. P. S.

A handful of millet hay is a good thing for the hen and her brood to scratch in. The seed is good feed for the chicks.

Dispose of the old hens. Save the best laying pullets for your next year's brood hens.

A thoroughbred male is the thing to have with the hens from which you are to get your eggs for hatching.

The male bird should not be too fat. Neither should the hens, for that matter.

No matter what variety you breed, the eggs for hatching should be from the largest hens.

Be sure that the young chicks have plenty of encouragement to scratch. Exercise is the best preventive of leg weakness.

Don't forget about those sudden storms. Have some ready means of escape for the chicks.

Large hens contribute more to the increase of the average size of the future flock than large roosters.

Poultry people are still talking about the profit there is in duck raising.

Damp and filthy quarters for poultry are next door to the hospital and graye yard.

Are predatory animals, minks, opossums, foxes, etc., more liable to catch white chickens than dark ones? Some say they are.

Poultry profits depend upon healthy fowls, and to be healthy, fowls must be surrounded by healthy conditions, and have healthy feed.

The small poultry keeper is not to be sneered at; he's too numerous. And when he is the right kind of fellow, and gives his fowls proper care, some blue ribbons are liable to go his way from the shows.

First element for poultry success—good stock for breeding purposes.

Don't try to raise 'too many fowls. Better sell the eggs than to waste them and the hens' time in a vain effort to raise chicks.

A prowling cat is a bad coop for young chickens.

Duck eggs can be hatched in incubators, otherwise the work must be delegated to chicken hens, especially if you are raising Pekins.

Don't let the goslings run to a pond infested with tadpoles. If you do you will lose both goslings and tadpoles.

Birds are great eaters; they eat more than any other animal in proportion to their weight.

Let us remind you that it is about time that poultry house was cleaned out again.

We don't vouch for them, but most of these remedies are simple and easily applied. For cholera, mix one teaspoonful of carbolic acid in a gallon of water; for lice one teaspoonful of sulphur in four quarts feed or mash; for diarrhoea, one teaspoonful of Jamaica ginger in a gallon of water; for roup mix boric acid with water so that it can be poured down the throat, give a teaspoonful and they will be cured.

Everything may well be proud of the photo-engraver's art but the chicken.

Sometimes a brood of chicks apparently healthy and growing nicely, will begin to droop, and if nothing be done with them they dwindle and die. The trouble most likely is lice—the large lice that will be found on the top of the head. These often appear very suddenly; the chicks may be entirely free from them one day, and in a day or two may be dangerously infested. Examine them carefully on the first appearance of droopiness, and rub a drop of lard on the head of each chick, dusting it well with insect powder. Then attend to the hen in the same way.

## AFRICAN GEESE

The African goose is not well known in this country, not so well as its close relative, the Chinese goose. We have had no personal experience with it, but

it is pronounced by those who have to be a very superior fowl—far superior to the common goose, and surpassing even the Embden and Toulouse, or the Chinese itself. A writer in the Northwest-ern Agriculturist, from an engraving in which we reproduce the accompanying illustration, thus speaks of the characteristics of this goose:

"African geese are as large as most Embden and Toulouse geese, and are better layers, setters and mothers than any other breed of geese. Goslings from old Africans are very strong and hardy and grow very fast. They are a stylish and active breed of geese. The ganders are very active and sure breeders and will mate promptly with any breed of geese. They can be mated with five times as many geese as can a Toulouse gander and twice as many as an Embden gander. African eggs always hatch well.

"The African geese have been raised for many years in the Eastern States, where they have a very good reputation as a first-class market goose, and they are working their way rapidly westward now, and in a few years will be as common as the Embden and Toulouse geese. They have a steady, dignified and noble walk and carriage and show much grace in their movements.

"This breed of birds originated in Africa and are known as far back as 1859 in Massachusetts. They have a large head with a large knob and generally have a dew lap under the throat. These and the Chinese are different from the others in the head, and are the only two breeds that have the knob as described.

"The bill of the African is rather large at the base and their necks are long. Their backs are long and flat, breast round and moderately full, and they have large, long and upright bodies. The wings are large and strong and are folded well against the body, the thighs are short and stout and shanks of medium length. The knob is black and the dewlap of a gray color, while the plumage of the neck is light gray with a dark stripe running from the head to the body. The back is dark gray, the plumage of the breast is gray and the under-part of the body is light gray. The wings and tail are dark gray and the thighs are light gray. The eyes are hazel or brown, bill black, shanks, toes and web are of dark orange color.

"The standard weight of the adult gander is twenty pounds, adult goose, eighteen pounds, young gander sixteen pounds and young goose fourteen pounds."

## THE GUINEA FOWL

It is a matter of surprise that more guineas are not kept on the farms. They are just about the hardiest of all the domestic fowls, and, I believe we may say the greatest hustlers, yet they seldom do their hustling to the injury of the garden or lawn. While quite domestic in their habits if treated gently, their wild nature leads them to remote parts of the homestead, and they are always catching insects that would better be destroyed.

While they do not lay all the year as the chicken hen does (more or less), they are great layers in their season, and the eggs, though smaller than those of the chicken hen, are very good for food. The eggs sell in the market, but generally below the price of hen's eggs. An objection is that guineas hide their nests so skillfully. But they always give themselves away when on their nests, and the watchful small boy will not fail to find them by their peculiar cry. The writer's happiest hours when a small boy were spent in watching and listening for the guineas, and then finding their nests after they had told on themselves.

On farms infested with hawks, guineas are very valuable, their vigorous protests against every approach of the foe actually frightening them away. And no strange cat or dog can come on the place without their emphatic protest.

The flesh is not so desirable, perhaps, as that of the chicken, being dark and inclined to be tough, but it makes excellent soup, and well cooked, it is by no means an unwholesome dish. Indeed, it has a gamy flavor which specially appeals to many appetites.

There are several varieties now, more or less popular, but we like the old-fashioned speckled guinea, the old friend of our boyhood.

## BINDER TWINE

Farmers wanted as agents. AUGUST POST, Moulton, Iowa

# UP-TO-DATE AND SMALL FRUIT

After a winter that's bleak and cold,  
When storm-winds worry and sift,  
And Summer's green and Autumn's gold  
Have long been under the drift—  
Isn't it sweet to hear the rain  
Come back with the southern breeze?  
And isn't it good to walk again  
Under the apple trees?

—Florence J. Boyce in F. J.

Up-to-Date is indeed a great paper. It ought to be in every American home.  
Montgomery Co., Ind. NEWTON FINCH.

Low ground is not the best selection for an apple orchard.

The Jonathan is a good apple; so is the Baldwin. The latter is a special favorite in Michigan.

A crop of one acre of Jonathan apples is reported to have sold for \$1,350 in Colorado.

The dust spray in the orchard is growing in favor. It is much cheaper than the liquid spray, and is thought by many to be equally effective.

A prominent orchardist uses a dust spray made up as follows: Lime, 30 pounds; Paris green, 1 pound; dry bordeaux, 1 pound; sulphur, 1 pound, concentrated lye, pulverized, 1 pound.

"Cherry trees do well in sod; no other fruit trees will," says a contemporary. Try Kiefer pears.

In transplanting anything, pack the dirt so firmly around the roots as to leave no air spaces. This must have special attention in transplanting orchard or other trees. Actually tamp the dirt in, but don't bruise or bark the roots, which you will not do if you keep them covered with earth. This is essential to success in transplanting.

For a wash for all kinds of fruit trees, says Farm Journal, make a tolerably strong solution of concentrated lye, and with an old broom brush and wash from the limbs to the ground and let some soak

around the roots of the trees. This fertilizes and makes the trees grow. Treat thus about once a month during the entire season; it will destroy lots of insects that work around trees.

A good disposition of the wood ashes is to scatter them in the orchard, around under the trees in a good place.

The old Concord grape still sits at the first table, though some of its neighbors wear finer clothes and hold a little higher head.

The plum curculio defies the spray. Spread a white sheet under the tree and jar him out of business. Then dispose of him in any way you please. A young duck makes an active and willing executioner.

Pear blight is now declared to be caused by the smallest bacillus of them all, and that the country where he lives is densely populated so that birds, flies, bees and other visitors carry millions on their feet to plant colonies elsewhere. This bacteria and bacillus business is getting beyond us. Wonder if there were so many of them when our daddies rushed through life in blissful ignorance of their existence!

## MULCH THE ORCHARD

The orchard mulch is meeting more and more favor every year. We quote from a good authority on that subject:

"The principal advantages of a mulch for orchard trees in our climate are, first, to protect the tender roots from severe freezing in seasons when the natural covering of snow is insufficient and the temperature, like the present winter, very low; second, to retain a good degree of moisture in the soil during the growing season, as well as through the winter months, and, third, to keep down the growth of grass and weeds, as the tree gets older and is difficult to reach with a cultivator.

It will be noted that in order to accomplish the first purpose of the mulch it will be necessary to have it in place

early in December, and it should be spread over the ground to a depth of six inches. Almost any kind of litter will answer this purpose very well, for it has been noticed that even a growth of weeds or grass left on the ground through the winter will do a great deal toward saving trees from root killing, as compared with the case when the ground is left entirely bare. However, the depth and importance of the mulch will vary with the latitude, and also with the certainty of a reasonable covering of snow during the winter months. We have used the remains of old straw piles, corn stalks raked from the barn yard, as well as worthless hay and litter of almost any sort.

To accomplish the second purpose of the mulch it should be on the ground before the usual summer drought and heat of July, August and September. In our present experience we have found that nothing not even persistent cultivation, will do so much to retain the moisture in the soil that is so necessary for the best thrift of a tree, as a moderate mulch of such material as above mentioned.

## SCALES

From the Ohio experiment station we get the following description, and suggested remedies of three of the most important orchard scale insects:

1. The Oyster-shell scale: This is a reddish or grayish brown scale, about an eighth of an inch in length, pointed at one end and curved in shape, suggesting a minute, elongated oyster shell. Its winter form is a hard scale, covering and protecting a number of minute, white eggs. These eggs hatch during the fore part of June, and the yellowish young crawl about for a few days and then fix themselves by inserting their beaks in the bark and begin sucking the sap. At this time they may be destroyed by spraying with kerosene emulsion, the formula for which is given in the station spray calendars, which are sent free on application.

Experiments made by the Canada Experiment Farms have shown that this scale may also be controlled by the use of lime mixed with water at the rate of one or two pounds of lime to the gallon of water. This should be done as early in the winter as possible. The lime loosens the scales, after which the rain removes them and destroys the eggs.

2. The Scurfy scale: This insect is somewhat smaller than the oyster-shell scale, and is more nearly round in shape. It is more conspicuous, because of its white color. Its habits and the means for its control are similar to those of the oyster-shell scale.

Neither of these scales is likely to cause much injury in orchards which are thoroughly sprayed with Bordeaux mixture.

3. The San Jose scale: This scale is

much smaller than either of the others named. It is nearly round in shape, at first white but later dark gray in color, and is easily recognized by a minute, central nipple, which is lighter colored, often yellow. To identify this scale a small magnifying glass is necessary.

This insect is far more destructive than either of the others named. Its appearance in the orchard means the eventual destruction of the orchard unless vigorous treatment is adopted. The best method of treatment yet discovered is the lime-sulphur-salt spray.

## STRAWBERRIES AND CREAM

Have you a strawberry bed? You ought to have one; you'd like a dish of fine scarlet berries with a sprinkle of sugar and an immersion in cream every day, and the thought of the ordinances and the taste of the berries would make you more religious. A Wisconsin man thus tells the Farm Journal how he does it. A good deal of work, but he, no doubt, gets a good deal of berries:

"I set out a small strawberry bed in 1893, which has continually improved, both in fruit and plants, each succeeding year under my system of cultivation. I keep the soil well enriched and free from weeds.

"As soon as I finish picking the fruit, I mow the vines closely and rake them off. I then rake the bed thoroughly with an iron-tooth rake, making the whole surface of bed fine and clean. I then mark the bed crosswise of last year's rows, leaving the row strips about eight inches wide. I then thoroughly, but carefully, hand cultivate between these row strips, so as not to injure the roots of the plants in these strips. In a few days the strongest and best plants will be up and running.

"I leave enough of the strongest plants to run and cover about one-half to two-thirds of the bed. I then carefully hoe out the plants not needed and keep the soil clean and fine about these running plants. When the runners have covered the amount of space wanted, I then cut off all runners as they appear, keeping the open spaces well hoed.

"If needed I apply a dressing of good, fine manure, before mulching the bed for winter. I set only perfect flowering kinds."

The great commercial interests are so closely bound together that there are no longer competitive channels to which we can go for relief. More than one-half of the population of the United States are agricultural. The government, therefore is interested and deeply concerned in their welfare from a national standpoint. There is no one single blessing which will give greater happiness, longer life, or a higher character to the American people than the perpetuation of the rural home.—Senator McCumber of North Dakota.

## 98c. Buys \$3.50 Shoes

SEND NO MONEY.

These are high-grade Men's and Women's Shoes at lower prices than ever before heard of. We guarantee them to be more stylish, better fitting, better wearing, than you can buy elsewhere at \$3.50 to \$5. This is the most wonderful shoe offer ever made.

SEARS, ROEBUCK & CO., CHICAGO, ILLINOIS.

## RAISED 129 PIGS FROM 13 SOWS

ST. JOSEPH, ILL.

International Stock Food Co., Minneapolis, Minn.

GENTLEMEN:—Word comes to us that one of Fithian's prosperous farmers, John Rueb, is the champion hog raiser of central Illinois. In the last two weeks he has had thirteen sows that farrowed 129 pigs, all living, healthy and strong. Mr. Rueb claims that his success is greatly due to his using "International Stock Food," which he has used for several years. John is one of the up-to-date farmers and he will continue to use "International Stock Food," and says he can always raise more pigs than any of his neighbors unless they use "International Stock Food."

From ST. JOSEPH RECORD.  
Beware of inferior Imitations and Substitutes. Write Us About "International Stock Food." We Have Thousands of Similar Testimonials and Will Pay You \$1000 Cash If They Are Not Genuine.

"INTERNATIONAL STOCK FOOD" IS A FEED FOR ONE CENT. It won the Highest Medal at Paris Exposition in 1900 as a High-Class Medicated Preparation, made from powdered Roots, Berries, Seeds and Herbs, to give to Horses, Cattle, Sheep, Goats, Colts, Calves, Lambs and Pigs, in small amounts as an addition to their regular grain feed to secure better digestion and assimilation so that each animal will obtain more nutrition from all grain eaten. Scientific authorities prove that the average animal digests 65 percent of the average kind of feeds. "International Stock Food" will cause them to digest 70 to 75 per cent. We paid the government \$40,000.00 war tax because "International Stock Food" was a high-class medicinal preparation. Many other kinds did not pay any war tax because they claimed to be to the government that they did not use medicinal ingredients and did not claim medicinal results. You can afford to use preparations of this kind only on a medicinal basis. "International Stock Food" purifies the blood, "tonics up" and permanently strengthens the entire system. It cures or prevents many forms of disease. It will save you \$10.00 per year in the feed of every horse you work and its use will only cost you \$2.50 per year. It saves grain and 30 to 60 days time in growing and fattening all kinds of stock and is endorsed by over one million farmers who have used it for fifteen years. It is absolutely harmless even if taken into the human system. Beware of the many cheap and inferior imitations and substitutes. No chemist can separate and name all of the ingredients we use. Any company or chemist claiming to do so is a Self-Confessed Ignoramus or a Paid Falsifier. Insist on having the genuine "International Stock Food."—It is sold by 100,000 Dealers on a "Spot Cash Guarantee" to Refund Your Money if it ever fails to give you satisfactory, paying results and its use only costs you 2¢ a FEED FOR ONE CENT.

## A \$3000000 STOCK BOOK FREE

### IT CONTAINS 183 LARGE ENGRAVINGS

WE WILL PAY YOU \$10.00 CASH IF BOOK IS NOT AS DESCRIBED

The Cover of this Book is a Beautiful Live Stock Picture. Printed in Six Brilliant Colors, and Without Any Advertising on it. Size of Book is 6 1/2 by 9 1/2 inches. ## Letter From David Dobetter

(Delayed in Transmission)

No. 41.  
NEAR WILLIAMSPORT, IND.  
April 15, '04.

Dear Mr. Everitt.

Things are swinging along nicely with us. The frame for the new barn is up and the siding is going on. We were fortunate enough to get carpenters before the season fairly opened. It pays to be a little ahead of time once in a while. If these men had got their season's work all engaged and under way before I spoke to them the chances are that the new barn would not have been ready for the summer crop of hay. As it is, we will be all right, unless something unforeseen occurs to prevent.

Tom has the manure almost cleaned up in the old yard. Chipper has gotten so he thinks he can do almost a man's work, and really, it is wonderful what a good healthy boy of his size and age can do. It sometimes seems as if he could tire me out and I believe I can endure as much hard work as any man of my time of life. A good many times when I would be feeling quite old after a hard day's work, Chipper would take the gun and go out to see what he could find in the way of game just before the sun went down. I have planned to pay Chipper something for his season's work this year. I do not suppose he will expect it. The home would be all he would ask, but it seems to me no more than fair nor right that he should have a fair return for his work. It never seemed to me just the thing to get all you could out of a boy just because he is a boy and cannot speak or act for himself. Lots of folks do that. They will work a boy till he is about used up, paying him little or nothing, and then turn him off to take up some other one.

We have the early potatoes all planted. Tom and I took a few days as soon as the frost was out of the ground and plowed the land. It seemed to be in splendid condition. We are taking the ten acres where we had one kind of corn last season. The piece was well manured and we think it will give us a good crop of potatoes. As fast as we can we are getting into a system of rotation of crops. This is a comparative new thing for the farmers of this section and entirely so with us at Four Leaf Clover Farm. The old method was to grow corn right along on the same piece of ground, year after year. The same way with wheat and other crops; and the worst of it was, we did not think much about putting anything back. Hundreds of tons of the very nicest straw have been burned by the farmers of the west and middle west. If we only had some of it now wouldn't we make good use of it? But now we are beginning to wake up to the necessity of saving not only the straw but all other kinds of farm fertilizers, and where we cannot get enough we are studying how to make up for the deficiency by a system of good tillage and crop rotation.

We have missed Ben this spring and no mistake. The older I get the more I feel my dependence on the young folks. I wonder if that is not so with all fathers? But he will soon be home now. He writes home that he has stored up a lot of new ideas that can be worked out on the old farm. All right. We will welcome them. Farming is a progressive business. We did not use to think so. Year after year we plodded along in the same old round—the same cows, the same kinds of potatoes, wheat and corn, the same way of plowing and seeding. This is being all changed—it is bound to be so.

I took little sweetheart in the other afternoon when it seemed as if I could be spared pretty well and drove about twenty miles through this county. I think I told you that I had an idea that we farmers of western Indiana would be looking out for our best interests if we could put up a good big elevator for the purpose of storing wheat or corn till markets were favorable. This was the object of my trip the other day. You would be surprised to see how quickly the farmers grasped at that idea. I tell you, we are right up to a time when the farmers are red hot to get out of the clutches of the moneyed men who have been taking the very last cent they could out of us and leaving us to slide it along the best way we could. Fifty men out of fifty-five that I saw that day are ready to support such a plan, and support it not only with their voices but with their pocketbooks, and that is what counts. Several offered to place money right in my hands for the purpose of building an elevator; but I did not think it wise to let the matter get along quite as fast as that. Let's know where we are going to build and what the cost will be and all about it before we call for money. The money will be forthcoming, I am sure when all the preliminaries have been arranged. But I did take a paper along with me and let every man put down on it the amount he felt like subscribing toward the stock of the concern. I think we have well towards enough down now to build the elevator. I know of two or three good men who stand ready to make up any deficiency

there may be after the rest of us have done what we feel able to do. You know there will always be some who will stand back till they see that a thing is sure before they will come in. We held a good big meeting last week and a committee was appointed to thoroughly investigate the whole matter and report the first of next month. I prophesy that before next wheat harvest we will be in shape to store our crop and hold it till prices get where we will want them to be before selling.

I wish farmers everywhere would do this. We must do it for our own protection. Men in all other lines of business are now organized from top to bottom. Why not we? I think the trouble has been that we farmers have been too suspicious of our neighbors. We have not wanted to trust anything or anybody except our own selves. We think we are smart enough to do all our own business ourselves and are willing that other folks shall do the same. No hog on the slippery ice ever was more independent than we farmers have been. "I'll run my own shanty" has been our motto, and we have suffered the penalty for our narrowness. While we have been begging folks to take our staff always at their own figures, not ours, they have been laying up money till their pocketbooks are ready to burst.

No use to blame anybody but ourselves. The other fellows have done nothing more than we ought to have done long ago. The question is, shall we work for our interests now that we know what those interests are? For one I say "Yes" and I mean to say it so that farmers all over this county can hear it, too.

Our little fruit trees have come through the winter in fine shape. I went out and examined them all a few days ago, and if I am not mistaken, every one of them is alive and ready for the new season's work. Tom and I spent some time trimming them up the latter part of last month. The branches look bright and thrifty and I can see that the trunks have grown considerably since we set them out. We gathered all the brush up after we had been over the orchard and burned it. Ben writes home that he has found out a number of good kinks about orcharding. Good for Ben. Fruit growing is an art. Few of us common folks know as much about it as we should.

I am coming down to the city next week, Mr. Everitt. I want to see you and talk some things over. Especially the elevator business. Then there is the Township Trustee matter. I am not going to let that worry me but I want to talk it over a little.

Now Goodnight. Yours Truly,  
DAVID DOBETTER.

## SWEEPING OVER AMERICA

We clip the following from a writer in "The Farm Home," Springfield, Ill. Reference is made to the American Society of Equity:

"A great movement is sweeping over America. It is an attempt by farmers of every class to control their marketing and compel a fair price for their products. Nearly 100,000 have joined the movement already. The object is so noble, so God-like—'The laborer is worthy of his hire' and its accomplishment will be fraught with so much good to all humanity—that every person should help from the President of our country down to the lowest ranks of people in public or private life.

"Farmers! Any person or institution that opposes this movement is your enemy. Every person who does not help it is not your friend. This is a time when the Divine injunction should be suspended and you should punish your enemies and not reward those who are not your friends.

"From this time forward refuse to help those who will not help you in this attempt; and give encouragement, comfort and support to those who help you."

The Louisiana Purchase Exposition management, in compliance with the requirement of the recent act of Congress in connection with the World's Fair loan, has set aside \$19,000 for a show of breeding cattle from below the quarantine line and a car-lots cattle show, following the regular series of exposition live stock shows at St. Louis this fall. This was approved at a conference with representatives of the southern breeders and range cattle interests by President Francis, Director Skiff and Chief Coburn at St. Louis, March 15-17.

Picture taking is fine sport when you have a good instrument. An advertiser in May 15th Up-to-Date sells good cameras at a low price. When you get a good picture send us one and we will pay you for your trouble if we can use it. Write name and address plainly on back.

## VIRGINIA FARMS

This section has been overlooked but now Northern Farmers are buying the lands and are delighted with their bargains. They find the land admirably adapted for grain, cattle and fruits. Good markets, climate delightful.

## A FEW AMONG MANY BARGAINS

No. 1,085—On the Staunton River—A charming old mansion and an excellent farm, 940 acres; about 300 acres are river bottoms, the soil of great depth and fertility. Brings maximum crops of corn, timothy, clover, etc. About 600 acres cleared and cultivated; and 340 acres in woods. There are many farm buildings of various kinds. The farm is well watered and is one of the very best bargains in Southern Virginia. The location healthy, and good society. About four miles from village and depot. Excellent stock farm and equally good for grain and general farming. Price, \$11,000.

No. 1,159—Charlotte County—900 acres. This is a charming old ante bellum homestead. Family scattered and place neglected, but it is one of the best

arms in the entire county. Large handsome brick residence, eight rooms and hall above the large basement. 300 acres fine bottom lands. 300 cleared up lands, and 300 forest. Seven tobacco barns and many other buildings. Price, \$12,500.00.

No. 1,257—Caroline County—136 Acres, Brick Mansion—Old Colonial building in the midst of 20 acre well shaded lawn, on hill with delightful view of river, valley and country for miles. Spring of excellent water. Place is noted for its healthfulness, 1 mile to post office, 2 1/2 miles to depot. This is a place of considerable historic note. \$5,000, 1/2 cash.

No. 1,263—Only 13 miles from Richmond, 847 acres \$15,000.00; a great bargain.

We have many other elegant farms and country seats in Virginia and other States. Small catalog free. Large catalog entitled "Virginia and Carolinas Illustrated," for 25c. This has descriptions of hundreds of farms with photographs of buildings and crops. Finest farm catalog issued. Address

## Cash Given Away

TO USERS OF

# Lion Coffee

We are going to be more liberal than ever in 1904 to users of **Lion Coffee**. Not only will the Lion Heads, cut from the packages, be good, as heretofore, for the valuable premiums we have always given our customers, but

## In Addition to the Regular FREE Premiums

the same Lion Heads will entitle you to estimates in our **\$50,000.00 Grand Prize Contest**, which will make some of our patrons rich men and women. You can send as many estimates as desired. There will be

## Two Great Contests

The first contest will be on the July 4th attendance at the **St. Louis World's Fair**; the second relates to **Total Vote for President** to be cast Nov. 8, 1904. **\$20,000.00** will be distributed in each of these contests, making **\$40,000.00** on the two, and in order to make it more interesting, in addition to this amount we will give a

## Grand First Premium of \$5,000.00

to the one who is **nearest correct on both contests**, and thus your estimates have two opportunities of winning a big cash prize.

Five Lion Heads cut from Lion Coffee Packages and a 2c stamp entitle you (in addition to the regular free premiums) to one vote in either contest:

Printed blanks to vote on found in every Lion Coffee Package. The 2c Stamp covers the expense of our acknowledgment to you that your estimate is recorded.

### WORLD'S FAIR CONTEST

What will be the total attendance at the St. Louis World's Fair on July 4, 1904? At Chicago, July 4, 1893, the attendance was 283,273. For nearest correct estimates received in Woolson Spice Company's office, Toledo, Ohio, on or before June 30, 1904, we will give first prize for the nearest correct estimate, second prize to next nearest, etc., as follows:

1 First Prize	.....	\$2,500
1 Second Prize	.....	1,000
2 Prizes—\$500.00 each	.....	1,000
5 "—200.00 each	.....	1,000
10 "—100.00 each	.....	1,000
20 "—50.00 "	.....	1,000
50 "—20.00 "	.....	1,000
250 "—10.00 "	.....	2,500
1,000 "—5.00 "	.....	9,000
2139 PRIZES	TOTAL,	\$20,000

### PRESIDENTIAL VOTE CONTEST

What will be the total Popular Vote cast for President (votes for all candidates combined) at the election November 8, 1904? In the 1900 election 18,959,653 people voted for President. For nearest correct estimates received in Woolson Spice Company's office, Toledo, Ohio, on or before November 5, 1904, we will give first prize for nearest correct estimate, second prize to next nearest, etc., as follows:

1 First Prize	.....	\$2,500
1 Second Prize	.....	1,000
2 Prizes—\$500.00 each	.....	1,000

## Newsy and of Interest

The Southeastern Stock Breeders' association was recently organized at Jacksonville, Florida, with J. A. Hollomon, of Jacksonville, as secretary.

There are 1,108 lumber mills in the south along the Southern railway, with a capacity of 13,000,000 feet daily.

In Haywood county, N. C., has been organized the Haywood County Stock Improvement company, with a capital of \$10,000. The object is the improvement of live stock.

The Texas Cotton Seed Crushers' association will meet at Fort Worth, July 4th and 5th. The railroads will give the usual reduced rates.

The Interstate Cotton Seed Crushers' association will meet at St. Louis June 6 to 11.

Belgium has placed a duty upon American meats of nearly a cent and a half a pound, and upon live cattle nearly 5 cents per hundred pounds; sheep nearly 40 cents per head, and lambs 19 cents per head.

Our readers may feel safe in answering advertisements in this paper. We exercise unusual care in admitting them to our columns. Nearly every day we refuse advertisements that we think objectionable. In a year this amounts to as much as two thousand dollars.

Of cattle imported into Great Britain seven-eighths come from the United States, and six-sevenths of the sheep.

Rabbits are a great pest in Australia, and it is claimed they have figured pretty largely in the destruction of the sheep industry there. But they are being turned to account. In 1900 5,678,224 frozen rabbits were shipped from Melbourne. Last year 20,000,000 were exported.

There were 868,000 hogs packed in March, 55,000 less than were packed in March a year ago.

Six per cent of the people own 82 per cent of the wealth of the United States. That leaves 94 per cent of the people to own only 18 per cent of the wealth. Remember Rome.

A fruit shippers association at Mill Creek, Ill., has been incorporated with a capital of \$1,000.

You can often save money by reading the advertisements in Up-to-Date.

About 10,000 barrels of potatoes have been shipped into the United States from New Brunswick, Can.

A loss of 800,000 sheep is reported from Montana.

A well known Denver cattle man says there will be no early beef from the northwest this year.

The prices of feeding cattle and fat cattle are out of proportion—which would seem to indicate a surplus of feed.

The British parliament is agitating the growing of cotton in that country's African possessions, and the government is urged to build railroads and render other substantial encouragement to cotton growers in those regions. Over \$180,000 have been raised to aid such growers. The plea is that British mills cannot afford to be dependent upon America for their cotton supply.

It's a good plan to always mention Up-to-Date Farming when you write advertisers. They know as well as you do that we guarantee them and expect you to get the best. And it helps us, too

Gen. E. F. Gaddis, of Dallas, declares that the 1904 crop of cotton in Texas will be the largest ever produced in that State.

July cotton is quoted at nearly 14 cents.

Mr. Windham R. Dunstan, director of the imperial institute, has compiled a report, which has been issued by the London Board of Trade, to the effect that India and Egypt cannot compete with the United States in the production of cotton on account of the great superiority of the American product.

The manufacture of cotton goods is rapidly increasing in the South.

A \$100,000 cotton mill is to be located at Cuthbert, Ga.

A large ginners is in contemplation for Sebastopol, La.

Do you loan your paper to some of the neighbors? Pass the good things around. If they think they want it every issue send their subscription for them or tell them to do it, and see that it is done!

The cotton crop of 1791 was 8,889 bales, and the price in New York was 20 cents; that of 1903 was 10,758,326 bales, and the highest New York price was 18½ cents. The highest price ever paid for cotton in this country was in 1864 when, with a crop of 1,450,000 bales, the price reached \$1.89. The crop of 1903 was 10,701,453 bales and the highest price paid was 9½ cents. The next year's crop was 57,000 bales greater, yet the price went to 18.50—though a greater crop, the price was higher. The size of the crop don't govern the price.

Cash wheat reached \$1.08 in Chicago during May.

Uncle Threadbare always lets his subscription expire. Then he misses good, valuable hints, and loses money.

Your cows and horses will pay you many fold if sprayed with some preparation to keep the flies off. And they'll thank you for it, too.

Live stock receipts at the five principal markets for the first quarter of this year were 8,844,718 head, against 7,808,901 during the first quarter of last year, and 8,081,008 during the first quarter of 1903.

Cattle shipped across the Atlantic for the first quarter of this year, were: From Boston 75,133, New York 54,387, Baltimore 43,120, Portland 26,506. Philadelphia 14,888, Newport News 10,151, Norfolk 849—total 225,084 head.

Secretary Wilson has authorized the shipment of 1000 head of beef cattle into this country from Venezuela.

As late as the middle of May stock men were reported shipping out all stock from western Texas, New Mexico and Arizona, on account of excessive drought and no grass.

It is reported that only 1,362 hogsheads of Burley tobacco are on sale in the open market.

The newspaper, the Commercial West, is quite sure the wheat yield of 1904 will not equal the yield of 1903.

Several progressive subscribers are using our advertising columns, and making money, too. Why don't you?

## THE COMING OF EQUITY

M. WBS TUBBS

There's a mighty force that's working  
In the soil and through the air  
That will break the throes of winter  
And spread verdure everywhere.

Now it's mild and calm and peaceful  
As the zephyrs of the night  
Now the sun in grandeur cheers us  
And the world seems extra bright.

Now a sudden change is noticed  
And the winds grow chill and cold;  
Angry clouds discharge their burden  
And the world is dark and cold.

Thus does nature roll and tumble  
Through the season of springtime  
With an ever changing programme  
That no prophet may divine.

Yet with all this change and mix up  
There's the farmer faithful at it  
Fighting food or drought or insect  
While the gamblers reap the profit.

There's another force that's working  
In the fields of thought of men  
That is sure to change conditions  
So the world will say amen.

It is mild and calm and peaceful,  
Has the halo of "good will,"  
Sends its message out like sunlight  
To a world yet cold and still.

Like the progress of the seasons,  
Wondrous changes can be seen;  
Farms and farmers seem enchanted  
At the prospects now first seen.

The sun of Equity has risen  
And shines brightly o'er the earth  
While the farmer with his measure  
Sells his produce—names its worth.

He no longer asks the buyer  
What his goodness will allow;  
He now determines value  
From the days behind the plow.

And he says to every buyer  
Yes, I have it in my bin  
It is worth so many dollars  
If you want it, where's your "tin"?

Nay, nay I will not pay it  
I will give you so-and-so  
But alas, poor Mr. Buyer  
Times have changed and you may go.

The world must eat and we must feed it  
As an ever flowing fount,  
Daily—weekly—monthly—yearly,  
Now then, farmers to the front.

## THE FARMER'S REVERIE

Th' nights' is gettin' shorter an' the day is gettin' long,  
An' yest'day, i-jing, I heerd a robin redbreast's song;  
Jes' let me say in passin' when a robin starts tew sing  
Thet it's a shore-nuff sign we hain't so fur away from spring.  
I calculate th' grass is sproutin, some beneath th' snow;  
Th' sap is sort o' thawin' an' a-tryin hard tew flow;  
Th' crow looks down an' sasses ez he flies past on th' wing,  
An' somehow, things begin to sort 'o smell tew me like spring,  
Fore long I'll be a-trailin' on the hill behind the plow—  
Inste'd o' settin' fore th' fire like I'm a-doin' now—  
A-lis'nin' in th' furrow fer the dinner bell tew ring—  
A-cussin' Jeff and Kate an' kind o' happy cus its spring,  
Some folks prefers the winter time an' some prefers th' fall,  
While summer time suits others, yit it, somehow, don't suit all.  
Es fur es I'm concerned, ef I could have my choice, i-jing,  
I reckon I would hev th' hull endurin' year jes' spring.

## A BETTER DAY IS COMING

(THOMAS L. PHILLIPS)

I wish if I might reach the ear  
Of every living farmer  
Around the globe; both far and near,  
In every nook and corner.

I would not tarry very long  
With you who have the knowledge,  
But I would try to tell it strong,  
To those who are in bondage.

The night is dark; the clouds are thick,  
And still no sign of morning;  
But listen friend, just stop and think—  
A better day is coming.

Have courage brother, yes there's hope,  
The clouds are disappearing,  
The darkness now is almost gone,  
And lo! the sun is rising.

The deliverer came! divinely sent,  
(At least it seems to me)  
To open wide the prison door  
And set the prisoners free.

O happy now! pass, pass it on,  
Come join the A. S. of M.,  
And we shall hear the shackles fall  
And see the captives free.

God grant His blessings from above,  
And we will render Thee  
The praise and glory which are Thine,  
And we'll live in Equity.

COULD YOU USE ANY KIND OF A SEWING MACHINE AT ANY PRICE?

If there is any price so low, any offer so liberal that you would think of accepting on trial a new high grade, drop cabinet or up-right Minnesota, Singer, Wheeler & Wilson, Standard, White or New Home Sewing Machine, on a postal card or in a letter, say: "Send me your latest Sewing Machine Catalogue," and you will receive by return mail, postpaid, free of cost, the handsomest sewing machine catalogue ever published. It will name you prices on the Minnesota, Singer, Wheeler & Wilson, White, Standard and New Home sewing machines that will surprise you, we will make you a new and attractive proposition, a sewing machine offer that will astonish you.

If you can make any use of any sewing machine at any price, if any kind of an offer would interest you, don't fail to write us at once and get our latest book, our latest offers, our new and most surprising proposition. Address,

SEARS, ROEBUCK & CO., Chicago.

## THE SANITARY WASHING MACHINE

A marvelous invention that has successfully overcome all objections to a wooden washer. Lace curtains, comforters, clothing, etc., washed perfectly clean without tearing. Made of Galvanized Steel. Durable, simple and effective. Sent on trial. A modern machine at a price within the reach of all.  
Agents Wanted to introduce this remarkable machine. To the industries kind we offer interesting inducements and exclusively territory.

The Sanitary Laundry Machinery Co., 24 Sixth St., Tell City, Ind.

**MARQUARDT & SCOTT CO.**  
DIAMONDS & WATCHES  
126-130 State St., C

# UP-TO-DATE FARMING PRODUCING AND MARKETING

The American Society of Equity is no farmer's fad but a farmer's move to better their condition. This movement should be encouraged by all classes of business men. It's not a move to tear down other avocations but a move to build up the business of farming. And the business of farming is the foundation of all business.—Breckinridge [Ky.] News, May 11.

It is now up to the tobacco growers.

And the tobacco growers seem to be just about up to IT.

The word in the tobacco districts is "On to Lynchburg."

It is the first time the tobacco growers ever made any move toward securing better prices for their product. They have always left that to the "other fellows."

The tobacco growers are determined to "worm" their way into better prices.

"Hello, central." "Hello." "Is this the tobacco growing people? Well, say, get Up-to-Date in the hands of as many tobacco growers as possible. That is the best way in the world to teach them how to get right prices. Try them on that big ten cent trial offer."

Tobacco growers, "smoke" out the trusts and "plug" it to the speculators.

It is not so much the purpose of Up-to-Date to teach how to raise tobacco, as it is to teach how to SELL it. Which teaching is worth most to you growers?

Are you fully anchored to your end of the rope and pulling with us? If not, get a pull on you.

Three months for ten cents. That is the cheapest tuition into the biggest school ever before presented.

Tobacco is a great exhaustor of soil fertility, hence he who grows it without a remunerative price is constantly diminishing his wealth.

The tobacco grower is at a disadvantage compared with the producer of other farm products. His crop is not a necessity, and he can make it no part of his living. Hence instead of selling only his surplus, he must sell his entire crop, and with the proceeds buy his living. For that reason he stands in greater need of co-operative organization than any other class of producers.

Tobacco growers must feel gratified at the work being done in their interest by the A. S. of E. Since the tobacco agitation was begun in Kentucky, the price has materially advanced, and the tendency is still upward.

## TOBACCO PRODUCTION AND PRICES.

Only twenty-six States figure perceptibly in the tobacco production of the United States. These States produced in 1902, 821,823,963 pounds, which, at the average price for that year, seven cents, represented a value of \$57,563,570.

But an examination into the production and price of tobacco discloses a strange phenomenon. The States which produce but little tobacco invariably get good prices, while those which produce the great bulk of the entire crop, get an insignificant price—a price which cannot be remunerative, but, under present conditions, must leave the mass of tobacco growers poor for all time.

Louisiana, with a total yield of only 33,375 pounds, gets 20 cents a pound; Mississippi, with a yield of 87,500 pounds, gets 18 cents a pound; Texas, with a yield of 174,850 pounds, gets 22 cents a pound; Florida, with a yield of 1,601,080 pounds, gets 30 cents a pound; New Hampshire, with a yield of 216,150 pounds, gets 16 cents a pound; Vermont, with a yield of 343,800 pounds, gets 14 cents a pound; Massachusetts, with a yield of 7,417,800 pounds, gets 15 cents a pound, and Connecticut, with a yield of 21,785,200 pounds, gets 16 cents a pound. It will be noted that we have quoted both Southern and Northern States, to show that climate does not enter as a controlling feature.

We now turn to the main tobacco producing States. Virginia, with a yield of 136,789,250 pounds, gets 7 cents a pound; North Carolina, with a yield of 142,520,950 pounds, gets 7 cents a pound; Kentucky, with a yield of 257,755,200 pounds, gets 6 cents a pound; Tennessee, with a yield of 33,889,500 pounds, gets 6 cents a pound, and Wisconsin, (a northern State) with a yield of 64,885,480 pounds, gets 7 cents a pound.

Now, it will be conceded of course, that there are different varieties of tobacco, and that these varieties are of greatly different values, but the difference in price between the States which raise small quantities and those which raise great quantities, is so great as to attract surprised attention. If the great difference in price is owing to difference in quality, cannot the higher grade be grown in the great tobacco States? If it is owing to a difference in handling, cannot the great States learn to handle their tobacco better? If the difference is in climatic or soil conditions, why do not the small producing States produce more of the high priced tobacco? If the difference is in marketing, let all the tobacco growers organize and learn how to market their crops.

## LEAKE'S LICE EXTERMINATOR

This preparation destroys Lice Mites and Fleas in houses, on chickens and on all animals. No poultry or stock raiser can afford to be without it another day.

2 or 3 Dozen { Eggs will pay for a quart of LEAKE'S LICE EXTERMINATOR which will last a long time and cause your hens to lay many extra dozens for you. The best and most economical way to apply is with our Electric Sprayer. (Price of Sprayer, 50 cents.)  
PRICE—1 QT., 35c.; 1 GAL., \$1.00; 5 GAL., \$4.00  
J. A. EVERITT, MFR., INDIANAPOLIS

## HARDY AMERICAN BEAUTY ROSES

### THE QUEENS OF SUMMER

You can have a successful and beautiful garden of American Beauty Roses in your own yard or garden if you plant our

Wanted everywhere men to distribute advertising matter, tack signs, collect, etc. Steady position, previous experience unnecessary. Address, NATIONAL ADVERTISING CO., No. 19 Oakland Bank Building, Chicago.

# BINDER TWINE Standard and Sisal From Factory to Consumer

**WE** Are offering the readers of UP-TO-DATE FARMING an opportunity to secure their twine early in the season at Factory prices. The gigantic trust which controls the supply of Fibre of the world is rapidly advancing the price of raw material, so that when the present supply of manufactured twine is sold, prices must advance.

## QUALITY "The Best"—PRICES "Most Reasonable"

Quality is the first consideration—Price the second question. WE MAKE BOTH to your advantage. Write for samples of our twine. See our prices below. We guarantee every ball we sell to be exactly like sample and to be equal to any twine produced anywhere. We offer the highest quality possible to make, spun from selected long fibre on the latest improved machinery, uniform in size and free from knots, bad spots and defects.

**PRICE** 50 lbs to 2,000 lb lots [either Standard or Sisal] at 10 1/4 c lb  
2,000 lb [ton] " " " " " " 10 1/8 c "  
30,000 lb to 50,000 lbs [car load] " " " " " " 10 c "

**WARNING** Supply is limited. We will not be bound to above prices beyond our present supply. Early orders are advised but we will maintain the price as long as possible. Do not be deceived by representations of "High Grade Twine" at lower prices. See the samples. QUALITY counts for much in twine. The low price may be on grass twine or something you cannot use.

## ECONOMY ??

**False Economy** Means buying poor twine, getting off your binder to fix your twine several times each hour, when you should be tying grain. This delay and annoyance you will not have if you use our Twine.

**TERMS** Cash with order. No credits or bad debts mean low prices. We will ship C. O. D. with privilege of examination if satisfactory reference accompanies order NOT LESS THAN 50 LBS SOLD. Get our samples and compare them with the best twine you can get at home, then we will get your order. You will find that we are SAVING YOU FROM 2c TO 2 1/2c PER LB AND GIVE YOU THE HIGHEST QUALITY OF TWINE MADE.

**SHIPPING POINTS** Indianapolis, Chicago, St. Louis, Kansas City, Minneapolis. (For shipments made from Kansas City or Minneapolis add 1/4c per lb to the above prices.)

Send all Orders and Correspondence to

**Prairie Manufacturing Company, Indianapolis**

## Up-to-Date Writers

### SEED SOWN IN GOOD GROUND.

#### To Up-to-Date Farming.

For the encouragement of the editor of Up-to-Date Farming, and the members of the American Society of Equity everywhere, I will let you know how the work of organization is progressing in this part of the world. In January of this year, at the request of the undersigned, Mr. Everitt sent thirty copies of Up-to-Date for distribution among farmers. That was the beginning of what will be splendid results. Immediately a meeting was called and a strong organization was effected, composed of our most substantial farmers. Since then societies have been established in the counties on the north and west. At the formation of each society we have succeeded in getting up a club of ten or more subscribers for Up-to-Date Farming which we aim to have circulate from home to home.

Members of each society enroll under the following

#### ORGANIZATION CONTRACT.

We, the undersigned residents of \_\_\_\_\_ township, Smith county, Kansas, and members of the American Society of Equity, covenant and agree with and among ourselves, that, when said Society is sufficiently organized, and after the statistical board of the National Union has fixed minimum prices on agricultural products, and determined the date when said prices shall go into effect, we pledge ourselves to do all in our power to maintain the prices so fixed."

W. H. INGLE,

Smith Co., Ks.

### AN INTERESTED SPECTATOR.

#### To Up-to-Date Farming.

I was led by your offer of free seeds some time ago to subscribe for Up-to-Date, and I am glad to say I am well pleased with the investment. The seeds came along all right, and the plants from them are now growing nicely, and the paper reaches me regularly, and brings help and cheer to our home.

It seems to me the task you have set for yourself, to unite the farmers of this great country, is a herculean one. You may succeed, but it will take time. The Yankee blood in your veins, and the energy born of your cold climate are much in your favor. Certainly I shall remain a much interested spectator.

If any of your readers, the up-to-date sort, are tired of the long, cold winters of Indiana, and would like a home in the sunny south, where, even last winter, we did not have ice the thickness of window glass, nor a day when we could not work out doors, we can exactly fit them here in Texas. Being an Indiana man myself, I have a kindly feeling for my old native State, and a brother's interest in all its good people.

J. H. GILLASPY,

Paige, Tex.

### "HUSTLING, BUSTLING KANSAS."

#### To Up-to-Date Farming.

Just a few words from hustling, bustling Kansas. Some months since, I began to investigate the great farmer's movement set on foot by Pres. Everitt of the A. S. of E. I read everything I could get on the subject, especially the editorials in Up-to-Date. At first I was skeptical, but as I studied the unanswerable arguments in those editorials, and in Mr. Everitt's great book, The Third Power, I was surprised to find that all my doubts and objections were based on my own ignorance of the real principles of the Society and the conditions for which it was seeking a remedy. I at once began to talk it up among the farmers of this county. At first I encountered every conceivable objection, but I continued to sow the field down with sample copies of Up-to-Date and such other literature as the National Union furnished me, and now the very best farmers in the country have become interested, and we are organizing local unions with little or no trouble.

I now see where I made a mistake. If I had placed The Third Power in the hands of some of our leading farmers, this county would today be thoroughly organized. I believe it would pay every deputy to secure a good supply of the Third Power and place them among the people he desires to organize. When once the people catch the idea, the work is accomplished. Before the present wheat crop is harvested, we will have our county thoroughly organized.

A. S. COOK,

La Bette Co., Ks.

### ON VALUATIONS.

#### To Up-to-Date Farming.

Rob Roy local union at their meeting last Saturday were drawn into a discussion of taxation values, and as is usual in such cases, something was developed. It seems the State board of appraisers added 50 per cent. to the appraisement of farm improvements and only 5 per cent. to that of city improvements. It is a well known fact that in our county the original appraisement is much lower in proportion on city improvements than it is on farm improvements. For instance, city property that cost seven or eight thousand dollars is appraised at \$1800. One of my neighbors built a new barn that cost \$3,000. It was appraised at 2,000 by our township appraisers. It was then raised by the State board to \$3,000, just what it cost, while the city property that costs 7,000 was raised \$90, making a total appraisement of \$1,890. A farmer put up a little business that cost \$100. The local appraiser took it at \$75. The State board raised it 50 per cent., bringing it up to \$112.50; 12.50 more than it cost. These are only samples of the situation in our country. Is it not enough to make the farmer indignant? We are willing to pay our taxes, but we want to pay in just proportion. We want Equity.

B. F. CRANE, Sec.

Fountain Co., Ind.

### THE VIRGINIA TOBACCO GROWERS.

#### To Up-to-Date Farming.

Our union held its regular meeting Apr. 16, with a fair attendance, and the action of Rob Roy union was heartily endorsed. We are in a tobacco growing district, and our union recently took up that subject, and urged a reduction of acreage in the hope of securing better prices. The farmers in the tobacco sections are in a worse condition than where almost any other crop is grown, and they are completely at the mercy of the trust.

Our union was the first in the county, and we have done all we could possibly do to build up and advance the organization. We have two members that have done much work, Clifton E. Hawkins and William Noell, while I have secured several names myself.

R. C. SAUNDERS, Sec.

Bedford Co., Va.

[Note—We thank Bro. Saunders for his letter, and all the good members for their faithful and persistent effort, and assure them there has been no purpose to pass lightly by anything they have done. We are sure they will be pleased with the work that is now being done in the tobacco interest. Kentucky is very rapidly organizing, and Tennessee will quickly follow. So we hope will Virginia, North Carolina and Pennsylvania, with the confident purpose to effect favorably the prices of the crop of 1904. But whatever the Society may or may not be able to do, depends entirely upon the faithful co-operation of the growers themselves.]

Editor.]

### ANOTHER FIELD IN ARKANSAS.

#### To Up-to-Date Farming.

I received papers in due time, and have distributed them. Am glad to say prospects are good for a strong union here. I have arranged for speaking on the 30th, and at that time we hope to organize. The farmers and merchants are all interested, and our local paper is to help us. Several other places are wanting to be organized, and they will be promptly attended to.

W. D. WILSON,

Logan Co., Ark.

### TO HELP ONE ANOTHER.

#### To Up-to-Date Farming.

So far as holding crops for the minimum price is concerned, we believe here that local unions may do much to aid their members to do that, and by such neighborly act help to revive the old house-raising, log-rolling spirit that conquered and civilized the country, but that seems to be almost lost at the present day.

JUAN FREEMAN,

Pulaski Co., Ark.

### THE YANKEE SPIRIT STILL THERE.

#### To Up-to-Date Farming.

My mother recently subscribed for Up-to-Date Farming, and we like the paper very much. If I were a man I would be a farmer, and I would belong to the Society of Equity. I wish you had a society that all ladies interested in farming could belong to. I like to see things go, and I like to help them to go as fast and far as possible. I have lived in country and city, but God's beautiful country is the best place for both old and young. Young people make the mistake of their lives when they leave the country for the city, expecting to make their fame and fortunes there; few succeed.

Meantime, let us beautify our homes, and make them havens of rest—simple beauty is the most satisfying. I have studied and taught music and art, but I love farm life. Last year I started a large strawberry bed, and this year I expect to start another. My mother and I have a fruit garden, with many kinds of fruit in it, and we take all the care of it. And we keep poultry, and I do the marketing, always getting the best price.

We are going to let our farmer friends read our paper.

A MASSACHUSETTS GIRL,

[Note—Now cannot that "Massachusetts girl" organize a local union in the Old Bay State? Women may belong to the American Society of Equity, and may help to win this battle for equitable prices. Or, if not that, can she not get up a club for Up-to-Date? In either case write to the office for particulars.—Editor.]

### THIS MAN UNDERSTANDS IT.

#### To Up-to-Date Farming.

I have become a subscriber for your paper, and the Society it advocates has long been needed. One third of all the farmers produce stops between the producer and the consumer. The gamblers in prices have always got what they wanted both from State and National governments, and are so strongly fortified that the farmers are helpless except through universal co-operation. The farmers will have to take the matter into their hands, and establish steady and equitable prices upon their products as manufacturers do upon theirs.

OLOF SWENSSON,

Chippewa Co., Minn.

Mr. George Terry, of Fayette county, Ill., a gallant old soldier of Co. F, 48th, Ill. Inf., writes to tell us how deeply he is interested in this movement to secure equitable and steady prices for farm products. Mr. Terry was born in England, and believes all the countries of the world can be brought into the movement, and that it will result in such improved conditions as have not yet been dreamed of.

### THEY ALL BELONG.

#### To Up-to-Date Farming.

You have the nearest thing to the rights of the farmer that ever has come up before; and if they don't improve the opportunity now it will be their own fault. The plan is very plain to me. I don't see why it wasn't thought of before. All we lack is number.

### The farmers around me all belong.

E. B. HOSLEY,  
Livingston Co., Mich.

### THE PRICE OF COTTON.

#### To Up-to-Date Farming.

We are interested in the price of cotton, and we would be pleased to see more in Up-to-Date about cotton. Dollar wheat does not interest us much. The prices of flour has advanced so that we can hardly afford to buy it unless we get a good price for our cotton. We believe the A. S. of E. is a good farmers' organization. It has been demonstrated that it is a good thing for the wheat grower, and we believe it would be just as good for cotton growers if they were sufficiently organized. Our people this year have greatly increased the acreage of cotton, and should this be true in all the cotton States, and should the season be favorable, we will raise an enormous crop. Should such a crop be rushed on the market, as is our usual way of doing, we could hope for nothing but a "starvation" price.

At our last meeting the question arose as to whether or not we could get better or quicker results from an organization in the South—a Cotton States union.

G. W. GRIMES,  
Pres. Chismville Union,  
Arkansas.

Note—The above letter which we are exceedingly glad to have, brings up two important questions which have figured much in the discussion of the A. S. of E. One is, Can the conflicting interests of agriculture be harmonized? and, Can localities devoted to special crops get benefits through the national organization? We answer both questions emphatically YES. Suppose there was an organization for wheat alone and an organization for cotton alone. These two organizations would be antagonists. The wheat growers would want high wheat and cheap cotton (cotton goods); the cotton growers would want cheap wheat (flour) and high cotton, an irrepressible conflict. But put both into the same great national organization; the interest of each is discovered to be identical. If the wheat grower gets fair prices for his wheat, he can buy more of the products of cotton, and swell the market of the cotton grower; if the cotton grower gets fair prices for his cotton, he can and will buy more flour, and thus increase the demand for wheat. Thus these two great interests stand as a prop and support to each other. When the wheat power says \$1, the cotton grower says amen, so be it. When the cotton grower says an equitable price, whatever that may be found to be, the wheat grower says, "It must be so!" Is there a power on earth that can resist the combined demand of these great interests? Bring in the minor crops. They stand in precisely the same relation, and the big interests are their salvation. What one says all say. Already the tobacco growers have a national convention called to consider and determine a minimum price for the crop of 1904. When that is determined, all other interests will say, "so be it." The cotton growers must do the same, and all other interests will sustain their action.

### GOOD RESULTS IN BRITISH COLUMBIA

#### To Up-to-Date Farming.

The farmers of British Columbia are awakening. Year before last one large concern bought up practically all the hay on the Fraser valley at some \$8 a ton, and in the following spring they suddenly raised the price in Victoria to over \$20, for they controlled the market. This year the farmers held their hay and are now realizing \$16 per ton for it, as they control the market, it being sold in Victoria at \$18.

Thus you see we are working out what you are so strenuously advocating, and our farmers are getting the benefit of it.

JOSEPH SHAW,

The Cedars, B. C.

### GETTING DOWN TO BUSINESS.

#### To Up-to-Date Farming.

I am glad the columns of Up-to-Date are open to the members everywhere. Walke local union No. 1, had the following program on the 7th: 1. Cost of raising, gathering and marketing cotton in our locality in 1903; discussed by P. L. Williams and others, and decided that it cost not less than 10 cents per pound based on 250 pounds lint to the acre. 2. What would be a profitable price based on the above yield? This question was discussed for two hours by C. A. Brashears, P. L. Williams, and others, and a unanimous decision was reached, but its announcement might be premature at this time, as the society itself is not yet ready to speak authoritatively, and outsiders might take advantage of it. We are in for profitable prices and equity for all.

Our program for next meeting is: 1. Can profitable prices be sustained by organization and co-operation on the part of the producer? assigned to P. L. Williams. I tell you we are having some good meetings down here. Old farmers are thinking mighty loud, and God only knows what may happen. But it is coming; then you will see it all the same.

P. L. WILLIAMS, Sec.

Louisiana.

Note—We refer our Louisiana brothers to foot note to letter from Arkansas in this issue. It covers some very important points.

## Don't fool with your face. Insist on Williams' Shaving Soap.

Sold everywhere. Free trial sample for 2-cent stamp to pay postage. Write for booklet "How to Shave."

The J. B. Williams Co., Glastonbury, Ct.

WEEKS SCALE WORKS BUFFALO, N. Y. The leading scale at moderate price. Will outwear any other. RELIABLE, LASTING, CONVENIENT. Does away with all loose weights. Send for catalogue and prices.

MONEY C. S. A., \$5 bill sent to any address for \$25. Will give \$50 to any one who can detect it. FRANK K. SHILLING, NAYARRE, OHIO.

St. Louis, Mo.

## MARKER, HEADSTONE, TOMBSTONE OR MONUMENT

TO MARK THE GRAVE OF YOUR DEPARTED! IF YOU CAN BUY THE finished stone, the best workmanship possible at one-third the prices others charge, if you could get from us a handsome, large, beautifully carved and finished Monument or Elaborate Tombstone, which, when set up on your lot, would cost you much less money than you would have to pay anyone else for the smallest headstone or marker, if you knew you could do this, would you not write for our FREE TOMBSTONE CATALOGUE? WRITE FOR OUR FREE TOMBSTONE CATALOGUE and you will receive by return mail the handsomest tombstone catalogue ever published; many beautiful illustrations, showing all styles, kinds and sizes of Markers, Headstones, Tombstones, and Monuments, a big variety of marble, all colorings, color samples, descriptions, suggestions for lettering new and special ideas for carving, shaping, designing, lettering, etc. OUR LOW PRICES WILL SURPRISE YOU, a mere fraction of the prices charged by others. Why we use better stone and marble, why our designing, finishing, carving and lettering is better than you would be likely to get elsewhere at 3 to 5 times our prices is fully explained. OUR PAY AFTER RECEIVED TERMS, our style, quality and satisfaction guarantee will be fully explained. You will get our very latest monument and tombstone offer the most astonishingly liberal proposition ever heard of. Don't fail to write for OUR FREE TOMBSTONE CATALOGUE TODAY if at all interested. Address, Sears, Roebuck & Co., Chicago.

# A GLIMPSE AT PRICE MAKING

How many farmers realize just how the boards of trade make and manipulate prices for farm products? You glance over the market reports one at a time, and probably they make little impression on you. Read the following brief extracts that we have made from a daily paper. The grain prices are Chicago; cotton, New York; live stock, Indianapolis.

Notice the causes assigned as being responsible for the variations in price. How many of these were or should have been considered real, live, potent factors? How many should be considered factors when the crops are finally harvested? Can supply and demand be pleaded as the only factor in the market to make price against this showing? Will the people who have so boldly asserted that the "UNVARYING, ALL POWERFUL, ALWAYS POTENT" law of supply and demand still contend that it is the only law (?) that is working in our markets? Read the reports carefully. Analyze them, compare them day by day and week by week. After this is done it will dawn on you that supply and demand are powerful factors, but they must be controlled by a different class of people from the present. If the farmers would control the supply then it would be all-powerful to compel a fair price from the demand.

The game of gambling in farm products is going on every day on many boards of trade while the farmers are out on the farm supplying the chips with which the game is played. How long will you let this continue? You can end it if you will. Controlled marketing by the farmers who produce the stuff will absolutely put an end to the whole nefarious business, and then certainty and equity in values will come to both producers and consumers. And who will be omitted from the blessings if we include producers and consumers of farm products. Since the government will not wipe out this blot on Commercial America and remove the curse that is bearing down the two greatest classes of our people, we appeal to that great class, THE FARMERS, to rise up and end it. The business on the board of trade has been aptly illustrated by a leading operator, who says: "The men who buy future wheat on the present market buy something they don't want; they are buying it because they believe the man who sells it cannot deliver it, and they sincerely hope he won't be able to." Thus you see it is a betting game pure and simple.

## MAY 7.

**LIVE STOCK**—There was a steady gain in prices of hogs all the week. Good cattle were strong. The receipts for the week were: Hogs, 7,536; last week, 23,304; of cattle were 4,238; last week, 4,390.

**COTTON**—Was slightly lower on account of more favorable weather, with prospects showers. The opening was 4 to 9 points lower. There was further liquidations and some bear pressure. On the other hand shorts were covering for over Sunday.

Spot closed steady. Middling uplands, 13.80c; middling gulf, 14.05c; sales, 6,755 bales.

**Cotton Futures**—May, 13.46c; June, 13.52c; July, 13.60c; Aug., 13.25c; Sept., 11.82c; Oct., 11.35c; Nov., 11.26c; Dec., 11.22c; Jan., 11.23c.

**GRAIN**—Wheat—An easier tone in the grain markets. A general disposition to take profits. Large shipments of wheat. An easier tone was manifest in the wheat pit, owing to selling by pit traders. Large Argentine, India and Argentine shipments were the principal weakening influences. The market continued easy throughout the session.

**Corn**—Holders took profits in corn. The easier tone of wheat brought out some realizing sales in corn. Rains throughout the West and small receipts were supporting factors.

Oats—Were easy on a poor cash demand and in sympathy with wheat.

Cash Wheat—No. 2 red, \$1.02@1.06; May, 91c; July, 86c; Sept., 80c.

Cash Corn—No. 2, 48c@49c; May, 47c; July, 45c; Sept., 47c.

Cash Oats—No. 2, 40c; May, 41c; July, 38c; Sept., 30c.

Indianapolis—Cash wheat, No. 2 red, \$1.02@1.05.

**LIVE STOCK**—Packers took hogs at Saturday's prices. Some best cattle not sold. Receipts of hogs, 1,500; same day last week, 1,348. Receipts of cattle, 400; last week, 232.

**COTTON**—Steady at decline. Local spot people seem to be selling July, but buying in future new crop months.

Spot closed dull; middling uplands, 13.80c; middling gulf, 14.05c; sales, 2,529 bales.

**GRAIN**—Wheat—Shorts fear bullish government report and sent prices up after a weak day. Corn also made advance. Lower cables, heavier world's shipments and predictions of fair weather were influences that caused weakness in wheat. During the latter part of the session shorts became active buyers on the supposition that the government crop report to issue to-morrow will be quite bullish. The market responded to the improved demand. The close was at about the top figures of the day.

**Corn**—An easier tone was manifest in corn, due to the weakness in wheat and in sympathy with foreign markets. Later, strength in wheat brought out a better demand in corn and a strong tone developed.

Oats—Were easier at the start in sympathy with other grain and unfavorable weather for the newly seeded crops. Trading was mainly by scalpers.

Cash Wheat—No. 2 red, \$1.04@1.08; May, 98c; July, 86c; Sept., 80c.

Cash Corn—No. 2, 48c@49c; May, 47c; July, 48c; Sept., 48c.

Cash Oats—No. 2, 39c@40c; May, 41c; July, 38c; Sept., 30c.

Indianapolis—Cash wheat, \$1.00@1.05.

## MAY 10.

**LIVE STOCK**—Large hog receipts but better demand. Prices showed an uneven advance of 5 cents. Medium cattle weakness.

**COTTON**—Slightly higher. Ruled steady on limited offerings and light demand. The weekly crop report from Washington was regarded as bearish and started moderate liquidation under which prices eased off a few points.

Spot closed quiet, 5 points lower; middling uplands, 13.75c; middling gulf, 14.40; sales, 100 bales.

**GRAIN**—Wheat—Fine weather caused selling of wheat. Light business white waiting government report. Only small demand for corn. Scalpers sold oats on

account of large receipts and favorable weather.

Cash Wheat—No. 2, \$1.05@1.08; May, 91c; July, 86c; Sept., 80c.

Cash Corn—No. 2, 49c@49c; May, 47c; July, 48c; Sept., 48c.

Cash Oats—No. 2, 40c; May, 40c; July, 38c; Sept., 30c.

Indianapolis—Cash wheat, No. 2 red, \$1.02@1.05.

## MAY 11.

**LIVE STOCK**—Plenty of hogs and a decline in price. Cattle market gradually getting lower. Receipts of hogs to-day, 6,500; a week ago, 6,076. Receipts of cattle, 1,000; a week ago, 837.

**COTTON**—About steady; was lower and then higher. Opened at a decline of 10 points under liquidation, bear pressure and rather disappointing cables. There was a fair demand credited to a prominent Wall street operator, and the market assumed a steady undertone.

Spot closed quiet; middling uplands, 13.75c; middling gulf, 14c; sales, 525 bales.

**GRAIN**—Wheat—Predictions of showers in the Northwest brought out a fair demand for wheat, and caused a firm feeling at the start. In spite of the bullish government crop report there was considerable wheat for sale. The demand improved and market became firm, but on liberal realizing sales later in the day, a sharp decline resulted. On the break shorts covered freely and a rally followed. Final figures for July were off 1/2c.

**Corn**—Sentiment inclined to the bear side. Favorable weather and good crop reports were the depressing influences. Extremely small receipts, however, had much to do with supporting the market. Buying by shorts was a feature. The market closed strong, with July up 1/2c.

Oats—Were easier early as a result of fine growing weather.

Cash Wheat—No. 2 red, \$1.05@1.08; May, 91c; July, 86c; Sept., 80c.

Cash Corn—No. 2, 48c@49c; May, 47c; July, 48c; Sept., 48c.

Cash Oats—No. 2, 40c; May, 41c; July, 38c; Sept., 30c.

Indianapolis—Cash wheat, No. 2 red, \$1.02@1.05.

**LIVE STOCK**—Packers bought hogs at 5c decline. Feeding cattle sold better. Receipts of hogs, 4,500; week ago, 2,875. Cattle receipts, 806; week ago, 725.

**COTTON**—Market easy at a decline of 2@13 points, under liquidation by yesterday's late buyers, encouraged by disappointing cables. Weather accounts were generally favorable aside from a continued lack of moisture in some eastern sections.

Spot closed quiet, 10 points lower; middling uplands, 13.65c; middling gulf, 13.90; sales, 1,400 bales.

**GRAIN**—Wheat—Covering by shorts due to rain in the Northwest, created a firm tone in wheat early in the face of easier cables. On light offerings the price advanced. A sudden decline occurred which was followed by a rally. The market was influenced to some extent by bearish crop advices. Weakness continued to the close, July losing 1/2c.

**Corn**—An active commission house demand with only light offerings held the corn market firm. Small receipts were the main bull influence. The market held firm the entire session, closing with a gain of 1/2c for July.

Oats—Under the influence of a strong cash situation speculative trading in oats was fairly active and the market ruled firm.

Cash Wheat—No. 2 red, nothing doing; May, 91c; July, 84c; Sept., 79c.

Cash Corn—No. 2, 50c@51c; May, 47c; July, 48c; Sept., 48c.

Cash Oats—No. 2, 40c@40c; May, 41c; July, 39c; Sept., 31c.

Indianapolis—Cash wheat, No. 2 red, \$1.02@1.05.

## MAY 13.

**LIVE STOCK**—All the packers and shippers wanted hogs and the competition advanced prices 5 to 10c. Good demand for fat cattle. Receipts of hogs to-day, 4,500; last week, 6,558. Receipts of cattle, 850; a week ago, 809.

**COTTON**—Declined early 7@13 points on the old crop and 1@3 points on the new crop on liquidation and disappointing cables. It soon developed that shorts were covering and the market rallied to about the closing prices of last night.

**GRAIN**—Wheat—Lower cables and liberal Argentine shipments caused heavy selling of wheat and a weak undertone. Small receipts and wet weather in the Northwest brought out enough demand to cause a rally. The weekly crop report of a milling paper was decidedly bearish, showing marked improvement in condition of the growing wheat. Heavy liquidation followed the giving out of this report and the market experienced a severe slump. The close was at the low point, July showing a loss of 1/2c.

**Corn**—Weakness in wheat had a depressing effect on corn. Trading was extremely light and confined largely to scalpers. Bearish crop reports and the break in wheat caused heavy realizing in corn, resulting in extreme weakness. July closed at the bottom with a loss of 1/4@1/2c for the day.

Oats—Were about steady, notwithstanding the easier tone of wheat and corn.

Cash Wheat—No. 2 red, \$1.03@1.05; May, 90c; July, 83c; Sept., 79c.

Cash Corn—No. 2, 48c@49c; May, 46c; July, 47c; Sept., 47c.

Cash Oats—No. 2, 42c; May, 41c; July, 38c; Sept., 30c.

Indianapolis—Cash wheat, No. 2 red, \$1.00@1.05.

**LIVE STOCK**—Hog prices raise on strong demand. Receipts, 2,486; week ago, 3,914. Receipts of hogs for week, 23,164; for preceding week, 17,450. Receipts of cattle for week, 3,933; for preceding week, 4,239.

**GRAIN**—Wheat—Firm on small supply. There was a healthy firmness caused by a reported heavy decrease in the available supply. At the opening there was considerable interest on account of reports of decreased Australian shipments and reports of dry weather along the Danube. Later in the session very bearish reports came in and general selling ensued. A rally followed this on covering by shorts, who heard of the decrease in the visible supply. At the close the market was fairly firm.

**Corn**—Small local receipts caused an active corn market at the opening. Reports of good growing weather with predictions of an increased acreage caused selling which caused a decline in price. The market closed weak and near the low point.

Oats—Sold well during the session until the break in corn came. Near the close liquidation became heavier and prices declined.

Cash Wheat—No. 2 red, \$1.03@1.05; May, 90c; Sept., 78c.

Cash Corn—No. 2, 48c@49c; May, 46c; July, 47c; Sept., 46c.

Cash Oats—No. 2, 42c; May, 41c; July, 38c; Sept., 30c.

Indianapolis—Cash wheat, No. 2, \$1.02@1.04.

## MAY 16.

**COTTON**—Market opened firm at an advance of 14@19 points on old, and 3@11 points on new crop. The advance met with opposition and declined about 5 point. This was recovered on receipt of bullish wires from New Orleans stating that leaders there were bidding for large amounts of May and July. The market closed steady at a gain of 10@33 points.

**GRAIN**—Wheat—Contract stocks of wheat are down and prices are up. Light offerings and strength of cash wheat had bullish tendency. Traders believe the contract stock of wheat is almost depleted. The sentiment was bullish from the opening. Shorts were liberal buyers, while longs were active in replenishing their stocks. The offerings were light. In outside market the strength of cash wheat was the feature. The decrease of the visible also strengthened the market, closing prices were at the top.

**Corn**—Wheatw as the barometer and corn advanced with the former. The market was steady and at the close was strong.

Oats—Also ruled strong through the day with other grains.

Cash Wheat—No. 2 red, \$1.03@1.06; May, 93c; July, 85c; Sept., 79c.

Cash Corn—No. 2, 49c; May, 47c; July, 48c; Sept., 47c.

Cash Oats—No. 2, 42c; May, 41c; July, 38c; Sept., 30c.

Indianapolis—Cash wheat, No. 2 red, \$1.00@1.04.

## MAY 17.

**LIVE STOCK**—Packers bearish but shippers came to the rescue of hog market. Good demand for fat cattle. Receipts to-day, Hogs, 6,000; week ago, 6,745. Cattle to-day, 1,912; week ago, 1,008. Price of hogs steady to 5c lower; cattle steady to a shade higher.

**COTTON**—Market weak after a steady opening decline of about 15 points.

Spot: Middling uplands, 13.65c; middling gulf, 13.90c.

**GRAIN**—Wheat—Buoyant; other grains weak. On account of the small amount of contract grain sentiment was bullish. The market became stronger as the session advanced, one of the influences being the small receipts indicated for to-morrow. Final figures for July being up 1/2c.

**Corn**—Strength of wheat and a decrease of 500,000 bushels in contract stocks held corn prices up, but on realizing sales due to excellent weather the price settled back. The market became weak and closed with a loss of 1/2c.

Oats—In spite of the firmness in other grains an easier tone was manifest in oats. Favorable weather for the new crop was the depressing influence.

Cash Wheat—No. 2 red, \$1.03@1.06; May, 93c; July, 86c; Sept., 80c.

Cash Corn—No. 2, 49c@50c; May, 46c; July, 47c; Sept., 47c.

Cash Oats—No. 2, 40c@40c; May, 41c; July, 38c; Sept., 30c.

Indianapolis—Cash wheat, No. 2 red, \$1.02@1.05.

## MAY 18.

**LIVE STOCK**—Shippers kept the hog prices strong but packers are not free buyers. Best cattle 10c higher. Receipts of hogs to-day, 7,500; week ago, 6,578. Receipts cattle, 1,001; last week, 967.

**COTTON**—There was a bad break in the cotton market to-day under active liquidation and bear pressure. The decline followed a steady opening and was accompanied by great excitement.

Spot cotton lost 25 points. Middling uplands, 13.40c; middling gulf, 13.65c; sales, 200 bales.

**GRAIN**—Wheat—Small receipts held grain steady. A report from the Northwest of greatly decreased acreage caused a bulge in prices. A report of heavy buying in New York was also responsible for an advance. On the denial of the acreage report prices yielded.

**Corn**—Reports of fair cash business in corn caused early firmness. A rumor that the visible supply estimate on Monday (next) will show a large decrease caused July to advance but later liquidation by scalpers caused a decline of about 1/2c.

Oats—Trade was slow. A tendency to weakness on rumors of decreasing cash demand was offset by firmness here in wheat and oats.

# I Cure Women

OF FEMALE DISEASES AND PILES

I Will Cure You So That You Will Stay Cured—Women No Longer Need Submit to Embarrassing Examinations and Big Doctor Bills.

To Show Good Faith and to Prove to You That I Can Cure You I Will Send Free a Package of My Remedy to Every Sufferer.

I hold the secret of a discovery which has never failed to cure women of piles or female weakness. Falling of the womb, painful menstrual periods, leucorrhea, granulation, ulceration, etc., are very readily cured by my treatment.

I now offer this priceless secret to the women of America, knowing that it will always effect a cure, no matter how long you have suffered or how many doctors have failed.

I do not ask any sufferer to take my unsupported word for this, although it is true as gospel. If you will send me your name and address, I will send you a trial package absolutely free, which will show you that you can be cured. The free trial packages alone often are enough to cure.

Just sit down and write me for it today.

Mrs. Cora B. Miller, Box No. 137 Kokomo, Ind.

## ITCHING SKIN, ECZEMA ALL SKIN DISEASE CURED

Send 6 cents for Trial Treatment. Testimonials. W. BULLARD, 357 Theodore St., DETROIT, MICH.

## MAY 19.

**LIVE STOCK**—Hog market lower but cattle higher. Good steers at highest price for some time. Receipts hogs to-day, 7,000; week ago, 4,133. Cattle to-day, 700; week ago, 613.

**COTTON**—The market opened steady at unchanged prices, but almost at once broke sharply under heavy liquidation and bear pressure.

Spot closed quiet; middling uplands, 13.13c; middling gulf, 13.65c; sales, 1,135 bales. Futures on cotton closed to-day as follows: May, 12.97c; Aug., 12.78c; Nov., 11.08c; Jan., '06, 11.11c.

**GRAIN**—Wheat—The price of May wheat shot up 3 cents. There is talk of a squeeze in this option. The receipts broke the record for small receipts. A scramble to cover by shorts sent May wheat to the dollar mark and carried the other options higher also.

**Corn**—There were only six cars received, and prices held steady and for the day showed a gain although the weather was all that could be asked for the growing crop.

Oats—Followed the trend of other grain with an advance of 1/4c.

Cash Wheat—No. 2 red, \$1.05@1.08; May, 99c; July, 87c; Sept., 80c.

Cash Corn—No. 2, 49c@50c; May, 48c; July, 48c; Sept., 47c.

Cash Oats—No. 2, 41c; May, 42c; July, 38c; Sept., 30c.

Indianapolis—Cash wheat, No. 2 red, \$1.05@1.06.

## \$20 IN CASH PRIZES

In order to stimulate investigation by farmers and others as to how markets are made for farm products, and to increase the interest in our special three months offer, the publisher of Up-to-Date will pay \$20.00 in cash prizes to the first persons who will send in a correct estimate of the closing highest price at Chicago of cash wheat, July wheat, September wheat, and cash cotton, at New York on Saturday, July 2, 1904. For the first correct estimate we will pay \$10.00 cash; for the second \$3.00 cash; for the next three \$1.00 each; for the next eight, 50 cents each. The prices today, May 23d, are as follows: Wheat: Cash \$1.10; July 88c, Sept. 82c. Cotton, 13.60c per lb.

A condition is that each estimate must be accompanied with a ten (10) cent trial subscription as per offer on second page of this paper. An estimate may be sent for each new trial subscriber sent.

This contest closes on the last day of June. Estimates must bear postmark not later than June 30th. Remember the prizes will go to the FIRST correct estimates received on all the points. If no correct estimate on all, then they will be awarded to the persons having the most nearly correct.

Address UP-TO-DATE FARMING, Indianapolis, Ind.

# You Are to Be the Judge!

## NOT NEW, BUT TRUE

**D**ANIEL WEBSTER once said about a certain political proposition: "There are lots of new things about it and lots of true things, but the trouble is that the NEW things are not TRUE and the TRUE things are not NEW."

**Thirty Days' Trial—the Proprietors Take All the Risk—  
You Have Nothing to Lose! You Are to Be The Judge**

You have seen it before—all of you have. It has appeared in this paper a dozen times a year for a number of years. You have all seen it, even though you may not have answered it. It is not new, but it is all true. You have but to write, to send for it, to direct that it be sent to you—and it is sent to you. No question, no quibbling, no money. If you want to pay for it, all right. If you don't you don't have to. Enough are satisfied, enough want to pay, enough do pay to make it pay the advertiser, to make its fame grow from year to year like a green-bay tree, and it is because it is all true. The claims for Vitae-Ore are not new, but they are all true. Your fellow readers who have sent for a package and tested it have proven this. Its history is an open book that all may read, and all will find it all true.

If you are sick and ailing, no matter what the trouble may be, if you need help, if you want help, here is the help for you. How can you, in justice to yourself and your family, your friends and those around you, refuse to accept? How can you refuse to be helped to the help you want? Remember, **WE TAKE ALL THE RISK!** You are to be the judge. **IT IS ALL TRUE!**

## SENT ON THIRTY DAYS' TRIAL

### Read This Special Offer

**WE WILL SEND** to every worthy, sick and ailing person, who writes mentioning UP-TO-DATE FARMING, a full-sized \$1.00 package of VITAE-ORE, by mail, POSTPAID, sufficient for one month's treatment, to be paid for within one month's time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs and doses of quacks or good doctors or patent medicines he or she has ever used. Read this over again, carefully, and understand that we ask our pay only when it has done you good, and not before. **We take all the risk, you have nothing to lose.** If it does not benefit you, you pay us nothing. We give you thirty days' time to try the medicine, thirty days to see results before you need pay us one cent, and you need not pay us the one cent unless you do see the results. **You are to be the judge!** We know that when this month's treatment of VITAE-ORE has either cured you or put you on the road to a cure, you will be more than willing to pay. We know Vitae-Ore, and are willing to take the risk.

## NOT A PENNY UNLESS BENEFITED

**What Vitae-Ore Is:** Vitae-Ore is a natural, hard, adamant, rock-like substance—mineral—Ore—mined from the ground like gold and silver in the neighborhood of a once powerful, but now extinct, mineral spring. It requires twenty years for oxidation by exposure to the air, when it slacks down like lime, and is then of medicinal value. It contains free iron, free sulphur, and free magnesium, the properties which are most essential for the retention of health in the human system, and one package—one ounce—of the ORE, when mixed with a quart of water, will equal in medicinal strength and curative value 800 gallons of the most powerful mineral water drunk fresh from the springs. It is a geological discovery, to which there is nothing added or taken from. It is the marvel of the century for curing such diseases as

Rheumatism,  
Bright's Disease,  
Blood Poisoning,  
Heart Trouble,  
Dropsy,  
Catarrh and  
Throat Affections,  
Liver, Kidney and,

Bladder Ailments,  
Stomach and  
Female Disorders,  
LaGrippe,  
Malarial Fever,  
Nervous Prostration  
and  
General Debility.

as thousands testify, and as no one, answering this, writing for a package, will deny after using. **VITAE-ORE** has cured more chronic, obstinate, pronounced incurable cases than any other known medicine, and will reach such cases with a more rapid and powerful curative action than any medicine, combination of medicines, or doctors' prescriptions which it is possible to procure.

Vitae-Ore will do the same for you as it has for hundreds of readers of UP-TO-DATE FARMING, if you will give it a trial. Send for a \$1 package at our risk. You have nothing to lose but the stamp to answer this announcement. We want no one's money whom Vitae-Ore can not benefit. You are to be the judge! Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it would hesitate to try Vitae-Ore on this liberal offer? One package is usually sufficient to cure ordinary cases; but two or three for chronic, obstinate cases. We mean just what we say in this announcement, and will do just as we agree. Write today for a package at our risk and expense giving age and ailments, and mention UP-TO-DATE FARMING, so we may know that you are entitled to this liberal offer.

## "JUST THINK OF IT"

**Was Using Four Different advertised Specific Remedies**

**No Help Until Vitae-Ore was Called In**

I received a trial package of Vitae-Ore some three months ago, having answered and accepted the thirty-day trial offer which appeared in my paper, and it is from this day that I date my return to health. I have used it continuously since that time with the following result:

I now feel stronger than I have at any time for five years. I can eat a variety of foods without inconvenience or suffering. I can walk five times as far and faster without losing my breath than I could before I commenced its use. The head noises have ceased; the back ache is gone; the nervous Constipation of the bowels is entirely cured; I am not troubled with constipation any more. Although formerly I had to take a dose of salts every morning; in fact, it is simply marvelous what Vitae-Ore has done for me. I was taking a root medicine for my kidneys, nerve for my nerves, nerve and liver pills for my liver, and heart cure for my heart (just think of it) and still I could not lie on my left side without a pain in my heart, I used to bloat and the pain in my back made me miserable, but thank God for inducing me to read through the Vitae-Ore advertisement. I have now discarded every other medicine but V.O. and am letting God's natural mineral cure me and am an nearer a perfectly healthy woman, than I have been for six years past.

LOVINA PETERSON,  
Slattington, Cal.

How can you refuse to give it a trial after reading such ringing testimony? If you need the treatment it is a sin and shame if you do not!

## CURED OF CATARRH OF STOMACH AND BOWELS

**Suffered for Many Years—The Trial Treatment Pointed the Way and a Complete Cure Followed**

Read What This Worthy Blacksmith Says of Vitae-Ore

I was a great sufferer from Catarrh of the Bowels for a number of years. After using many different kinds of medicine, in fact, everything that was recommended to me. I almost lost all hope of every getting any better until the Theo. Noel Company of Chicago sent me a trial package of Vitae-Ore. After only a few days' use my hopes of a complete cure were again revived, the change being so prompt and immediate. I purchased and used about five packages of Vitae-Ore and through this medicine am now again able to wield the sledge hammer and shoe horses and do my blacksmith work as in years when I was younger. My stomach and bowels are better than they have been for thirty years past and it is all due to Vitae-Ore. I can conscientiously and truly recommend Vitae-Ore to all persons suffering from Catarrh of the stomach and bowels, and would consider myself, indeed, selfish did I not write and tell what it has done for me, so that others may be cured as I have been.

HIRAM C. POWELL,  
Center, Ind.

**IT WAS TRUE  
12 YEARS AGO**

## AND IT IS TRUE NOW

HERMANSVILLE, MICH.—I had been pronounced incurable of Bright's Disease by three eminent physicians, when I commenced using Vitae-Ore. I weighed about 100 pounds, but in three months I weighed 145 pounds and was well and hearty. Have not suffered with my kidneys since, and it was twelve years since I first used V.O. I am good for thirty years yet if I can have V.O.

W. H. NORCROSS.

## WHAT IRON DOES:

**A**MONG the properties which go to make mineral springs famous for their medicinal qualities is IRON, hardly a spring of any consequence or renown being without some proportion of this mineral substance. There are certain springs which contain sufficient iron to impart the iron taste to the waters, which are then known as ferruginous or chalybeate waters, and Vitae-Ore in solution, ready for drinking by the patient, is representative of the best class of these waters, having the added advantage of being stronger than any water known.

Iron is of especial value in blood disorders and because of this fact the large proportion of iron in Vitae-Ore, as shown by its analysis, does much toward making possible the wonderful curative power possessed by this remedy. As the blood is the vehicle which ordinarily carries medicaments to the different portions of the body, the only means in repairing the ravages of disease in these parts is in supplying that fluid with the elements necessary for the proper restoration of the abnormal or diseased tissues.

The countless millions of little red corpuscles which are contained in this fluid have a powerful affinity for iron. Without iron they cannot live and their death means the death of the entire body. The iron in Vitae-Ore causes it to be immediately absorbed by the blood, owing to the property of the fluid above mentioned, and it is on account of this that results from the use of this remedy are so easily and quickly established. Iron is also an ideal astringent, possessing the power of laying irregular or catarrhal action upon any mucous membrane with which it is brought into contact. The wide range of usefulness of iron, and, through iron, Vitae-Ore, may easily be considered when it is known that membrane which is liable to excessive action exists in the mouth, tongue, throat, lungs, stomach, bowels, kidneys, bladder, head and nose, causing much trouble and a long train of ills which may be primarily traced to such excessive action or catarrh. The astringent properties of Vitae-Ore gained by the iron which is part of its composition, make it the most powerful remedy known for checking such catarrh, as thousands of cures in these cases have thoroughly established.

Last, but by no means least, in the many merits possessed by iron and Vitae-Ore in relation to the curing of human ills, is the ALTERATIVE action, a prominent quality of iron, and which, owing to the peculiar origin and formation of V.O., is exerted by that remedy in a more marked degree than has ever been accomplished by artificial compounds of iron used for a like purpose. The term "alterative" is difficult to explain, but a remedy is said to possess "alterative action" when it can check or alter certain morbid processes that work in the system. Embraced in the group of diseases in which alteratives are of benefit are Rheumatism, Gout, Cancer, Nervous Disorders, etc., numbering up into several score.

The patient afflicted with any of the diseases named herein and those kindred to them, in following the Vitae-Ore treatment, is securing a more direct medication to the parts affected than could be obtained from drinking the waters of any of the world's noted mineral springs, since one quart of the solution prepared from Vitae-Ore is from four hundred to twelve hundred times stronger than the same quantity of the valuable waters of the globe, and it is not necessary to drink gallons of water to obtain the much desired medicinal power. And remember IRON is but one of the many constituents of a medicinal value found in Vitae-Ore and all are in a free state, capable of easily being digested and assimilated with the blood.

**It is a Mineral Spring Condensed and Concentrated**

### NOEL SAYS:

If you are sick with any disease of the Circulation, the Stomach, Liver, Kidney, Bladder or Throat, **VITAE-ORE WILL CURE YOU.** NOEL is the discoverer of Vitae-Ore, has been familiar with its wonderful properties for two generations, has watched its remarkable action in thousands of cases, and **HE OUGHT TO KNOW.**

NOEL SAYS he doesn't want your money unless Vitae-Ore benefits you. NOEL is old enough to know what he wants. NOEL SAYS that the Theo. Noel Company has instructions to send a full-sized one dollar package on thirty days' trial to every sick or ailing reader of UP-TO-DATE FARMING, who requests it, the receiver to be THE JUDGE, and not to pay ONE CENT unless satisfied. NOEL is the president and principal stockholder of the Theo. Noel Co.; what **HE** says goes. Here is his SIGNATURE ON IT:

### PROOF FROM OFFICIAL SOURCES

[The statistical research and resulting tables in the following article are by Eugene Matrosow, of Washington, D. C.]

[Editor's Note.—The following article brings up a new problem in American agriculture. Up-to-Date Farming has discovered several such problems, and what is more, has given a solution for them. Every farmer who wants to be abreast of the times is urged to read and study these problems carefully. A very careful study and understanding of the matter in this article is urged. Others equally as valuable, are in preparation.]

Almost every American will be greatly surprised to learn that just recently the United States has lost her paramount position in the world as an exporter of grain.

The most eloquent and indisputable language of figures tells to us the following tale:

Total exports of wheat and flour during seven years.

	United States. Bushels.	Russia. Bushels.	Argentine. Bushels.
1897-98.....	507,000,000	293,000,000	18,000,000
1898-99.....	429,000,000	270,000,000	49,000,000
1899-00.....	460,000,000	190,000,000	104,000,000
1900-01.....	437,000,000	250,000,000	93,000,000
1901-02.....	201,000,000	296,000,000	80,000,000
1902-03.....	291,000,000	349,000,000	72,000,000
1903-04.....	234,000,000	300,000,000	144,000,000

While the American totals are for cereal years of which the last one (1903-1904) is of course just approximately estimated, and the Russian and Argentine totals are for calendar years, they show quite clearly that the supremacy of the United States among the exporters of grain, is seriously threatened by both Russia and Argentine, and particularly by the first one. This is, however, not the whole truth, and the rest of it is contained in the following figures:

Grain exports of the United States and Russia for calendar year 1903:

	United States. Bushels.	Russia. Bushels.
Wheat and flour.....	148,800,000	150,400,000
Rye .....	2,720,000	44,800,000
Total breadstuffs .....	151,520,000	195,200,000
Maize .....	81,600,000	16,000,000
Oats .....	1,850,000	67,000,000
Barley .....	8,800,000	94,400,000
Total feeding stuffs .....	92,250,000	177,400,000
Grand Total .....	243,770,000	372,600,000

Continued on Page 7 of this issue of UP-TO-DATE FARMING.

Thus it appears that the aggregate Russian exports for the last calendar years exceeds the American by 50 per cent. Once more has the Russian Empire taken a first place as an exporter of cereals after having been wholly eclipsed by the United States in several recent years. It can be seen that the change in the relative position of the two countries is due not so much to the growth in the exporting capacity of the United States. So it appears as if the American farmer of to-day is either incapable or disinclined to compete with the Argentine or Russian peasant.

As soon as the decline in exporting capacity of the United States is thus established beyond any dispute, it is absolutely necessary to trace the very items in separate exports which by their decrease caused the decrease of mean totals, as well as the diminution of grand totals for given years. It is not an easy task to perform. Taking wheat and flour as fairly representative of the whole trade in grain, and even to ascertain the extent in all agricultural products, we will try to do the best we can, with the available statistics, to throw the proper light on the matter.

United States exports of wheat and flour for the last seven years, ending June 30:

	Bushels.
1898 .....	218,000,000
1899 .....	223,000,000
1900 .....	186,000,000
1901 .....	216,000,000
1902 .....	235,000,000
1903 .....	203,000,000
1904 (approximately estimated).....	160,000,000

The records of the last seven (fiscal) years for the coarse grain (maize, barley and oats), are very similar to the one just exhibited for the wheat. It appears that the total exports of wheat and flour from the United States for the current (fiscal) year represents a decrease of 53,000,000 bushels, or 25 per cent. from the average of the preceding six years.

Publisher **Indianapolis**

# WE WILL INSURE A PROFITABLE PRICE

## *for* EVERY CROP YOU GROW

*You can learn HOW for 10 cents*

### The American Society of Equity

is organizing to bring farmers to the front where they belong. This will be accomplished.

ed through profitable prices for all farm crops and when speculation in farm crops is at an end. We know that the world must have the farmers' crops as long as people and domestic animals must eat, and as long as people will be clothed. There are no other commodities on earth that are as necessary. Also we know there has not been a surplus of any staple crop grown in many years. Therefore, it is plain that if farmers will regulate their marketing to cover a year to meet a year's demand, they can sell at prices of their own making. Or to state it differently: They must quit dumping their crops soon after harvested and thus keep them out of elevators and keep the visible supply in the hands of speculators and manipulators, low.

**UP-TO-DATE FARMING** This paper is the official organ of THE AMERICAN SOCIETY OF EQUITY. It is teaching the farmers how to carry out the plan of the society. It is now printing six (6) special issues which will be edited with the special object in view of educating farmers how to co-operate, control marketing and make profitable prices on all crops. The special issues and what they will be mainly devoted to are as follows:

**JUNE 15.** The most valuable number on Co-operative Marketing ever issued.

**JULY 1.** How to get profitable prices for all Grain.

**JULY 15.** How to get profitable prices for Cattle and Hogs.

**AUGUST 1.** How to get profitable prices for Cotton and Tobacco.

**AUGUST 15.** How to get profitable prices for Fruits and Vegetables.

**SEPTEMBER 1.** How to get profitable prices for Dairy and Poultry Products.

**ALL THESE NUMBERS CAN BE HAD FOR TEN CENTS.**

**THE THIRD POWER** Do you know what "The Third Power" is? It is a book of 275 pages written by J. A. Everitt, President of the American Society of Equity and Editor of Up-to-Date Farming. The price is \$1.00 in handsome cloth binding. It is in many respects, the most remarkable book ever written. The third edition is nearly exhausted and its sale will probably reach to millions. This book is being printed as a serial in UP-TO-DATE FARMING. There is an installment in this number. Read this part and you will be hungry for what preceded and what is to follow.

**PRICE GUARANTEED** Any person reading the six special issues of UP-TO-DATE FARMING and The Third Power we believe, will have no trouble to secure a profitable price on every crop he or she grows by following the simple plan therein explained. We want everybody to learn this plan. If you are not a member of the AMERICAN SOCIETY OF EQUITY, send 10 cents for this special three months service, and get the benefit of that. If you are a member or not, get all your neighbors to join a club at 10 cents each.

**HOW MANY WILL YOU SEND?** Farmers every where must learn of this movement. Up-to-Date Farming and "The Third Power" must be read by a million people. We now appeal to every subscriber and reader. How many 3 month subscriptions will you send at 10 cents each? Every body you ask will gladly give you a dime. Ten names can easily be secured. One hundred can be secured if you make a little effort. Single names will be thankfully received but a club of ten or more counts faster. How much time will you give to this movement? If you will give each Saturday afternoon this summer to the cause the results will be great. We want every farmer's name in your community reported to us on this offer at once so the speculators cannot price this year's crop. Right now is the time. Right now we want your help.

**WE REPEAT THE OFFER** Up-to-Date Farming three months for 10 cents covering June 15th to September 1st numbers inclusive. The paper will positively stop at expiration of the time. "The Third Power" book began to appear in June 15th issue. Each ten cent subscriber will receive just these numbers (June 15th to Sept. 1st). Back numbers will be sent as the term advances. This is not a change in subscription price in any respect. This offer is to new subscribers only, for this special purpose.

IF YOU WANT \$1.00 WHEAT, 60 CENT CORN, 75 CENT POTATOES, 7 CENT CATTLE, 6 CENT HOGS, 15 CENT COTTON, 50 CENT APPLES, AND A PROFITABLE PRICE FOR EVERY CROP YOU GROW, come forward and help get them. Wake up your neighbors and send their names along. It can be done the same way that dollar wheat was secured. Numbers give strength. Numbers are irresistible. Hence send as large a club as possible.

**THERE SHOULD BE A REGULAR LANDSLIDE** Of farmers to embrace this offer. This offer should bring the million to learn how farmers are to come to see. You cannot do more for them and for yourself than to give them a 3 mo. subscription to Up-to-Date Farming. The paper is bringing farmers to the front. Every Farmer must be educated. We want clubs of ten or more. One dollar of your money will make ten converts and bring the time nearer when the million co-operating farmers will bring certainty out of uncertainty. Many people who want better conditions to prevail on the farm, have sent clubs of 25, 50, and over 100. It is your turn next.

This is the way subscribers write after they become acquainted with this paper:

"Up-to-Date Farming is a paper that surprises its readers by the greatness of its ideas, the simplicity of truths, and the importance of the results sought. It is THE ONLY TRUE FARM PAPER PUBLISHED. It teaches farming as well as others, and it teaches how to get fair prices for farm products, which none of the others do."

A. A. DION, Grand Harbor, N. D.

Here is another:

"Some months ago I began to investigate the great farmers' movement, put on foot by J. A. Everitt, president of the A. S. of E. I spent much time in studying the matter printed in Up-to-Date Farming, and particularly the editorials. The logical and unanswerable arguments of these wonderful writings, produced a profound effect on me. \* \* \* At first I was skeptical as to the feasibility of the proposed plan for deliverance from the GENTLEMEN OF THE BOARDS OF TRADE. But as the light was turned on I was surprised to find that all my doubts and objections were based on my total ignorance of the real principles that constitute the grand central buttress upon which the whole structure is built. As soon as the light dawned on me I began spreading the news to the farmers of my county. \* \* \* Before the present wheat crop is ready to market we will have our county thoroughly organized."

A. S. COOK, Chetopa, Kas.

Read this number of Up-to-Date Farming carefully, then you will be glad to help this movement along. We will look for a club from you. Make it as large as possible.

## UP-TO-DATE FARMING

INDIANAPOLIS, INDIANA

# UP-TO-DATE FARMING

Official Organ of  
The American Society of Equity

PUBLISHED SEMI-MONTHLY  
At 227 West Washington Street

Entered at the Indianapolis  
Post-Office as Second Class Matter

INDIANAPOLIS, JULY 15, 1904

NUMBER 14

## Up-to-Date Farming

J. A. EVERITT, Editor  
JOHN P. STELLE, Associate Editor

Subscription Price 50c a Year  
PAYABLE IN ADVANCE

Subscription Including  
membership in the A. S. of E. is \$1.00

The emblem of the A. S. of E. as shown here, is symbolical of PRICE, being on an equality with PRODUCTION and CONSUMPTION.

**Acknowledgement.** The date in connection with your address on wrapper, informs you of the time your subscription expires. Change of date indicates that your renewal was received.

Many club raisers fail to indicate their name separate from the club. We want to know who our workers are, therefore always write: "this club was sent by (name)."

**Always state if a renewal or a new subscription. Don't Neglect This. See Special Subscription Offer elsewhere in this number.**

**Your Address** should always be written very plainly. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

**Renewals and Change of Address.** Give the same name as before. If a change from one member of the family, so state. If you change your post-office, give old office as well as new.

**Advertising Rate** 50 cents per agate line each insertion; 10 per cent discount when two or more consecutive insertions are taken. About eight words make a line, and fourteen lines make an inch.

**Only Reliable Advertisers** are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurrence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date when you write.

Three month's trial subscribers will be supplied with back issues containing the first chapters of the Third Power, June 15th to September 1st, inclusive

**NOTICE:** All trial subscriptions will stop promptly unless renewed.

Renewals may be sent in at any time during the three months, thereby insuring continuous service.

"Be not like dumb driven cattle, be a hero in the strife."

The right hand to the plow and the left hand to market.—C. Hayes Taylor.

A revolution is taking place in American agriculture. Can you read the signs of the times?

The National Union is mailing a large number of circulars in the interest of co-operation by farmers. We will make it a million if the people show the proper interest.

Send us names of farmers that you have not sent before, for sample copies of this paper. Or, better yet, get their names and 10 cents for the three months educational offer.

The A. S. of E. is not a stock company. It will never have any watered stock. It will never pay dividends to gentlemen on the inside. The funds come from memberships and the members draw all the dividends.

Quit working like a horse to produce all you can. It is far more important that you get a good price for what you do produce.

In this number we tell how profitable prices can be obtained for cattle and hogs. We cannot go into the whole subject of co-operation in each number with each subject, hence we advise you to invest ten cents for the six special issues and everything will be made plain to you.

In this number is the third installment of "The Third Power." Are you reading this great work carefully and studying it? An understanding of what this book teaches will do you more good than all the farm papers and books you have previously read. Don't miss a number. Back numbers can be obtained on our special offer of 10 cents for six issues.

### WHEAT GROWERS! REMEMBER 1903

Will you weakly submit to the speculators and take their price, or will you keep a stiff backbone and compel them to pay your price?

### COTTON GROWERS, REMEMBER 1903

Will you forget the price cotton sold at after you had dumped the bulk of your crop? You can make the price for the first cotton you sell this year. Will you?

### EVERYBODY, REMEMBER 1903

It was the year of education for farmers. They have taken the first lessons in controlled marketing and price making. It will be a memorable year for American agriculture.

Have you become interested in "The Third Power?" You can get back numbers by sending only 10 cents for the special 3 months educational offer. After you read the present installment, write and tell us if you approve of the way it handles the speculators, trusts, railroads, politicians, etc.

### POTATO GROWERS, REMEMBER 1903

Do you recall how buyers circulated through the growing districts and said you must sell for 15c. to 25c. a bushel, and how this paper warned you to not be stampeded, and all your potatoes would bring you a good price?

### TOBACCO GROWERS, REMEMBER 1903

Do you remember how the trust has been telling you about the great overproduction which was responsible for the starvation prices they paid you? Do you remember, when you held up your crops, how hungry they got for tobacco? How they hired all the riders who were available and sent them scouring the country for tobacco? Does this look like an overproduction of tobacco?

### STOCKMEN, REMEMBER 1903

How prices fell after 1902. How consumers paid as much as formerly. How prices soar again in 1904 when supplies are light. There was no overproduction. Every pound of meat went into consumption at a high price. Much more would have been consumed if the consumers price had been proportionately as low as yours. Don't this all prove that you must control marketing—dry it up completely if necessary, sometimes—to teach the food trust and unfair middlemen a lesson.

### 450 TO 1

There are about four hundred and fifty farm and stock papers printed in the United States devoted to the problem of producing larger crops, while there is only one farm paper devoted to the problem of getting a profitable price for the crops.

The 450 papers have not succeeded in increasing the average yields of any crop a single pound or bushel, but the one paper has been instrumental in raising prices so farmers have realized many million dollars more for their crops.

In this number is a great article headed, "American Exports of Agricultural Products versus American Prices of the Products. Proof that Low Prices of Farm Crops have Damaged our Export Trade." Read and study this article. American farmers begin to realize how their industry has been injured and themselves deceived by designing or ignorant people. Is it not time for a change? Don't you want honest and capable people at the head of your industry? One of the objects of the A. S. of E. (No. 5), is "To open up new markets and enlarge old ones." After reading the article referred to, you must admit that there is much to be done in enlarging old markets. Turn to this article at once.

## The General Outlook

### WHEAT

Was backward in maturing and the movements of the new crops much delayed. Mills that have been short of supplies are further distressed by the delay in the new wheat coming to market. Already reports are current that local millers are absorbing the local supplies and we predict there will be comparatively small supplies go through and reach the large central markets. This is a healthy sign for the farmers, as under such conditions there will be no large visible supply to be used as a club to break their prices down. When millers and grain handlers decide to do away with gambling speculation, futures and options, then they can also expect better things in the wheat and flour trade. As long as foreigners are offered wheat and flour for future delivery at 20 per cent. discount on present values it need not be wondered at that the export trade is dead. Millers may not be "natural born gamblers," but it looks very much like it, when we consider how prevalent the habit of selling flour and wheat for future delivery has become. Now if they would or could always sell it at a premium it would be robbed of many of its bad features. But to sell it at a discount makes every grain dealer and miller a "bear" until the contracts are filled.

The next issue of Up-to-Date, Aug. 1, will be the wheat and hay price number. Readers are requested to cut out the blank in this number and send it in whether a member of the A. S. of E. or not; also readers of this number who are not subscribers should prepare to receive the next, which they can by sending 10 cents for the six special issues. Price (Chicago) cash—No. 2 red 1.12; July, 87½c.; Sept. 82½c.; Dec. 82½c.

### CORN

This crop has been retarded by the continued cold weather. No prediction can be made at present regarding the crop. In view of the large acreage, however, it may be the best thing for farmers, if the yield is moderate, when it will command a good price. Farmers should consider that their true aim should be to raise dollars and not simply bushels, pounds, etc. We advise marketing the old crop closely before the new crop comes.

Price, (Chicago) cash, 48c. @ 48½c.; Dec. 45½.

### LIVE STOCK

The cattle and hog producers have been having their inning lately. It was an accidental one, and a repetition of what has been transpiring in the agricultural business as long as memory can serve man. Cattle and hogs were too low and feeders got tired of converting high priced feed into low priced meat. There were many of them of the same opinion as always happens in these cases. The consequence is that there is a scarcity of live stock and next thing we will realize there will be a surplus of grain. How much better it would be if prices could always be maintained on all crops so there would be uniformity of production and prices. Prime beefs sold for 9½c. on foot in 1902 and are now worth about 6c. to 6½c. per pound. Sixty days ago they were worth about 5 cents. Hogs selling around 5½c.

### FRUIT

The agricultural department gives flattering reports of apple prospects in the Lake region and the Missouri Valley, and only moderate prospects in the Middle Atlantic States, and the Central Mississippi and Ohio valleys. The New York state crop is reported less promising, but with good weather and freedom of hard storms, a good crop may be secured.

### OATS

Crop prospects excellent in most sections. It will require a fairly complete organization of farmers to guarantee a good price for the new crop. Price, (Chicago) cash 34½c. @ 36c.; Sept. 32c.; Dec. 32½.

### VEGETABLES

With abundance of rain generally throughout the country vegetation made good progress but not as much as if warmer weather had accompanied the moisture. In most lines there is more than the midsummer abundance of vegetables. Potatoes are rapidly descending the price scale, and soon will not be classed with the luxuries. A condition that will be genuinely welcomed by many housekeepers. Prices in Indianapolis and other leading markets are well maintained which indicates that growers are getting good rewards, or that the handlers are getting more than their share of profits.

### COTTON

The Department of Agriculture shows the condition of cotton on June 25 at 88 per cent., as compared with 77.1 per cent. a year ago, and a ten year average of 84.8 per cent. The price is going down. Cash selling at 10.60c. to 10.85c.; Sept. future, 9.46c.; next March, 9.36c.

### PRICE TO PRODUCER AND TO CONSUMER

Our readers know better than we can tell them what price is paid for shipping cattle on the farm. About the best is 2 to 4 cents. At the yards it now ranges from 2 to 6½ cents. We have contended all along that consumers in the cities have to pay more for the beef they eat than they ought to pay considering the prices paid for the live stock. Or, taking the converse of the proposition, the farmers do not receive enough for their cattle on the farm considering the prices paid for beef by consumers in the cities.

One of our enterprising Indianapolis dailies takes this matter up and shows that, however the price of live stock may vary, the price of beef remains about the same, and that extortionately high. A few years ago the storm center of this agitation raged around the stock yards and packing houses. It is now shifting to the retail dealers.

The figures of the packers show that, at their prices, they are actually losing money on each carcass they handle. Take a 1,400-pound steer, the kind used in the best shops. The packer pay \$6.35 per hundred pounds, or \$88.90. The steer makes a dressed carcass of 840 pounds, 60 pounds dressed carcass to the 100 pounds live animal. This carcass the packer sells to the local butcher, or retailer at 9½ cents, and gets for it \$77.70, an apparent loss of \$11.20. But the packer is doing well, for he has left the hide, horns, hoofs, blood, offal and all other refuse, every bit of which is a marketable commodity and makes the packer a handsome profit.

We now pass to the local butcher or retailer. We have seen that he paid for the carcass \$77.70. Here is a bill of what he gets for it right here in Indianapolis as given by the daily paper referred to:

60 lbs. porterhouse at 30c a lb.....	\$18.00
100 lbs of loin at 17½c a lb.....	17.50
190 lbs of round at 15c a lb.....	28.50
90 lbs of ribs at 15c a lb.....	13.50
180 lbs of chuck at 10c a lb.....	18.00
150 lbs of plate at 5c a lb.....	7.50
60 lbs of shank at 3c a lb.....	1.80
10 lbs of suet at 2½c a lb.....	.25
Selling price .....	\$105.05
Cost to retailer .....	77.70

Retailer's profit on transaction.. \$27.35

This shows an actual profit made by the retailer of more than 35 per cent. We think there are very few who will not agree that this 35 per cent. might well be divided—10 per cent. to the consumer in a reduction in the price he must pay for beef, 10 per cent. to the stock raiser in an increase of the prices he receives for the live animal, leaving the packer's profit the same as now, and giving the local dealer 15 per cent. on his investment as his share of the animal.

But, strange as it may seem, if we pursue this investigation a little further, we shall find that the retailer makes his heaviest per cent. of profit off the poorer people of the city.

To the poorer quarters none but the inferior beefs go—canners, old cows badly fattened, that sell on the hoof at about \$2. Such an animal of 1,000 pounds makes a dressed carcass of about 400 pounds, which wholesale at 6 cents, or \$24. The retailers cuts and prices on such carcass are as follows:

30 lbs porterhouse at 15c.....	\$4.50
90 lbs round at 11 cents .....	9.90
90 lbs loin at 11 cents.....	9.90
50 lbs brisket at 5 cents .....	2.50
25 lbs shanks at 5 cents.....	1.25
30 lbs of ribs at 8 cents.....	2.40
75 lbs of chuck at 7½ cents.....	5.62
10 lbs suet at 2½ cents.....	.25
Total .....	\$36.32
	24.00

Profit over 51 per cent, or .....\$12.32

So, it seems, the retailer, notwithstanding his higher prices, makes 35 per cent. off the more aristocratic tastes of the rich, and 51 per cent. off the bare necessities of the poor.

There is no "dead loss" to the retail meat dealer. If he can not sell all of the bones and cheaper cuts he can trim the meat and muscle from the bones and put it into bologna. The fat and tallow find a market at a fair price.

## AN INGENIOUS SCHEME

### To Frighten Farmers into Taking Lower Prices Be Not Deceived

The Chicago "bears" who have been selling out your new wheat crop around 80 cents a bushel are getting worried about their ability to get stock to fill their orders. They have flooded the mails and press with ingeniously worded circulars containing the following pretended reasons why the price of wheat should be put down:

1. The foreign market is the court of last resort. Its decision is final.

2. Every one knows that very much more winter wheat will be harvested than seemed possible two months ago.

3. There will be a large surplus for export. No one pretends that the United States can consume what it will raise.

4. Foreigners will not buy new wheat at anything near present basis of "July" in St. Louis, Chicago or Toledo.

5. Australia, India, Argentine, Russia, France and other wheat-growing countries are selling choice milling wheat away below American quotations.

6. British, French, German and Australian millers have driven American flours out of the markets of western Europe.

7. The American miller can not get back unless he can put his flour upon a competing basis with equally good qualities from other countries.

8. A decline of 10c per bushel from present price of July delivery in the central markets will barely enable him to meet this competition.

9. Not in twenty years has so little new winter wheat flour been sold ahead by American mills at this date for export.

10. The miller can neither sell flour nor hedge wheat on present basis, as September and even December are selling much below July, and these distant futures entail neither interest, storage nor insurance.

11. These are statements of fact, not fancy and the country wheat dealer and shipper realizing this should not bid for the new wheat anything above its safe value.

12. This value can only be determined by price at which the wheat can be sold for export, or by the basis upon which new winter wheat flour can be sold ahead freely in eastern and foreign markets.

Pay legitimate value—nothing more!

1. This country has set the price for European importing countries in the past and will do so in the future. All that our farmers need to do is to set the price on the 1904 crop, stick to it, and the foreign price will come to it.

2. Admit the correctness of the statement. Yet the 1904 crop will be less than last year, which was a short one. If the 1903 crop sold at \$1.00, why should a shorter crop sell for less? Is there any good reason? The 1904 crop will be the smallest harvested in several years, while the population of the world and consumption of wheat is increasing at a wonderful rate. Wheat at \$1.50 per bushel will be the cheapest article that goes on the table; much cheaper than potatoes, vegetables, fruit or meat at prevailing prices.

3. About one-fifth of the 1903 crop was exported. With a smaller crop and increased home consumption there will be less of the 1904 crop as surplus, to export. We claim that Europe will be glad to take it at a fair price to our farmers. But if they don't want it at your price hold one-fifth of the crop back and the American Society of Equity will, in a few months, arrange with an exporting house to ship it at the best price that can be obtained. Do you understand? Instead of letting a possible one-fifth of the crop set an unfair price on the whole crop, demand and get a good price for four-fifths and take what you can get for the other fifth. By this plan you will be far ahead in cash. This is exactly what manufacturers do. They sell at high prices in this country all they can and cut their prices for export to meet competition abroad. Farmers must do the same. If they must buy machines, clothing, etc., etc., at protection prices, they must sell their grain on the same basis. The 25 per cent. duty on wheat protects them. Let them use the protection.

4. Supply the home demand first at your price; then if the foreigners won't take the small fraction that remains, you can treat with the foreign buyers. Last year the foreigners got their share out of the first run and farmers took a low price. Let us first sell all we can at our price at home and see if any is left to sell at a low price abroad.

5. In the first place, not much below. In the second place, their wheat is very inferior compared with our wheat. In the third place, if speculation was cut out and no futures sold below the real value of the commodity, the whole world would be on a uniform basis for values of wheat at this moment. Who would expect foreigners to take our wheat at spot cash values when speculators offer to sell it at 20 cents a bushel less for delivery in three months? The whole system is bad. Vicious, demoralizing. Farmers must break it up and this is a good time. You can do it by not letting a bushel of your wheat go for less than \$1.00, on basis of Chicago market.

6. Let it stay out unless it will be profitable to you to reinstate it, you will

make far more money by growing only enough for the home demand than to compete with peons, slaves and paupers of foreign countries. Wheat growers the world over have been the poorest paid laborers. It is time to give them a change.

From Bulletin No. 27, of the Department of Agriculture "Wheat Production and Farm Life in Argentine," we quote as follows:

"The life of the Argentine wheat farmer is not a condition that would be endured by the North American in the same business. In the opinion of many observers the profits of the Argentine farmer represent merely the privations and the low order of living which he endures."

And yet there are people who claim the United States farmers must compete with these farmers. What we hope to see soon is wheat growing in every country on earth elevated until it takes a position that this necessity is entitled to, considering its importance. This will come about through the American farmers.

You know wheat growing has been a profitless industry in this country until this society took hold of the price proposition. Now it may be made one of the most profitable crops. In this connection we will quote from Geo. H. Phillips, grain broker of Chicago, who is on the bull side of the market at present.

"This year, with a certain short crop, with Argentine and Australia out of the shipping business for six months, should see prices for wheat that will make every farmer in the country a spender of money and change the growing sentiment that we are to have hard times, to confidence in uninterrupted prosperity. I believe this crop of wheat, short as it is, will net the farmer more money than it would, had it been a hundred million bushels larger."

For further evidence that there is no need for wheat growers to be stampeded we gather the following from news reports, July 4th:

"The marketing of new wheat is considerably behind the movement of a year ago. On the day following the close of the Fourth of July holidays last year the arrivals of new wheat at Baltimore aggregated 50,000 bushels—covering three days' receipts. It remains to be seen if even that point can do as well as that this year, although the crop in the vicinity of Baltimore and, in fact, in the whole south Atlantic district, is unusually fine and reasonably early as compared with other sections of the winter wheat belt."

"The Texas grain has all gone into the hands of local millers in the vicinity of its production, and the same appears to be true of most of the marketings thus far elsewhere."

"The situation abroad shows improvement as viewed from the American standpoint. India has been getting poor returns from her early sales, and is asking more money for her surplus. Argentine shipments are dropping off, and Australia has already dropped down to small proportions. The European requirements this year will be somewhat larger than those of last year."

And so it goes. More farmers are going to hold their wheat than ever before. What is thrown on the market we believe will be quickly absorbed, until the foreign market comes to our price, which we predict they are bound to do.

7. The American farmer first, is what we say. You grow the wheat and must take your profit before others touch it. If the millers cannot hold the foreign trade and pay you a decent price, then we say, "let them lose it." If millers and honest grain dealers everywhere will help to kill gambling in wheat, they will put their business on such a basis for volume, certainty and profits, as they never knew before.

8. July wheat was quoted on the same day the circular went out at 85 cents, (cash wheat \$1.02) 10 cents off would be 75 cents at Chicago. This is what the Chicago bears want. It is 25 cents under the farmers' price. It means just 25 cents per bushel less for every bushel you have, no difference where situated. It means a loss to agriculture of \$150,000,000 on a moderate crop. By the farmers of the United States sacrificing \$150,000,000 of hard earned wages, they can continue the speculators in the price making business; enable the millers to hold their foreign trade, and perpetuate the low order of existence for wheat growers throughout the world. But the A. S. of E. contends that the sacrifice is too great. That at a profitable price, millers will increase their business and profits, and agriculture will be elevated in every country. Which will you choose?

9, 10. Just so. Millers know the farmers are a power now. They can't grind speculators options, and they can't get the farmers wheat. Just as soon as farmers organize to an extent that there

[Continued on page 12.]

## HOW CROPS CAN BE CONTROLLED AND PRICES MADE

No. 2.

### CATTLE AND HOGS

(July 1st, we explained how wheat, corn, oats and other grain can be controlled for marketing and prices made. August 1st will contain directions for cotton and tobacco. Aug. 15th for fruit and vegetables, etc., Sept. 1st for dairy and poultry products. These numbers belong to our three months educational series, all for 10 cents.)

These products of the farm, on first thought may appear to be more difficult to control than the non-perishable grains that were the subject for consideration in the preceding issue. This idea is, however, erroneous. When producers co-operate on the plan of the A. S. of E. equitable prices can be compelled on live stock and meat for both the producer and consumer. What is desired is a profitable and equitable price for the producer and an equitable price for the consumer so the maximum consumption results. Neither of these objects are accomplished under the present system. Both of them can be accomplished under the new system. In fact, the meat trust will never meet its Waterloo until it encounters the growers organized to obtain equity.

It is evident, considering the prices paid by consumers, that every pound of pork and beef produced should pay the first owners a profit; yet, cattle have been netting the stockmen from \$15 to \$30 each loss until the recent advance, which was brought about through reduced receipts. We claim that as long as the goods go into consumption—that by intelligent, equally distributed, or controlled marketing that a fair price to the first owner can be secured. Stockmen must organize with a central head. This central head must keep them all informed of the markets and prices, so there may be concert of action. They must be in a position that they can withhold marketing when necessary and dry the market up so it will be hungry for supplies. This is sure to force the price up. You see how it works even under the old system.

Please don't misunderstand us. It is not expected that every stockman will hold all his stock at any time. A little more control will be sufficient. If you will refer to the market reports you will observe that when a market that receives 5,000 to 6,000 head of cattle or hogs, receives only 4,500 or 5,000 in the same period of time, the price goes up. We claim that with even a moderate organization enough influence will be exerted to teach the buyers that the growers can limit receipts whenever necessary. A few lessons along this line will teach them to take a maximum supply at the stockmen's minimum price and be thankful to get them.

If it was agreed that the minimum price for prime beef at Chicago should be 7 cents a pound, and of hogs 6 cents a pound, this price would be communicated of all producers in the association and others outside would know of it. Then all desires and impulses would centre on these values. It will be easy to learn the rate of freight to Chicago, or if east or south of Chicago the prices may be higher. This is a matter that producers can easily learn and your society through the official paper will tell you. After deducting the freight to Chicago from western points and a reasonable charge for commissions the balance will be the farm price. At this price sell all your buyers will take and stop the minute when they won't take any more. There are, however, many places where the local market will take all that is produced when the Chicago price need not prevail.

As the reader will see the solution of the stockmen's problem is in a known price and controlled marketing, the same as with grain. There is, however, a factor entering into it that may compel stock yards in leading cities. The buying and distributing end is now so thoroughly under control of a few men that controlled marketing on the farm may not meet the needs entirely. Even though a supply of fat hogs and cattle was sent to market to only equal the demand, if the buyers would refuse to pay a good price or buy at all, as they frequently do, the feeding charges are so high that the shippers cannot afford to keep them long in the present stock yards. Therefore it may be necessary for stockmen to have their own stock yards, where cattle and hogs may be kept indefinitely and the expense be only the market price of feed used and the legitimate cost of attendance. In this way they could be kept nearly as cheaply as at home and their weight be increased while waiting for a market. A fraction of a cent a pound on pork and beef would soon produce a fund that would provide stock yards in all leading markets.

We trust stockmen will understand this plan. We hope they will realize the strength of their position when co-operating. They must remember that even during the period of depressed prices to them the world took all they produced at inflated prices and consumed it. Therefore, it is clear that the low price cannot be charged to overproduction. In fact there was no overproduction, and had marketing been uniform, regulated and controlled, the first owner could

have got his price, every pound would have been taken just the same and the consumer would have paid no more. It is a fact that the consumers are paying the same prices now, with very little variation—that they paid when cattle sold at 8 cents live weight and hogs at 7 cents, although the live weight price has gone down to 4 cents to 5 cents a pound.

When stockmen are organized they can even regulate production if they find it necessary, and do almost every other thing they in equity should do. Then they will solve the transportation problem or be indifferent to freight rates. What will it matter to them how much freight the railroads charge, they can simply take their price and profit first before others touch the cattle or hogs.

But stockmen will not be satisfied with a profitable price for themselves. When organized and co-operating on the plan of the A. S. of E. they will have a head through which they can make demands on Congress, the State legislatures, railroad corporations, combined packers, stock yards, etc. Such demands will be in the interest of equitable prices for themselves, equitable freight and yardage charges. Equitable prices to consumers and maximum markets at home and abroad. Such demands coming from a million or more united farmers will be heeded and they will make haste to give the farmers what they want.

In this movement for more equity for the stock grower, he will have the support of the millions of grain growers, cotton growers, fruit men, truckers and every branch of agricultural effort. This will make the farmers union the greatest and most powerful of all, as it should be.

Hasten the stockmen's march into the American Society of Equity. The only movement the world ever knew that can place the industry on a basis of certainty and enduring prosperity.

#### THE LIVE STOCK INDUSTRY OF THE UNITED STATES.

##### —Horses and Mules.—

The number and value of horses and mules in the United States, as given by the annual report of the Department of Agriculture, are: Horses, 16,736,059, worth \$1,136,940,298; mules, 2,757,916, worth \$217,532,832, or a little less than \$68 per head for horses, and a little more than \$78 per head for mules. During 1903, there were imported into the United States 4,998 horses, valued at \$1,533,796, or \$306.88. At the same time there were exported 34,007 horses, worth \$3,152,159, or \$92.69 per head. The great difference in the price of imported and exported horses is owing to the fact that the imported ones are almost entirely costly breeding stock, while the exports are using stock. There were no mules imported, but there were exported 4,295, valued at \$521,725, or \$121.47 each.

##### —Cows and Other Cattle.—

The number of milch cows in the United States in 1904 is 17,419,817, worth \$508,841,489, or \$29.21 per cow. Of all other cattle there were 43,629,498, worth \$712,178,134, or \$16.32 per head. There were imported into the United States during 1903, 66,166 cattle, worth \$1,161,548, or \$17.56 per head. During the same time there were exported 402,178, worth \$29,848,963, or \$74.22 per head. The wholesale price of cattle for December, 1903, was: Chicago, lowest \$1.50, highest \$3.35; Cincinnati, lowest \$2.35, highest \$3.75; St. Louis, lowest \$5.10, highest \$6; Omaha, lowest \$2.65, highest \$5.30.

##### —Sheep.—

The number and value of sheep in the United States, Jan. 1, 1904, was 51,630,144, valued at \$133,530,099, or \$2.59 per head on the farm. There were imported into the United States during 1903, 301,623, worth \$1,036,934, or \$3.44 per head. At the same time there were exported 176,961, worth \$1,067,860, or \$6.03 per head. The total wool product of the United States in 1903 was, washed and unwashed 284,450,000 pounds; scoured, 124,366,405. The price of wool in December 1903, was—Boston, XX Ohio, washed, lowest 34c., highest 35c.; New York, XX Ohio, lowest 28c., highest 32c.; Philadelphia, XX Ohio, washed, lowest 33c., highest 34c.; St. Louis, best tub washed 30½c.

##### —Hogs.—

The number of hogs in the United States January 1, 1904, was 47,009,367, valued at \$289,224,627, an average value of \$6.15 per head. There were exported from the United States during the year ending June 30, 1903, 4,031 hogs, valued at \$40,923, or \$10.15 each. The price of live hogs per 100 pounds in December, 1903, was—Cincinnati, lowest \$4.25, highest \$4.95; St. Louis, lowest \$4.20, highest \$4.85; Chicago, lowest \$3.80, highest \$4.90; Omaha, lowest \$4.15, highest \$4.70.

Ten trial subscriptions for three months means ten converts to co-operation by farmers. This means a local union at your place. This means the greatest event that has occurred in your neighborhood for many years. Ten members are the least number that can organize a local union. Twenty will make a stronger union. Get the minimum if you cannot get more.

# SHALL THERE BE A LAND MONOPOLY?

# LETTER FROM DAVID DOBETTER

No. 43

Rapidly developing conditions, viewed in the light of the constant encroachments of monopoly, lead many of the most reliable observers in this country, to see in the not distant future, that most to be dreaded of all monopolies, a land monopoly. It is to come, they think, through the absorption by big concerns of the homes of the people. The American farmers have ever been the greatest conservative force of the country, but, notwithstanding the fact that within the last fifty years our farms have increased by 245,000,000 acres or about 1,600 acres a day, the farmers are now becoming greatly outnumbered. The above increase cannot be kept up, and the farmers' strength, compared with the combined strength of other classes, must diminish. The young man with small means can no longer go west and secure a farm of his own, and thus become an independent home owner.

And worse even than that, the modest home, the small farm, the pride of all nations, is being absorbed by the large farm; the small home owners are becoming tenants, while the homes they owned are becoming parts and parcels of large holdings, which foreshadow a species of landlordism, without giving us much assurance as to the form it may take. The census returns from decade to decade show that more and more the ownership of the land is passing out of the hands of those who live in the country and till it, and into the hands of those who live elsewhere and control the princely combinations that dominate the other industries.

God save America from a landed aristocracy! But how can we expect it to be otherwise? The wonder is that the growth in this direction has not been more rapid. During all the years the farmer has fought his way to the westward, conquering every obstacle of mountain and stream, and beast, and savage. All along the route, as the elders have felt the infirmities of age creeping upon them, or as they have become satisfied with adventure, they have stopped and farms have spread out around them, while the younger have pressed on toward the unknown, to do a little later as their fathers did, settle down and hew a farm out of the wilderness, while, in turn, their sons pushed farther on. Thus has the wilderness given place to homes, and civilization has swallowed up the great untamed.

All this time these farmers, fighting against such fearful odds, and overcoming obstacles so nearly unsurmountable, have fed and clothed a constantly growing world of consumers who are

not producers. How have they done it? Their fields have waved in green and gold and white, and their pastures have swarmed with lowing herd and bleating flock and lazy drove. A naked and hungry world has taken these rich products without consulting the makers and owners as to their value, and have made such returns as their impecuniousness or cupidity might suggest. He whose toil produced them and to whom God gave them as a reward for labor, has had little to say as to the terms upon which they should be taken.

In all the world of life and activity, of creative energy and endeavor, can such a spectacle be found in any other line? And so contradictory of the farmer's character, and history in all else. The farmers so boastful of independence; who bled for it on Bunker Hill, who suffered for it at Valley Forge, and who won it at Yorktown; and then joined in a living stream of daring and toil that flowed to the west, strewing improvement and plenty all the way and behind them surrendered to the god of greed, and yielded up that plenty on whatever terms he who desired it might choose to make! "Price it and take it. You may not know so well as I what it cost; how many hours of anxious thought, how many days of painful toil, how much fatigue of wife and children, but it is not for me to name its price. What do you pay to-day?"

Can these be children of the men of '76, of '12, of '61-5? No wonder the boys float into the towns. No wonder that mothers sigh for absent daughters. No wonder the small farms are melting into the large ones. No wonder independent home owners are becoming tenants at will. No wonder an aristocracy rules, and thinking people shudder as the shadow of land monopoly shuts out the sunlight of hope from rural America.

But it is not too late. These things may be changed. They must be changed. "The laborer is worthy of his hire," declared the voice of Omnipotence, and the things a man produces are his own; his to make terms upon which he will part with them; his to put a price upon—not to harm the world, not to starve the world, but to secure his own, and bring back to the farm his boys and girls from the doubtful hand to mouth, and day to day life of the cities, and thus create a new sun of rural prosperity to dispel the shadow of land monopoly. This is the problem the farmer must solve, and he now knows how to do it. God help him to be wise and brave to fight one more battle for humanity and civilization.

## ALL FAVOR BETTER PRICES

The fight that Up-to-Date Farming is making for better prices is evidently nearing victory. The live stock market has been thought to be the one most difficult to control, but recent events prove that it may be controlled, and also that leading factors in the market favor our contention, and will render all possible aid in securing for stockmen better and steadier prices. We have from time to time published strong expressions of men of influence on the ranches and in the stockraising centers, and also from men of power on the Boards of Trade, and from leading trade journals, all favoring the same thing—such control of stock shipments as shall each day meet the day's demands and no more.

We clip the following published as a warning in an article under the head of "General Advice to Shippers," from the Indianapolis Live Stock Journal:

"The marketing of both cattle and hogs should be restricted as much as possible so that there will be an opportunity to clean up the stale supply."

Such warning is constantly going out from the market centers, and it is being received with thoughtful consideration by stock raisers everywhere. It will lead to controlled marketing. And why not? Such marketing is entirely in the interest of the most important elements of this great business. The stock raiser cannot live without it. He must have remunerative prices or go out of business. One of the most valuable reports of the United States Bureau of Animal Industry very well says:

"One of the first questions to be considered by a man who is to embark in stock raising of any kind is the markets for his surplus. This question is first because it is the principal one and all important."

So clearly is this the truth that no argument could make it clearer or stronger. Hence, the stockman, already impressed with the necessity, can be relied upon to throw their great power to the support of the movement.

The commission men comprise the next most powerful factor in the solution of the problem; and they have already given unmistakable expression in favor of such marketing as will make gorges and gluts impossible. Instead of aiding their business, these stagnation periods

are more like drifts clogging a stream. The commission men, even from a selfish standpoint, are friendly to remunerative prices to the growers. Their pay comes in the form of commissions, of percentage on the amount of sales; and, of course, the greater the amount of sales, the greater their reward. For instance, a 1,000-pound steer at 4 cents is worth \$40, and the commission at 5 per cent. is \$2. The same steer at 6 cents would bring \$60, and the commission would be \$3—a dollar's difference to the commission man in favor of the better price, and \$19 difference to the raiser or shipper.

The local buyer is another factory in this problem that may well be considered, and his every interest is best served by the better price and steadier market. With the better price his margin of profit is invariably wider, his business more pleasant, and his trade more certain—the danger of his calculations being at fault sink to the minimum. Indeed, with a steady market his calculations need never fail.

The element most fearful of being hurt in this matter is the city consumer, but even his fears are groundless. He already pays prices, which, as Secretary Wilson, of the Department of Agriculture, very justly declares, are too high when compared with prices paid for live stock. It is entirely reasonable, therefore, to assume, in fact it approaches more nearly a certainty than an assumption, that these great factors in the problem of live stock and beef supplies, thus uniting in equity for their mutual interest, will find some means of lopping off the excessive profits laid on between the slaughter house and the consumers' tables, and secure to the consumers better meat than they now receive, and at more reasonable prices than they now pay. We use these terms advisedly, for controlled marketing will often keep the stock longer on the farms and in the feed lots and put them on the market in a better finished condition; and the lower prices to consumers, made by a reduction of profits between commission men and consumers, appeals to the selfish interests of all these elements, as such reduction of prices by that means takes nothing from these parties, but will increase consumption and multiply trade, thus enlarging the business of raiser, shipper, transportation company and commission man.

The consumer has no cause for alarm, but much reason to rejoice. Controlled marketing is coming, and will benefit every legitimate interest connected with this great business.

Near Williamsport, Ind., July 1, '04.

Dear Mr. Everitt:—

Children all home now, and everybody happy! What a blessing the boys and girls are anyway! Streaks of sunshine, everyone of them, shining right down on this poor old earth that would be a desert without them! The night after they came, we didn't do much but let them talk. Seemed as if they had more to tell than there was time for. Mother and I just sat there and let them run, answering the questions the best we could and feeling our old hearts getting tender and tender all the time, till by and by we slipped off to bed and left them roaming about the house, doing the land knows what, but having a good time everywhere.

I tell you, Mr. Everitt, we don't half appreciate the boys and girls. I remember reading once an article telling how much it cost to bring up a boy. So much for his clothes. So much for his books. So much for his board and schooling and so on. It makes me mad to think of it now. I said then that the man that would figure it out in cold blood just what he had to pay out in cash for his boys and girls was no better than a heathen, and he isn't. Count up the meals of victuals a boy eats! Charge him with all the boots and shoes he wears! Make him feel that all he is good for anyway is to eat and make trouble! If you can think of any better way to send a boy away from home the minute he can get loose, I don't know what it could be. Our children have done more or us than we ever did or them, enough sight. They have kept us from being all covered over with moss. Our hearts are a great deal fresher and brighter than they would have been without Ben and John and Mary. Chipper and the little sweetheart are very dear to us, too, and they never shall be sorry they came to Four-Leaf Clover Farm to live if we can help it.

But you will want to know something about how the farm work is coming on, and so I will start in new. We shall begin cutting the wheat next week. Looks the best it ever did. In the spring I thought perhaps I would not be able to say this. For a little while it did seem as if the crop would be lighter than usual, but the snow lay on our piece well. We happened to have it down where the strip of woods sheltered a good deal and the snow did not blow off as it might otherwise. The boys got into their overalls the very next day after they got home and pulled the binder out and looked it over. Ben found one or two little things that needed replacing, and when he goes to town to-morrow with the load of early potatoes he intends to get new parts. We think it pays to find out about such things a little before we hitch on the machine for business. We never like to drive off to town on purpose to get some little job done that will delay business and keep everybody at a standstill.

Speaking of the early potatoes, I must say that they have proved a regular bonanza this year. The old ones were so cleaned out of the country early that when the new ones came folks just grabbed for them. We have sold them all as fast as we could get them to market and for a tiptop price, too. Lucky we had a good lot of them this time. But I can't help thinking of the folks that have to buy at these high prices. There is always that side to look at, you know. We must not think always of self. It is nice to get a big price for what we have worked hard to raise; but what about the other fellow who must buy? So I say, we farmers should be content with a fair return for our crops. Selfishness never made a man better. The world might have been a great ways ahead of where it is now if folks had not worked quite so hard for themselves and done a little more for their neighbors. I don't say it to boast at all, but I have before now shaded my price on potatoes and garden stuff to those that seemed to be having a hard tussle with the world. I don't believe we will ever be any the poorer for doing things like that. Do you? That's why I would like to get clear of all these great grabs, trusts they call them; but really they are nothing but monstrous grappling hooks to haul in the millions out of the homes and lives of the poor.

And that is what I shall advocate in regard to our new venture, the Elevator Company. Right is right. There is nothing wrong in holding wheat or anything else until it brings the man who grows it a fair price for the work of his hands; but do not let us forget the other man who must buy our grain. Think of him as well as of ourselves, and I think you will find that is the way most farmers look at the matter. The trouble has always been that the men who have no interest in either the farmer who raises the grain or the poor man who eats it have set the price and made the world come to their figures. What for? Just so they might rake in a few more millions. I tell you, the farmers of this country are getting terribly sick of that. But we are getting ahead some nowdays. Why, this summer it has done my soul good to hear the grocers and other merchants ask when we drive into town to sell a load of stuff, "what do you ask?" Never been that way before. We have had to ask "what will you give?" It is a good sign when the farmers set

the price. It looks as if at last they were in a fair way to receive pay for what they have done.

The hay crop is about two-thirds in the barn. We cut a good lot of it, too. I used to think that the later we could put off haying the more profitable it would be. And I suppose now, that by letting the grass stand till it is about as ripe as it can be and not shell the seed, it will weigh more than if cut earlier; but we do not intend to sell any this year, and we are sure that if cut early it will do the stock more good than if put in later. I took a little plot of grass this year as a test for my own satisfaction. Half of it I cut when the head was just in the blossom. This I weighed as carefully as I could and put in the mow. The rest I am leaving to ripen up a little. I can see already that a change is coming in the stalks. They are turning harder and there is not as much juice in them. This I take it means that the sugar is changing into woody substance. It does not seem as if the stock could get much goodness from the harder, drier stalks as they could from the tenderer hay. The boys have rushed the work along splendidly since they began. For a few days they were a little sore, their muscles not being quite as hard as when they were working on the farm. John has, however, taken exercise every day in the gymnasium at school. That is all right. But I am glad to say that he never has had the football fever. I don't think any the more of young men who go into that. I suppose I might be called an old fogey in this respect. All right. I would rather it would be so than to say a word which would encourage one of my boys, or any body's boy to go into a thing that might cost him his life or maim him for all time.

I hear wife calling for supper, now. We always make it a point to get there just about as quick as we can when mother calls, for we know she has something good on hand and we don't want to keep her waiting! Just now it is strawberry shortcake; and the berries came from our own garden, too. Why not?

With much love and best wishes, I am,

Yours sincerely,

DAVID DOBETTER.

## GREAT MEETING IN WISCONSIN.

The Daily Republic, of Baraboo, Wis., gives an extended account of a great meeting of the A. S. of E. recently held in that locality, from which we take the following:

The enthusiasm displayed among the farmers and others who have recently taken part in the new movement is an evidence that the American Society of Equity has not only come to stay, but will rescue the farmers and consumers from the clutches of the gamblers who have for years controlled the market for farm products to the extent of reducing the price as it comes from the field and in many instances doubling it when the article is placed on the market for the consumer. Farmers all over the country have realized for a long time that the day must come when they can combat the existing conditions and make it possible for them to name the price for their products instead of having it made by others if this industry is to have any standing in the world. For many years the price of all the articles they buy has been made for them and when they have anything to sell they have nothing to say about the price and the cost of the production is never considered. They find it impossible to produce at the same price on a farm worth \$100 an acre as they could when land was worth only one-fourth that amount. They realize that farming is drifting, or rather must drift, to a business basis or the farmer must finally succumb.

Among the speakers was Daniel Ruggles, a Baraboo lawyer, who among other excellent things said:

"The time has come when all must settle down and become a permanent fixture in order to succeed. This means that farming must become the business of the farmer rather than mere land development for the purpose of selling at a higher price. To make farming a paying business the method must be changed so that the farmer will receive the true value for his products."

General Organizer Sherman, of Indiana, was the principal speaker and made one of his usual eloquent appeals for farm organization, and for placing the business of the farmer on a basis corresponding with that of all other business, when the farmer shall have a right to put a price upon what he makes. The interest in the subject was very great, and the farmers are determined to better their condition.

According to figures printed in German papers, the appropriations by governments for the aid of agriculture in proportion to cultivated area, compares as follows: United States 3, Russia 8, France 20, Austria 30. That is the United States government spends \$3.00 for the benefit of agriculture, while Austria spends \$30.00.

## CHAPTER IV.

But why it may be asked, should the speculators and the moneyed men, the bankers, manufacturers, railroad people, etc., object to the organization of the farmers? There are many reasons, each one of which, however, is an argument in favor of the organization when considered from the farmer's point of view. Suppose some fall Mr. Hill or Mr. Leeds were to back his cars up into the wheat country, after having made every arrangement to transport the crop, and should find that there was no wheat to carry; and suppose the railroad president should find that the farmers had all resolved that they would not let go of their wheat for less than a dollar a bushel. If this resolution were backed by a national organization, the consequences for the railroad and the consumers would not be pleasant. The effect on stocks would be disastrous, and a panic would surely follow. That is, unless concessions were made to the farmer. And as the capitalists and speculators think they don't want to make concessions to the farmer, they would intensely dislike being put in a position where they would have to make them or suffer ruin.

Every one that has a grip on the farmer, who sells to the farmer at exorbitant prices—all would find that their grip was broken, and that on the contrary the farmer had the upper hand.

The mere shifting of power from the few to the many would be enough to rouse opposition on the part of the few. Oligarchies always hate democracies. The four or five men who now fix railroad freights throughout the country would naturally feel that it was an impertinence for the 1,000,000 farmers to insist on being heard on the subject. Those few men may combine to regulate the commerce of a continent, but the farmers may not. They think control by the few is right and proper, but control by the many is a bad thing. The banker might find that with such a combination the farmers would have to borrow less money, and that they would have more to say about the rate of interest and the security than they do now. If, when the representatives of the organized manufacturers went to Washington to demand favors at the expense of the people, they found themselves confronted by a lobby of able and intelligent men representing the farmers' organization, the job of pushing through tariffs might be more arduous than it is now. Some of the beggars for tariff taxes might actually be called on to show why they needed them and ought to have them.

As for the speculators, they would not find life wholly pleasant under the proposed conditions. When, to return to Mr. Norris's book, Curtis Jadwin tried to corner the wheat supply, he was beaten by the new crop which came pouring in. Here is how it happened:

"And the avalanche, the undyked ocean of the wheat, leaping to the lash of the hurricane, struck him fairly in the face. He heard it now; he heard nothing else. The wheat had broken from his control. For months he had, by the might of his single arm, held it back; but now it rose like the upbuilding of a colossal billow. It towered, hung, poised for an instant, and then with a thunder as of the grind and crash of chaotic worlds, broke upon him, burst through the pit and raced past him, on and on to the eastward and to the hungry nations."

What if the farmers had controlled that "undyked ocean of the wheat," and had refused to let any of the ocean get through the dyke? The price would not have broken, and the corner would have smashed Jadwin. And what right had he to control the price of wheat for months? Neither he nor any of his tribe could do it if the farmers would assert their power. It would be the same way with the stock market. As it is now, a few pirates get hold of some great granger road, "merge" it with another, buy the roads by paying for them out of their own treasuries, stock and bond them out of all proportion to their real value, issue "short-time" notes, and then expect them to pay dividends and interest. So rates must go up—and they do go up. They combine to regulate rates, discriminate against non-competing points, and it all comes out of the farmer. The legitimate value of the shares depends on the amount of business that the roads do, and on the price of the stuff they haul. The farmers, I estimate, are responsible for three-fourths of the tonnage hauled by the railroads and stored in warehouses, yet I venture the assertion that not one board of railroad and warehouse commissions in all the States has a farmer representative. It is on this basis that the speculation proceeds. Who would attempt to bear the market if he knew

that the farmers' combination might refuse to send any farm products to market? The value of the shares would, as now, depend on the earning capacity of the properties, but the farmers would have a good deal to say about what that earning capacity should be. And this would be a great dampener on the speculative spirit. Grain and stock gambling would be much less popular than they are now. There would be a new and controlling element in the problem. And it would operate for the good of all. The case of the manufacturer would be much the same. He is as we all, interested in selling dear and buying cheap. Backed by the government, and assisted by his combination, he has it in his power to make, or at least largely to influence prices. With those to whom he sells and from whom he buys unorganized, he occupies an exceedingly strong position. It would be less strong were his customers, the farmers, also organized. They might still have to pay the manufacturers' price, but they could, if organized, sell at their own price. The manufacturer, as do all the rest, "looks with distrust" on any movement looking to an organization of the farmers. This is natural, because all former farmer organizations were directed to pull the other person's business down to a level with unsatisfactory agriculture. But it is different in this movement. Now it is proposed to build agriculture up to a level with the best of them. Therefore, manufacturers, merchants, bankers, etc., are needlessly alarmed. In fact, when the plan to make the Third Power a real power is understood they will approve and help it.

Nor can the political phase of the question be disregarded. The tremendous power which organization would clothe the farmers with could not be ignored by the government. If the combined agricultural interests of the country should ask the men at Washington to take off a protective duty—even though it were for the special benefit of Mr. Morgan's steel trust—that duty would come off. If the demand were made for special legislation in the interest of the farmer or the customer of his products, even though it might injure the manufacturer, or middleman, that demand would be complied with. Were the farmers organized, some plan would be found for checking the aggressions and extortions of the railroad and food trusts. All this is perfectly well understood by the minority that now controls the government. Should the farmers think it worth while to make any demands for legislation it will be more in the interest of the consumers than from any necessity on their part. When the farmers co-operate and name prices on their own products they will be so strong in their fundamental right to price our food and clothing products which the balance of the world must have that they can meet all aggressions by others. What matters it if the railroad charges fifty cents a bushel for transporting grain to market? The farmers' price of this bushel of grain—when the farmers represent the Third Power—was made out on the farm before the transportation company touched it. Therefore, I say, if the Third Power concerns itself about legislation, taxes, transportations, etc., it will be in the interest of the consumers, and to promote the maximum consumption by preventing the railroads and middlemen from imposing unfair rates. On the whole it is surprising that any person should oppose the organization of the farmers, and sneer at every scheme looking toward that end.

But there is even more in it than this. If there were resistance on the part of any class to the farmers' demand for fair price for his products, and if the farmer should refuse to sell them for less, it is evident that there would be panic and starvation. The farmer can live on what he raises, and can even, as he once did, make his own clothes. But the men in the banks, the offices and the mills must have bread, vegetables, fruit and meat. Suppose they could not get them. Pushing the case to this last extremity you can easily appreciate the extent of the farmer's power the absolute nature of his independence. God rules in heaven, and the farmers own the earth. All others are suspended somewhere between and are absolutely dependent on the farmers in this world, as on God in the next. The farmer is, or may be, if he chooses, wholly self-supporting. No other class of the community can be, for all men rely, and must rely, on the farmer to keep them alive. If he should decline to market, on the ground that he was not being paid sufficiently for his service, a crisis would be presented with which the government would have to concern itself. Yet all the while the farmers would be doing nothing that the miners and manufacturers are not doing every day. Indeed, they would be doing only what other men are now doing with the farmer's grain, meat and produce. The only difference is, that the farmer's corner would be more complete and his control of output and prices, being applied to commodities that are absolute essentials, would be more disastrous in its results. But what would or could the government do? It could hardly confiscate farm products, or compel the farmer to sell

them at prices unsatisfactory to himself. Surely it could not compel those men who failed or refused to put in crops lest there should be overproduction, to cultivate their farms against their will.

The arbitration question here presented, if it is a question at all, would be one far more difficult than that between the anthracite miners and operators which President Roosevelt arranged for and practically compelled. The government could not destroy the farmers' organization and continue to permit capitalists and workmen to organize.

The difficulty would in all probability be adjusted either by fair compromise or by a complete yielding to the demands of the farmers. But the problem would not be solved. On the contrary, the government would have had such a warning as would drive it into the adoption of a just policy. Theoretically we have the most just government in the world. The preamble of the constitution reads thus:

"We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this constitution for the United States of America."

"To establish justice"—this is one of the purposes which our forefathers had in view in adopting the constitution. If it is found that justice has not been established, it must be either that the constitution is defective, or else that we have been false to its principles. It makes no difference which of these alternatives be true, the fact remains that our government at the present time is not conducted in accordance with justice and equity. It has too many favorites, and among those favorites the farmer is not found. He is taxed, not only for the support of the government, but for the benefit of others of his fellow citizens, who are not taxed for his benefit. As taxes are levied on land and as land cannot be hidden from the taxgatherers, it follows that he pays proportionately more taxes than do those whose wealth is in money or stocks or bonds, which can be hidden. Under our constitution has grown up a system of laws which favor the corporations and trusts at the expense of the individual. And it has come to pass that our government is weaker than its citizens. The combination of politicians, speculators and corporations controls the government—nay, is the government.

The powerlessness of the central authority would be brought home to all men in such a struggle as that between those wanting to buy farm products (food and clothing) and those refusing to sell them. The people would demand that their government should at least be as strong as its most powerful citizens, or as the most powerful combination of citizens. Then it would be able to do equal justice to all. And we should all realize that justice pays—indeed that it is essential to the perpetuity of our institutions. So, without doing one illegal thing, or making a single demand on the government, the farmers could, were they organized, work such a radical and wholesome reform as would transform our whole social order. All the people—and that is what the government ought to be, and in theory is—might conclude to fix a minimum price for the necessities of life, and say that no one should be compelled to sell for less than that price, or that, if the crisis were grave, any one who offered that price should get the commodities. At least the government would realize that it could not afford to be unjust to the farmers, the most numerous class in the country. If we are to have a class government at all, and this ought not to be, we should have a government of the largest and most influential class. If we are to have favoritism, it should be favoritism, not for the minority, but for the majority. If it be said that the scheme involves socialism, the answer is that socialism for the many would be better than socialism for the few. If the government helps the manufacturer to make prices which are often exorbitant—as it does by imposing tariff taxes—it surely might help the farmer make prices that are fair and just. So the result of the effort of the farmers to organize to control their own business might easily have the effect of forcing reforms all along the line, and I predict it will have. Hence, hasten the farmers' organization—the Third Power—the equitable government.

## CHAPTER V.

It has been said, and it is not surprising, that those who are now more or less in partnership with the government should oppose and sneer at this effort to organize the farmers. And yet there is no good or honest reason why they should not welcome it and co-operate with it. For its purpose is not to help any one class at the expense of the others, but by helping one class, which is now neglected, to help all and to improve the general social and business conditions. It has been said that the country could not prosper unless the farmers prosper, and that the farmers could not prosper without benefiting all other classes. Neither of the statements can be denied or doubted. So the real reason why this movement is opposed is that the men who oppose it are getting special privileges from the government, and they know that these would be taken from them when the Third Power compelled an equitable government. The fact is, not that the farmers would be unjust, but that they would insist on equal and exact justice to all. And justice is the last thing that the corporation trust magnates, graft gatherers and the tariff-pampered manufac-

turers want under the present system. Many men in this country at the present time thrive on inequity, and so they do not want the present arrangement disturbed.

The man who both buys and sells grain or other produce at prices made, not by the owners, but by himself, knows well enough that he would have no just cause for complaint if the farmer made the prices on the farm. But he does not want this, because he thinks it would interfere with his own game, and would curtail or destroy his profits. But he may be mistaken, as a certain profit would be better than an uncertain one. So the protected manufacturer, who buys in a free trade market and sells in a protected one, thinks he does not care to have the farmer share in that advantage. To his mind there is nothing wrong in compelling the farmer to pay tariff-raised prices on all that he uses, and to sell his products at free trade prices and in competition with the whole world. The banker favors co-operation between himself and the farmer which shall enable the banker to fix the rate of interest which the farmer shall pay, but he thinks he would not like to have the farmers co-operate with one another, so that they might become their own bankers or put themselves in condition that they don't need to borrow. The combined railroads, which, subject to the slight restraint (?) imposed by the Interstate Commerce Commission, fix the rates on farm produce, will no doubt object to a combination among the farmers to secure equitable rates, a fair price for their crops and regulate their movement to market. Even the trade unions, which vociferously and often violently assert the right of their members to say what wages they shall be paid, and who subject the country to great inconvenience and even suffering in the struggle to carry their point, might be disposed to deny the farmers the right to combine for their own protection and independence, on the ground that it might advance the price of living. Always this desire to secure an unfair advantage, or an advantage at the expense of some one else, develops opposition to an organization among the farmers.

But, as has been said, there is no good and honest ground for any such objection. For the farmers propose to demand nothing that is unfair, unjust or dishonorable, nothing that it would not benefit all classes for them to have. To illustrate: If farmers organize and put profitable prices on their crops, they will have more money to spend for labor and every necessary and many of the luxuries of life. It is only the profit that may safely be spent. Therefore, more profit—margin—to the farmers will benefit the country merchant, bankers, professional men, etc. They intend to put such a price on their products that they can hire the best help in the country. Thus the demand for union labor will be increased by millions. The illustrations might be carried out indefinitely; but what the use? If unfair advantages are cut off, or other classes built up to a level, though the class enjoying them would lose nothing to which it was entitled, and everybody would be benefited. This government cannot continue half just and half unjust any more than it could be half slave and half free. Indeed, injustice involves slavery, for the man who is the victim of injustice is the slave of him who profits by it. Thus the question is one of emancipation quite as much as it was forty years ago. So it is proposed to raise up this Third Power as the defender and champion of liberty. The man who is forced to pay one dollar more for an article than it is fairly worth is to the extent of that dollar a slave. The toil represented in that extra dollar is as truly slave labor as was the toil of the black man forty years ago, or that of the miserable peon in the Alabama cotton fields at the present time. And how can the American farmer, who is grandiloquently spoken of by campaign orators as the freest man on earth, be free at all, in any sense, when he is compelled to market the fruits of his hard labor at prices made by some one else, who frequently enjoys, at the hands of the government, an advantage that the farmer does not enjoy? Many fantastic schemes have been devised for the emancipation of the American farmer, but they have all had one fundamental defect in that they looked in the first instance to the government instead of to the farmer himself. No people was ever freed except by its own exertions.

"Who would be free themselves must strike the blow."

So this appeal is not to the government, not to the politicians, not even to the law, but to the farmers themselves. If they show themselves worthy of the blessings which they crave, they can get them. The demand is not for government warehouses, free silver, unlimited issues of paper money, loans from the treasury on crops or land, duties on farm products, or even for the better regulation of trusts and corporations, but simply for the use of the power which the farmers have to help themselves. The question is whether they are patriotic enough, intelligent enough, self-restrained enough, determined enough, and wisely selfish enough, simply to put out their hands and pluck the fruit which hangs within easy reach of their grasp. They, in the beginning at least, need no help from any one. Governments are like God in one particular, in that they help those who help themselves. When people generally, and the politicians in particular, see that the farmers are in earnest about this business they will promptly co-operate. The farmers will find that they have as many real friends as they now have pre-

(Continued on page 14.)

# THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS  
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

This is the co-operative farmers' own department. It is the desire to make it the life and strength of the Local Union. Every member is a welcome contributor, and every communication will have courteous consideration. Address JOHN P. STELLER, care Up-to-Date Farming, Indianapolis.

More than politics should be the A. S. of E. to you. More than the voting place your Local Union. Here your troubles will end and your triumphs begin. All credit to the Local Union. They are your forts—your strength. Stand by them as you would by your guns within the real fort to repel the enemy.

## GO FORTH FOR JUSTICE

Aim: Stand up for Jesus.  
Go forth! Go forth for justice!  
Ye farmers at the call;  
Raise up the righteous standard,  
Of Equity for all,  
Till in the happy future,  
It waves on every hand,  
Glad tokens that all farmers  
Have joined our mighty band.

Go forth! Go forth for justice!  
Go forth in numbers strong!  
On to the bitter conflict,  
Against the power of wrong.  
Ye that are farmers follow  
The leadership of right,  
And ye shall win the battle  
Against the foe with might.

Go forth! Go forth for justice!  
For Equity and right;  
As victor in the battle  
Step forth from dark to light.  
Though all the foe is round you,  
Ye must not be afraid,  
For Equity is ready,  
To come at once to aid.

Go forth! Go forth for justice!  
A full ten million strong,  
Ye farmers of the nation,  
A happy hopeful throng.  
And Equity will lead you,  
Unto the heights so bright,  
Where like a gracious vision  
Fair Justice fills your sight.

## Picnic season.

Farmers' rest days and family outings.  
Get busy enjoying yourselves and talking prices of the maturing crops.

Be sociable, one with another. Neighborhood picnics are great fraternizers.

How about those big conventions of farmers? Wouldn't they be regular earthquakes for the "bills" and "bears" of speculation on the boards of trade?

Farmers are busy, but they should "not forsake the assembling of themselves together," as the manner of some is.

The farmers need speakers. Every local union should be a school of oratory.

The negro farmers of Georgia are organizing to improve their conditions. All right. There is no color line in the necessity for agricultural improvement.

The Lansing, Mich., Journal says the A. S. of E. of Perry and Morrice held a picnic Saturday in a grove just south of Perry. A large crowd attended and the day was pleasantly spent. A new local is to be organized at Lake Center.

The Detroit, Mich., Times speaks of a grand rally of the A. S. of E., at which J. P. Lockwood, of Howell, Pat Hankerd, of Pleasant Lake, and George G. Winans spoke. About a thousand persons were present and 20 new members were added to the society, about all that were there who were not already members.

I am pleased to note that the A. S. of E. and the F. M. B. A. are working together in perfect harmony, and co-operating in the matter of controlled marketing and price making. Up-to-Date Farming is glad to aid that and all other farm organizations in the splendid work that lies before them.

Luke Finn, a member of Shady Grove Lodge, F. M. B. A., Hamilton county, Ill., was killed by lightning a few days ago. The order paid a funeral benefit of \$100.

Victoria Union No. 1, of Kentucky, favors an immediate price for tobacco that growers may keep in view as they make their crops. The tobacco interest is aroused and satisfactory results will follow.

Hon. T. S. Petit, of Kentucky, addressed an immense meeting of farmers in that State July 2d in the interest of the A. S. of E.

Schoolcraft local union No. 1 A. S. of E. will meet at Terry school house Saturday, July 16 at 2 P. M. A. J. Andrews, Pres.

Kenmare L. U. No. 3 was organized at Kenmare, N. Dak., July 2 with 58 charter members. They expect to raise the number to 100 at the next meeting.

Kenmare L. U. No. 2 was recently organized by B. A. Enochson at Kenmare, N. K. Eleven charter members were reported.

Deputy President Chas. H. Olive, of Reno, N. Dak., reported the organization of a local union with seventeen charter members at Bryant on June 30th. Also a number of members to the National Union.

Bro. Thomas Connelly organized a local union with ten charter members at Broadview, N. Dak., on June 25th.

A nice local union was recently organized at Oakville, Ky. Ten charter members and favorable prospects for double that number at the next meeting.

Fordsville, L. U. No. 2, Fordsville, Ky., recently added eleven members to its number.

Deputy F. S. Noland organized Woodward L. U. No. 1 at Woodward, Iowa, on June 25th with 10 charter members.

## AT DEGONIA ON THE FOURTH.

The picnic at Degonia, Ind., on the Fourth was a very successful one. It was held in a beautiful grove near the celebrated spring so well known for its medicinal properties. The attendance was large, and the people were patient, sociable and attentive to the speaking. Sentiment in favor of farm organization was universal. E. D. Gee, of Tennyson, was there and sang some of his jolly songs, and Mr. Bullock made a brief but entertaining talk. The principal address was delivered by John P. Steller, of Up-to-Date Farming, and it was well received, though a threatened wind and thunder storm in the evening interfered somewhat with its close. Wilson, Buehler, Taylor, Bullock and others are strong men in that locality, and are faithful to the A. S. of E.

## WOMEN IN THE A. S. OF E.

We note that the wives and daughters of farmers do not take the interest in the local union meetings that they should. We hope for a change in this direction soon. The ladies should urge the men to organize and then should encourage and help them by attending the meetings. The ladies can help make the meetings interesting. In fact, the local union should be the central and brightest social spot in the community. Don't fall into an error and think because the A. S. of E. is non-secret there is nothing to encourage meetings. You must become impressed with the idea that this is a business organization and farmers must learn that it pays to meet together for business reasons. When you once thoroughly understand this idea and are getting part of the benefits this society will give you, then we believe you will prize your local union meetings more than your secret order meetings. Ladies, help the cause by your presence and work.

## ORDINARY CONDITIONS POINT TO BETTER PRICES.

A short time ago the Drovers' Journal published an interview with Hon. L. H. Kerrick, in which that gentleman took the position that those who held their cattle would very likely get better prices than were then offered. Referring to that interview, Mr. Kerrick now says:

"The thing seems to be working out as I predicted. If there are any considerable number of fat beefs in the United States at this time, I do not know where they are. And since many have not been put on feed during the last few months, I do not see where any large number are to come from during the next few months, and will confidently expect higher prices than are even prevailing now for good dry fed beefs. If we could certainly predict a continuance of the good demand which there is now, it would be entirely safe to count on very stiff prices for corn fed beefs for many months to come."

It is with cattle, hogs and sheep, just as it is with tobacco, cotton, wheat and other products; there never has been so much that any has had to be destroyed. All has gone into consumption practically during the year of its production, and such will continue to be the case. Our contention for controlled marketing is simply that the producer should hold the temporary surplus and secure to himself a just reward, instead of throwing it upon the market as he gathers it from his fields and pastures, thus giving to the manipulating non-producer the profit derived from holding such surplus until consumption requires it—a profit which ought to remain upon the farms for the benefit of the country.

It will require a more or less concerted action to bring this thing about, but prices once established by the producers they will be easily maintained and there will be no bolting of the demand once equity of values is established.

## OUR FOREIGN MARKETS LOST BY LOW PRICES

[From First Page]

United exports of wheat to principal importing countries for the last five fiscal years:

	1898. bu.	1899. bu.	1900. bu.	1901. bu.	1902. bu.
United Kingdom .....	80,163,805	74,613,304	62,774,870	78,574,752	77,544,418
Germany .....	3,218,401	10,311,450	9,065,713	10,267,622	19,725,674
Netherlands .....	7,153,767	18,455,133	9,625,793	12,082,258	16,970,035
France .....	30,041,289	2,232,190	1,237,247	1,139,525	3,324,015
Italy .....	875,495	894,071	461,533	925,946	470,171
Belgium .....	11,109,841	15,718,879	8,475,650	11,024,534	15,662,238

As the foregoing figures represent the American exports of wheat to the principal wheat importing countries of the world, their proper analysis is of the utmost importance.

From them it will be seen that of all the principal items of American exports of wheat, this to France has decreased the most considerably; from over thirty million bushels in 1898 to little over three million bushels in 1902. It is most remarkable in this connection that the American exports of wheat to France have reached such a high level as to become second only to those of England in the very year of a short suspension of French import duties of wheat. As soon as the French duty on imported wheat had been reimposed, July 1st, 1898, the imports of wheat from the United States abruptly fell off from 30,041,289 for the said year, to 2,232,190 for the fiscal year 1899. The falling off of about 70.4 per cent. is all the more noteworthy when the French persistence of the importations of foreign wheat is borne in mind.

Although the imports of American wheat into Germany are increasing, the increase is just a part of a big pool represented by a great general increase in Germany's annual imports of foreign wheat to offset very large exports of native wheat. Germany pays since 1898 a rebate of \$1.82 per quarter (22c per bushel) on all exports of wheat, thus directly encouraging and stimulating the imports of foreign wheat merely for substitution for the native stocks. Moreover, the German millers, in order to meet the demand for fine flour, are using a large percentage of dry foreign wheat, whose equivalent, in soft native wheat, thus swells the exports of the latter to a considerable volume. So long as the standard of living in Germany continues to rise, an increasing proportion of soft native wheat will have to be exported to the countries where the taste of the consumer is not too fastidious, the imports of foreign wheat will retain their great volume. But as soon as the economic factors, of more or less transitory nature, cease to exist, the imports of foreign wheat into Germany will undoubtedly become stationary. Thus the somewhat transitory and unstable nature of the increase of imports of American wheat into the German Empire is apparent. It must be taken into consideration, also, that, until the year 1896, Germany was a steady importer of wheat flour, and, though in late years the trade decreased considerably, it may increase again at any moment. Therefore, in order to arrive at the proper conclusions concerning the rise of exportations of American wheat to Germany, the annual imports of the grain into the German Empire ought to be reduced by the amount of German exports of flour made of the American wheat, as well as by the exports of German wheat substituted by the imported American grain. Then it could be seen that the net imports of the American wheat in Germany for home consumption and not for rendering exports of native wheat and flour possible, are neither so large, nor are they increasing. It is enough to say that the net imports of wheat into Germany for the last cereal year (ended July 1st, 1903,) amounted fully to 65,796,000 bushels from all countries, while the American exports of wheat to Germany (Statistisches Jahrbuch fur das Deutsche Reich 1902) amounted just to 19,715,674 bushels.

The exports of American wheat to Belgium are increasing so significantly that they might be considered as almost stationary. Meanwhile Antwerp, its capital, is the greatest importing city of wheat in Europe, and of all this great amount of wheat imported into this little country (over 56,000,000 bushels last year), it retains for home consumption nearly seven bushels per capita; that is more than any other nation in the world. It is very significant that during the last cereal year (ending 31st July), the little kingdom of Roumania exported into Belgium 19,900,000 bushels of wheat, while the United States, which many years ago had proudly assumed the capability to feed the world, exported therein just 14,626,800 bushels, only 73.4 per cent. of the Roumanian imports.

While the Netherlands present an almost unprecedented growth of trade in foreign grain within the past ten years, and the chief component of the Dutchman's bread is American flour, the United States holds quite secondary place among the sources from which the Dutch miller obtains his wheat. Though the foregoing exhibit of the United States exports of wheat to principal importing countries of the world shows a slight increase in exportations of American wheat to Netherlands, it appears at the same time that within the last cereal year (ending July 31st, 1903,) imports of the American wheat into Netherlands amounted to 12,064,400 bushels, while in the same season have been imported into that country: From Belgium, 18,404,000 bushels, and from Russia, 21,049,600 bushels, 73.2 per cent. more than from the United States. However, the most striking

illustration of the falling off of the exporting capability of the United States is presented through Italy. Though the consumption of wheat in Italy is undoubtedly increasing, and the size of the imports of foreign wheat is growing steadily, within the last twenty years the importations of American wheat into Italy are relatively infinitesimal, as proven by the following statement compiled by us from several different statistical data:

Aggregate Imports. bus.	Imports from U. S. bus.
1898.....	875,495
1899.....	894,071
1900.....	461,533
1901.....	925,946
1902.....	470,171

The last cereal year (ended July 31st, 1903), is marked by a great increase in imports of foreign wheat into Italy, which amounted to 47,532,000 bushels. Of this amount 33,891,200 bushels were imported from Russia, 12,176,000 bushels from Roumania, and only 1,200,000 bushels from the United States. In other words, American imports of wheat into Italy during the last cereal year constituted just 9.8 per cent. of Roumanian imports, and only 3.5 per cent. of Russian imports.

The question naturally arises: "What has killed the United States grain export trade with France and other continental European countries?"

Some genial American gentlemen, who style themselves "experts" in the grain trade, venture to explain that the American home consumption has increased so rapidly that the home consumers overbid the foreign buyers. If such an "overbidding" of foreign consumers of cereals by domestic ones really exists, it certainly could and ought to be expressed in definite figures. There is one way to figure this thing. The Agriculture Department estimates that, of the 670,063,008 bushels of the wheat crop of 1902, 202,906,273 bushels were exported and consequently 467,156,735 were retained for home consumption. The crop of 1903 has been reported by the same department at 637,891,835 bushels. Taking the wheat and flour exports for nine months of the current fiscal year (July, 1903-March, 1904,) and adding to them the three last months of the year at the rate of the March shipments (last month reported), the year's exports from the last year's crops would foot up 137,900,000 bushels. Thus it appears that, while the crop of last year decreased only 32,241,173 bushels, the exports from the said year's crops decreased considerably more, namely 65,006,273 bushels. This means that home consumers retained for their own consumption about 33,000,000 bushels more this (fiscal) year than they did last (fiscal) year. Such an increase in consumption of wheat within twelve months would be so violent and so abnormal that the absurdity of the conclusion is self-evident.

There is, however, another way to figure it from the "Statistics of the Principal Crops" annually issued by the United States Department of Agriculture. We take the data relating to the production and exports of wheat for the last five fiscal years, fully obtainable, and figure out the amounts of wheat retained in the country, presumably for home consumption. The results are expressed in the following tabular statement:

Years.	Production. bus.	Exports. bus.	Retained in Country. bus.
1898 .....	675,148,705	222,618,420	452,530,285
1899 .....	547,303,846	186,096,762	361,207,084
1900 .....	522,229,505	215,990,073	306,239,432
1901 .....	748,460,218	234,772,516	513,687,702
1902 .....	670,063,008	202,906,273	467,156,735

It would appear from the foregoing statement that the consumption of wheat in the United States since the beginning of the 1898 fiscal year decreased 91,223,201 bushels in 1899, decreased again 54,967,652 bushels in 1900, increased 207,448,270 bushels in 1901, and decreased 46,530,967 bushels in 1902. Such an increase, and especially such decreases, in home consumption of wheat are so violent, and so utterly impossible, that they certainly do not represent the "overbidding" by domestic consumers of the foreign ones, and thus having nothing to do with the waning of the American grain trade since the 1898 fiscal year. That untenable assumption finds further and final rebuttal in the plain fact that, as the population of the United States, including immigration, increases annually about 2,000,000 persons, and as the estimated rate of annual per capita consumption of wheat in this country amounts at present to 4.87 bushels, the increase in consumption of wheat in the United States can not exceed 10,000,000 bushels each year.

If, then, it is not the increase in home consumption of wheat that causes the waning of the American grain trade, what is the cause of it?

Looking for an answer to this tremendously important question, to the mass

[Continued on Page 8]

# UP-TO-DATE FIFTY ANNUAL PRODUCING AND MARKETING

Find enclosed 50 cents for my renewal of Up-to-Date Farming. I joined the A. S. of B. in June, 1903, and I do not want to miss a single copy of the official paper of this great Society.  
JOHN F. BREWSTER  
Trempealeau Co., Wis.

"God bless the farm, the dear old farm,  
God bless its every rood,  
Where willing heart and sturdy arm  
Can earn an honest livelihood,  
Can, from the coarse and fertile soil,  
Win back a recompense for toil."  
—Selected.

Did you have a satisfactory harvest?

Are you dumping your grain and hay on the market for somebody else to hold and get the profit?

The hay market ought to be as easily controlled as the wheat market. There has never been a hay crop that has not been consumed, and if it were marketed so as to only meet the demand, steady prices would prevail the year around.

"What if we hold our hay?" Steady prices sure, provided enough be held to keep the market unsatisfied. It is not necessary to hold the entire crop; only enough to prevent a glut or gorge at any one time. It is the piling up of stuff beyond the capacity of consumption that makes the trouble.

The millets are coming more and more into favor. The South Dakota experiment station has been experimenting with millet seed as hog feed, and the seed, ground, showed results very nearly equal to those from wheat and barley. With unground seed best results were not obtained. That station thinks a Russian millet, black voromesh, known as hog millet, the best of all the millets. It matures in that climate in about ten weeks, stands drought well, and bears an abundance of seed, which, when ground, is a good feed for cattle, sheep or hogs.

Sorghum is now approaching maturity. The demand for good sorghum syrup has seldom been satisfied, and we believe a greater acreage of this crop could be grown profitably. But the fodder and seed, usually wasted on farms where sorghum is grown in a small way for syrup, should be saved. The fodder (blades) is difficult to cure, but when cured without molding, it is excellent feed, especially for sheep and cattle. The seed, threshed and cleaned, usually commands a fair price, and saved in the heads, is an excellent poultry feed. But the heads, like the blades, are very liable to mold, and must not be put away in bulk until well dried out.

Don't let any of the crops go to waste. This is one of Uncle Threadbare's greatest troubles. He often raises fair crops, but loses his labor in his belated and slovenly methods of harvesting.

Have an eye on the old timothy meadows. I have no doubt many of them have made unprofitable yields on account of the foul growths in them. Turn the old sod under, work it down, applying a liberal dressing of fertilizer. Do the seeding in September, and you will very likely have a nice, clean crop of hay the next year. The old, deep-seated idea that meadows should stand for years without re-seeding has cost many a farmer badly needed dollars.

Farmers should be very careful about investing in anything but farming. Corporations "to kill the trusts," to build elevators, to erect beet sugar factories, creameries, canning factories, etc., are easy schemes to put money in, but they are hard ones to get it out of.

"Twenty-fifth of July sow turnips wet or dry." We don't know about that, but it is wise to sow turnips along about that time. Farmers don't pay enough attention to root crops. Turnips may be made valuable in winter for cattle, sheep and hogs, and for lack of better accommodations, they may be pitted.

Wheat sowing is already occupying the thoughts of farmers in the wheat belt. Begin early to get the ground in condition, and don't waste your time, labor and seed by trying to grow wheat on land which will not produce it, and don't take all these risks by sowing inferior or doubtful seed. It takes good land and good seed to raise dollar wheat.

At first thought it seems hard to realize that we have lost our foreign trade because we have sold our products too low, but if you will read carefully the article on that subject in this issue, you will agree that the proposition is pretty clearly proven. It is not because consumers in foreign countries don't want our products at low prices, but because producers of like products in those countries have shut us out by tariff walls. This is something our statesmen have never discovered.

Begin pardon, but we wish once more to urge our friends to push that ten-cent

educational campaign. With this issue the time is just half out, and you know at least half of what those who invest in it will get. The three issues already out are worth more than a dime. But they are printed and we want them to be read. The three yet to come will be just as good, or better.

## MORE ABOUT ALFALFA.

Farmers all over the country are still struggling with alfalfa. The wonderful success of this plant in the West, and occasional successes elsewhere, lead farmers to disregard repeated failures and continue their experiments. We believe other crops may better engage attention in most localities east of Kansas, but there are some facts of science and history that seem to justify a hope that alfalfa may be successfully grown almost anywhere in the United States.

Some seventy years ago, a plant called Lucerne, the seed having been brought from Lucerne, Switzerland, was very successfully grown in portions of New York, and proved such a wonderful cropper and so valuable a forage plant, that the growers hesitated to tell all the truth about it. This was none other than alfalfa, the identical plant now grown with such wonderful success in the West. Why it was abandoned in the East does not appear.

The seed from which the western alfalfa came, seems to have been brought by the Spaniards, first to Chili and Peru, and thence to California, whence it has been slowly but steadily traveling eastward.

And science is not without encouragement to farmers of other portions of the country. It is clearly established that the growth and luxuriance of certain plants, of which alfalfa is one, depends upon bacteria that are found in vast numbers in nodules that form upon their roots. Without these the plants do no good; with them they flourish luxuriantly. To complicate this strange situation, almost every one of these different plants, clover, peas, etc., has a bacteria peculiarly its own, but it has been recently discovered that the bacteria of the sweet clover, *Melilotus alba*, and that of alfalfa are precisely the same. Sweet clover flourishes with wonderful luxuriance in many portions of Illinois, and elsewhere, being in many places looked upon as a troublesome weed. If scientific men are correct, alfalfa bacteria are abundant where sweet clover luxuriates, and alfalfa would grow there too.

## FORTUNES FOR OUR READERS!

The publishers of UP-TO-DATE FARMING have arranged for the announcement in their columns of an exciting, interesting, and profitable contest, wherein, by the display of skill, some of our readers can become rich men and women.

Through our Chicago representative we have arranged for the announcement of the Lion Coffee Contest, which appears elsewhere in this issue, in which details are given of how \$50,000 will be awarded to the public, and those readers of UP-TO-DATE FARMING that display the necessary amount of pains, patience, research, and skill may be made rich men and women.

## HOW \$50,000 IS TO BE GIVEN AWAY

The Lion Coffee people will give the public one or more votes in their contest, on mailing to them five lion heads taken from the Lion Coffee pages and a 2 cent stamp for each vote. There are two contests—one being based on the attendance July 4 next at the World's Fair, St. Louis, in which \$20,000 is to be awarded, the second contest is based on the popular vote for President (all candidates combined) to be cast on Nov. 8 next. On this contest \$20,000 will be awarded, and, in addition to this, a capital prize of \$5,000 will be given to the one who is nearest correct on both contests. This makes \$45,000, the other \$5,000 being reserved for the grocers' clerks that sell most Lion Coffee.

Some of this money has got to come to our readers. In the 4,279 cash prizes to be awarded there are \$5,000, \$2,500, \$1,000, and \$500 prizes and UP-TO-DATE would like to feel that it had been the cause of some one getting this money.

## VOTE EARLY AND OFTEN!

This advice has been administered many times. Here is a chance offered our readers not only to make a big sum of money, but the excitement and skill entailed should bring interest to all.

The Lion Coffee people are absolutely and perfectly responsible for many times the amount involved, and those who win can be sure that they will get their money promptly and honorably.

The awards are to be made by such honorable gentlemen as the Congressman from Toledo, the Postmaster of Toledo, and the President of the First National Bank of Toledo—all Government officials in high positions, who will not give their judgment until they have gone into the matter with care.

There is no limit placed on the number of times you may vote. All it takes is five lion heads off the Lion Coffee packages and a 2 cent stamp for one vote. When you write the Woolson Spice Co. at Toledo, O., mention that you are a reader of UP-TO-DATE FARMING. Now dig in and get rich.

## OUR FOREIGN MARKETS LOST—

(Continued From Page 7)

of official agricultural statistics of leading grain exporting, as well as grain importing countries, one can not but be amazed at the following facts:

While the acreage of wheat harvested in the United States during the last 33 years increased, the yields per acre remained almost stationary, the average prices of the grain on the farm decidedly decreased, as will be seen from the following tabular statement, compiled and composed by us:

(Primary figures extracted from the reports of bureau of statistics of the United States Department of Agriculture.)

Dec'd's.	Av. acreage harvested.	Av. yield per acre.	Av. price on farm.
	Acre.	Bush.	Cts. bu.
1870-79	25,187,000	12.4	104.9
1880-89	37,279,000	12.1	82.7
1890-99	38,100,000	13.2	65.4
1900-03	47,014,000	13.6	64.0

As showing the actual area, yield per acre, average price of, and importation of wheat in France during the same decades, we give the following as being the statement compiled and composed by us, the most complete official statistical data ever issued:

Decades.	Av. acreage harvested.	Av. yield per acre.	Av. price on the farm.	Av. Duty.
	Acre.	Bushels.	Cts. per bu.	
1870-79	16,973,000	16.5	152.0	3.2
1880-89	17,197,000	17.7	128.0	12.8
1890-99	16,851,574	18.7	87.7	32.3
1900-03	16,524,250	20.2	71.7	37.0

\*Including 2 months free in 1898.

The foregoing tabular statement, being a first one ever given by any writer on agricultural economics, is somewhat deficient just in one respect, namely: While yields per acre for the United States are given in preceding table in Winchester bushels, the same yields for France are given in this table in 60-pound bushels, which make them to appear considerably lower than they should be. Therefore a comparative statement of yields of wheat per acre in the United States and France in Winchester bushels for the last nine calendar years obtainable is given below:

	United States.	*France
1894	13.2	20.1
1895	13.7	19.7
1896	12.4	20.0
1897	13.4	15.1
1898	15.3	21.1
1899	12.3	21.2
1900	12.3	19.2
1901	15.0	18.5
1902	14.5	20.2
1903	12.9	22.7

\*Same comments as above.

In certain provinces of France the yield of nearly 37 bushels per acre has been maintained for several years.

From the above tabular statement, compiled and composed from the "Bulletin de Minister l'Agriculture," it will be seen that, while the area under wheat in France during the last 33 years has decreased, and the yield per acre has increased considerably, the price on the farm has always been considerably higher than in the United States. Meanwhile the rate of import duty rose from the average of 3.2 cents per bushel in the first decade to the present rate (since July 1st, 1898) of 37.0 cents per bushel, having increased over ten times. It must be remembered also that while the French acreage of wheat for the last calendar year constituted less than a third part of the American acreage (16,144,000 and 49,467,967 acres respectively). The French crop of wheat for the same year amounted to over half of the American crop, 353,938,000 and 637,821,835 bushels respectively.

It would be absolutely impossible to find two other countries so perfectly fitted for comparison in all matters relating to the most cardinal questions of agricultural economics as the United States and France. Being an agricultural country in the proper meaning of the word, and one of the leading producers of wheat in the world, second to the United States and Russia only, France at the same time, imports wheat on more or less considerable scale. It might seem almost incredible that the importation of foreign wheat into France is always increasing, while the production of native wheat is simultaneously increasing, so that, as a producer of wheat, France keeps a third place in the world. This seeming incongruity is, however, easily explained by the fact that, while both production and importation of wheat have been increasing, the production of other food crops has concurrently decreased, so that an increase in importation of wheat must be chiefly attributed to the soil decrease. It would seem that the standard of living is rising in France, as in several other countries of continental Europe, and that, consequently, less rough grain and more wheat is now being used than was the case in former years. So the United States and France bear to each other an exceptional and unique relation of

(Continued on page 12)

## FARMS For rich farming, and fruit growing

Write J. D. S. HANSON, Hart, Mich.

WEEKS SCALE WORKS BUFFALO, N. Y. The leading scale at moderate prices. Will outwear any other. RELIABLE, LASTING, CONVENIENT. Does away with all loose weights. Send for catalogue and prices.

## UP-TO-DATE FARMING, INDIANAPOLIS

### RAISING AND MARKETING

Good stock; good prices; you don't have to sell till you get a satisfactory price.

Have the midsummer porkers gone to market? Do you reckon you sent yours in when they were not needed? Do you know how much they cost you? How much you made on them?

The bureau of animal industry at Washington has ordered all stock cars to be cleaned and disinfected before being reloaded. Good order.

Raising Angora goats is a growing industry in Montana. The fleeces of the recent clip are heavier than usual, and the kid crop is about double that of last year.

Wool in the West is 20 cents a pound, about three cents above the price of last year, and it is considered a fair and equitable price. Holders are letting go freely at that figure, but they will stop selling should the price fall below that.

We suppose, of course, the spring calves are on good pasture. In addition to that a little grain feed will help them out amazingly. Ex-Gov. Packard, of Iowa, says a year-old calf should weigh from 1,000 to 1,200 pounds.

Unless you are an expert stock raiser, better avoid fall calves.

The calf crop of Montana is reported very light.

Mutton sheep have been the general favorites for some years now, but the increasing price of wool will enable the wool breeds to divide the honors.

A good treatment for hogs that are on pasture is a daily feed of bran and shorts, or chopped corn and shorts, but be careful never to feed sour slops.

A prominent stock paper says "6-cent cattle on the hoof means 9%-cent beef in the carcass at absolute cost to the killer." If it costs 3% cents a pound to kill a steer in Chicago, better kill it somewhere else. Besides, people don't get beef at 9 cents, nor even at 10, in Chicago. Who gets the difference?

Stock that are to be ready for the autumn market should have attention now. The pastures will soon be getting thin, and a little grain must be added to give weight to the stock. A supply of pumpkins will greatly aid the ration a little later.

"Slack" from a coal mine, or bits of waste coal, thrown into the hog lot, will be eaten with a relish, and it is good for the hogs, too.

"Price it and take it." How do you like that for a business motto? That is the farmers' motto under the present condition of things. What other sensible business man would accept it?

Mules come to working age sooner than horses. A mule two years old, with his mate, will do as much work as a four-year-old horse. A mule at weaning time is worth \$25 to \$40. In a year and a half he can be at work, and can be sold for \$75 to \$125.

#### NUMBER OF HOGS PACKED.

The following table shows the number of hogs packed at the places named, between March 1 and June 15, 1904 and 1903. It will be observed that there is a material falling off at Chicago, but most other points show gains:

March 1 to June 15—	1904.	1903.
Chicago	1,560,000	1,720,000
Kansas City	790,000	570,000
Omaha	775,000	710,000
St. Louis	528,000	410,000
St. Joseph, Mo.	476,000	479,000
Indianapolis	306,000	260,000
Milwaukee	59,000	35,000
Cudahy, Wis.	105,000	103,000
Cincinnati	155,000	144,000
Ottumwa, Iowa	154,000	108,000
Cedar Rapids, Iowa	126,000	113,000
Sioux City, Iowa	142,000	141,000
St. Paul, Minn.	260,000	220,000
Cleveland, Ohio	147,000	145,000
Louisville, Ky.	89,000	97,000
Nebraska City	85,000	61,000
Wichita, Kan.	85,000	63,000
Detroit, Mich.	79,000	80,000
Bloomington, Ill.	21,200	18,200
Above and all others	6,325,000	5,850,000

#### LEARNING THEIR LESSON.

Big cattle men are taking their cue from Up-to-Date and are advising the holding back of stock to secure better prices. Speaking of a probable rush of grass stock on the market in the fall, a prominent western stockman said a few days ago:

"This seems all wrong to me, and I feel sure cattlemen would make more money on their stuff if they would let it come along, a few loads at a time, all summer and fall. Some grass cattle are needed, the year 'round, and if shippers would 'feed' the market all season instead of 'glutting' it in the fall, they would have more to show for their work at the end of the year. We would rather pay good prices all the year and sell the beef at good figures than pay seemingly low prices in the fall and have such hard work, as we generally do, getting rid of so much beef."

#### CAVALRY HORSES WANTED.

The United States government is once more in the market for cavalry horses, not that our army is expecting to go into any more active service, but so long as we have cavalry, the men must be supplied with mounts, and cavalry horses wear out the same as other horses. To meet the requirements of this trade, the horses must be bay, brown, black or chestnut; they must stand fifteen and a half to sixteen hands high, and they must weigh from 1,000 to 1,250 pounds. They must be from five to eight years old, and must be broken to saddle, and well gaited at walk, trot or canter. None of the fancy gaits are desirable.

#### TO COMMAND LIVING PRICES

Speaking of the work of the A. S. of E., in Tennessee, the Nashville American says:

"The entire district will be thoroughly organized, and it is expected that within a short time the farmers will be in a position to command living prices for their products."

## UP-TO-DATE FARMING, INDIANAPOLIS

### PRODUCING AND MARKETING

After reading the book, The Third Power, and Up-to-Date Farming in connection with it, I am thoroughly convinced and believe that, the Bible always first, then should be read the Third Power and Up-to-Date Farming.  
L. G. HIXES  
Kalamazoo Co., Mich.

The spring time cackle of the hen  
No longer cheers the ear,  
But cockerel proud and pullet gay,  
Give hope to coming year.  
—J. P. S.

The poultry crop is now so well advanced that the poultry raiser can have a fair idea of his, or her, success or failure. Which has it been?

How many more eggs have you set than you have of growing chickens? The answer to this question has much to do with determining the matter of success or failure.

We suppose you are now planning for winter eggs. Early pullets, a comfortable house, clover, pea hay and millet, with some grain and an occasional feed of meat scraps and some vegetables, if you can have them—this is just about the combination.

Duck feathers, especially those of the white ones, always find a ready market.

The farm hen is now inclined to "steal out her nest," and some good eggs may be lost. "Eternal vigilance is the price of"—fresh summer eggs.

Some very little things are among your greatest enemies now—mites and lice. Clean up and white wash.

Do you ever think of preserving summer eggs for winter market? Water glass is the best home method. Told all about it in June 1 Up-to-Date. Don't try to put up any but absolutely fresh eggs.

You may give the rats a little poison if they bother the chickens; but be mighty careful with it.

Don't plan to keep a great flock of roosters through the winter. Pick out a few of the very best, and sell all the rest while they still go into the young chicken market. We may have advised this before.

Keep tab on the old hens this summer. Send them to town at the proper time, and keep your flock young and useful.

Uncle Threadbare has not yet provided his folks with any good feeding coops for the young chickens. I can't like that old man.

Neighbor Thrifty sent off for a couple of settings of thoroughbred eggs last spring. He thinks he has some "beauts."

Say, haven't you been finding some pretty good reading in Up-to-Date lately? Ask a whole lot of your neighbors to try it three months for ten cents.

Are you raising goslings? If out in a real hard rain they will stick their bills straight up in the air and drown. Fact.

Geese are seldom below 50 cents each in the autumn market. It is all right to raise them if the old man can stand 'em.

Well grown bronze turkeys are good for a dollar each before the middle of winter. Push the poult.

#### IT IS DIFFERENT NOW

The Richmond, Va., Times-Dispatch notes the effect of the A. S. of E. on the market conditions of the country, but does not fully understand the cause. It says:

"They (the farmers) are able to hold their grain for a season for higher prices, and they will make the profits. In other days they were forced to rush their grain to market as soon as it was harvested, no matter how low the price might be. With a rush of grain the market would become glutted, the price would go down, speculators would buy it up, and by and by when the farmer had disposed of his crop the price would begin to rise, and the profit would go into the pockets of the speculators. It is all different now. The farmer has command of the situation and this is good both for the farmer and for the country at large. It is far better for the farmer to make the profit than for the speculator to make it. Our country is bound to be prosperous so long as the farmers make good crops and make fair profit on their operation."

#### WHAT 10 CENTS WILL DO

It will pay for this paper three months six issues, and teach you how to solve the farm labor problem, how to keep the boys on the farm, and hundreds of other things that farmers want and can get.

#### CORN FOR POULTRY.

Where the poultry has free range of a farm they will get green feed and insects enough to balance their ration, and a light feed of corn once, or even twice, a day is well enough; but where they are kept up, corn should not enter very largely into their daily ration in warm weather; it is too heating. For this very reason, though it is a most suitable feed in cold weather.

#### THEY'VE DECIDED IT.

The Irishman was not so much to be laughed at after all when he pointed to a toad and asked, "Faith, and what kind iv a bird is that?" Frogs are poultry. The national treasury department has so decided. At the custom house the revenue collectors declare that frogs' legs are dressed poultry and must pay tariff duties accordingly. This reminds us of the English railroad guard who had been ordered not to permit dogs to be taken into the cars. A passenger presented himself carrying a young alligator in a box. The guard was puzzled for a moment, but only for a moment, when he arrived at this learned decision: "Cats is dogs, and rabbits is dogs, but halligators is a hinsect! Jump aboard."

#### LEGHORNS AS SETTERS.

The following from one of our brightest Canadian contemporaries is exactly our experience with the Leghorns:

The non-setting breeds will set if they are kept in confinement and gotten into a fat condition. The reason they seldom set is that they are active foragers and take constant exercise. The Leghorn rarely sets, but when a hen of that breed determines to hatch a brood she will be as persistent as a Cochon, and makes an excellent mother, willingly sacrificing herself in defence of her young, equaling the game hen in that respect, and attacking dogs, cats, and even hogs.

#### THE BEST HENS.

No one should be satisfied with less than the best of anything. "But," says a poultry writer, "there is no way of knowing which of the hens are the best unless they are closely observed. Every hen that has a good record should be marked and retained, not only for laying, but for breeding purposes. The egg record would be much higher, and the flocks improved every year, if the farmer would keep only the best hens from which to produce the layers for another year. Unfortunately, with many 'a hen is a hen,' but, in fact, there is a wide difference in individuals, and any peculiarity or points of excellence should be observed, so that all future stock may be better than the preceding."

Uncle Threadbare had a high old time the other day, and had the whole family in a stew. He remembered an article in Up-to-Date Farming of Aug. 1, 1903, that gave exactly the information he now felt bound to have, so the whole place was turned topsy-turvy hunting for that paper. Of course, it could not be found. A complete file of the paper would have been mighty handy just then.

## Sharple's Tubular Separators

We want you to know Tubular Cream Separators as they are.

The low can, enclosed gears and ease of turning are shown in this illustration from life. Tubulars have neither oil cups, tubes, nor holes—they oil themselves. They have bowls without complicated inside parts—they hold the world's record for clean skimming, durability, capacity, easy turning and easy washing. They save half the work—greatly increase the amount and quality of butter—are wholly unlike all other separators. Catalog H-136 will interest and benefit you. Write for it.

The Sharple's Co.  
Chicago, Ill.

P. H. Sharple's  
West Chester, Pa.

## Spavin

Bone Spavin, Bog Spavin, Ringbone or any kind of blemish—we have what you need to make a certain cure. Guaranteed always—money right back if it ever fails.

Fleming's Spavin Cure (Liquid)

for the soft bunches—Paste for the hard ones. A 45-minute application and the lameness goes. Lots of blemish information in the free book we send.

## Fistula and Poll Evil

Do yourself what horse doctors charge big prices for trying to do. Cure Fistula or Poll Evil in fifteen to thirty days.

Fleming's Fistula & Poll Evil Cure is a wonder—guaranteed to cure any case—money back if it fails. No cutting—no scar. Leaves the horse sound and smooth. Write for our free book on diseases and blemishes of horses.

FLEMING BROS., Chemists,  
307 Union Stock Yards, Chicago, Ill.

## \$43.75 CREAM SEPARATOR

AT \$43.75 we furnish the highest grade CREAM SEPARATOR made, the strongest, simplest, lightest running, closest skimmer, MOST ECONOMICAL and most thorough hand cream separator made. For large illustrations and complete descriptions, for our special

30 DAYS' FREE TRIAL PROPOSITION and the most astonishing offer ever made on any CREAM SEPARATOR. WRITE FOR SPECIAL CATALOGUE. Address: SEARS, ROEBUCK & CO., Chicago, Ill.

## THE 4-LEAF CLOVER Cream Raiser.

Don't mix. Has utmost cooling surface. Inner can quickly removable. No water needed in winter. Cold air chamber over whole can. Very easy to clean. Patent faucets and many other desirable features described in our FREE catalogue. PLYMOUTH MFG. CO., Plymouth, Ohio.

## CREAM EXTRACTOR FREE

This is a genuine offer made to introduce the Peoples Cream Extractor in every neighborhood. It is the best and simplest in the world. We ask that you show it to your neighbors who have cows. Send your name and the name of the nearest freight office. Address:

PEOPLES SUPPLY CO.  
Dept. 183 Kansas City Mo.

DEATH TO HEAVES Guaranteed NEWTON'S Heave, Cough, Ulcer and Indigestion Cure. A veterinary specific for wind, throat and stomach troubles. Giving rooming, \$1.00 per can. Dealers. Mail or Ex. paid. The Newton Remedy Co., Toledo, Ohio.

40 VARIETIES BEST POULTRY. Fine large poultry Guide to Price List free. JAMES R. GARDNER, Harrisonburg, Va.

## UP-TO-DATE AND SMALL FRUIT

We are delighted with Up-to-Date. I read every word carefully. I think the A. S. of E. is a grand thing. ALICE C. BRASHERS  
Chester Co., Tenn.

A chatter in the orchard,  
And a flutter on the breeze,  
A hope throbs in the blossom,  
And glazes nodding in the trees  
A thought of winter ev'nings,  
With good cheer upon the boards,  
As we gather 'round the fireside  
To enjoy our luscious hoards.

—J. P. S.

It takes courage to thin out the fruit on the trees. Nature has done it very severely in some localities this season.

Fruit in small packages is popular in the cities—many can buy a small package who will not buy a large one.

Put up all fruit packages honestly; have approximately the same grade throughout the package, whether barrel, box or basket. It is entirely proper, though, and expected that the top layer will be of the nicest fruit and more carefully packed.

Don't worry much about the birds in the orchard. They'll peck some of the fruit, but—

Notice. The trees that were thoroughly mulched will yield the best results.

Did you spray? How thoroughly, how often and when? And what are the results?

The orchard grown up in weeds, briars and brush is a scab on the farm. Uncle Threadbare's is that way. Well, his boys love to chase rabbits.

Who is Uncle Threadbare? He's an old fellow that is very numerous in some places; he don't live in Indiana.

The honey bee and the humble or bumble bee are useful in the orchard in blossom time—the latter is worth his weight in gold in the clover field. When I see a gang of boys beating out a bumble bee's nest, I want to get after them with a sting about the size of a pitch fork.

The A. S. of E. is working on the fruit problem. There must be some means of marketing fruit only as consumption will take it. Market glutting and gorging must stop.

It is seldom that there is not a fair market for dried apples. If there is no evaporator handy, the sun does a very fair job of evaporating. Handy scaffolds and crates two by four feet, are great helps. Some of the most cherished pictures in the galleries of our memory are of a whole family gathered in a shady place, cutting and putting out apples to dry.

Kiefer pears should remain on the trees until near frost. Light frosts will not hurt them. They should then be gathered, assorted, each pear wrapped in soft paper, packed in baskets or crates, and stored in a cool, dry place, not liable to sudden changes of temperature.

Don't let the windfalls lie under the trees and rot. If they are not yet sufficiently matured to be cut and dried profitably, have some pigs or sheep in the orchard.

### TO RENEW OLD ORCHARDS.

Prof. U. P. Hedrick, of Michigan Agricultural College, gives the following very good advice as to the treatment of old, neglected orchards. We don't place quite so much stress on the cultivation of old orchards; we are willing that heavy mulching take the place of much of the cultivating, but Prof. Hedrick's treatment is good:

"1. Get into the orchard with the pruning saw. For this work you need men of experience. Too many so-called tree pruners are tree butchers. Their zeal is much greater than their knowledge. The only absolute rule in pruning that can be laid down is to cut out all dead wood. Branches that are badly injured, diseased, crossed or that from weak crotchets should be removed after which some small limbs may be cut out and if the tree top is very thick there should be a judicious thinning of large branches. Let the pruning extend through two or three seasons rather than one.

"2. Nearly all old orchards are in sod. This must be broken up—absolutely must if success is to be attained. Start its cultivation and keep it going. Plow in a good dressing of stable manure, or plow and then harrow in a good dressing of fertilizers rich in potash and phosphoric acid. In the words of the parable of the barren fig tree, 'dig about it and dung it.'

"3. With a short handle hoe or some kind of a box scraper remove the old rough bark which shelters innumerable insects and fungi and then spray thoroughly, while the trees are in the dormant condition, with copper sulphate at the rate of one pound to 25 gallons of water.

"4. Make up your mind to feed, prune, spray, sow cover crops and cultivate the

orchard for the remainder of its life. If the orchard fails to appreciate the treatment outlined above cut it down and plant anew. 'Why cumbereth it the ground?' Do not expect too much nor look for quick returns. 'As the twig is bent the tree is inclined' and a season or two of good care cannot make up for a lifetime of neglect. Do not follow years of outrageous treatment with unreasonable expectations."

In August 1st number the price for the 1904 crop of wheat will be announced. Watch for that number. If you are not a subscriber to this paper you better accept our 3 mo. trial offer at once only 10 cents. Or better yet, send \$1.00 and become a subscriber for a year and a full member of the A. S. of E. The crop report blank is repeated in this issue. Every person producing wheat and hay are asked to fill it out and send in at once.

### ANOTHER "DOCTOR"

One of our sprightly Kentucky contemporaries has made the important discovery that, "during the past year there has been a gradual settling of values down to a hardpan basis, the speculative element has been eliminated from all lines of business, the water has been squeezed out of inflated securities and values of all kinds, and all this has been done without serious damage to the country at large."

Well, that is a discovery certainly, and the distinguished finder deserves something more than a leather medal, for he has found a condition which nobody else has suspected. Indeed, the mortals of ordinary vision, see nothing but the reverse of that—see speculation more rampant, and water in corporate values more abundant than ever before.

But this astute gazer has made another important discovery, one that even common vision has been able to see. The American people are hungry every day and the farmers must feed them. But with all these happy conditions, there is still one cog loose in the great business machine of the world, one little dirt speck on the bright picture that rests within the serene view of this learned "doctor." But he easily fixes the cog and brushes off the dirt. "To put things just right there should be a scaling down of at least 10 per cent. in wages for farm help!" That fixes it; rights the only thing wrong with the entire economic situation!

It does look like patience ceases to be a virtue in the presence of such rot. The dullest and most ignorant student of economic questions knows that the farmer and his hired men are the hardest worked, poorest paid of the entire world of labor, and that there can be no settled prosperity until this greatest class of our citizenship is better rewarded. They know, too, that this better reward can only be secured by better prices for the products of their labor, and that permanent better prices can only be obtained by co-operative organization and controlled marketing.

Really some "Mirrors" reflect very distorted images.

In the first Ohio district, comprising Cincinnati and Middletown there is a marked decrease in the tobacco cut put for the ten months of the current fiscal year. In cigars the decrease is 11 per cent.; in tobacco 11, and in small cigars 18.

A recent fire in the Cudahy packing company, of Los Angeles, Cal., resulted in a loss of \$300,000. It was pretty well covered by insurance.

The farmers of Chappell, S. C., are to erect a \$15,000 oil mill.

The Proctor and Gamble soap people are to put up a large oil mill at Atlanta, Ga., and a large soap factory is to be added to it. The same company already has seven big oil mills in the South.

An independent packing plant is to be erected at Minneapolis, Kansas. Such plants are very desirable, but we doubt if they can succeed.

A large cold storage plant is to be erected at Atlanta, Ga.

There have been 135,000 fewer hogs packed since March 1st than for the same time a year ago.

The orange crop of California is reported large, and prices are holding up well.

**STARK FRUIT BOOK**  
shows in NATURAL COLORS and accurately describes 216 varieties of fruit. Send for our terms of distribution. We want more salesmen.—Stark Bros., Louisiana, Mo.

## DON'T BUY GASOLINE ENGINES

—UNTIL YOU HAVE INVESTIGATED—  
"THE MASTER WORKMAN"  
A two-cylinder gasoline engine superior to all one-cylinder engines. Costs less than half of one-cylinder engines. Give size of engine required. Especially adapted for irrigation in connection with our centrifugal force pumps. (Sizes 2, 2 1/2, 4, 5, 6, 8, 10, 12 and 16 Horse Power.) High-grade Gasoline Engines, 3 to 6 horse power—adapted for Electric Lighting, Marine and Pumping purposes. 12 1/2 HP. mention this paper. Send for catalogue. THE TEMPLE PUMP CO., Manfrs., Meagher and 15th Sts., CHICAGO, ILL. Established in Chicago, 1852.

# UP-TO-DATE HOME ON THE FARM

Up-to-Date Farming comes regularly, and is of much value to me. I take two other farm papers, and it is interesting to note the difference between Up-to-Date and them. The enlargement of your paper is fine—up-to-date.

ALBERT L. BAILEY  
Martin Co., Minn.

Most of the things that worry us  
Don't really matter much.  
Too many of us fret and fuss  
At every touch.  
There's nothing else so much to fear,  
Of good or ill,  
As just the failure of good cheer  
And honest will,  
No loss need fright us if we earn  
More power to live, and love, and learn.

—Selected.

Now is the time when a little work around the home makes lots of sign.

Keep the home grounds nicely trimmed. Weeds and high grass around the dwelling are an abomination.

Don't permit weeds and grass to grow up in the paths about the house. The heavy morning dews make them impassable without wading.

The farmers' institute season is approaching. The ladies should take up, and keep up, the domestic science feature. Near Dahlgren, Ill., and in other portions of that State the ladies have domestic science associations or clubs, and meet regularly to discuss questions pertaining to home economy, and to have a profitable and enjoyable outing with each other. Such meetings are to be highly commended.

The main work of the crop season is now over, and, though there is always plenty of work to do on the farm, don't confine yourselves too close. Stir out among the people, take outings, attend the picnics, cultivate the social amenities. Let the men get back some of the vigor they gave to the growing crops, the women some of the life and spirit they sacrificed to the household cares during the busy season, and place the children within the wholesome influences of a wider life.

As the heat becomes more and more oppressive the wise housekeeper will lighten the household burdens as much as possible. Every unnecessary step now, upstairs or down, to smokehouse or cellar, or from room to room, should be avoided. Let there be more wise planning and less drudgery.

Whatever may be thought or said of it in many quarters, Up-to-Date Farming has no word of condemnation for a short sleep just after the noonday meal. It is comforting and restful, especially for those who have passed middle life, and those who have toiled up to that period deserve a nooning as restful as they can have. Besides digestion can perform its work more perfectly at that time of life when both mind and body are in perfect repose.

Keeping bread, cakes, cookies, doughnuts, etc., from drying out too quickly is often a summer-time problem on the farm. One of the very best vessels to keep such things in is a thoroughly cleaned stone jar, tightly covered and kept in a cool corner. A tin lard can is also good, but if ever used for lard it requires a great deal of cleaning and scalding to free it from the lard taste. Bread, cakes, etc., must be thoroughly cooled before being put in the vessels.

Here is how to make a small handy sieve that is useful in many ways: Take a cigar box, or other box of suitable size, take out the bottom and tack over the opening a piece of wire cloth or screen. The sieve is made.

## CARE OF LAMPS

The following are hints which, if taken, will be useful in almost every farm home:

Never touch the chimney of a lamp with water. A few drops of kerosene oil will remove the smoke and dimness, and a rub with soft flannel or chamois skin will result in a clear polish.

Clean every bit of the burner with a rag dipped in kerosene and polish it dry and bright. Boil very dirty, neglected burners in soda and water.

See that the outside of the lamp is dry clean and perfectly free from oil after being filled. Each day rub off the burned portion of the wick with a duster. Do not cut the wick.

Do not fill a lamp to the brim.

Do not let a lamp burn after the oil is exhausted and do not turn it down. Nearly the same amount of oil is consumed as when the flame is full, what is not burned passing off in the form of gas, which is often smelled when entering a room where the lamp has been turned low.

A bit of camphor the size of a hazelnut put into the reservoir improves the light.

Empty and wash the reservoir every few weeks to prevent the collection of sediment from the oil.

Soak new wicks in vinegar and dry thoroughly before putting in the burner.

## BUTTERMILK BREAD

For three good-sized loaves use one quart of sour buttermilk, one generous tablespoonful of sugar, one tablespoonful of butter, one teaspoonful of soda and  $2\frac{1}{2}$  quarts of flour. Heat the buttermilk to the boiling point, stirring it frequently to prevent curdling. Put the sugar in a large bowl and pour hot milk on it. Now gradually sift into the mixture a quart of flour, stirring all the while. Beat well; then cover and let it stand in a warm room over night. In the morning dissolve the soda in three tablespoonfuls of water, and add it to the batter, together with the salt and butter melted. Beat thoroughly then gradually beat in the remainder of the flour, reserving, however, half a cupful for kneading. Sprinkle the board with flour, and, turning the dough upon it, knead for fifteen or twenty minutes. Divide into three parts and shape into loaves. Place in buttered pans and put into the oven immediately. Bake for one hour in a hot oven.

## TO COOK EGGS

To cook eggs in the shell through evenly put them into a deep pan, cover them with boiling water and let them stand for ten minutes or more where the water will keep just below the boiling point. This prevents the albumen from coagulating, but jellies both white and yolk, making the egg more appetizing in appearance than at the ordinary "soft boiled" stage. It is at the same time easy of digestion.

It is said that cracks in kettles may be mended as follows: Stir litharge into glycerine until the consistency of putty is reached. Rub this into the crack and let dry 24 hours. It will resist the action of fire and water, it is claimed.

## MOLASSES CANDY

Boil a pint of molasses for twenty minutes, then add a scant half teaspoonful of baking soda and boil for fifteen minutes more, or until a little dropped in cold water is brittle. Stir steadily to prevent scorching. When the cold water test proves that it is done, add a teaspoonful of vinegar, pour into buttered pans or pull to a light brown.

## FLANNEL CAKES

Rub two tablespoonfuls of butter into a quart of flour until well mixed; add a teaspoonful of salt and make into a batter with a pint and a quarter of milk, into which has been beaten smoothly the yolks of three eggs. Last, and just before baking, stir in the stiffly beaten whites. Bake on hot griddle, well greased.

## TO TEST THE PURITY OF WATER

Take some of the suspected water in a clean, glass-stoppered bottle; add a little pure cane sugar, expose, having well stopped the bottle, to the light in a warm room. Should the water, even after a week's exposure, become turbid, it is dangerously impure for drinking; if it remains clear it is safe.

Egg-Balls—Boil six eggs for twenty minutes, drop them in cold water for ten minutes, then remove the shells. Take out the yolks, mash them smooth in a bowl, then add a dessert spoonful of soft butter, a few drops of onion juice, three-fourths of a teaspoonful of salt, half a teaspoonful of lemon juice and the well-whipped whites of two eggs. Form into small balls, and fry in hot butter. Cut out rounds of nicely buttered hot toast, garnish with the hard-boiled whites of the eggs cut in thin rings, sprinkle with salt and little bits of butter, put two or three egg-balls in the center of each, and set in a hot oven for one minute. Serve at once. These are very nice for breakfast.

Eggs in Potato Nests.—Cold mashed potatoes may be used for this dish. They should be well seasoned, then add a little hot cream and the yolk of one egg to each cupful of potatoes to soften them. Whip them very light with a fork, add the stiffly whipped whites of the eggs, and heap in a mound in a well-buttered baking dish. Take a clean egg, and make little cup-shaped hollows in the potato mound, drop a raw egg in each, dust with salt and white pepper, cover with little bits of butter and cook in a hot oven until the eggs are like poached. Serve at once. These are very nice.

Lucanian Eggs.—Cut five hard-boiled eggs in eighths lengthwise, add one cupful of cooked macaroni, one-half cupful of grated cheese and one and three-fourths cupfuls of cream sauce. Season with salt. Put in a buttered baking dish, cover with buttered crumbs, and bake until the crumbs are brown.

White-cap Omelet.—Beat the whites of three eggs until so stiff they will not drop from an inverted bowl, add one-third of this to the yolks, beat thoroughly, and season to taste with salt and pepper. Have ready a hot frying pan in which has been melted a tablespoonful of butter, pour in the yolk mixture, spreading it over the pan, and then spread the whites over the yolks. As soon as the bottom is lightly browned, set in a hot oven for one minute. Take out, and serve immediately.

Try This.—Seven rolled crackers, one cupful of sugar, one-half cupful each of molasses and butter, one cupful of vinegar, one of chopped raisins, one teaspoonful of all kinds of spices and one-half cupful of boiling water. This recipe makes three pies.

Nut Biscuit.—Sift together two cupfuls of flour, one-half teaspoonful baking powder, two tablespoonfuls sugar; rub in one heaping tablespoonful butter, add one cup ground or finely chopped nuts—walnuts, hickory nuts or almonds may be used—and mix to a soft dough with milk. Mold with the hands into small balls and place well apart in greased pans. Brush each with milk, put in a pinch of chopped nuts on top and bake in moderate oven.

Creamery Sauce for Pudding.—One-fourth cup of butter, one-half cup powdered sugar, sifted, two tablespoonfuls cream. Cream the butter, add sugar slowly, then cream. Beat well and just before serving, place over hot water and stir till smooth and creamy, but not enough to melt butter. It is not intended to be a hot sauce, and if it becomes oily in heating, place in cold water and beat again until smooth like thick cream.

A good plan is to have as little furniture as possible in the rooms in summer, especially in the living room and bed rooms. Did you never note how much hotter a room full of rubbish and furniture is than one which has plenty of empty space. And the latter is so much more easily cleaned up.

# DOLLAR WHEAT

## DO YOU WANT TO GET IT FOR THE NEW CROP?

If so you must know how. Write the names of wheat growers below and each of them will receive full instructions. It can be done. It was done last year after the bulk of the crop was marketed. It can be done this year when the new crop is ready to be marketed

Cotton Belt Route . . . . . St. Louis, Mo.

## [Continued From Page 6]

Neither Holland nor Belgium can be considered as wheat producing countries. The former is notoriously a rye consuming country, and the latter one of the important consumers of wheat, while both import the grain mostly for milling purposes. Having no wheat producing industry of their own worth protection against the importation of American wheat, they do not impose any import duty on it, Belgium limiting herself to imposing such duty on flour, of 48.6 cents per sack (280 pounds). It should be remembered, however, that, while these two countries, and especially Holland, import foreign wheat exclusively for manufacturing purposes, their flour, made of imported American wheat, competes on the markets of the world with American flour, thus correspondingly reducing the amount of grain annually

Thus England remains to-day the only European country which imports a very large quantity of American grain for home consumption. It should be said, however, that even the United States exports of grain and flour (as compared with her total exports to all parts), have fallen off more or less considerably within the last two decades. While twenty years ago the United States exported to England from 80 to 90 per cent. of her wheat and flour reckoned together, and ten years ago 70 per cent. of the same, during the past fiscal year ended June 30th, 1902, there has been exported to the same country 41 per cent.

[Concluded From Page 4]

There are many objections to the use of poisonous articles to keep mice out of the house, and a fresh hint may be useful to those who are troubled with these little pests. Mice have a great antipathy to the smell of peppermint, and a little oil of peppermint placed around their haunts and holes will successfully keep them away.

You can't expect a soap that is made to remove dirt from your clothes to be a good shaving soap, but some men will use it and run the risk of serious skin trouble. The reason for this is that they have never felt the smooth delighted effects of a shave with the creamy, thick lather made by Williams' Shaving Soap. See the advertisement elsewhere; take advantage of their sample offer and you'll never use any other.

## THE THIRD POWER

[From Page 6]

tended ones. Success will bring unexpected allies, and will uncover and discomfit secret enemies. Would the American colonists ever have won their freedom if they had waited for France to begin the struggle? Nay, rather did not France withhold her aid till she was convinced that the colonists could win their freedom even without her aid? The Cuban patriots battled for a generation before our great republic, at last convinced that there could be no peace till Spain was driven from the island, intervened in behalf of Cuban freedom and independence. English liberties are the product of centuries of toil and fight, and it was the French people that won liberty for France and maintained it against combined Europe. So the American farmer must not whine, and beg, and supplicate, must not rely on politics and politicians, nor even on Divine Providence wholly, but must, as others have done, fight his own battles. The victory is sure. And when it is won, as won it will be, it will be found that all will be benefited. So it is true that no American freeman, able and willing to support himself without bonuses or subsidies from the government, and without the protection of unfair and unjust laws, loving justice and fair play, and asking for nothing more than is rightly his—an honest reward for honest toil—need have the slightest apprehension about this movement for the organization of the farmers. The beggars, the preys, on other men's wealth, the parasites, the government pets, the grafters, the boodlers, and all who look on government as an instrumentality for their own enrichment, may well be disturbed. But there is no warfare to be waged against the rights even of these. We want to take the broad and manly view of this movement. It is not a grab for privileges, or a war of reprisal, but simply a firm and resolute stand for justice and equity. The farmers are not going to ask any one to give them something. They are merely going to take what is theirs. The Third Power, representing the divinely established business of agriculture, when it is organized, will not need to ask favors; it will only have to insist on rights. Favors it does not want or expect. Rights it will have.

## CHAPTER VI.

A little further elaboration of the general helpfulness of the proposed plan may help to a better understanding of it. It has been said that the farmers could not be prosperous without benefiting all classes, and that prosperity of the country depends on the prosperity of the farmer. No one doubts the truth of these statements. They have a very important bearing on this argument. For if they are true, as they are, it must follow that a movement to better the condition of the farmers will be in the interest of all. And this is precisely the point that I desire to emphasize. For, unless it is made clear, the impression may prevail that we are making war on other classes and trying to seek an advantage at their expense. The further we get into the case the more obvious will it become that this is not the purpose at all.

What do the stock speculators mean when they say that the prosperity of the country depends on the well-being of the agricultural class? Simply that that class is the largest in the community, that all others depend on it, that our farm produce is our greatest national asset, and that a bad condition here is a national calamity. Foreign trade, railroad earnings, the price of stocks, bank deposits, wages and of course the welfare of all the industries directly dependent on the farm, are all affected by the condition of agriculture. Prices are largely regulated by the ability of the farmers to buy. Thus, all our business and industry are based on the farm—it is the foundation on which the whole structure rests. Is it not clear that it is to the interest of all that that foundation should be solid and substantial?

Look at the matter in another way. The farming class is the greatest consuming class in the country. When it, through stress of circumstances, is driven to rigid economy, sales fall off, stocks accumulate in factory and store, prices decline, collections are bad, there is less available capital to loan, money gets tight just when it is most needed, and we all feel the pinch. Luxuries are dispensed with. There are fewer pianos and organs in the houses of the farmers, fewer pictures on the wall, fewer books and newspapers bought. The farmer and his family make the old clothes do for another year instead of buying new ones. Farms are allowed to run down, either because their owners cannot afford to keep them up, or because they do not think it worth while. Improvements are not made; less machines are bought and fewer hands employed, and finally the gains of former years are wiped out, then comes the mortgage, and the whole process of reconstruction has to be gone through with again. In the meantime the whole country suffers. It is all the result of a diminished consumption on the part of the farmers, brought about by large crops and low prices. With the farmer out of the market, or in it only to a limited extent, the market is bound to suffer and all industries be harmed.

The first thing that the merchant wants to know, when he sends his commercial travelers out to the smaller towns, is whether the farmers are buying, and whether they are paying their bills promptly. The credit to be extended to the local merchant depends largely on the financial condition of the farmers. If they are buying liberally and paying their bills with reasonable

promptness, the city merchant knows that he can afford to sell larger bills of goods to the local dealer, and give him better terms than he could do under other circumstances. All this is elementary, and yet we often forget it. We seem to feel that prosperity is maintained solely by the buying of the rich people in the cities who are so lavish with their money. But it is not so. The farmers are the great customers, and when they cease to buy, or curtail their expenditures, they not only limit the market by just that much, but they lessen the power of people in the cities to buy. Smaller stocks in the stores mean a smaller output from the mills and factories, and that means reduction of wages and of the labor force. So the working man consumes less. So, too, less freight is hauled, earnings and wages fall off in the railroad industry, and consumption again suffers. Thus the farmer is inextricably bound up with all other classes of society.

Looking at the question, therefore, from the non-farmer point of view, we see that it is one of maintaining and increasing the consuming power of the farmer, which is equivalent to the maintaining and increasing of the general consuming power. And that is a result which all are interested in bringing about. Thus this movement is not for the good of the farmer alone, but for the good of all—the good of the whole country. To regard it in any other way would be singularly to misapprehend it.

The name of the organization which is now in process of forming, and which will make the Third Power a real power is The American Society of Equity. It is not a farmers' society only, but an American society—that is, for all good Americans who want to see better conditions prevail on the farm. It is not a benefit society, but an equity society. Benefits are always for an individual or class, while equity is for all. Indeed, it can not be equitable unless it is for all. Equity for one and not for another is not equity, but inequity. It is a society that knows no state bounds; one that reaches from one side of the agricultural region to the other; one that every farmer can join, and be the better for joining. So when we propose to organize and secure fair prices for the farmer, it is not simply that he may be benefited, but all may be benefited, and it has been shown that all would be benefited. To demand more than a fair price would be inequitable, and so is not to be thought of. Fair wages for a fair day's work, fair profits for the manufacturer, fair interest for the capitalist, fair prices to the consumers, and fair values for the products of the farm—this is equity. It is important that this should be thoroughly understood. For the attempt will be made, indeed it has already been made, to make it appear that the farmer is proposing to rob others for his own enrichment. This has been the method used by other classes, and it is not surprising that those who have practiced it should think that the farmers are going to adopt it. It fact, unfairness is so prevalent in commercial enterprises that every movement is looked upon with suspicion. The outsiders begin to look for the hook that will catch them. The golden rule, "Do unto others as you would have them do unto you," is interpreted to-day, "Do him before he has a chance to do you." But it is not so with this society. The name and purpose of the society alike forbid it. It is an old maxim that those who seek equity should do equity. They are fortunate in being in such a position that nothing can benefit or help them which will not help and benefit all others. So they are not subjected to the temptation to prey on others to which other classes have yielded. If they would put their prices too high they would curtail consumption. Hence, how reasonable then that they will do everything possible to secure the maximum market. In fact, this is one of the leading reasons for organizing and one of the principal objects of the society. If the Third Power controls the other powers it will be only because it is the biggest and most essential to the national welfare, and so ought to control. But it will be ruled by equity, and in and by seeking its own good it will, even admitting that it may not mean to do so, seek the good of others. Therefore, there is no reason why it should be antagonized and feared by any legitimate interest or industry. Rather it should have the cordial and friendly co-operation of all who want to see freedom and independence, peace and happiness, truth and equity, religion and piety established among the people of the earth.

(To be Continued.)

## PEPPER PODS.

"The fool hath said in his heart"—it can't be done. But it can.

The "Guide" that leads his followers into places of greatest danger should have no followers.

"The ox knoweth his owner," but some men do not seem to know what is best for them.

When a bear gets cold and hungry he rolls himself into a ball and sucks his own paws. When some men get in the same fix they fall down and worship the combinations that made them so.

Those who opposed the patriots of '76 and declared "it can't be done!" were called Tories, and are universally hated. Agriculture is now struggling for as great a right as that won by the patriots of the revolution. What of those who pretend that "it can't be done?"

## CREAMERY MEN OF MINNESOTA

To Control Their Marketing for Steady Prices.

(From the Daily Bulletin, Rochester, Minn.)

To the Creameries of Minnesota:

It is time for you to get together in a state convention and organize so as to place yourself in a position to obtain better prices for your butter. This ought to be easy of accomplishment. The shortage of crops the past three years in the United States has made prices so high for feed that you could not afford to be liberal with your cows. If you were you got nothing for your labor. If you were organized these conditions could not prevail. If there are any laborers in the world entitled to fair reward it is the farmers. To get this reward you must change your methods of doing business. Call your convention, elect your officers and employ one man to sell the butter of all the creameries. All the creameries of the state are equipped with first-class machinery and all of them make a good grade of butter. This manner of selling would put it all in the same grade. Any good business man could be your salesman. Let him watch the markets in all the important cities of the United States, and in two months time he can learn the amount that is necessary to supply them. When the receipts are a little larger than is necessary put it in your storage room in your creameries. Place a fairly profitable price on your goods and when the people want your goods you will hear from them. When more butter is shipped into the markets than people can consume the price is shaded and it is placed in cold storage to be delivered when called for at a profitable price.

Why not hold your butter a week or two and maintain your price and prevent somebody else from knocking the bottom out of it? In this way you would reap a reward that belongs to yourselves. This would not add anything to the cost to the consumer. There is now an average of about 11 cents between the manufacturer and the consumer, while the cost of getting it to them I think is

somewhere near 1½ cents. The gap between you and the consumer is a wide one. Here is where your profits are dropped. It is within your reach to narrow this gap and will you do it or keep on giving your labor to somebody else?

This is the principal upon which the American Society of Equity rests and the one that our president, J. A. Everitt, announced\* to you in his address at Rochester June 4. It is a simple, practical plan for the control of the market, without which you can not succeed, no matter how much money you might put into stock companies. It is a mistake to undertake to fight capital with capital, because we would be weak in comparison. It is much cheaper and accomplishes what we are after, to let our capital remain in our goods a few days. You will find upon investigation that the success of this farmers' movement will add nothing generally to the cost to the consumer.

W. G. SCOTT,

Pres. Olmsted Co. Union, A. S. of E.

In this issue is a blank for a report on the wheat and hay crops. We urge every person who receives this paper, whether member of the A. S. of E. or not, to send in a report. We will again state the society's position about crop reporting. No attempt is made to get advance or prospective reports, because these cannot do the farmer any good. They are no reliable criterion to the final crop and do not affect the farmers' crop one iota, hence are useless to him. We will print blanks for other staple crops in due season.

**Sanitary Belt For Women.**  
Holds the napkin for monthly discharges in a stout sure clasp, without pins or buckles. Cloth may be changed in an instant but cannot detach itself. Fitted with elastic gores for comfort in walking. Neat, clean, wholesome, strong—it is a health-helper. I want to get in correspondence with ten thousand ladies, and will send this \$50 belt to you for 50c. State medium, large or small waist. Wrap two quarters in stiff paper today, or a dollar bill for two. Mrs. W. W. POWERS, 204 St. Nicholas Ave., New York City.

## The Third Power \$1.00

If you want a handsome cloth bound copy of The Third Power for your library or book table we will send it for \$1.00; or a paper cover book for 50 cents. 10 cents extra for postage in either case.

## The Third Power 50 cents

CABBAGE WORMS  
AND  
MELON BUGS

Killed by dusting on **Ferto-Insectone**. Fertilizes while it kills the bugs. Harmless to human beings but death to all bugs, worms and insects.

Price, 25 lb. sacks 75c; 50 lb. sacks \$1.25; 100 lb. sack \$2.00.  
J. A. EVERITT, Mfr., Indianapolis, Ind.

BOYS AND GIRLS WANTED AT ONCE  
TO WORK FOR UP-TO-DATE FARMING THIS SUMMER

No matter where you live you can do our work and earn money. There are over 15,000,000 farmers in the United States and we want all of them to see Up-to-Date Farming and know about the great work it has undertaken. It will bring farmers to the front and insure to them profitable prices for every crop they grow.

NAME .....  
P. O. ....  
R. F. D. No. .... State .....  
Age .....  
Have You ever worked for any large business house before? .....  
How much time can you give our work? .....  
Have you a bicycle? .....

We want to employ you to show them a copy of this farm and home paper and tell them what it is and what it proposes to do.

If you will do this fill out the coupon now and mail it to us at once as the sooner you begin the more you will be able to earn.

REMEMBER it costs you absolutely nothing and we will send you full instructions and supplies that will enable you to earn \$1.00 the first day you work. You do not have to become a subscriber or invest one cent to do this work. ACT AT ONCE. This notice will not appear again.

ADDRESS TABLE A

## UP-TO-DATE FARMING

INDIANAPOLIS-IND

## CROP REPORT BLANK

JULY 15, 1904

WHEAT AND HAY

	WHEAT	HAY
Acres Harvested in 1903		
" Sown in 1903		
" Harvested in 1904		
" Lost by any cause		
Yield per acre in 1902		
" " 1903		
" " 1904		
(If not thrashed by July 20th estimate the yield)		
Quality of 1904 crop, Excellent, Good, Fair, Poor		
Amount on hand of former crops		
Average price received for 1903 crop		
What would be a fair price for crop of 1904		
Do you grow Winter wheat or Spring wheat		
Must you market immediately regardless of price		
Can you hold until December if necessary to get your price		
Are you a member of the American Society of Equity		
Are you a subscriber to Up-to-Date Farming		

Non-members who have this blank may use it, but be sure to fill blank above where question is asked.

Please have report in by July 23d., so the result may be printed in August 1st. number. In the meantime wheat growers are informed that the price of No. 2 Winter wheat will not be put below \$1.00 a bushel at Chicago.

Reports may be sent through local union secretaries, or direct to The American Society of Equity, Indianapolis, Ind.

This report is from

## UP-TO-DATE WRITERS

IN SUNNY CALIFORNIA.

### To Up-to-Date Farming:

The farmer, and his wife and children, from their environments, should be the most independent and care free of beings, while just the reverse is true. The question is how to get them to co-operate.

We have, though small farmers on a small place, been ever ready to help a brother, and lend a hand for the betterment of humanity, ever been looking for that better time when we could pay off that little mortgage. The good time seems just as far off; the hours for hard work grow longer, and we are squeezed harder than ever between the contending forces of commercialism.

Mr. Editor, please tell the other farmers' wives that the same necessity that developed our minds to understand, and our strength to be not only wives and mothers, but butchers and bakers, dairy-men and gardeners, tinkers, laundrymen, dress-makers, doctors, etc., all of which we must be, enables us to understand why other people can patronize the laundry and bakeshop while we cannot.

My own hands while I write this are so hard and stiff from contact with mother earth that I make the resolve to help you bring about that state of affairs when all shall get a just return for their labor. In our sunny California, where oranges grow on Christmas trees, where bees gather honey all the year round, where stock need never be taken from the range, where seven crops of Alfalfa can be taken from the same field each year—in fact, where all the farmer has to do is to turn on the water, nature does the rest—surely here we can stand 'most anything. But here as elsewhere everything else is unionized or combined, and the farmer is even further behind on that line than in any other part of the nation.

Mrs. J. B. AMES,  
Stanislaus Co., Calif.

### SOME SLEEPY FARMERS.

### To Up-to-Date Farming:

I am sending you list of names as requested. I am willing to do all I can to assist in this movement, for I think it deserves the attention of every farmer. I think it is the grandest step ever taken toward bettering the financial condition of the country, not only the farmer, but all classes. I am sure you have done your part in sounding the bugles; if it could only be sounded loud enough to awaken the sleepy farmers who always wait to see how it will work before they do anything. I sometimes think, when the day of judgment comes, they will wait to see how the business is to be transacted before they respond to the call. I know we can succeed if we do our part.

Geo. BLULAUGH,  
Oklahoma.

### LOSS FROM FLOODS.

### To Up-to-Date Farming:

Our union is getting along all right; but we have had a very disastrous flood, and 90 per cent of the cotton crop has been washed out. All in the creek and river bottoms is gone, and also that on the islands. We think we ought to have 15 cents a pound for what is left. Lots of people that lost all they had are moving off. Lots of corn is also ruined.

J. A. YOUNG,  
Logan Co., Ark.

### IN WESTERN KENTUCKY.

### To Up-to-Date Farming:

Language fails me in expressing my appreciation of this paper. I am a member of the A. S. of E., which I consider not only a step, but quite a journey in the right direction. We may be a little behind our neighbors, but it is mostly our own fault. We realize that there is something wrong, but we have not been making much effort to correct it. I am sure, though, in joining the A. S. of E. we are getting into the army which must conquer soon. We need more farmers like David Dobetter. Wheat is very scarce and below an average. Corn late. Oats very backward. The acreage of tobacco is cut down about one-third. Rye a failure. Pastures good but late. The crop of winter pigs almost a failure.

C. T. CLARKE,  
Livingston Co., Ky.

### EVERY MEMBER PRESENT.

### To Up-to-Date Farming:

I come as a member of Dedman union and a lover of Up-to-Date Farming. I wish to express my sympathy for all laboring men and women all over our land, and to say the time is here when we must speak up for ourselves. I wish to clasp hands with H. W. Climax; woman is man's best help meet. We are proud of our local union. We met Friday night, and every member was present, though it was raining and thundering and a very bad night. We have learned something in our discussions. Cotton in calico cost 48 cents a pound, and in a hat it costs about \$6 per pound. The grower gets about \$50 a bale, the hat maker gets about \$3000 for the same bale. This is not all. There are other things to think about when you get to thinking.

S. BURFORD,  
Dallas Co., Ark.

### HOLDING GRAND MEETINGS

### To Up-to-Date Farming:

Fordville local was organized March 4, 1904, by E. B. Oglesby, with ten members. By June 20, we had 27. Then we had a big meeting with a free dinner and a revival. The meeting was presided over by J. G. Withers, of Fordville No. 2, and the principal speakers were Arthur Moxley, of

Herbert No. 1; Rev. P. M. Whitlow, of Fordville No. 1; Cicero Phillips, of Lyon; No. 1; Alfred Buckley, of Reynolds No. 1; and the subjects discussed were: Should Farmers Organize, Why Should Farmers Organize, On What Plan Should Farmers Organize, Is Organization by Farmers Honorable.

Then came dinner, after dinner the secretary, W. A. Basham, assisted by M. F. Sharp, read the address President Everitt delivered at Rochester Minn. We then called the membership roll of Fordville Union No. 2 and 25 responded. Next, we opened the doors for the reception of members and 28 were received into the union. There was then further speaking by Prof. Arthur Moxley, of Trisler No. 1; M. F. Sharp, Fordville No. 2 and Garl Lanham, Aetna No. 1. It was decided to hold the next meeting August 27, with Lyon No. 1, and committee was appointed to arrange program.

J. G. WITHERS, Pres.  
W. A. BASHAM, Sec.

### ORGANIZING FAST.

### To Up-to-Date Farming:

This section is organizing fast; we expect to have Pierce county solid before harvest. Our local has a volunteer committee of eight who are going out to organize two locals this week. I wish every local union had a volunteer committee of organizers. Try it. We expect to put in a scale at Pleasant Lake this fall. Let us all get to the front. Come on, farmers, you are not alone. We are with you. We want \$1.50 for out flax seed and \$1 for our wheat.

JULIUS J. CARSTENS,  
Pierce Co., N. D.

### "AWAY DOWN SOUTH IN DIXIE."

### To Up-to-Date Farming:

May I say a few words for South Florida? We are situated in the high lake region, several hundred feet above the sea level, and about midway between gulf and ocean, making the climate the most healthful and delightful found anywhere. We are not bothered with flies, fleas, mosquitoes, etc. Fruits and vegetables of all kinds are grown here with ease, as well as corn, oats, grasses, clovers, beans, cow peas, etc. Potatoes, cabbage and melons pay handsome profits. People are very sociable, and we have good churches and schools, and a bank and ice plant, two railroads, six stores and 700 population. Success to the A. S. of E. and Up-to-Date.

FOSTER THRELKELD,  
Dadi City, Fla.

### THANKS, MR. EVERITT.

### To Up-to-Date Farming:

I want to thank Pres. Everitt for the good speech to the farmers of Minnesota. Our road supervisor had me out working today, and I got in my work on him too; he is now a good A. S. of E. Crops promise an average yield here, though the pig crop is only about 60 per cent. of an average. It looks like it might cost you city fellows something to grease your whistles before many moons.

DON M. LEACH,  
Ackley, Iowa.

### PREFER OUR WAY OF WRITING.

### To Up-to-Date Farming:

I have been a constant reader of for over half a century and it is a paper I have always thought a great deal of, but since I have read Up-to-Date Farming I prefer your way of writing, for you certainly are doing more for the farmer than all other farm papers have done, or ever will do, and I am heartily in favor of your fearless way of telling what you know to be the truth. I hope and trust farmers will lend their aid to accomplish what you are working so hard to do.

J. C. METZGER,  
Sullivan Co., N. Y.

### BETTER CROPS AND BETTER PAY.

### To Up-to-Date Farming:

For many years I have been reading agricultural papers. All can tell the farmers how to grow better crops, but it was always uncertain as to price and profits. But I am glad we now have a paper that tells how farmers can get better prices for their products. If farmers will benefit by the information thus given, there is no question as to results, as readers of Up-to-Date Farming well know.

We are more than pleased with the present form of the paper, as it is larger and filled with good reading. Each copy is worth the cost for a year.

W. D. WILSON,  
Boonville, Ark.

### COTTON GROWERS SEEK A BETTER WAY.

### To Up-to-Date Farming:

I have always advocated the principle of cooperation, and believed farmers have the same right and power to co-operate as any other class. I think you have struck the right method. The present condition of our farmers is deplorable in the extreme. The territory has no chance at all. Take my own case and it is the case of nine-tenths of the farmers of this section. I want to make a cotton crop. I go to a cotton merchant, and this is the contract I make with him. He furnishes me with the necessities of life, just as little as I can get along with, and seed, and I give my note for a certain sum sufficient to meet all these probable expenses. To this sum 10 per cent. is added and the note is to draw 8 per cent. from date if not paid at maturity, October 1. To secure the note I give a chattel mortgage on my prospective crop, and on all the stock and farming tools I have.

Cotton does not begin to open here until September 1, and I have no means of paying the note at maturity consequently I must pay 18 per cent. besides the high prices the credit merchant charges for goods. This is the condition of nine-tenths of the cotton raisers of this territory. What chance have they? We are getting farther behind each year and we are eager for a means to change these conditions.

B. F. ROMINE,  
Choteau, Ind. Ter.

Note—Bro. Jeff Dickey, of Arkansas, writes to ask a number of questions that have been answered and answered in Up-to-Date, and made as plain as clear argument can make them. Bro. Dickey admits that he has never seen but one copy of Up-to-Date, and that was loaned him by a friend. He is naturally like the blind man whose eyes were first annointed with the clay Christ prepared—he "sees men as trees walking." He must have more oint-

ment. Get Up-to-Date and read it regularly, or, if you want the "whole thing" at one dose, get Mr. Everitt's book The Third Power, and then you cannot help but see clearly.

### THE INTEREST IS GROWING

### To Up-to-Date Farming:

Prairie View, local union No. 1, met in 13th regular session July 1st, with 16 members present. We had a very interesting program rendered by the little folks. We have 55 members enrolled, and the interest is growing. We hope the A. S. of E. will reach the million before the year shall close. We read a great deal in Up-to-Date about \$1 wheat. That is all very good, but what interests us more, is 12 cent cotton, as we are in the cotton belt. I think we need a general organizer in Arkansas and other southern states to help us organize for 12 cent cotton. Success to A. S. of E. and Mr. Everitt

P. L. CUMMINS,  
Prairie View, Ark.

### THEY SAVED \$127

### To Up-to-Date Farming:

Here is what local co-operation has done for Meridian local union No. 2. With an active membership of 25, we have saved during the past year, \$127. Considering that we are poor men, and this our first year, I think this is not a bad showing. Success to Equity. You can depend on us to bring up our part.

R. R. ILEY,  
Meridian, Texas.

### WILL MAKE FARMING PLEASANT

### To Up-to-Date Farming:

Crops here are greatly damaged by heavy and continued rains; large cotton fields are being plowed up and put in corn. (June 21)

I am surely interested in this great work. I have talked to the farmers for several years, and told them it is a shame that they will not stick together in their own interest. Union firm and solid will make farming pleasant, and will keep the boys on the farm. As it is there is no encouragement for man, wife, son or daughter to toil and sweat in the fields and gardens, for when crops are ready for market, they are hauled off and paid in on machinery debts and expenses. And so it goes on from year to year, and no change for the better. It is said, "All things come to those who wait," but that seems slow to apply in our case, as we have waited long for some one to help us, and, as Mr. Everitt has led out, we must all fall in line with a determination that will not back down. We will have a struggle, for there are so many bacteria that prey upon the farmers' finances; but if their ravages be not checked soon the farms will be vacated and grow up in weeds. Prolonged discouragement and failure will break down any business.

(Mrs.) S. E. SOWERS,  
Indian Terry.

### GOING TO HOLD WHEAT

The Farmers met in Irvington, Ky., July 5 in mass convention and resolved that they would not take less than \$1 for their wheat. 20,000 Bu. of wheat was represented.

### KEPT ON THE JUMP

### To Up-to-Date Farming:

The A. S. of E. of this county are planning a picnic on a grand scale, to take place at Brazil, Pierce Co., N. D., on July 30. Through the efforts of the members the farmers are beginning to realize their condition, and I am kept on the jump to organize them fast enough to satisfy them. This is one of the best movements that has ever come up before the farmers, and President Everitt deserves all the praise the farmers give him. If all other societies would join us, you would hear something drop. Did you ever in your life hear of any society growing so fast as this one? May the good work go on, and every farmer say \$1 wheat.

CHARLES OLIVE,  
Pierce Co., N. D.

### GIVING IT PUBLICITY

While so much of the press, especially the farm press, through feeling of jealousy or for some other inexplicable reason, refuse to give any encouragement to the idea of price making by the farmers, all papers are not so. The Montgomery county, Pa., Transcript, for instance, having received from a member of the A. S. of E., one of our war cry cards, published both the letter and the card and had this to say editorially:

"As many of the 'Transcript' readers know, an organization of farmers has been formed in the West that has planned to do great things for agriculture. The organization is known as the American Society of Equity. There are about six million farmers in the United States and the A. S. of E. wants one million of these to become members. 'The object and scope of the Society is set forth in the letter and card that accompanied it. It is evident that systematic work is being done, inasmuch as all the cards are numbered and when returned evidently are carefully filed away.'"

### CO-OPERATE FOR PROSPERITY

From an excellent article by J. P. Lockwood, in the Detroit, Michigan, Times, which, by the way is always ready to publish whatever will benefit the farmers, we clip the following:

"Now make the farmer prosperous and he will consume the goods from the hands of the merchant, then the merchant will buy from the manufacturer, and the factory will roll along in full blast; labor will be put to work at profitable prices; the great transportation companies will have the goods to haul, which will require the employment of more labor, and thus everybody will reap a benefit, for the laboring man is the most liberal man to spend his money when he has it to spend, and working hard he consumes more than the person who does not perform manual labor.

"The question now is, how are we going to bring about prosperity for the farmers. It cannot be done by legislation, for you cannot legislate prosperity for the farmer, all arguments of the politicians to the contrary notwithstanding, but it can be done by organization and co-operation. Let the farmers organize thoroughly enough to put an equitable price on their own product instead of letting the speculator price his goods, and you will put agriculture on a basis that cannot be undermined, and with the present improved machinery, farming would be a successful business instead of a life of drudgery. And whom would this price-making hurt? No one but the speculator, who as a rule, never produced anything in his life except excitement and poverty for the producer of the food products of our land.

"When I say speculator I don't mean the legitimate middleman, for we must have them in order to carry on our business, and it is my honest opinion that the average farmer will protect such middleman as long as he will deal honestly.

"The farmers' organization, the American Society of Equity is now at work in this state, and I believe it is the society which is destined to emancipate the American farmer from his present condition.

"Dead-beats" can't advertise in Up-to-Date. If they did it would break us up because we guarantee our advertisers.

## I Cure Women OF FEMALE DISEASES AND PILES

I Will Cure You So That You Will Stay Cured—Women No Longer Need Submit to Embarrassing Examinations and Big Doctor Bills.

To Show Good Faith and to Prove to You That I Can Cure You I Will Send Free a Package of My Remedy to Every Sufferer.

I hold the secret of a discovery which has never failed to cure women of piles or female weakness. Falling of the womb, painful menstrual periods, leucorrhea, granulation, ulceration, etc., are very readily cured by my treatment.

I now offer this priceless secret to the women of America, knowing that it will always effect a cure, no matter how long you have suffered or how many doctors have failed.

I do not ask any sufferer to take my unsupported word for this, although it is true as gospel. If you will send me your name and address, I will send you a trial package absolutely free, which will show you that you can be cured. The free trial packages alone often are enough to cure.

Just sit down and write me for it today.

Mrs. Cora B. Miller, Box No. 137 Kokomo, Ind.

### To Women Who Dread Motherhood!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No woman need any longer dread the pains of child-birth; or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at child-birth may be entirely banished, and he will gladly tell you how it may be done absolutely free of charge. Send your name and address to Dr. J. H. Dye, 112 Lewis Block, Buffalo, N. Y., and he will send you, post-paid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also how to cure sterility. Do not delay but write to-day.

WE can cure any skin disease, such as a wet sore, scald, burn, chafe, offensive body odor, itching skin, perspiring feet. C-U-R-A Powder is the article that will do it. One box 50c, three boxes, \$1.00 by mail. Sample for 2c stamp.

C-U-R-A Chemical Co., 665 Mill St., Akron, O.

## CANCER

ually cure cancer and tumors without the knife. 73 page book sent free. Address Drs. GRATIGNY & BUSH, 7 Odd Fellows Temple, 7th & Elm Sts. Cincinnati, O.

FITS Permanently Cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. Send for FREE \$2.00 trial bottle and treatise Dr. R. H. Kline, Ltd., 531 Arch St., Philadelphia, Pa.

Use C-U-R-A Pile Remedy. We guarantee to cure any case of piles, no matter of how long standing. Describe your case, telling how long you have been troubled. Our remedy is mild, healing, and soothing. Price by mail, 50c. Sample for 4-c stamp.

C-U-R-A Chemical Co., 665 Mill St., Akron, O.

WE START YOU in Mail Order Business. Particulars and samples free. AMERICAN SPECIAL AGENCY (U.F.) Milwaukee, Wis.

# The Queen of the Wheat Field

## FULTZO-MEDITERRANEAN WINTER WHEAT

**STILL VICTORIOUS** is this grand variety. To say "It is Better than the Best" does not overstate its good qualities. IT BEATS THEM ALL wherever tested in competition with other varieties as proven by the reports printed below. If you have not procured seed of the Fultz Mediterranean wheat you don't want to put it off another year.

**The Great Hardy, Productive Wheat, Withstands Freezes, Floods, Drought, Rust, Fly, Bugs and Blight to a Remarkable Degree. Stiffest Straw Fine Quality. Farmers and Millers Wild for it. Where first grown always sells for seed at fancy prices. Will you introduce it in your neighborhood?**

The Fultz-Mediterranean wheat was originated by crossing Fultz on the Hybrid Mediterranean. Hence the name. All experienced wheat growers must acknowledge the parents as being among the hardest, most reliable, and most valuable varieties of wheat ever grown in this country. A beautiful variety in growth, straw, head and grain, even surpassing the expectations of those who grow it for the first time. The plant is a strong grower, with a corresponding large root development. If sown thinly or damaged in winter it will stool out and usually produce 20 to 100 stalks from one grain. If damaged in winter it usually makes a good crop at harvest on account of its wonderful vigor and recuperative properties. This quality was conspicuously shown this year, 1904. Farmers, by all means sow such a wheat and you will have extra bushels and extra dollars when harvest comes. Read the reports.

The stalks are large, short and very stiff, and stand up where nearly all other kinds would fall. We recommend it as the best that can be selected for very rich ground. The heads are thick and broad, broader at the top than at the bottom, looking at them edgewise. The meshes are compact and contain from three to five grains. Chaff white, heads smooth or beardless; grains large, color red. The Fultz-Mediterranean is extra early. This wheat appears to be without a peer today for standing hard winters, wet weather, drought, rust, bugs, fly, etc.; in making a vigorous growth and heavy yields. It easily yields 10 to 20 bushels per acre more than the old Fultz, Mediterranean, Gold Dust, Velvet Chaff, Clawson and other old favorites that have lost their original vigor. If you don't get yields like reported in letters below, you want to get rid of the corpses this year and get this vigorous variety with young blood that will stand hardships and produce a good harvest in the end.

If for any reason you were dissatisfied with your wheat crop this year, obtain seed of Fultz-Mediterranean. We have made low prices for large lots. You can afford to buy for a field or your entire crop.

### READ THESE REPORTS

The Like of this Wheat was never Known Before

#### OVER 50 BUSHELS PER ACRE

"Under separate cover I send you a copy of our county paper. In it you can read an account of my Fultz-Mediterranean wheat. The two bushels my tenant obtained of you sown on 1 1/2 acres of ground and yielded 75 1/2 bushels. There is no mistake about this as the land was measured and the grain kept separate and weighed. Also I will say that a shower passed over the field just before threshing and I know much wheat was left in the straw.  
Mrs. M. C. Mitchell Co., Kans.

#### ONE BAG YIELDS 106 BUSHELS

We are well satisfied with your wheat. The sack had a hole in it and about a peck lost out. From the balance we raised 106 bushels; 2 1/4 bushels of seed.  
B. H., St. Charles Co., Mo.

#### 45 BUSHELS TO ACRE—HARDY AS RYE

This is my second year for Fultz-Mediterranean having obtained a little of your seed two years ago. It has proved the hardest wheat I ever grew, and yielded last year at the rate of 45 bushels per acre, and this year will yield nearly or quite as much; winter proof; a great stooler; even grower; the field looking like a large level floor, heads large, broad and well filled.  
J. L. M., Jennings Co., Ind.

#### GOOD FOR 50 BUSHELS OR MORE

It was with some feeling of doubt that I sent you the order for Fultz-Mediterranean wheat last fall, but I had had good success with other varieties of your introduction, that I thought I would try it. I am more than pleased now, and this is the finest variety of a'l. My 18 acre field is a grand sight, and good for 40 to 50 bushels per acre. Your delighted customer,  
M. A. G., Mecosta Co., Mich.

#### BEST FOR THREE YEARS

have raised Fultz-Mediterranean wheat three years consecutively, and every time it has been the best wheat grown. This year it yielded 10 bu. per acre more than my other wheat. It is destined to become the most popular variety in this section.  
J. C., Daviess Co., Ind.

#### F.-M. 30 BU., OTHER WHEAT 11 BU.

The wheat crop in Sciota county is poor. Fultz-Mediterranean obtained of you is by far the best in this section and will average 30 bushels per acre of excellent quality. The Fultz-Mediterranean was a beautiful sight, while the next field adjoining, with only a wire fence between, only made nine bushels per acre. I am a friend of your seed.  
J. S. V., Sciota Co., O.

#### FARMERS COME EXPRESSLY TO SEE IT

I purchased of you last season two bushels of Fultz-Mediterranean which I sowed on 134 rods of ground on the 25th day of September. I sowed with the wheat 200 pounds of wheat fertilizer. I do not think I lost one plant in wintering, although our farmers complain of severe winter killing. This wheat was in head May 24 and will be in bundle before July 1, (extremely early for New York) It challenges the curiosity of a wide section and many farmers have come expressly to examine it. I expect at threshing not less than 45 bushels per acre. Every kernel that I have to spare is spoken for and I want to buy more.  
Rev. J. W. L., Onondago Co., N. Y.

#### AVERAGED 41 BUSHELS PER ACRE

We raised 15 acres of Fultz-Mediterranean wheat and threshed 615 bushel of beautiful wheat. This is an average of 41 bushels per acre. This is the finest wheat I ever grew.  
N. B. W. & Son, Harrison Co., Ky.

NOTE:—We do not give full address of our customers as that would divert trade from our house. Usually our customers sell all their surplus wheat at a high price in their neighborhood. We would print many more testimonials if space permitted.

#### REQUIRED FIVE HORSES IN BINDER

I bought seed of Fultz-Mediterranean wheat to sow 16 acres last fall and now I am pleased to say it is the best wheat I ever saw. I usually grow good wheat, but this is the best I ever grew. It is early stands up straight, and will surely yield 35 to 40 bushels per acre. It is unequalled in all this section I started in to cut it with three horses in my McCormick binder, but was obliged to put in five, and it kept four men jumping to shock it. It required 55 pounds of twine to bind the 16 acres.  
J. M. R., Hancock Co., Ind.

#### BETTER THAN FULTZ EVER WAS

Your Fultz-Mediterranean wheat is giving entire satisfaction. I sold to a number of farmers and not one can pick a flaw in it. I consider this wheat better than the old Fultz ever was. It grows very vigorously; has a fine head in size, shape and structure, with very large grains. It will yield heavily. Will report when threshed.  
A. B. S., Saline Co., Ill.

#### A SIGHT TO SEE

My crop of Fultz-Mediterranean is now in the shock and it is a sight to see how thick the shocks stand. I have 355 dozen, large bind, on 9 acres. In the balance of the 20-acre field I sowed Early Red Clawson, which averaged 15 dozen to the acre. I expect 40 bushels per acre of Fultz-Mediterranean.  
G. B. S., Montcalm Co., Mich.

#### YIELD TWICE AS MUCH

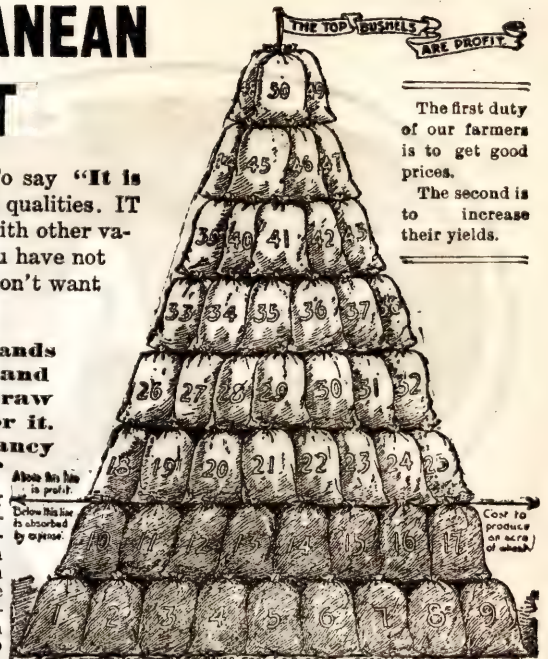

Fultz-Mediterranean wheat will yield twice as much as any other variety. It is not threshed yet, but it is the best wheat I ever raised. It is free from rust and fly.  
O. C. HUTCHENS, Braxton Co., W. Va.

#### 33 BUSHELS FROM 1

I threshed the crop from the bushel of Fultz-Mediterranean wheat and had 33 bushels of fine wheat. Other wheat is about half crop. I am greatly pleased with it.  
PARKS CAMPBELL, Daviess Co., Ind.

#### DELIGHTED WITH F.-M.

From 2 1/4 bushels of Fultz-Mediterranean wheat sowed I threshed 64 bushels of fine quality. It is the best crop of wheat in the community. It has a stiff straw, stands drought, fly and rust better than any other wheat I ever raised. I am delighted with Fultz-Mediterranean.

**THE TOP BUSHELS ARE PROFIT**  
Farmers, strive for the top bushels. There are several bushels extra per acre for you by sowing the Fultz-Mediterranean.

The average yield of wheat is 13 bushels per acre. If every farmer sowed Fultz-Mediterranean it would be much higher at once.

The increase in yield will abundantly justify the extra price for seed, besides having seed for your future crops.

#### STOOL OF FULTZO-MEDITERRANEAN WHEAT

There were 94 developed stalks with heads in this stool. This shows the vigor of the Fultz-Mediterranean wheat. Vigor is of immense importance in wheat. It oftentimes brings success out of what looks like failure. The F.-M. is unequalled in recuperative powers.

**ONE YEAR AGO I PRINTED AS FOLLOWS:** "I believe the 1903 crop of wheat is the last one that will be priced for the farmers by the speculators and gamblers, I believe that before another crop of wheat is raised that farmers will be co-operating, and will fix the price on their crops before they leave the farm, I believe the next crop of wheat will make the farmers more money than any crop they have ever raised, and I don't know of any variety of wheat that can be recommended above Fultz-Mediterranean for seed."

Has not this prediction come true? Farmers put the price of wheat to \$1.00 a bushel and have held it there. The price came to late to benefit the majority of growers, but all will get the benefit in the 1904 crop. Readers of Up-to-Date Farming know how much credit is due me for the good price of wheat. This is another reason why we should have your orders.—J. A. EVERITT.

**Price of Fultz-Mediterranean Wheat.** By mail post paid, 1 lb., 30c; 4 lbs., 75c. By freight or express, 1/4 bu. 75c; 1 bu., \$2.00; 2 1/2 bu., (1 bag for 2 acres) \$4.75; 5 bu., \$9.00; 10 bu., \$16.50; 25 bu. or more at \$1.50 per bu. Bags are supplied free. Purchaser pays freight. Price subject to change. We will book orders and ship later if 1/4 is remitted.

# WE WANT YOUR MONEY

**BUT** not until you can say "Here is the dollar. You deserve it," not until we HAVE EARNED IT, not until you are WILLING to send it to us, not until you want to send it to us, not until you are SATISFIED to pay it, not until we HAVE PROVEN TO YOU that we have what we claim, not until VITAE ORE HAS DONE FOR YOU WHAT YOU WANT IT TO DO FOR YOU. Until then, you pay us NOTHING. After that you will be willing to pay, GLAD TO PAY, as hundreds of the readers of this paper, yea even thousands, have been willing and glad to pay. YOU ARE TO BE THE JUDGE. We leave it to you entirely for you to decide. If you can say that we, And Vitae-Ore have earned your money, we want your money, as we say at the top, but NOT OTHERWISE. How can you refuse to give this most remarkable of all remarkable remedies—a natural curing and healing mineral ore—a trial on the terms of such a LIBERAL OFFER? If you need medicinal treatment of any kind, if you are sick and ailing, if anyone in your family is ailing, poorly, worn out, sickly, it is actually a sin and a shame if you do not send for Vitae-Ore upon the terms of this thirty-day trial offer. Read the offer! Read it again and again! Send for the medicine! Do it today! Each day lost makes a case older, obstinate, harder, hurts you more, pains you more. We take all the risk; you have nothing to lose.

## WE WILL SEND TO ALL

Subscribers or readers of UP-TO-DATE FARMING, a full sized \$1.00 package of VITAE-ORE by mail, POSTPAID, sufficient for one month's treatment, to be paid for within one month's time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs and doses of quacks or good doctors or patent medicines he or she has ever used. Read this over again carefully, and understand that we ask our pay only when it has done you good and not before. If not, no money is wanted! We take all the risk; you have nothing to lose. If it does not benefit you, you pay us nothing. We give you thirty days' time to try the medicine, thirty days to see results before you need to pay us one cent, and you do not need to pay us one cent unless you do see the results. You are to be the judge! We know Vitae-Ore and are willing to take the risk.

Vitae-Ore is a natural, hard, adamant, rock-like substance—mineral—Ore—mined from the ground like gold and silver, in the neighborhood of a once powerful, but now extinct, mineral spring. It requires twenty years for oxidation by exposure to the air, when it slacks down like lime, and is then of medicinal value. It contains free iron, free sulphur and free magnesium, three properties which are most essential for the retention of health in the human system, and one package—one ounce—of the ORE, when mixed with a quart of water, will equal in medicinal strength and curative value, 800 gallons of the most powerful mineral water drunk fresh from the springs. It is a geological discovery, in which there is nothing added or taken from. It is the marvel of the century for curing diseases as thousands testify, and as no one, answering this, writing for a package, will deny after using. VITAE-ORE has cured more chronic, obstinate, pronounced incurable cases than any other known medicine, and will reach such cases with a more rapid and powerful curative action than any medicine, combination of medicines, or doctors' prescriptions which it is possible to procure. Vitae-Ore will do the same for you as it has for hundreds of readers of UP-TO-DATE FARMING, if you will give it a trial. Send for a \$1.00 package at our risk. You have nothing to lose but the stamp to answer this announcement. We want no one's money whom Vitae-Ore cannot benefit. You are to be the judge! Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it, would hesitate to try Vitae-Ore on this liberal offer? One package is usually sufficient to cure ordinary cases; two or three for chronic, obstinate cases. We mean just what we say in this announcement, and will do just as we agree. Write today for a package at our risk and expense, giving age and ailments, and mention UP-TO-DATE FARMING, so that we may know that you are entitled to this liberal offer.

## SHE DID

And is Now Entirely Cured of Liver, Kidney, and Bladder Disorders Which Previously Defied All Treatment.

It Will Do As Much For You

I cannot express my gratitude for the great and lasting good that Vitae-Ore has done me. I had been taking medicine ever since October, 1902, when I was first stricken down with my disease, a complication of Liver, Kidney and Bladder disorders. I took several different kinds of patent medicines, but none of them did me any good. My husband then called a doctor. He came a few times and then dismissed the case. He then called in two more doctors, the best this country affords, and one of them treated me two or three months, but he only gave me temporary relief. I dragged along all last year, never feeling like myself. In the fall I grew worse and again went to my physician and he treated me about eight weeks. I was almost ready to give up. I did not know how near death's door I was until a neighbor told me after I began to get better. Some one of our neighbors advised us to send for some Vitae-Ore on trial, but I told my husband not to bother with it, as I thought nothing could help me. He sent for the treatment without my consent, and I now consider it the greatest favor he ever did for me. One month's trial package has saved my life. I think I can safely say that I would have been in my grave today had it not been for this Vitae-Ore. I have only taken the one trial package, but I feel that I am entirely well. When I commenced its use I weighed 98 pounds, but now in only five weeks' time I weigh 110 pounds. I would not be without Vitae-Ore. I would not give this medicine for all the medicine in the world, and I am not ashamed to let the world know what I have to say about Vitae-Ore. I am willing to do all I can to help its cause. Mrs. J. F. MORRIS, Stevens, Tex.

## MAKE NATURE YOUR DOCTOR

### WHAT CATARRH IS:

Many of the troubles and disorders which Vitae-Ore is advertised to cure may be traced to a Catarrhal condition of some part of the body. Most people connect the word Catarrh only with a disorder of the head or throat, but such inference is not correct.

CATARRH, as defined by Webster, is an inflammatory affection of any mucous membrane, any condition in which there are congestion, swelling, morbid action or any alteration in the quantity and quality of mucous secretion. It can consequently be present in any part of the body where there is a mucous membrane, the head, nose, throat, stomach, intestines, bowels, bladder, kidneys and generative organs, and as a clot of dust will impair the workings of the finest watch, so a catarrhal condition of any organ will enfeeble its power, prevent the proper functional activity and capacity, and result in a complication of ills of many names and symptoms, treated in many different ways, but no cure is possible unless the Catarrhal condition, the primary cause, is checked and removed.

To successfully treat catarrh of any part, it is necessary to use medicaments which possess the power of allaying inflammation, arresting morbid action and of purifying diseased mucous.

Vitae Ore will positively cure Catarrh of any organ or part of the body, used for the different conditions in the several ways prescribed in our printed directions. It is a natural astringent, presenting qualities as such which it seems impossible to duplicate in any manufactured or artificial product, and immediately allays all inflammation, stops all morbid or irregular action on the membrane, eradicates all catarrhal conditions and places each organ in a natural, normal, healthy condition, so as to faithfully perform its individual function, and restores the entire system to a state of entire and perfect health.

Its action is certain and results sure. It can be relied upon to reach every case more promptly and effectively than any treatment, combination of remedies or doctor's prescription that can be procured, and cure completely as well as permanently. Patients afflicted with catarrh of any part should not delay treatment, as delay means a spread of the disease to other parts, a more aggravated condition from month to month, and more difficulty in effecting a cure. Vitae-Ore has cured thousands upon thousands of cases, as the multitude of testimonials in our indexes shows, many of them in which the patient was at such a stage that hope was given up, recalling them from the shadow of the grave.

The loss of appetite and general breaking down of the digestive organs is delayed, the blood purified and enriched, the vital organs are strengthened and a peaceful old age may be enjoyed by the use of this great natural remedy without drugs.

## WORKING WONDERS

FOR ALL THREE

Rev. G. W. Rook Tells What a Trial Package Did For Three Persons

Does Not Such Testimony Say to You  
"GIVE V.-O. A TRIAL!"

I want to say that the Vitae-Ore medicine is working wonders for every one in this house. Mrs. Rook is wonderfully improved of late, and is better than she has been at any time since she received her paralytic stroke, and is getting better every day. Her sister, Miss M. A. Wood, who has been afflicted with a lame foot ever since she was eight or nine years old, or for the past fifty years, is greatly improved in every way and expects to be a well woman yet. Her back has always troubled her and her kidneys were in a very bad condition. I am also happy to report for myself that my own case is very much further improved. My back and kidneys seem well, and my heart, which has been giving me no end of trouble, is very much better. It seems almost impossible to believe that so much good could be accomplished for three different people on \$1.00 worth of medicine, and this is all the more remarkable from the fact that the dollar's worth was a trial package sent into our house without costing us one penny in advance. We are more than glad to pay for it, as all should be, and intend to continue with the treatment, so as to secure the great and lasting good which it promises all of us. The Theo. Noel Company is doing a wonderful work in offering the Vitae-Ore in this splendid manner, and my most sincere and best wishes go with it. REV. G. W. ROOK, Lostine, Ore.

## NOT A PENNY UNLESS BENEFITED

This offer will challenge the attention and consideration, and afterward the gratitude of every living person who desires better health or who suffers pains, ills and diseases which have defied the medical world and grown worse with age. We care not for your skepticism, but ask only your investigation, and and at our expense, regardless of what ills you have, by sending to us for a package. ADDRESS

### The Government Against The Farmer

The politicians, about vote-getting time, delight to remind the farmers of what they and the government have done for them. Farmers are patriotic people. They love their country, and they ought to. There are few governments so beneficent as ours, and there are few which respond more readily to the wishes of their people. But the last few years have witnessed a wonderful growth of organization in the United States, organization which has been quite one-sided in its character, or rather it has been among classes distinct from one class, and that class the largest and most important of them all. Yet it is the class least importunate in its claims for recognition, and it has had fewer of the direct benefits of government. We refer to the agricultural class. We are aware that in this connection farmers are reminded of the agricultural colleges and universities, of the experiment stations, of the weather service, and of the great work done by the department of agriculture, and we concede all these and appreciate them, but that does not prevent us from reminding the authorities that in spite of all these things the average yields of

our lands have not increased a pound or a bushel, and the prices of our crops have not increased a cent. We may remind them also that, under the very nose of the government, the farmers' products, their toils, their wages, are being made the subject of the wickedest gambling that ever cursed a nation, and it is more than probable that some of the methods of the Department of Agriculture play directly into the hands of these gamblers, and militate as directly against the interests of the farmers.

And there are other ways in which the government's efforts are not to the best interest of its farming people, evidences of discrimination between classes, of a leaning toward the organized and powerful and from the unorganized and, therefore, weak. Read the following from the Chicago American, anent the opening of new lands in the West:

There is one thing about this frequently growing opening up of government lands which is really very important and which has probably escaped the attention of a great many readers. That is the feature of government competition with farmers.

Concluded on Page Twelve. Read the whole article and get your eyes opened

J. A. EVERITT, Publisher, INDIANAPOLIS

# HOW LONG WILL THIS CONTINUE?

Under present prevailing conditions, the great class of people who produce our food and clothing supplies, and the other great class, the consumers of these products, are exploited by a small middle class who take heavy toll from both. This small middle class known as grain brokers, cotton factors, elevator combines, railroad corporations, packer's combine, together with the large and small speculators and gamblers in futures on Boards of Trade—self-appointed people—assume to place themselves between the millions who produce and the millions who consume, and

## STREAMS OF DOLLARS

flow both ways into their pockets. It is not proposed to attack the fair middlemen who are necessary to both producers and consumers, but the unfair ones. These are the people who must feel the righteous wrath of a long suffering people. Speculation and gambling in farm products must stop. Future selling and buying must stop, and will stop when farmers learn how to regulate their marketing so as to keep their grain, and cotton, and meat, and fruit, and butter, and egg, etc., out of public elevators and ware houses, and let them come off of the farms, or out of store houses owned by the farmers, as the consumers need them. It other words, to market a year's supply to meet a year's demand, and not like the old way—dump their fine products to overwhelm the demand.

Think of it. What would be more natural than for the people who produce the stuff to hold it until the consumers want it? What would be more unnatural than to turn over your goods which are absolutely essential to the millions of human beings and domestic animals throughout the world, to other people to store and manipulate? The world don't use your products in a month, but twelve months are required. The family that consumes don't buy a year's supply at once, but buys every day or week during twelve months. Don't you see now why farmers should market gradually instead of throwing their crop on the market in a lump? But you say farmers can't hold their crops. This is all a mistake. Of 12,128 farmers answering this question, only 262 said they could not hold their crops. Somebody MUST hold them. Farmers CAN hold them. All they need to know is HOW? This is the mission of this paper to teach.

*We want to teach farmers how to market their crops over a year, and compel an equitable price for every crop. We want to teach farmers how to kill gambling in farm products; how to get rid of the unfair middlemen, and give to consumers their products at equitable prices.*

## YOU CAN LEARN HOW FOR 10 CENTS

**UP-TO-DATE FARMING** This paper is teaching how these things can be done. It is now printing a special educational series of six numbers, (three months) which are edited with the special object in view of educating farmers how to secure profitable prices on all the crops they grow. The special issues and what they are mainly devoted to are as follows:

**JUNE 15.** The most valuable number on Co-operative Marketing ever issued.

**JULY 1.** How to get profitable prices for all Grain.

**JULY 15.** How to get profitable prices for Cattle and Hogs.

**AUGUST 1.** How to get profitable prices for Cotton and Tobacco.

**AUGUST 15.** How to get profitable prices for Fruits and Vegetables.

**SEPTEMBER 1.** How to get profitable prices for Dairy and Poultry Products.

**ALL THESE NUMBERS CAN BE HAD FOR TEN CENTS.**

**THE THIRD POWER** Do you know what "The Third Power" is? It is a book of 275 pages written by J. A. Everitt, President of the American Society of Equity, and Editor of Up-to-Date Farming. The price is \$1.00 in handsome cloth binding. It is in many respects, the most remarkable book ever written. The third edition is nearly exhausted, and its sale will probably reach to millions. This book is being printed as a serial in UP-TO-DATE FARMING. It began in June 15th number, (the first of the educational series); hence, each three month's trial subscriber at 10 cents will have the rare treat of reading this wonderful work which is truly a revelation to every American citizen. There is an installment in this number. Read this part and you will be hungry for the entire work.

**PRICE GUARANTEED** Any person reading the six special issues of UP-TO-DATE FARMING and The Third Power, we believe, will have no trouble to secure a profitable price on every crop he or she grows, by following the simple plan therein explained. We want everybody to learn this plan. Get all your neighbors to join a club at 10 cents each.

**HOW MANY WILL YOU SEND?** Farmers everywhere must learn of this movement. Up-to-Date Farming and "The Third Power" must be read by a million people. We now appeal to every subscriber and reader. How many 3 month subscriptions will you send at 10 cents each? Every-body you ask will gladly give you a dime. Ten names can easily be secured. One hundred can be secured if you make a little effort. Single names will be thankfully received, but a club of ten or more counts faster. How much time will you give to this movement? If you will give each Saturday afternoon this summer to the cause the results will be great. We want every farmer's name in your community reported to us on this offer at once so the speculators cannot price this year's crop. Right now is the time. Right now we want your help. Send a large club and see how your community will come to the front.

**WE REPEAT THE OFFER** Up-to-Date Farming three months for 10 cents covering June 15th to September 1st. The paper will positively stop at expiration of the time. "The Third Power" book began to appear in June 15th issue. Each ten cent subscriber will receive just these numbers (June 15th to Sept. 1st). Back numbers will be sent as the term advances. *This is not a change in subscription price in any respect. This offer is to new subscribers only, for this special purpose.*

IF YOU WANT \$1.20 WHEAT, 60 CENT CORN, 75 CENT POTATOES, 7 CENT CATTLE, 6 CENT HOGS, 15 CENT COTTON, 50 CENT APPLES, AND A PROFITABLE PRICE FOR EVERY CROP YOU GROW, come forward and help get them. Wake up your neighbors and send their names along. It can be done the same way that dollar wheat was secured. Numbers give strength. Numbers are irresistible. Hence send as large a club as possible.

**THERE SHOULD BE A REGULAR LANDSLIDE** of farmers to embrace this offer. This offer should bring the million to learn how farmers are to come to the front, and organize the army of a million united farmers. You have friends in distant parts of the country whom you can't see. You cannot do more for them and for yourself than to give them a 3 mo. subscription to Up-to-Date Farming. The paper is bringing farmers to the front. Every Farmer must be educated. We want clubs of ten or more. One dollar of your money will make ten converts, and bring the time nearer when the million co-operating farmers will bring certainty out of uncertainty. Many people who want better conditions to prevail on the farm, have sent clubs of 25, 50, and over 100. It is your turn next.

This is the way subscribers write after they become acquainted with this paper:

"Up-to-Date Farming is a paper that surprises its readers by the greatness of its ideas, the simplicity of truths, and the importance of the results sought. It is the ONLY TRUE FARM PAPER PUBLISHED. It teaches farming as well as others, and it teaches how to get fair prices for farm products, which none of the others do." A. A. DION, Grand Harbor, N. D.

Here is another:

"Some months ago I began to investigate the great farmers' movement, put on foot by J. A. Everitt, president of the A. S. of E. I spent much time in studying the matter printed in Up-to-Date Farming, and particularly the editorials. The logical and unanswerable arguments of these wonderful writings, produced a profound effect on me. At first I was skeptical as to the feasibility of the proposed plan for deliverance from THE GENTLEMEN OF THE BOARDS OF TRADE. But as the light was turned on I was surprised to find that all my doubts and objections were based on my total ignorance of the real principles that constitute the grand central buttress upon which the whole structure is built. As soon as the light dawned on me I began spreading the news to the farmers of my county. \* \* \* Before the present wheat crop is ready to market we will have our county thoroughly organized." A. S. COOK, Chetopa, Kas.

*There are still several thousand of our readers who have not sent a club. What's wrong with you? Do you enjoy being a machine to produce, while gentlemen on the Board of Trade set your wages after the work is done, and pocket most of the profits? YOU can end all this quickly. Will you learn how? Will you put others in condition to learn how? IT IS YOUR TURN NEXT IF YOU WILL SIMPLY TAKE YOUR PLACE.*

**NOTE.** With the acknowledgement of each trial subscription will be sent a booklet containing the plan of the AMERICAN SOCIETY OF EQUITY, with constitutions and by-laws, etc. This is the movement through which farmers are coming to the front.

NUMBER 16

## Up-to-Date Farming

J. A. EVERITT.....Editor.  
JOHN P. STELLE, Associate Editor.

Subscription Price 50c a Year  
PAYABLE IN ADVANCE

**Acknowledgement.** The date in connection with your address on wrapper, informs you of the time your subscription expires. Change of date indicates that your renewal was received.

Many club raisers fail to indicate their name separately from the club. We want to know who our workers are, therefore always write: "this club was sent by (name)."

Always state if a renewal or a new subscription. Don't Neglect This.

Your Address should always be written very plainly. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

**Renewals and Change of Address.** Give the same name as before. If a change from one member of the family, so state. If you change your post-office, give old office as well as new.

**Advertising Rate** 50 cents per agate line each insertion; 10 per cent discount when two or more consecutive insertions are taken. About eight words make a line, and fourteen lines make an inch.

**Only Reliable Advertisers** are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurrence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date when you write.

Three month's trial subscribers will be supplied with back issues containing the first chapters of the Third Power. The special numbers are June 15th to September 1st, inclusive.

**NOTICE:** All trial subscriptions will stop promptly unless renewed.

Renewals may be sent in at any time during the three months, thereby insuring continuous service. Be sure to inform us if you was a trial subscriber, when renewing.

A limited number of calls for speakers can be filled by the National Union.

If this paper had a circulation of One Million copies, the whole proposition of controlled marketing and price making would be worked out at once.

Then enough producers would know the prices, and have the advice so that enough would hold their crops and compel the demand to seek the supply.

Thirty cents a bushel (90c-1.30c-1.20) on a crop of 550 million bushels of wheat is 165 million dollars. Wheat growers could establish the A. S. of E. and keep it running two hundred years on this profit, and they absolutely would be getting \$1.20 per bushel now if this society had a million members.

The same kind of an illustration could be made on any other crop the farmers grow. Truly the possibilities are marvelous. You can have all these things if you reach out your hand and get them.

We are not a prophet, nor the son of a prophet, but is it not reasonable to suppose that seasons of drought will follow the seasons of extreme wet that this country has experienced?

Always keep in mind that there will be as much consumption of farm products at a good, fair, profitable price, as at a low price. This fact is of enormous advantage to farmers. Their position—as producers of and first owners of absolutely indispensable articles—is stronger than that of any other productive class in the world.

The only thing we want farmers to understand is the price their goods are worth, then market only when they can get that price. Until there is a thorough organization the society price may not prevail at the start, because the great majority of farmers don't understand the plan and have not got the information. But as long as there is not a surplus produced those who do hold will get their price at the other end of the season. The proposition is—the world must have your goods and will pay your price if they cannot get them at theirs.

We want every person who wants better conditions to prevail to speak up and get busy. A great work needs to be done, and this is the year and now the season has come. Crop report blanks for cotton will be printed in September 1st number.

## EQUITABLE PRICES

Below are the prices recommended by the American Society of Equity. They are the minimum prices, below which farmers should not sell. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should see that marketing is controlled so that the demand seeks the supply when it will pay your price. This list will be added too, as other crops mature.

KEEP THESE PRICES IN MIND.

**Wheat, No. 2, Red Winter at Chicago, \$1.20 per bushel. Price announced Aug. 1, 1904.**

**Hay, No. 1, Timothy, at Chicago, \$12.00 per ton. Price announced Aug. 1, 1904.**

## NOTICE

Large meetings in the interest of the American Society of Equity will be held at the following places: These meetings will be addressed by speakers from the National headquarters.

Howell, Mich., Aug. 16; Geo. G. Winans in charge.

Altus, Ark., Aug. 20; John W. Wilson in charge. Trenton, Ill., Aug. 20; Geo. Hartley in charge.

Duff, Ind., Aug. 20; C. H. Osborn in charge.

Marion, O., Aug. 23, 24, and 25; Enos Doughty in charge.

Bellevue, O., Aug. 16; E. Good in charge.

Lewisport, Ky., Aug. 27; H. G. Smith in charge.

Farmers should take note of these meetings, and do all they can to secure a large attendance at each.

## NEW SUBSCRIBERS.

Several thousand new subscribers are being added to our list every month. To each of these we are sending a 24-page booklet giving the plan of the A. S. of E., with constitution and by-laws, and other matter of value. We want each recipient to read and study the booklet carefully as well as each issue of the paper. Our object is to create a new mind in you, and prepare you to be a factor in the revolution that is taking place in American agriculture.

## SUMMER CAMPAIGN, A CALL TO ARMS

We want to ask every person who works on farms: "Will you work every day, every hour, every minute, to produce all you can, while a few people who do not work are scheming to cheat you out of your hard earned wages? Or will you take a few hours off this summer—only a few hours is asked—to look after the business end of farming—the marketing?"

Cannot the cotton growers bring some one to the front who can take up the work of organization in the Cotton States? A tremendous effort is being made to hold down the price of cotton, but as appears from articles we are constantly publishing from various sources, there are powerful influences in the South that are ready to assist the growers in controlling the market and maintaining fair prices. Now is the time to strike.

The farmers have an opportunity never before offered them. Price is the element upon which their financial success depends, and it is one which they may now bring into their business calculations. But they must not sit down and wait for others to do it for them. The everlasting habit of doing that has been, and still is, the farmers' greatest drawback.

## The General Outlook

Farmers are now a power to be reckoned with in all transactions in which agricultural products enter. They have surprised the business world and themselves. That they should be a factor in business is not remarkable, but it is remarkable that they have so long been ignorant of the power they possess and of the way to apply it.

That they are "doing things" is reflected in the markets nearly every day. The boards of trade operators have already learned some valuable lessons, with more to follow if they continue selling futures at big discounts. The bears who sold new July wheat for future delivery have this record to look back to. The prices given were closing prices on dates given for new wheat. May 2, 84¢; May 31, 85¢; July 1, 85¢; July 15, 95¢; July 30, (highest) \$1.00. During this time cash wheat was \$1.00 or over.

It will be seen that the speculative price came to the cash price on settlement day, and clearly shows the great injustice of the old system. We predict the September and December options must come to the farmers' price which is now \$1.20 per bushel for No. 2 wheat at Chicago. Farmers are urged to hold for this price. All will not hold, but those who do hold will get it. Mark our prediction.

## WHEAT.

The A. S. of E. estimate of the wheat crop as 275 million bushels, which must be scaled down on account of bad quality by 25 million bushels, making an available crop of only 550 million bushels. Other estimates are also being scaled down. Watch them and see if last year's experience will not be repeated. Late threshing reports in the winter wheat region confirm our estimate of yield, while from the spring wheat district come reports of rust. The spring wheat crop is two weeks late, and late wheat is rarely of good quality. The foreign situation is an interesting one. Extreme droughts have been prevalent in Europe, cutting short all crops, and making those countries more than ever dependent on America, while the United States will have very little wheat to spare at any price.

Millers, dealers and exporters all admit that the wheat market "all depends on the farmers." If they sell liberally, prices will stay down, but if they husband their wheat they can make any prices they want to. \$1.20 looks low enough for wheat this year, from every viewpoint. The price should come quickly before the crop is out of the hands of farmers. It will, if farmers do their duty. The surest way is to extend the circulation of this paper.

## CORN.

With a reasonably late fall to mature the crop this country will have a very big crop of corn this year. With wheat at \$1.20, corn ought to bring 60c a bushel. But we won't fix a price until the crop is made. Corn is easily held over if there is a surplus crop, and farmers should make up their minds that they will not sacrifice the crop, but hold the surplus, if any, against a possible shortage the next year. Besides, if the price was put down to 35 cents a bushel, no more will be consumed than at 50 cents to 60 cents. The only thing that might result would be for speculators to buy it as a club against your next crop.

## OATS.

The country has raised a very large crop of oats, and of good quality. Prices are ruling low. July oats closed at 45 cents, September option at 33½c, December 33½c. Cash oats on last day of July closed as follows: Old No. 2, 37c; new No. 2, 40½c-41½c. The A. S. of E. bulletin on oats and barley will be issued with September 1st number. We recommend selling oats on basis of cash prices as above and hope the speculators will fall in their attempt to bring the farmers' price to theirs.

## LIVE STOCK.

The live stock situation is at present subject to more than its customary uncertainties. This is on account of the strikes. Indianapolis has received a greatly increased amount of stock which usually brought good prices. On a few days the market was glutted and low prices were the result. If stockmen would get into an organization and supply the markets with just what they need, and no more, they would rule the roost and make prices to suit themselves. We would welcome a capable organizer who understands the stock business and send him out amongst the growers to teach them the plan of the A. S. of E. Are there any candidates?

## FRUIT.

The apple crop will probably be sufficient for the demand. It is very good in some sections and very light in others. The matter that concerns us most is that growers in the districts of abundance may not get what their fruit is really worth. We will soon ask for reports on the crop and in due time attempt to print the equitable minimum price. There is a position waiting to a wide-awake fruit man, who understands the business—one who can organize fruit growers and help them to get profitable prices. What is wanted is information regarding crops, markets and prices; and a concert of action. This can all be accomplished through this paper, but the expense must be borne by the class to be benefited.

## COTTON.

Conditions of crop generally favorable. Picking has begun. Market has been steady; price ranges from 10.60c to 10.95c at New York. There is great need of organization among cotton growers and we want organizers at once in every State. Also a general organizer to have charge of the cotton interests is needed at headquarters and in the field.

## TOBACCO.

Crop prospects good. A reduced acreage will give a full crop if present favorable conditions continue. Tobacco growers are better organized than any other class of farmers. All that is necessary is to keep up the campaign of education and organization and hold a great convention next Fall at Lynchburg, Va. Who are in favor of the convention of growers to agree on prices? Write to this paper.

Dollar 20 wheat. It is coming about as fast as can be expected. Fifteen cents advance since the A. S. of E. bulletin was sent out. Any farmer who sells wheat at less than \$1.20 basis at Chicago, simply throws away the difference.

Hold for your price. Keep the visible small. Make the demand seek the supply. There is no other commercial operation as sure as yours if comparatively few of you will do these things.

# Strikes and Lockouts

## THE PUBLIC MUST BE PROTECTED

The people of the United States are understood to be the freest in the world, and yet they are compelled to suffer more inconveniences from bad conditions of society than any other people. Take the strikes and lockouts that every once in a while almost paralyze the entire business of the country. Two interests get into a quarrel, or rather two elements of the same interest, and the business and social interests of seventy-five millions of people suffer; their convenience, comforts, health, business and even their lives, are disregarded.

Consider the great anthracite coal strike of a little more than a year ago, which demoralized the entire coal industry of the country. Every man, woman and child that had been taught to depend upon coal for comfort and cooking, every mill and factory and lighting plant that depended upon coal for fuel and power; every railroad train engaged in the nation's transportation; every vessel clearing from our ports and depending upon us for coal, felt the terrible pressure. The users of hard coal were not the only sufferers. The producers of soft coal saw their opportunity and were not slow to avail themselves of it. Prices went up to almost prohibitive figures, and coal famines ensued in many places, and in not a few instances people were driven to such desperation that coal trains were seized and their loads taken. And all because a few plutocratic coal barons and a few hundred stubborn miners refused to settle their petty disputes. So acute became the situation that the president of the United States finally awoke from a night mare dream and timidly intervened in the public interest.

Now is on a strike which may become even more terrible in its effects upon the masses of the people, the strike of the butchers and other employers of the great packing houses at Chicago and in Western cities. This strike may be settled before this paper reaches the reader, we pray God it may be, but at this writing there is little indication of it.

The monopolistic greed of the great packing houses has so crowded out all other concerns as to compel the stock-raisers of the entire country to look to them for a market, and to force the meat eaters to depend upon them for their daily food. The terrors of the situation are therefore apparent. On the one hand the ranges, the pastures and feed lots, at immense expense to the producers, contain the supplies, supplies that must constantly deteriorate to the ruin of the growers, if not used. The railroads stretch their mighty arms out to those sources of supply, with appliances all ready, fire in furnaces and steam in boilers, anxious to bring the stock to where hunger awaits it. On the other hand, rich and poor alike call for it. Their kitchens are empty, their tables bare, and the most undesirable makeshifts must be resorted to keep off actual hunger—there is hunger where there is inability to provide substitutes for the cheap meats—the poverty cuts and soup bones of the already suffering poor. Hunger, not for lack of food, not because food is far distant, not because the owners are unwilling to sell, not because those who need it are unable to buy, but because a half score of plutocratic monopolists, who have arrogated to themselves the important function of supplying the country with meat, refuse to bend their haughty necks to hear and adjust the complaints of their work people, or because those work people, clothed with the power of organization, refuse to submit to the requirements of their employers. For the purposes of this article, we need not inquire who is in the right or who is in the wrong. There is a tyranny of employer and a tyranny of labor; these have both been manifested time and again, to the hurt of those not in the least responsible for the contentions. It is no solution of the question to say that if labor does not wish to work on terms offered, American independence vouchsafes to it the right to refuse, but that its power ends there; it must not stand in the way of others who would take its place. The condition of labor under monopolistic control is such that the laborer may have spent his life in a cer-

tain restricted line, and he may be wholly unqualified for anything else, and his living and that of his family may depend upon his employment in that particular line. This very condition, without some source of protection, makes the laboring man a slave, and refusing him employment in his qualified line, drives himself and his family into the ever dishonored army of tramps and dependents upon public charity. To deny him the right to organize and to quit work in a body—to strike—is to take from him the last weapon with which he may defend himself from the arrogance and tyranny of plutocracy, even though that tyranny be the tyranny of his employer.

On the other hand, to say that the employer, the capitalist, who has invested his money in the business, must not be allowed to direct and control that business, is to place him and his property too often at the mercy of a conscienceless mob, the tyranny of organized labor—to suspend justice, to violate the right of property, and to set up a standard that points to and borders on anarchy. And between the two society is the victim.

But there is a way to determine who is wrong. There is a way to compel the doing of the right. There is a way to protect the public and its vast interests from disturbance and harm from the greedy tyranny of plutocratic capital on one side and stubborn, unreasonable labor organizations on the other. There is an arm stronger than the strongest of these; there are rights more sacred than any of theirs; there are interests greater than the interests of either capital or labor—the arm of organized society, of government; the right of the whole people to the undisturbed enjoyment "of life, liberty and the pursuit of happiness;" the combined interests of the nation.

When the greedy tyranny of capital manifests itself in the oppression of labor, or when organized labor arrogantly refuses to do the equity it asks, and all this to the public hurt, it is the duty of organized society, which constitutes government, to require, and if need be to compel the contending parties to settle their differences on the basis of right and justice to all—to one as well as the other, no difference between Dives and Lazarus. It is a weak government that cannot protect the whole against the wrong doing of some of its parts; it is not a brave government that dares not do it.

### A Word With the Other Fellow

We are aware that newspaper controversy is a waste of space, and that it soon becomes irritating to good readers; but we believe a brief notice of the following sentence is justifiable, since we find it among the editorial utterances of *The Farm Journal*, a paper whose special claim has always been fairness in its treatment of all subjects, and its constant aim to uplift the farmers. Here is the sentence:

"Any scheme that seeks to stay the tide of commerce, or change its natural flow, as for instance, by the fixing of a set price for products, bears on its face the stamp of stupid ignorance, or of bare-faced fraud."

Of course reference is had to the effort now being made by farmers all over the country to take their products out of the control of speculators and gamblers, and assume control of them themselves, as all other producers now do and always have done; and securing equitable and steady (set) prices, by placing them on the market, not mainly in one bulk, in a small fraction of a year, but as consumption requires them over a period of a year. Notwithstanding the charges of "stupid ignorance" and "bare-faced fraud" preferred by our uninformed contemporary (we will be charitable and attribute his injudicious statements to a lack of knowledge of the subject), *Up-to-Date Farming* is proud to stand out boldly and proclaim that it is the champion of all that is condemned and we leave farmers who

have been reading this paper and studying this problem with us to judge.

Prices are made, no one denies, by the speculators; they are not based on supply and demand, but on temporary conditions, on daily reports, true or false, on the comparative strength of the contending forces, often making material changes in a week, a day, or an hour, when there could not possibly be any change in the supply or the demand. Since prices are made thus, not by any fixed rule or law, why not the farmers themselves make them once for the whole season, according to a fixed rule of production and consumption, and then market only as consumption demands at the price? This is the proposition attacked, and it is entirely proper for *Up-to-Date Farming*, the only paper that dares to champion that effort, to take up the gauntlet where our venerable contemporary throws it down.

By "the tide of commerce" we suppose is meant in this case, the rush of farm products directly from the fields to the speculative market centers, not to meet the demands of consumption, but to be stored by speculative buyers, where they can be held to play into the hands of the most conscienceless set of gamblers that ever disgraced the creative power of God—gamblers that first "bear" the prices down to rob the producers, and then "bull" them up to rob the consumers. This, declares the sentence quoted, is "its natural flow," which only "stupid ignorance or bare-faced fraud" would attempt "to stay."

Would it not be well for such pretentious papers to go a little slow in making such assertions? Nature is of God, and "the natural flow" of anything must be the flow fixed, arranged or ordained by God. Now, when did God order or ordain that the products of the millions of farms of the United States, representing the labors of the millions of farmers and their families who cultivate them, and upon which alone those farmers depend for a living, and for the bringing up and education of their families (if, indeed, in the estimation of persons entertaining such ideas, farmers' families deserve to be educated), when did God ordain that all these products should leave the producers' hands as soon as finished, for the sole benefit and behoof of the class above referred to, without so much as consulting the producer and owner as to their value? If this is their "natural flow," and if God did so ordain it, why did He not, as a just God, likewise ordain that all other products of industry, the handiwork of the forges, the implements of the factories, the fabrics of the mills, the products of the shops—why did He not ordain that "the natural flow" of all these should be from the centers of activity that produced them into these same or similar speculative hands, as fast as finished, and at as low a price as conscienceless greed could put them, without any reference to cost of production, and there be held until the user must have them, the price then to be put up to the highest figure the same conscienceless greed could extort from the necessities of the demand? God did decree that sin-convinced man should eat bread in the sweat of his face, but He never decreed that the surplus of that sweat should be gathered without the man's consent into the coffers of those who "toll not, neither do they spin," and by them made a means of robbing both the producer and the consumer. Nor did He ever commission the editor of the paper quoted from to so declare in the interest of those same gamblers, though it must be confessed his utterances place him more nearly in sympathy with them than with the farmers tolling in the million fields.

Our view of the situation is that God is "no respecter of persons." He has permitted this great injustice as a thing that "in the days of their ignorance God winked at," just as He heard for so many years the clank of the chains of human slavery which He finally broke in the roar and smoke and blood of battle; but now, as then, eyes that were closed have been opened, and this great injustice will cease, and those of His people who till the soil will be given the same control over the results of their labor as is accorded to laborers in other fields of productive industry. And this will come in spite of the growling of the "bears," and the bellowing of the "bulls," and the aid that may be rendered them, purposely or otherwise, by

such expressions as the one above quoted. Surely it is time that farmers become educated on these vital questions, so they may be wise against false teachers, and we believe Bro. Atkinson might well turn the heads of his dogs in the other direction.

\* \* \*

And again. We find in a recent issue of the *Washington (D. C.) Post* an article which declares "there is an organization of farmers in Indiana that seems determined to cause trouble." That's a truth, sure, for there is such an organization not only in Indiana, but in all the States of the American Union, and even in other countries, and it is determined to "make trouble," not with any legitimate calling or industry, not with the natural flow of commerce, not with the users of farm products, but with the bulls and bears that arrogate to themselves the right to sell property that belongs to another without consulting the owners. With that class of fellows we are determined to "make trouble."

But the article continues: "Circulars and letters are now being sent out by the association informing the farmers of the nation that they are being robbed because they are not paid for their products the prices quoted on the Chicago Board of Trade, and at other speculative centers."

There is where the traditional newspaper liar gets in his work. Reference is had, of course, to our warning to farmers that their products were already being exploited and sold in advance of maturity, sold at prices far below the prevailing ones on the Chicago, New York or other markets, with an agreement to deliver the products at those reduced prices at a future date without so much as "by your leave" to the producers and owners. It was these future prices that we claimed were to rob the farmers if they were not beaten by a refusal to deliver the goods. This was plain enough for any farmer to understand; perhaps not for the above class of newspaper men, but we were writing for farmers, not for the other class. We have always held and so taught that the prices to be demanded upon the farms are the central market prices, less the cost of transportation and legitimate profits for the handlers. But it rested with the producers to make the central market price.

But such articles as that in the *Post* may be excused on the ground of haste and ignorance of the subject in hand. They are generally prepared on the spur of the moment, based on conclusions hastily drawn without regard to the facts or reasons, by literary dudes, who have one habit that never misleads them—that of looking into a mirror when they wish to see an animal usually credited with more noise (and ears) than brains.

### All Things Come to Those who Wait

There is good in agitation. When *Up-to-Date Farming* began to agitate the question of controlled marketing to secure better and steadier prices for farm products and thus save to the producers the millions that have gone to swell the pockets of the price manipulators, the idea was ignored as the vaporings of a visionary; but as we pressed the matter home, and the farmers themselves began to think and to speak, the matter was ridiculed by those who arrogate to themselves the right to direct public thought. But the truth could not be long ignored and those who ridiculed now acknowledge the correctness of our contention. For instance, read the following from a publication that a year ago would have scorned such an utterance:

"The farmer who has been hoarding up his grain and waiting for 'dollar wheat' to become a reality is at present the one who profits, for he can go to town now with cash wheat and cash corn. What is the result? Mortgages will be lifted, repairs and necessary improvements made, a new dress for the wife, a horse for the boys, a piano and education for the girls."

And this:

"The farmer who is in position to hold his future crops will be wise to do so, for the price will go higher, and it is quite a reasonable supposition, for America's great rival in the wheat market, Russia, needs all of her wheat at home."

Of course we have said all these things time and again, and have enforced them with arguments that have never been assailed, but it is gratifying to quote others who have been brought to see the light.

# How Crops can be Controlled and Prices Made

## No. 4—Fruits and Vegetables

### ORCHARD CROPS.

Every person who grows fruit would like to have a greater degree of certainty prevail in their prices. Apples is the leading orchard crop. When there is a good crop of apples they usually sell at from 20 cents to 30 cents a bushel in the orchards. If the grower attempts to ship them to market he frequently finds himself even worse off if his shipment happens to strike a glutted market. This is a crop in which cold storage figures; and the trust, company or individual who has the facilities to hold the crop makes several times as much as the producers. When orchardists are organized it will be an easy and simple matter to store and hold their own fruit, in their own warehouses—(control marketing)—and make a fair price to both producers and consumers.

If consumers could buy apples at a moderate price, such as would be fair to them, give a profitable price to the grower and only a legitimate profit to the handler, the consumption would double. The same may be said of other fruit.

### PEACHES, STRAWBERRIES AND VERY PERISHABLE CROPS.

These fruits differ from apples in the respect that the entire crop must be marketed as it matures. To maintain an equitable price a different plan must be followed than with the former. If the crops are large and they are thrown on the market indiscriminately, the markets are bound to be glutted and serious loss results. A market that will take 10,000 baskets of peaches a day and pay a good price for them would be glutted with 15,000 baskets, and all would sell at a loss. It is necessary in such crops to know the requirements of each market, to be in communication with all producing sections, to direct the supply so as to equal the demand and prevent over supply. If there are very large crops it will be necessary to keep some at home and let it spoil rather than send it to a distant market, where it is not wanted.

These crops are the most delicate to handle for certainty of profitable prices. But it can be done through organization. With a head or clearing house, where the crops are reported; with agents or representatives on all leading markets, and the means of communication with the producers as the A. S. of E. provides, results will be as satisfactory and reliable as with non-perishable products.

Also, with direction from a central head all the markets can be supplied to their maximum consumption, resulting in a greater volume of business and making it quite improbable that there would ever be an unmarketable surplus.

It may be necessary to have a farmers' national telegraph or telephone system to carry this branch of the work out to its perfect end. If this is found necessary the farmers can easily build it when getting profitable prices. A slight advance on the farmers', stockmen's and fruit men's crops will amount to hundreds of millions of dollars and supply all the money necessary. Or a small assessment on members of the society when numbering a million or more will supply funds for any improvement that may be deemed wise or necessary.

### CROPS FOR MANUFACTORIES.

There are many sections of the country where extensive canneries and factories are operated that take the products of thousands of acres.

The present plan is for the canners and manufacturers to name a price to the farmers for the crops delivered. The price is oftentimes made very low, besides all the risk of crop failure comes on the growers. By the plan of the A. S. of E. the farmers will dictate the price and protect themselves first. These crops must be largely under the control of local unions, and may have a county or district organization of their own, but through the national union and national organization, a uniformity of price will be maintained throughout the

country that will give the canners and manufacturers a uniform cost price, so they in turn will be on an equality when it comes to selling the manufactured product to jobbers.

If the farmers in any community where this business is carried on were organized in the A. S. of E., they could agree on prices they would charge, and the contractors would be obliged to pay them. Sweet corn, peas, cucumbers, beans, etc., must be obtained in the vicinity of the factories. Hence it can be seen that a limited section organized could control the situation. It is evident that the factories cannot conveniently move out of a locality and they cannot bring their stuff a long distance. Growers for these concerns can quickly secure all the benefits of co-operation and price making.

### POTATOES, VEGETABLES, ETC.

From the instructions already given the plan of the A. S. of E. for controlled marketing and price making can be applied to every crop. Cold storage houses will be an important factor in carrying out the plan. These should be in every county, district or community. By putting the surplus of any crops, fruit, cabbage, cauliflower, etc., etc., in storage there will be less to go on the market, prices will be good during the season of abundant harvest and the surplus will come on the market during the balance of the year. Somebody holds the surplus. Why not the growers? When prices can be made and maintained equitably to producers and consumers. Also, when the growers control the supply and keep the prices equitable to the consumers, they will realize the maximum markets.

### THE PEANUT.

For a crop of its importance and of so nearly universal use, we presume as little is known of the peanut as any other crop that could be named. We have not now before us any reliable statistics later than for the year 1899, collected by the census of 1900. At that time eight States produced almost the entire crop of the United States, and we append a table showing the acreage and production of peanuts in those States for that year:

State.	Acres.	Bushels.
Virginia . . . . .	116,914	3,713,347
North Carolina . . . . .	95,856	3,460,439
Georgia . . . . .	100,589	1,435,775
Alabama . . . . .	78,878	1,021,708
Florida . . . . .	69,452	967,927
Tennessee . . . . .	19,534	747,663
Texas . . . . .	10,734	184,860
South Carolina . . . . .	7,162	131,710
Total . . . . .	599,119	11,643,434

The yield per acre varies greatly in the different States. Tennessee in 1899 produced an average yield of 33.3 bushels, while Alabama produced only 13 bushels. The price of peanuts in 1863 was \$2.50 per bushel, but it has steadily declined since then until in 1899 it was only 61 cents. It is evident that here is a case in which equity should interpose, for, while the production of peanuts has rapidly increased since 1865, the consumption has increased also. Peanuts are not alone used for human food. Large quantities are used in the manufacture of oil, some are made into peanut butter, while no small percentage is used as hog feed. Indeed the low yield per acre of some of the States may be accounted for in the fact that only the best are harvested, the remainder being left for the hogs, which do their own harvesting.

The peanut will grow in any friable soil, but it is produced with most success in loose, sandy loam. It does very well in a clayey soil, but the shells are apt to be colored in that kind of land, which makes them grade low in the market, though this defect is now being pretty well overcome by cleaning machines. The peanut vine makes an excellent hay for horses and cattle, though it is seldom saved for that purpose.

It may be interesting to growers to know that the peanut is quite an important crop abroad. On the west coast of Africa, especially in the French col-

ony of Senegal, they are the principal, in fact, almost the only crop, and France alone imports annually about 500,000,000 pounds. Large quantities are also produced in the East Indies.

### THOSE "FUTURE" DEALS.

The infamy of the system of so-called trading in futures is not sufficiently well understood, nor can it be easily expressed in words. A speculator, a gambler, it can be made nothing less, proposes in the Cotton Exchange that he will sell 1000 bales of cotton to be delivered in December at 8 cents per pound. Another who is willing to wager his money that cotton cannot be bought at that price at that time, accepts the offer and closes the deal. This is the transaction so far as these two parties are concerned. The seller has no cotton, and does not expect to have any. The buyer wants no cotton and does not expect to have any use for any in December, or at any other time. It simply means that when the last day of December comes, if cotton can be bought for less than 8 cents, the buyer must pay the seller the difference, which would be his profit in case he should buy and deliver the cotton, collecting the 8 cents per pound from the purchaser. On the other hand, should the price of cotton be more than 8 cents on the last day of December, the seller must pay the purchaser the difference, as that would be his loss and the purchaser's gain, were the seller to buy the cotton at the increased price and deliver it.

If this was all the transaction meant, it might be passed by in contemptuous unconcern, but it does not affect those two parties alone; it affects the entire cotton interest.

Suppose an important mill, a consumer of great quantities of cotton, finds its supplies running short in August, September or October, and its management wishes to lay in supplies. The cash price of cotton may be ten or even twelve cents, and if the stock be bought now that price must be paid. But there is the record of the Exchange to the effect that cotton is selling for December delivery at 8 cents. Can the mill afford to buy at 10 or 12 cents when these expert dealers are selling immense quantities at 8 cents to be delivered only a few weeks hence? The result is the mill curtails its force, works on short time, and husband its supplies, waiting for the cheaper cotton of December. It is thus not only of one mill, but of all the mills—of all the consumers of raw cotton. It does not matter that the price may be more than 8 cents when December comes; the effect is the same; the trade is demoralized, and every energy of the sellers and of the consumers who are thus waiting for the low price, is all the time exerted to forcing the December price to or below the 8 cents. And the producers are the irreparable sufferers.

And this pernicious system does not only affect cotton. All the staple crops are subject to the same fatal blight, the cereal much more than the textile products, because they are in so much more universal demand, and actually include the food supplies of the people and their domestic animals—wheat, rye, barley, oats and corn. A legislature or a congress simply makes itself an object of ridicule and contempt, when it enacts laws forbidding games at cards or other gambling devices when this far more pernicious gambling is permitted to go without a protest, and sometimes by the law making bodies and the courts actually encouraged.

### STOPS TOO QUICK.

The Agricultural and Mechanical College of Mississippi is inaugurating a movement to organize farmers' clubs in every supervisor's district in the State for the purpose of placing the farmers in closer touch with the college and other means of improvement and progress. This is a good move, and one which should meet with a hearty response from the farmers of the State, but, like so many other well meaning efforts for the benefit of the farmers, it stops too quick. The element of price does not enter into its calculations, and unless something can be done to eliminate the gambling price-making system, and insure to the farmers steadier and more equitable prices for their products, all other efforts must fall short of what might otherwise be accomplished.

### DEFECTS OF THE SYSTEM.

Elsewhere in this paper we give, from different sources, strong arguments in favor of controlling the price of cotton by withholding it from the market until the equitable price is reached; and those arguments come from sources which must command respect. They show clearly that such a course would be not only to the interest of the producers, but of the mills also. The plans, however, are defective. That of the Texas farmers' congress is by means of warehousing, but it is indefinite as to how these warehouses are to be constructed and maintained, and it lacks the element of a fixed price. Mr. Bush, though, while he feels the necessity for controlling the market and argues it well, sees no way to do it but by means of vast capital, sufficient to buy up the cotton and hold it subject to a future and better market. Capital in investment is never benevolent; it is there controlled by the business idea of profits, and such profits are seldom measured by the golden rule. Invested in warehouses to hold cotton, if not so at the start, it would soon become as exacting, if not as cruel, as the present system of gambling on future markets. It would be a "bear" in buying and a "bull" in selling. In other words, that system would soon learn to buy at as low a price as it could force the farmers to take, and to sell at as high a price as it could compel the mills to pay, and thus be no relief to the farmers and no advantage to the business interests of the community.

The business people of Sulphur Springs, Texas, come nearer solving the problem. They raise a fund only sufficient to buy when the market is below an equitable price. Consequently they buy only what has to be thrown upon the market, and thus relieve those who are too poor to hold their crops. This is the true spirit of benevolence and acute business foresight. By buying the small quantity of 1,600 bales, they maintained the price of 15,000 bales, and saved the farmers \$30,000, adding that much to the prosperity of their customers, and to the same extent increased their own business. Besides it did not in the least disturb the general flow of the market, because whenever the price was offered the market was open and anybody was free to buy. It was only when the offer was below the minimum that the business men intervened.

We commend this plan to hay growers in the North, and to the business men in localities where the hay crop is an important source of revenue for their customers.

### BUSINESS MEN TO THE RESCUE.

At Sulphur Springs, Texas, the business men have what they call a Business Men's League for the purpose of protecting the cotton trade. They make an assessment on the various firms composing the league to raise a fund to buy cotton whenever the price offered is below its worth—that is, below what the A. S. of E. would call the minimum price. Whenever this price is offered by the general market the league don't buy; when the general market falls below the minimum price the league buys. As a result no cotton can sell at Sulphur Springs below the price determined upon as its real worth. Last year the league bought 1,600 bales of cotton, most of which was resold at the price paid by the league, and the remainder was shipped. At the close of the season, after transacting all this business and thus holding up the price of cotton, the league found it had lost a little less than \$35, but by buying the small amount of 1,600 bales it had held the price of the entire crop of 15,000 bales \$2 above the speculative market, and had saved the farmers \$30,000. Where did the benefit to the league come in? In the fact that it had increased the monetary circulation of the locality \$30,000, and to that extent had multiplied the business of the town. The Dallas (Tex.) News of July 17 is our authority for the above facts, and the lesson is so plain that "a man though a fool need not err therein."

### ENCOURAGING TOBACCO GROWERS.

Deputy J. W. Lee has this to say of the tobacco situation in one of the leading Kentucky papers: "The A. S. of E. now has one or more workers in every county in the dark tobacco district in the State, and, from reports coming to me from my territory, I know that some counties are getting well up with us in membership, if not already ahead of us. I am glad to say that Henderson, Webster, Daviess and McLean are some of the counties that are doing good work, but there is a healthy growth all along the line, which bespeaks large power before the 1904 crop of tobacco comes into market."

[THE THIRD POWER, (Farmers to the Front) is a book of 275 pages, by J. A. EVERITT, President of the American Society of Equity. It began in June 15th issue and will continue until completed. Back numbers may be obtained by embracing the special three months offer in this number for 10c. The book may be obtained complete at \$1.00 in handsome cloth binding, 50c in paper cover, 10c extra for postage. Send orders to the publisher of UP-TO-DATE FARMING.]

## CHAPTER X.

Something has been said of the influence of agricultural schools and papers, which is undoubtedly good as far as it goes. But it does not go far enough, and there is need here for reform. The whole purpose of those who teach agriculture as a science is, of course, to develop the scientific side of the business, and to teach the farmers how to make their land as productive as possible. This is well, but it must be remembered that what the farmer wants to produce is not crops, but money—or crops as a means of getting money. His aim is, or should be, to make his farm productive, but productive of money. To this end he should practice the economies that other business men practice, making extensive use of machinery, keeping his soil in good condition, studying the question of crops and their rotation, observing the markets; in short, trying to raise as big crops as possible are commendable, but, after all these are done, there is something more important. It is the profitable market. It is one that, in justice to the farmer, ought not to be overlooked by any of the teachers, speakers or experimenters.

The only people who profit more from a large crop than a small one are the consumers, railroad men, middlemen and the speculators. The railroads charge as much for hauling a cheap bushel as a dear one, and the more bushels there are the better it is for them. The same way with the speculator and middleman. Cheap and abundant wheat is quite as profitable for speculative purposes as dear and scarce wheat. The farmer's prosperity, on the other hand, depends on both the price and the quantity. As the freight is the same on the cheap as on the dear bushel, it is evident that a larger proportion of the price goes to the railroad in the former than in the latter case, to the reduction of the farmer's profit. So the question is much more complex than it seems to be on its face.

Suppose by the application of improved methods the average of wheat per acre could be raised from twelve to thirty bushels, and this is exactly what a professor of the Indiana Agricultural Experiment Station said the farmers could and should do, by coming to them and learning how. This on the same acreage as now would mean a yield of more than 2,000,000,000 bushels instead of 700,000,000. Under present conditions the effect on price would be most depressing. No one can say how far the price would fall, but it is certain that the farmer would get less profit for the large crop than he now gets, even at the present moderate price, for the smaller one. While it is not possible to increase any of our crops so enormously as in this illustration, it will serve to show the folly of the farmers' institutions, teaching how to raise large crops without the ability to put profitable prices on them. Better devote their efforts to teaching them how to raise less; as under present systems, if each farm would raise uniformly less, so as to always make a hungry market, our farmers would revel in prosperity. Better yet would be to join in the educational work and teach them how to get a good price for a large crop as well as a small one.

The farmer is more interested in the question of price now than in quantity of crop. However, with the ability to fix profitable prices on the farm, and prevent a surplus from appearing on the market at any one time, it will be practically impossible to raise a surplus of any of our crops for many years. As we have shown, profitable prices will curtail production at first, rather than stimulate it, while population and consumption will go on increasing. Those who advise the farmer to raise larger crops and to make his land more fruitful, without the ability to fix prices, are, therefore, unsafe advisers, and unconsciously have been playing into the hands of the transportation companies, middlemen and speculators.

By all means the farmer should adopt scientific, up-to-date methods, but he should apply them to the marketing of his crops, as well as to the raising of them. Scientific business as well as scientific agriculture is needed. The crop in which the farmer is most interested is the crop of money. It is for that that he works. He does not want

to raise crops simply for the sake of raising them. He raises them to sell. The money that he gets for them is his living. The bigger the crop the better, of course, provided the price be right. But, and here is the point, the bigger the crop, the greater is the necessity that the farmer should control the sale of it. Under the present free competitive system, a big crop may be, and frequently is, anything but a blessing to the man that grows it. When the crop is small it, in a measure, takes care of itself, even as things are to-day. It is when his fields are most fruitful and the conditions most favorable that the farmer is likely to find himself swamped by the very plenteousness of his yield. I have made the assertion that the short crops of 1901 were responsible directly and indirectly in bringing more prosperity to the farmers than any other crop they ever raised. Really they, the farmers, get their blessings in disguise.

Thus it appears that the very instruction that is being given at our agricultural schools, experiment stations, farmers' institutes and by farm papers makes further instruction necessary. When you teach a man how to grow the largest possible crop on a given acreage, and press on him the necessity of doing so, you put yourself under obligation to show him how he may best deal with the products which he has raised in such abundance. Without this latter instruction the former may be worse than useless—may be positively harmful. This is a subject to which our schools and papers ought to give their attention. Certainly the farmers should think about it very seriously. When you increase largely the output you, of necessity—other conditions remaining the same—depress the price, unless you can control the marketing. A community or country will, however, consume as much at a fair price as at a low price. A fair price appears to add dignity to a commodity, and makes it more desired. Besides, if we can keep the farmers prosperous by giving them good prices we can keep the world prosperous, thus stimulating consumption.

The present average yield of wheat is in the neighborhood of thirteen bushels an acre, and at that average the country can produce about 650,000,000 bushels. That is enough at the present time to supply the needs of our own people, and to furnish a quantity for export. Whether it would pay the farmer to raise more under the old conditions, depends entirely on the price he could get for it. A short crop at a high price might bring him more money than a large crop at low prices. This condition has frequently prevailed. In fact it is the rule that the smallest crops sell for more money than the largest ones.

So the question is whether the price of the large crop, though lower than that received for the small crop, is still high enough to enable the farmer to make at least as much money net on his investment. If it is not, he loses. This question of the ratio between quantity and price is of vital importance, and the ratio is one that is easily disturbed and thrown out of joint. He would be a bold man who, understanding the matter, tells the farmer that he ought to raise more than he is now raising, and the farmer who will listen to such teaching without a protest does not deserve a better fate than has been his portion in the past. Yet the whole object of so-called scientific instruction in farming is to induce the farmer to do just that thing.

But the farmer will not forget the question of price. The American Society of Equity is not going to let him forget it. This is the first and great object of the society. It is the stepping-stone to the accomplishment of the Third Power. The society is willing to co-operate with the schools by showing the farmer how to market and by helping him to market profitably the larger crops which he is being taught to raise. The two things—up-to-date farming and up-to-date business—must go together. No sane manufacturer makes more goods than he thinks he can sell profitably, or increases his facilities beyond what he believes to be the power of his customers or possible customers to consume. He does not put in new and elaborate machinery simply that he may increase his output—whether he does that depends on the condition of the market, and his ability to control prices, but that he may produce more cheaply, and thus, if need be, to sell more cheaply, yet make more money. It should be so with the farmer. He must never forget the question of price, and must ever remember that the product which he is after is not corn or wheat or cotton or pork or beef, but gold. He who gets the most gold out of his grounds is the most successful, up-to-date and scientific farmer.

Good prices for farm products means increased prosperity, and increased prosperity means greater consumption. The element of waste alone of food and clothing when people are prosperous is a great item, and will have an important bearing on the farmers' markets and prices.

## CHAPTER XI.

Such are some of the needs of the farmer. It has been shown that they can be satisfied only through organization, and it must now be inquired whether the American Society of Equity is the sort of an organization that the situation demands. A consideration of the subjects that it proposes to accomplish will at least prove that its founder intends it to do the work which it has been said must be done, if the farmer is to wield the power that he should wield. The objects that it aims at are precisely the ones that have already been put before the reader. The very first thing proposed is, that the farmer should "obtain profitable prices for all farm products, including grain, fruit, vegetables, stock, cotton and their equivalents." It has been shown that the farmers oftentimes do not obtain fair prices for these products, and that such prices can not be obtained without organization among the farmers. This is the theory on which the American Society of Equity is based. That organization can do this it has been the purpose of this argument to demonstrate. That the American Society of Equity can do it follows necessarily, if the argument already made is sound, for it is based on principles that have been set forth in the preceding pages.

But there are certain details connected with this question of price that need further exposition. In order to get a fair price it has to be proved that the farmers are under no necessity of selling their crops at irregular intervals and in uncertain quantities, and this involves two questions: First: Can the farmers hold them? and second: Have they the facilities for holding them? It is insisted that few farmers are driven to the necessity of selling their crops to the first purchaser that offers, for the farmers are even now the most completely self-supporting class in the country. Many of them have been asked, "Why do you sell your crops now?" and the answer almost invariably is, "I have found from experience that the price is about as high now as it will be any time, so I let it go." That is, they do not sell because they have to, but because they are disgusted with former attempts to hold and the results. They exercise a free choice and they choose to sell because they think they can make as much money by selling as by holding. Undoubtedly this is the true reason in the majority of cases for their haste to get rid of their crops. The farmers think that the price, though not good, is as good as they can hope to get, and they fear that they may get caught in a decline. So they let go and then complain that farming does not pay. But do you stop to consider that somebody holds these crops—your wheat, oats, corn, potatoes, poultry, butter, eggs, fruit, tobacco, cotton, meat, etc. The world doesn't consume them—gulp them down—as soon as you let go of them. They go into elevators, cold storage houses, packing houses, etc. There they are held by comparatively few individuals until the hungry consumer wants them, when they come forth with profits added. The present system of marketing by farmers is similar to that of throwing bankrupt stocks on the market. And the farmers adhere to it, not because they like it, but because they have no better way. The purpose of the American Society of Equity is to point to and provide a better way. And as the farmers are free agents, they can tread that way if they chose to do so.

The other question is as to the ability of the farmers to hold their crops. This, too, is answered by the American Society of Equity. For another of its objects is "to secure equitable rates of transportation, and to provide for storage in warehouses." There has always been more or less strife between the farmers and the railroads and the elevator interests, and in that strife the farmers usually lose. Of late co-operative societies have been formed in the Western and Northwestern States, the object of which is to enable the farmers to store and ship their own grain. As a rule they have been successful and profitable. These associations can easily affiliate with the American Society of Equity, and with the ability to control prices as well as to save the grain trusts' profit and get equitable rates of transportation, they will be in a very enviable position. Without the ability to make equitable—profitable—prices, they will still be at the mercy of the trusts, speculators and gamblers. And without the power to hold the grain, prices can not be fixed. Thus the two things must go together. I claim the best place to hold grain is on the farm in a good, safe, vermin-proof granary. The farmer then has no elevator charges to pay, which in public elevators is about one cent a month and eight cents a year. This is a heavy tax, and is about sufficient to build an elevator, if used to its capacity, in a year. The next best way is to have a community elevator. Several local unions of the A. S. of E. will join together and erect it. And beyond this it is the design of the society to have large elevators in the leading market cities, under the management of the National Union, where grain will be stored for members at lowest rates. Cold storage houses will serve a similar purpose and on the same system for perishable products. Individual members can store their fruit, poultry, or dairy products, meat, etc., in the local union line of storage houses, or consignments from local union or large individual producers will be received in the National Union storage houses. In this way the produce can be taken care of,

the market supplied regularly with what it needs, and uniformity of prices maintained throughout summer and winter. The producers will be benefited by higher prices and the consumers benefited by lower prices, because the mountains of greedy profits that are now added by unfair middlemen and food trusts will be cut out.

But you may ask, How are the poor farmers to hold their crops?

In the first place, it will not be necessary to hold all crops at any time, and those who do hold will make a better price for those who can not hold. Also our farms and farmers need the "rest cure," and will not work so hard with profitable prices in sight, thus reducing the crops.

Second, with the farmers organized and fixing a minimum (lowest) price dealers will see that they can not buy any cheaper and there is a possibility that prices will be higher. Therefore, they will all want to buy all they can at the low price, and will put all their capital in the commodity as soon as the poor producers must sell. I predict that the market would take more when this system is in force than will be offered.

Third, the society provides for those farmers who will hold their grain and other produce a rising market each month. This may be one-fourth or one-half, or one cent per bushel or hundred-weight, depending on the commodity, kind of crop and the market. The advance will be sufficient to offset shrinkage, interest, etc. If there is a tendency to market too freely this monthly advance can be increased to make it profitable to hold. It is reasonable to believe that farmers will hold on to their crops if there is a certainty of making money by doing it. This monthly advance should be adjusted to a nicety, so it will not allow loss nor make a profit, but the inducement will be to maintain prices, which will result when twelve months' requirements are filled, by marketing one-twelfth of the annual crop each month.

Fourth, grain in a granary or elevator, produce in a storage house or property anywhere in evidence, establishes credit. If cash is wanted for pressing needs it can easily be raised on warehouse receipts, or on personal notes, at any financial institution.

Let me say right here that the American Society of Equity does not propose to loan money to its members unless it engages in the banking business later. Also we want to effectually explode the theory of maintaining profitable prices for farm products by the use of money. No individual, society, corporation, nor Russian government, nor United States government can make and maintain profitable prices for farm products by the use of money, even though they had the treasure of these great nations to fall back upon. It would be possible to keep prices up for a while by the use of money, but remember, when a price is paid for a commodity that you can not consume yourself, you must find another party who will take it off of your hands at a higher price, and here is where the trouble comes. If the farmers' society would supply the money to take their crops at profitable prices it would be a great thing for the members as long as it lasted. They—the members—would not need to concern themselves about anything but to go back to the farm and raise as large crops as possible and turn them into their society, which must not only pay them a profitable price, but find some other person to take them at a higher price. This is a sure way to run up an unwieldy surplus. The only way to handle this problem is to make each individual producer responsible for production and markets. If he produces too much he must take a lower price or hold it over to a season of less production on his own account. In this way he pays the penalty for his indiscretion. Also, if farmers will not sell at the equitable minimum price and foolishly hold out for a higher price, prevent the crops from going into consumption and run up a large surplus, the board of directors must declare a lower price, and thus they will suffer again for their stubbornness. The American Society of Equity does not stand for high prices, but for equitable prices, believing that as large consumption will result at a profitable price to the producer as at an unprofitable price. It will as strenuously oppose holding for unfairly high prices as it opposes selling for unprofitably low prices.

How will the society secure money to build warehouses, etc.?

Farmers can do anything they want to do, or what they in equity should do, if they will organize and co-operate to put profitable prices on their products. Suppose they would want to build or buy elevators, cold storage houses, stock yards, telegraph systems, railroads, ship lines, make good county roads, etc., they could do all these things and not issue a bond, mortgage a property nor pay a cent out of their own pocket.

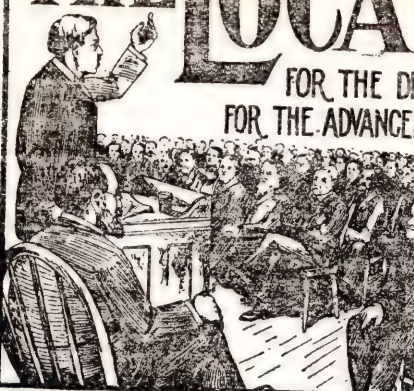

But it is proposed to use this power fairly and honorably. It is not proposed to favor a high price, but simply a profitable price. And every one is entitled to a profitable price if he can get it. The question is how to get it. By the plan of the A. S. of E. no hardship will be imposed on any one, and the consumers of farm products have nothing to fear. Indeed, it has already been shown that the whole country is interested in having the farmer get profitable prices. There need be no conflict of interest here.

(Continued on page 13)

# THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS  
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

This is the co-operative farmers' own department. It is the desire to make it the life and strength of the Local Union. Every member is a welcome contributor, and every communication will have courteous consideration. Address JOHN P. STEELE, care Up-to-Date Farming, Indianapolis.

More than politics should be the A. S. of E. to you. More than the voting place your Local Union. Here your troubles will end and your triumphs begin. All credit to the Local Unions. They are your forts—your strength. Stand by them as you would by you guns within the real fort to repel the enemy.

Very flattering reports are now coming in, and the A. S. of E. wheat bulletin is meeting with special favor. Of course it is not expected that farmers will hold for \$1.20 per bushel on their farms. They must be the judges as to what would be a proper price for them with wheat at \$1.30 in Chicago. In previous issues rules have been laid down for determining this.

The interest that is being taken in the subject of controlled marketing in the cotton States is very gratifying, and if the cotton growers do not receive the benefit of equitable prices it will undoubtedly be their own fault.

There is no letting up in the tobacco country. The tobacco growers have proven what they can do, and there is no danger that they will yield the ground already won.

The storm center of activity now is in the bean growing region of Michigan. State Organizer Winans has his war paint on, and it is very plain he is going to win a victory.

Wisconsin scores a mark well up to the head of the class, and District Organizer Crawley is pushing on with intelligence and vigor.

Ohio is not idle. There are enterprising union farmers at Amanda, who have made an effort to feel the A. S. of E. pulse throughout the State. We have some earnest workers in that great commonwealth, but certain influences which we need not name here have somewhat retarded the work of organization. The farmers are learning, however, to recognize their friends, and they can not be blamed if they make their enemies feel their power.

We have not heard much recently from Virginia, but we are sure Bro. Taylor and his workers are not idle. They are raising a "Breeze."

As will be seen by a letter elsewhere in this issue, our Rocky Mountain brethren are having things pretty much their own way. We extend to them our hand and a hearty "God bless you."

The "peanut people" may not receive much thought in the great wheat, corn, cotton and stock regions, but their industry is by no means an insignificant one, and there are few places where their product is not on sale. They are waking up to their own importance, and are beginning to demand recognition, which we are sure will be freely accorded them. The A. S. of E. is no respecter of persons. Wherever a human being toils that human deserves an equitable price for his products.

Subjects. Topics. Discussion. Interest. Lively meetings. As autumn approaches the spirit of mental activity comes with it. Keep up the discussions. Gather in the people. Prepare for lively times at all the meetings. Controlled marketing. Equitable prices. Make the welkin ring with these things. The people must be waked up.

The local unions are again entering the field of organization, and have reported the formation of several new unions lately. This is as it should be. When one local union organizes another it feels a sense of paternal care over it, and can assist it in getting properly into the work.

B. A. Enochson recently organized a union at Baden.

President S. B. Robinson, of Calhoun local, recently reported a nice union organized at Faith, Ky. May success attend them.

Deputy A. T. White, of Macedon, N. Y., is planting Equity seeds in the fertile soil of the Empire State. Macedon union now has a membership of over 40.

Deputy Jacob Folsom, of Island Lake, N. Dak., organized Mars union July 14, with 21 charter members, and many more are to be added at the next meeting.

District Organizer N. C. Crawley, of Baraboo, Wis., organized a local at North Freedom July 23. This, it is said, will make a strong union.

Crossett local No. 1, of Arkansas, believes they should have 15 cents a pound for their cotton, arguing that, considering the slowness of the crop, the labor it requires, the meager yield of their land and other difficulties they must overcome, they can not grow it for less. We sincerely hope they may obtain it; but in fixing a minimum price on any crop local conditions can not always be taken into consideration. Prices have to be fixed on average conditions, and those surrounded by less fortunate conditions than the average can not always reach prices that their labor really entitles them to. But an average will be much better for them than the ordinary market price weighted down by a glut of deliveries.

There is great responsibility upon deputy presidents. The National Union depends upon them to actively represent the cause in the localities for which they are appointed, and if, for any reason, they can not do so, they should promptly report the fact to headquarters. "Why cumbereth it the ground."

There are bright prospects ahead for the A. S. of E. It has had a steady growth all through the crop season, and already increased activity, pointing to the great work of the approaching autumn, is manifesting itself.

We believe Up-to-Date Farming is doing its duty as the official organ of this society, and every member ought to be glad to push it out into new hands. Our ten-cent educational campaign has been a great success, and at its close we shall enter upon another campaign of similar character. We must get the truth of controlled marketing and equitable prices before the people, that farming may be relieved of the load it has carried all these years.

The F. M. B. A. of Hamilton county, Ill., have appointed an agent at each shipping point in the county, and will ship their own hay.

We congratulate the F. M. B. A. on the earnestness of their members and the excellence of their work. They should never lose sight of the doctrine of controlled marketing and equitable prices. Our offer for ten cents for three months is still open to them, with the assurance that Up-to-Date Farming will vigorously fight their battles. It ought to be read by every member.

Mr. Sherman is again in Kentucky among the tobacco growers, and as the plants spread their broad leaves toward maturity, the sentiment of controlled marketing and equitable price is spreading also. Oh, for like activity among the cotton growers.

The offer of ten cents for three months to absolutely new subscribers is to be extended. Up-to-Date must be read, and read LOUD. Rush in the names. No one is too poor to spare ten cents, to read of things of greatest interest to him that he never thought possible before.

## IMPORTANT ANNOUNCEMENT!

### SPECIAL ISSUES OF UP-TO-DATE FARMING

Immediately following the SPECIAL EDUCATIONAL SERIES—six issues of UP-TO-DATE FARMING June 15 to September 1—we will commence the publication of six other special issues. These will begin September 15, and will be called THE AGRICULTURAL ECONOMICS SERIES. We will repeat our liberal offer of THREE MONTHS FOR TEN CENTS, covering this period, but old subscribers for three months, or for a longer period, cannot embrace this offer. They must be new subscribers.

These special issues and special prices are made to secure new subscribers. (We believe every person who reads UP-TO-DATE FARMING for three months will want to read it always, thus we hope each three months subscriber will become a yearly one.)

The leading articles in these numbers will be as follows:

1. September 15.—PRICES ON THE FARM AND PRICES OF FARM PRODUCTS ELSEWHERE. We prove that gambling in farm products has an astonishing effect in depressing prices. An exhaustive treatment of this vital subject.
2. October 1.—PROSPERITY OF THE NATION DEPENDS ON THE PRICES OF FARM PRODUCTS. We prove that low prices of farm products have been responsible for seasons of depression in business; that prosperity returned with the return of good prices, and incidentally we show that hard times and good prices for farm products cannot exist at the same time. An exhaustive treatment of this very important (to every true American) subject.
3. October 15.—THE UNITED STATES DEPARTMENT OF AGRICULTURE—What it is and What it Should Be. Contains many startling statements and important recommendations, which if carried out, will result in incalculable good to Agriculture.
4. FARMERS' INCOMES AND FARMERS' TAXATION. Shows how the politicians repay the farmers for their votes by saddling on them the bulk of taxation; with advice how to equalize the taxes.
5. November 15.—THE ELEMENTS OF EXPORT PRICES OF AGRICULTURAL PRODUCTS. Much light on a dark (to the farmers) subject.
6. December 1.—THE SO-CALLED COMPETITIVE PRICES FOR AGRICULTURAL PRODUCTS DO NOT EXIST. Proves that America has fixed the world's prices for staple farm products in the past and will for the future.

THESE ARTICLES will constitute a unique addition to American Agricultural literature, and at the same time they will possess a value from an educational standpoint never before approached. Never before in the history of this country has agriculture been favored with so many valuable literary and educational contributions as are now appearing through UP-TO-DATE FARMING. Farmers and others should interest themselves to help the publisher to give these special issues the widest circulation possible.

It is time now for the many thousand three months trial subscribers to renew for a year so the paper may go to them without interruption. Always state that you are a "trial subscriber."

#### BEAN GROWERS TO MEET.

A meeting of the bean growers of Livingston county will be held at Court House in Howell, Tuesday, Aug. 16th, at 1 p. m., for the purpose of forming the "Livingston County Bean Growers' Association. It is the intention of the American Society of Equity to form these associations in every bean-producing county in the State. Every bean grower is urged to attend this meeting. Farmers, turn out en masse and show the speculators in your beans that you intend to have a voice in pricing and grading your bean crop for 1904. Michigan is the leading bean-producing State and holds the key to the market.

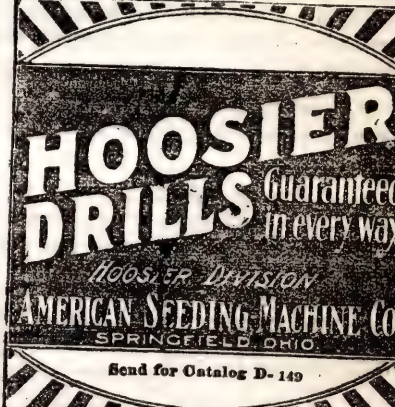

GEO. G. WINANS,  
State Organizer Am. Society of Equity.

The Secretary is very anxious to have reports from all the local union secretaries and deputy presidents. On August 5th he mailed to each a copy of "With Our Workers," and he wishes to know if each received it. If so, please make the report required; if not, drop him a card notifying him of that fact. We are now at a time when every branch of this service must be in close touch with each other, and in strenuous activity. Address National Union A. S. of E., Indianapolis, Ind.

The flattering letters we receive from our brethren of the F. M. B. A. are very gratifying, and we assure the earnest farmers that belong to that Order that Up-to-Date Farming will stand by them in every effort they make leading on to agricultural independence—to controlled marketing and steady and equitable prices for farm products.

If the tobacco planters will only organize and co-operate together all over the tobacco sections, they will compel the American Tobacco Company to pay reasonable prices for the weed, or loose their present monopoly of the tobacco business.—Times, Mecklenburg, Ky.

Remember, you can get The Third Power in book form, 275 pages, for 50 cents in paper covers, and for \$1 in cloth, ten cents extra for postage. You should have this work for your library or table.

## HOOSIER DRILLS

Guaranteed in every way.

HOOSIER DIVISION  
AMERICAN SEEDING MACHINE CO.  
SPRINGFIELD, OHIO

Send for Catalog D-149

## SEASONABLE ARTICLES FOR THE FARM

The following are offered subject to changes in price. All grass and clover seed, wheat and cow peas quoted by the bushel:

**Grass Seed** Prime Timothy, \$1.75; Red Top Ex. \$1.75; Blue Grass, \$1.75; Blue Grass—Ex. \$1.75; Orchard Grass—Prime, \$1.50; Choice, \$1.75; Lawn Grass—Quick Growing, per pound 25c, per bushel \$3.00. Bags charged 17 cents each extra, except for Bluegrass, Orchard grass and Red Top in 8 bushels or more.

**Clover Seed** Medium Red, \$5.50; Mammoth Red, \$7.50; Crimson \$4.00; Alsike, \$6.50; Alfalfa, \$9.00; Turkestan Alfalfa 25c per lb. Bags extra, 17 cents each.

**Seed Wheat** Fultz-Mediterranean, \$2.00; Farmer's Trust, \$2.00; Harvest King, \$1.75; Mealey, \$1.60; Nigger, \$1.50; Rudy, \$1.50; Poole, \$1.50. Bags free. Large quantity quoted on application. Catalog free.

**Winter Rye** Mammoth White \$1.40 per bushel. Black or Common \$1.25 per bushel. 1. Sacks included.

**Turnip Seed** Purple Top Strap Leaved, 60c; Purple Top Globe, 60c; Early White Flat Dutch, 60c; Amber Globe, 60c; Cow Horn, 60c; Seven Top, 50c. Price per pound by mail. If not sent by mail deduct 10c per pound.

**Miscellaneous** Dwarf Essex Rape 5c per lb. Vetch (Vicia Villosa) \$4.50 per bushel. Cow Peas, \$1.50 per bushel.

**Poultry Supplies** Chamberlain's Chick Feed, \$2.50 per 100 lbs.; Oyster Shell, 65c per 100 lbs.; Mica Grit, 75c per 100 lbs.; any standard Louse Killer, 25c per package, postpaid, 35c.

**Fly Fuma** To keep flies off cattle and other domestic animals, quart 35c; gallon \$1.00; 5 gallons, \$4.00. Purchaser to pay transportation. A sprayer will be sent free with one gallon or more, on first orders only.

**Lice Exterminator** Leake's—this destroys lice, mites, fleas, etc. Directions with each package, quart 35c; gallon \$1.00; 5 gallons \$4.00. A sprayer will be sent free with one gallon or more, on first orders only.

ADDRESS ALL ORDERS TO

J. A. EVERITT, Seedsman, Indianapolis

## FARMERS HANDY WAGON

Low steel wheels, wide tires, make loading and handling easier. We furnish **Steel Wheels** to fit any axle, to carry any load. Straight or staggered spokes. Catalogue free.

EMPIRE MFG. CO., Box 65-P, Quincy, Ill.

# UP-TO-DATE FIFTY IN AN HOUR PRODUCING AND MARKETING

I think Up-to-Date Farming is the best paper I ever read for educating the farming class of people.  
A. D. Hood.  
McLeansboro, Ill.

In ranks of green behold they stand  
And beautify the fertile land  
Their broad swords turning to the light,  
Now waving low, then poised for flight,  
As eagles mounting on the air—  
Oh, all these fields of corn are fair.  
—Selected.

Rye for winter and spring pasture.

Don't be afraid of getting the wheat land in too good a condition. Plow it, roll it, harrow it, roll it, drill it.

Don't let the Hessian fly catch the new wheat crop. Sow a little late if the fly is around.

Just as well pasture the clover some before turning it under for wheat.

Weeds are the farm loafers. Keep up the sign—"No room for loafers." Don't let them go to seed.

Looking after the farm wastes is timely work for August.

It's a good plan to have something ready for market when everybody else hasn't got it.

Every improvement made on your farm benefits all the adjoining farms. See? Have an up-to-date neighborhood.

A farm with fence rows and creeks grown up in brush and briars looks like a tramp with tangled beard and his head not combed.

There are two things to consider—how much can I raise? and how much can I get for it?

No one has a right to hunt on another's farm without the owner's permission.

Put away the summer tools. If you knew of a ten-dollar bill lying out in the field you'd hurry out there and get it. Yet you leave a ten-dollar plow lie out there all winter.

Don't let the field peas get too ripe before cutting for hay.

August is a good time to tighten up the wire fences.

The wire and picket fence is not very satisfactory, is it? It is very little good unless it is kept repaired. Have some extra pickets and posts, and take a day or two off and examine and repair every panel.

Young man, two cigars a day would buy you a nice little home in 25 years, and your wife would have a husband she could be much prouder of.

Good ponds are all right, but stagnant, filthy mudholes are an abomination—breeders of disease for man and beast.

The city boy was afraid to accompany his country cousin into the field because he had been told corn was shooting.

If the wheat is well stacked that is a mighty good place for it to stay for the \$.

In the East they can "tomats" and pickle "cukes."

If the worms are troubling the late cabbages try sprinkling them with a strong brine of common salt.

## SAVING PEA HAY.

Stock or cow peas intended for hay should not be allowed to get too ripe. A majority of the pods are ripe enough to hull and most of the remainder turning yellow is about the right time to cut. Don't cut when the peas are wet either with dew or rain. Select a dry time if possible, and don't go into the field until

the dew is all off. What is cut in the forenoon may be put up in the afternoon of the same day, but before the dew begins to gather.

Success depends entirely upon the "putting up." If piled in the usual little round bunches, better let it remain in the swath. But put it up in very narrow shocks, as narrow as the base as possible, and then make the shocks as high as they will stand. Some set poles for each shock, but that is impracticable. Three shocks, however, may be built close together, with just room for the air to circulate freely between. When completed as high as they can be built, lean them toward each other until the tops meet. Each will thus serve as a brace for the other, and they will stand indefinitely, and yet the air may freely circulate among them. In this way both foliage and stems will cure beautifully, and it will stand considerable rain without material injury, and may be hauled in at pleasure. This is also a good way to shock clover. It may be put up thus almost immediately after the machine, and will cure beautifully. But bear in mind that success depends upon the narrowness of the base, and the shock should be built up the same size as high as the men can reach.

## Holding Cotton

Mr. T. G. Bush, president of the Alabama Consolidated Coal and Iron Company, of Birmingham, has this to say of holding cotton off the market until consumption demands it:

"One of the chief causes of embarrassment to the cotton planter and the consequent embarrassment to the cotton manufacturer is due, I think, to the inability of the former to market his cotton as his judgment and the demand for the same should dictate. Under the present system the farmer securing aid from merchants or banks to the extent probably of the larger part of the value of his crop is compelled to sell as early as practicable to give relief to those who have aided him. Conditions should not admit of any discretion on his part as to when he will sell if his crop is encumbered, consequently the bulk of the cotton crop is forced on the market within a given time, and ordinarily the price is materially depressed, regardless of the size of the crop and the ultimate demand for cotton by the spinners. These conditions cause fluctuations which even the buyer is not always prepared to guard against, and in the end disturb more or less the cotton goods market. There is but one solution, I think, of this trouble, and that is a strong system of warehouses at a number of points in the South, accessible to the planter, in which he can store his cotton on reasonable terms and secure a receipt that is so protected by a strong guarantee or bonding company as to enable him to use it as a collateral, securing the lowest reasonable rate of interest. A system like this is not only valuable to the farmer, protecting him so that he may sell as his judgment may dictate, but it is helpful to the spinner, enabling him to carry his stock in such a way as to avoid unnecessary risk on the market and without excessive rate of interest. That some plan of this kind will and must be adopted, I do not doubt, and the sooner it is taken hold of by parties capable and strong enough financially to carry it out the better it will be for all concerned. I believe that at many points local interests would co-operate with other parties in establishing a warehouse system of this kind. The farmer is entitled to a fair and uniform profit on his labors, and it is to the interest of buyers of cotton in this and other countries that he should have reasonable prosperity, thus encouraging him to produce the quantity of cotton that the world will take at reasonable prices and to increase from time to time as the demand for cotton goods throughout the world may be enlarged. I certainly hope that this question will attract at an early day parties who can see their way clear to take it up and carry it through."

## Control Marketing

At a recent meeting of the Farmers' Congress of Texas, the subject of holding crops to control marketing as advocated by Up-to-Date Farming, was taken up, and a committee was appointed to report on the subject so far as cotton is concerned. The following are the salient points of the committee's report:

"1. That an imperative necessity exists for such warehousing of cotton to

the end that the crop may remain under the control of the farmers, merchants, bankers and others producing it until demand therefor arises by spinners for actual consumption.

"2. That such control would lessen, if not altogether suppress, the vice of gambling in futures now conducted under the false mask of legitimate trade, a vice destructive of the well-being alike of producers and consumers of cotton.

"3. That warehousing all, or even a portion of the crop not in immediate demand would cause that portion actually offered to bring a higher price, yet not higher than its fair value, whilst the portion warehoused under the control of men producing raw material aggregating over \$500,000,000 annually before manufacture and over \$1,000,000,000 after manufacture, would exert such powerful influences in the world of industry that the highest fair price could be demanded.

"4. That the increased price, savings in fair classification and fair weights and the incidental benefits to the farmers, merchants, bankers and other business interests of the country resulting from a warehousing system, will aggregate not less than \$10 per bale or over \$100,000,000 to the cotton growing States and Territories annually, which, flowing through the arteries of trade, will quicken into renewed life and vigor every effort and enterprise of our people.

"5. That the construction and maintenance of mills at the fields would be encouraged by reason of their being able to obtain adequate supplies of cotton directly from the warehouses when actually needed instead of being required to lay up a year's supply of cotton on borrowed capital at high rates of interest as at present.

"6. That the binding together of our people, the better acquaintance with the conditions existing among us from time to time and other incidental benefits to be derived from a uniform system of warehousing cotton by our own people would be of untold value to the country at large and would the first season repay many fold the cost of the whole system."

## SOUTHERN COTTON MILLS

In a previous issue we published an article showing the rapid increase of the cotton manufacturing industry in the South. That was a compilation from another publication. We are now able to give a more explicit statement, prepared by the cotton expert of the bureau of statistics of the department of agriculture. The South has great cause to be proud, and to look forward to a day of great prosperity, which must come when she manufactures her own great product and ships the finished goods instead of the raw material:

The United States has increased its cotton crop nearly 5,500,000 bales, or about 96 per cent. India's crop has increased 1,500,000 bales (of 400 pounds each), or about 73 per cent. Egypt's crop has increased 570,000 bales (of 500 pounds each), or 70 per cent. Russia, which used to draw so largely upon this country for her raw cotton, is now supplying her mills with 200,000 to 300,000 bales grown in her trans-Caspian provinces.

Brazil has almost ceased exporting cotton, such is the home demand for her crop. The continent of Europe has increased its consumption of cotton 2,472,000 bales, or about 9 per cent. The United States, the largest producer, has become the largest consumer of cotton, hence the price of its staple is now regulated in the home market, and no longer in Liverpool.

But notwithstanding the great increase in the world's consumption of cotton within twenty years, the overshadowing feature of the period is the phenomenal increase in consumption in the cotton States. This is of immense significance to the countries consuming American cotton, because every additional 10,000 bales consumed in this country means shorter time for some foreign mill, perhaps its shutting down, assuming, of course, that no further expansion of the American crop and that of other countries will take place.

In 1850 there were 168 cotton mills in the Southern States, operating 245,810 spindles and consuming 80,300 bales of cotton. In 1860 there were two mills less but an increase of 58,741 in the number of spindles and 21,388 in the number of bales consumed.

The first census taken after the war between the States showed 154 mills in operation, having 344,046 spindles and consuming 83,068 bales, or only 2,768 more than were consumed in 1850. Five years later the number of mills had increased to 181, the number of spindles to 481,821, or 40 per cent., and the number of bales consumed to 145,078, or 75 per cent. in five years.

In 1880 the census returns showed a decrease in the number of mills as compared with 1875, but an increase of 86,637 or 18 per cent. in the number of spindles, and 43,320 or 30 per cent. in the number of bales consumed.

In 1885 the number of mills had increased to 232, the number of spindles to 1,100,132, or 94 per cent. in five years, and the number of bales consumed to 315,842, or 68 per cent. in five years. By 1890 the number of mills had increased to 240, the number of spindles to 1,554,000, or 41 per cent. in five years, and the number of bales consumed to 526,856, or 67 per cent. in five years.

Every year since 1890 there has been an increase in the number of mills and

spindles in operation, and, with the single exception of 1893-94, an increase in the number of bales consumed.

Some years show astonishing developments. For instance, 44 new mills were put in operation in 1890-91, 48 in 1896-97, 23 in 1897-98, 55 in 1899-1900, 82 in 1900-01, 42 in 1901-02, and 15 in 1902-03. In fourteen years the number of mills increased from 240 to 640.

In 1890-91 the number of spindles increased 207,547 over the previous year; in 1895-96, 484,552; in 1896-97, 476,994; in 1899-1900, 1,667,186; in 1900-01, 591,196; in 1901-02, 931,339, and in 1902-03, 577,670. In fourteen years the number of spindles increased from 1,554,000 to 7,100,202, or nearly 375 per cent.

The largest yearly increase in the number of bales of cotton consumed are the following amounts for the years named: In 1890-91, 79,060; 1894-95, 130,023; 1897-98, 295,683; 1899-1900, 156,918, and in 1901-02, 304,345. In fourteen years the consumption of cotton increased from 526,856 to 1,925,954 bales, or about 265 per cent., while the total crop taken for domestic consumption in the cotton States increased from 7 to 18.1 per cent.

# UP-TO-DATE FARMING AND SMALL FRUIT

Up-to-Date Farming is one of the best farm papers now published in the United States, and the only one that is fearlessly advocating the right of the farmer to set the price on his own products. J. T. INGRAM, McLeansboro, Ill.

*The summer brings a wreath of flowers,  
Of roses sweet and lilies fair,  
To wreath her queen's luxuriant hair,  
To carpet all her verdant bowers.* —Selected.

The pests are now setting their stakes for their next season's raids.

It develops that the apple crop is by no means a full yield.

"Raise more fruit," says a contemporary. Sure, but will you help get a better price?

Hardwood ashes and all manures containing potash are good for peach trees.

Grape juice makes an excellent and healthful vinegar. Sweeten the juice a little and add yeast or "mother," and allow to ferment.

There will, no doubt, be weedy places in the meadow not fit for hay, and damaged hay. Don't leave such in the field. Haul to the orchard and place around the trees as mulch.

Georgia's shipment of peaches this year has been very heavy, and it is not yet over. The same report comes from southeastern Tennessee and other peach centers of the South.

In many orchards the trees are planted too close together. You get more trees to the acre, but you lose out in quantity and quality of fruit.

It is a pretty good plan to plow the old orchard in the fall. Plow very shallow as close to the trees as you can without injuring the roots too much, then mulch the trees.

Dismiss the idea that the orchard is a "dead clinch"—a pension. If it does its best, or does much good, in fact, it must have attention. Nothing comes naturally any more.

It is a pity fruit growers are not organized so that they could better control the marketing of their product. The various fruit associations, though useful perhaps in facilitating business, do not pretend to exercise any influence over the price, and they are powerless to do so if they did. Fruits, like all other crops, are priced by the buyers without consulting the owners—the producers.

## STARVING ORCHARDS.

Green's Fruit Grower: A tree can not move about from place to place seeking food. It is anchored in one spot and its

life depends upon such food as it can find within a radius of thirty to fifty feet around its trunk. It is therefore not surprising that after a tree has fed upon this small piece of ground for five, ten, twenty or fifty years that all the available plant food in that ground has become exhausted. Thus you see that there must of necessity be many starving orchards. An apple tree will live and bear fruit under favorable circumstances for one hundred years, but it can not do so unless some fertility is added to the soil in which that tree is growing. I am often asked what remedies to suggest for insects that bore into the bark and wood of apple trees, also to suggest remedies for other diseases of trees. In reply I often say that if the tree is kept growing vigorously it will of its own efforts overcome many diseases and insect foes. When a tree becomes stunted or lacking in vigor it is quickly preyed upon by insects and disease, whereas if it was kept growing in full vigor it would have repelled these disturbing forces. I am in favor of cultivation of the soil in which fruit trees are growing. I do not mean by this that the ground may not be sown to grain or grass for a short period so that the green crop may be turned under to make humus and plant food. But generally speaking orchards must be cultivated in order to produce the nicest specimens of fruit.

What place at the old home do you remember most vividly? With the boys it is most likely the "old swimmin' hole;" but with the girls it is mother's flower garden.

The autumn is a good time to set out that strawberry bed.

If the old canes could now be got out of the blackberry and raspberry beds without injuring the new canes, it would be a good thing to do. Of course we are writing this for the farm folks, not for the professional grower.

See that the chisanthemums are coming on all right, so that they may be making the very best preparation for their "autumn glory."

The petunia beds should be kept well watered. A beautiful bed of petunias is as refreshing to the eye this August weather as a dish of ice cream is to the palate.

The vegetable garden ought not yet to be entirely without resources. The beets, the cabbage, the cauliflower, the shell beans, the late sown turnips—oh, there ought to be a good living in the garden yet. Don't let the weeds grow up great big, ugly, seed-making things.

If you have not yet got in the habit of having plenty of flowers about the house go out and look at the golden rods, the wild asters, the milk weeds, and even the little acacias by the roadside. God planted them for you. He did not intend that any one should go through the world without flowers.

# Wheat Growers Attention

## ORGANIZE AT ONCE

FARMERS! millers and dealers are hungry for your wheat as they never were before. This is your opportunity. Will you embrace it? Or will you stand aside and let the gentlemen of the Boards of Trade sap the profits of your business?

THIS YEAR YOU CAN GET \$1.20 (on basis of Chicago market) FOR EVERY BUSHEL OF GOOD WHEAT YOU HAVE. IF YOU TAKE LESS YOU SIMPLY THROW AWAY THE DIFFERENCE.

**REQUEST FOR INSTRUCTORS**  
The American Society of Equity  
Indianapolis, Ind.  
Gentlemen—I request you to send me full particulars for organizing a Local Union of the A. S. of E. (or Wheat Club) so I and all my neighbors may cooperate and get the Union price for our wheat.  
Name.....  
Address.....

Have you ever known another business where the people who produced the stuff, have nothing to say about the price? Or where a few people set themselves up to sell out the products of a great army of people before the goods are produced?

This is what the Speculators and Gamblers do every year, and then expect you to deliver the goods, whether the price is equitable or not.

Get together. Everything is simple when it is explained. Form a Local Union. Full instructions will be sent on application.

USE THE ACCOMPANYING COUPON

## CABBAGE WORMS POTATO BUGS MELON BUGS

Killed by dusting on Ferto-Insectone.  
Fertilizes while it kills the bugs. Harmless to human beings but death to all bugs, worms and insects.  
Price, 25 lb. sacks 75c; 50 lb. sacks \$1.25; 100 lb. sack \$2.00.  
J. A. EVERITT, Mfr., Indianapolis, Ind.

Only one more issue of the Special Educational Series. Only one more opportunity for you to help the campaign of education by sending in a list of 3-month subscribers.

Results are what we all like to see. Farmers can already see immense results from the work undertaken by Up-to-Date Farming.

The speculators must come to the farmers' price on settlement day. Note that speculative wheat went to \$1.00 on the last day of July. Speculators as well as farmers appear to have had their mark set at \$1.00. For this '04 crop they may as well set their mark at \$1.20.

An esteemed contemporary has discovered that Indiana's 13 bushels of wheat to the acre is not enough, but it has never observed that the prices fixed by gamblers on 'Change are not enough. It says the wheat fields must be redeemed by a copious use of fertilizers, but it does not tell how 13 bushels to the acre at board of trade prices are to pay for it. Let's sing the old, familiar hymn:

O, for a closer walk with truth,  
A little common sense;  
A light to shine in places dark,  
And drive false notions hence.

"The seer and yellow leaf" is hastening on. Have plenty of chrysanthemums and other autumn flowers to cheer the home surroundings.

Don't let the onions stay in the ground too long. As soon as the tops begin to wilt, the onions should be harvested and put in a cool, dry place.

Have your flower experiences been entirely satisfactory this year? If not, determine why not, and set your pegs for better things next year. Think of this run: Tulips and columbines, peonies, pansies, phlox, gladiolas, cannas, dahlias—oh, there are a thousand beauties that may be taken in rotation and make home lovely and life enjoyable all the season.

## HOT WEATHER POULTRY NOTES.

From Canadian Farmers' Advocate: A few hints for the young stock now that the weather is becoming hot and dry. Spray the dust bath for the young stock. The dust they stir up is almost as injurious to their lungs as it is to the lice. Many people think that lice kill them in hot, dry weather, but in reality if they breathe in much dust it frequently kills quite a number. Also, it is better to omit meat altogether from their diet; they find more insects than is good for them at this time of year. Feed as much dry food as possible, and if milk is to be given to them, mix it in with the mush, as they should have only clean, clear water during the "dog days." Save all your scraps of bread and toast them black. Put a good-sized piece into every drinking cup. It prevents thirst and is more nourishing than plain water. Never soak bread in hot milk or water, nor boil it with the scraps. It is the cause of a list of ills. Keep your birds growing.

## 10,000 LETTERS A DAY

THERE are many firms in this country who receive 10,000 letters, and even 25,000 letters a day, not counting the hundreds of papers and pieces of advertising matter.

## DO YOU WANT LOTS OF MAL?

You can have it by placing your name and address on our list. We want to add 100,000 new names at once and make this liberal offer. Manufacturers, publishers, importers, printers and dealers everywhere send samples and literature to names on our list. Send 10c and we will place your name and address in our 1904-5 list. If you want your share send your name now.

**FREE** To make our offer doubly attractive we will send ABSOLUTELY FREE a new musical instrument, The Zebophone. Any one can play this novelty without a moment's instruction. Sent postpaid to your address and special agents prices so you can sell them.

**SEND TODAY, 10 CENTS** to list your name and get one Zebophone.

**S. E. FERRY**  
842-844 Capital Ave. N., INDIANAPOLIS, U.S.A.

## \$15.00 TO TEXAS

August 9 and 23, September 13 and 27, Cotton Belt Route will sell round trip homeseeker tickets from St. Louis to Dallas, Ft. Worth, Waco, Houston, Galveston, San Antonio, Corpus Christi, Brownwood, Amarilla, Quanah and intermediate Texas points at rate of \$15, stopovers both ways, return limit 21 days. "The Texas Train," a fine fast service to the southwest, leaves St. Louis daily, 5 p. m. Write for particulars.

E. W. LABEAUME, G. P. & T. A. Cotton Belt, St. Louis, Mo.

## ALL ABOUT THE NEW SOUTH

The Bedford Breeze, a monthly magazine published at Bedford City, Va., by a former Iowa farmer, tells the exact truth about the Agricultural conditions in the South, and gives especial attention to the making of new homes by Western and Northern Farmers. It is one of the most sprightly and readable magazines devoted to the up-building of farms in the South. 25c per year—Send for a sample copy free. THE BEDFORD BREEZE Bedford City, Va.

## BLACKBERRY

and RED RASPBERRY plants. Early harvest. Erie, Cuthbert and Miller's Red. Extra well rooted, true to name. Ready Sept 1. Prices Low A. R. WESTON & CO., RFD No. 5, Bridgman, Mich.

**STARK FRUIT BOOK** shows in NATURAL COLORS and accurately describes 216 varieties of fruit. Send for our terms of distribution. We want more salesmen.—Stark Bros., Louisiana, Mo.

**GET LAMBERT'S** Death to lice—the kind that successful poultrymen have used for twenty years. It kills lice anywhere—just the thing for sitting hens. Never disappoints—always sure. Sample 10c. 100 ounces \$1.00. "Pocket Book Pointers" free. D. J. Lambert, Box 240, Apponaug, R. I.

**WE START YOU** in Mail Order Business. Particulars and samples free. AMERICAN SPECIAL AGENCY, (U. F.) Milwaukee, Wis.

## WHO'S YOUR FAVORITE ROOSEVELT OR PARKER?

Everybody will choose sides in the coming Presidential campaign and each should wear an emblem of their choice. What is more appropriate than a picture of the favorite? The coming election will, in many respects, be the greatest we have ever had. Campaign days will be days of activity. Loyal partisans of both sides should wear their nominees' pictures. Our buttons are illuminated in many brilliant colors. It is indeed difficult to imagine their beauty before you see one. They are the finest specimens of the engraver's art. All buttons have famous patent pin back that fastens tightly to the coat or dress.

Be the first in your town to have one. Show them to your friends and you can take lots of orders. **LIBERAL TERMS TO AGENTS.** Made in four sizes:—7-8 in. 5c each, 1 1/4 in. or 1 3/4 in. 10c each, 2-1 1/8 in. 15c each. Postpaid at these prices. Special rates on quantities. **SEND FOR OUR FREE ILLUSTRATED CIRCULAR** Order now and get Special Agents Terms

**COONER & FORTUNE CO., INDIANAPOLIS**

# UP-TO-DATE HOME ON THE FARM

I take farm papers small and great,  
But none compare with Up-to-Date.  
Dodge, Cal. E. E. Dodge.

Life's dearest things are free  
Nor to be bought with mines of gold,  
Thy peaceful home its joys untold,  
Its love that binds in willing thrall,  
Is free alike to great and small,  
And like a halo over all,  
God's matchless love for thee!  
—Emily H. Watson.

"Be it ever so humble, there's no place like home."

The best lesson children can learn, at home or elsewhere, is to be kind, polite and courteous. This is the surest passport on any road and into any business.

Boys and girls of a certain age become restless, and long for a change. Let me whisper to such: "Don't be in a hurry to leave the farm. Stay upon it and make it better and make farming the best of all businesses." That time is coming.

Uncle Threadbare's home looks untidy in spite of all I can say to him. Gates are loose, fences are down, weeds grow up in the yard, and things look "out at the elbows and down at the heel" generally.

A solution of blue vitriol sprinkled over the walks will prevent weeds from growing in them. But this stuff should be handled with care; it is poison, you know.

Don't neglect to thoroughly air every part of the home frequently. The bedrooms should stand open all day, and they should never be tightly closed at night.

Pure water made milky with starch or fine flour is a good drink for children with bowel trouble, or babies with summer complaint.

Don't spend any time in worrying. The weather is too hot and you haven't the time to spare.

Don't do a good deed "by and by." Do it now.

"The words of all others I regret the most are unkind ones spoken in the home." Those to whom they were spoken may be too far away to hear the recall of them.

It is strange, but it is true, that nothing is ever done to-morrow, for there is no to-morrow, and there never will be. Do it to-day.

Never eat nuts without salt. A little salt makes nuts easily digested, without it they are sometimes very burdensome to the stomach.

Let us eat to live, rather than live to eat. Whenever we eat more than is necessary to properly sustain us we are burdening machinery that is wearing out.

I wish the boys on the farm would not learn to chew and smoke tobacco.

A few drops of oil of sassafras scattered about the room is said to be a great thing to keep the flies out.

Try a dish of fried tomatoes. Slice without peeling, into rather thick slices. Dip them in crumbs and fry in a little butter, and just before taking out pour into the pan half a cupful of sweet cream. Season with salt and pepper.

The boy that knows how to do almost anything in the house and the girl that knows how things are done on the farm, are capital prizes no matter who may draw them in the matrimonial lottery.

A high, round topped, four-legged stool is a handy thing in the kitchen. A tired person can often sit on such a stool, and do work at the table that they might otherwise have to stand up to do. A low, three-legged stool is also often a great convenience, but it will sometimes be found in the way.

Try this plan for your biscuits. Mix together butter milk and sweet milk, and let stand over night. Mix the dough with this, using no water, and very little grease. Add soda and salt as usual. You will have some nice, light biscuits.

A person who has examined into the matter reports that it is quite a common thing for bakers to mix 20 per cent. of corn flour, 5 per cent. of potato flour and 75 per cent. of wheat flour together, and, as one baker expresses it, "It is just the thing."

## RAILROADS AND THEIR BUSINESS

The press reports of the inter-state commerce commission, recently issued, shows that there was in the United States, June 30th, 1903, (as late as the report covers) 207,977 miles of railroad, which is an increase of 5,505 miles during the year, the greatest increase made during any previous year since 1890.

There were in the country at that time 2,078 railroad corporations, and 1,185 miles of road were in the hands of receivers.

There were in the service of the railways 48,871 locomotives, an increase of 2,646 during the year. The total number of cars of all classes was 1,753,389, an increase of 113,204.

The total number of persons employed was 1,312,537, or 639 per 100 miles. The amount paid these employes during the year is given at \$757,321,415, which the report declares to be at least \$18,000,000 short. The total railroad capitalization is put at \$12,599,990,258, or \$63,186 per mile.

The number of passengers carried is stated at 694,891,537, an increase of more than 45,000,000 over the previous year. The tons of freight carried was 1,304,394,223, an increase of 104,078,536 tons.

The total earnings of the road were \$1,900,846,907, a gain of \$174,466,640 over the previous year. The gross earnings per mile were \$9.258. The operating expenses were—keeping up the roads, \$266,421,774; maintenance of equipment, \$240,429,742; conducting transportation, \$702,509,818; general expenses, \$47,767,947. The operating expenses were \$6.125 per mile, and the sum available for dividends was \$296,376,045.

The total casualties during the year was 86,393,—9,840 being killed and 76,553 being injured. The number of passengers killed during the year was 355, and the number injured was 8,231. One passenger was killed for every 1,957,441 carried, and one was injured for every 84,424 carried.

## UP-TO-DATE'S Dressmaking Department

We have arranged with a New York house to furnish the very latest fashion creations to our lady readers. Through this department you will be able to buy the latest styles and fashions long before the pattern are on sale at your local stores. This department is edited by an eminent fashion authority and will be up-to-date in every way. Send ten cents for each pattern you want. Always order by number. Send orders to Pattern Department, Up-to-Date Farming, Indianapolis, Ind.

### LADIES' DRESSING GOWN

No. 6112.—This is the season of the year when a woman most delights to discard her tight-fitting skirt and waists and step into a comfortable dressing gown, imparting an air of cosiness. Dressing gowns, especially pretty ones, tastefully made and nicely trimmed are always among the most highly-prized treasures in a woman's wardrobe.

In the illustration shown, the gown can be made up either as a dressing or negligee gown. The pattern provides for flowing or bishop sleeves, high or open neck, circular back and with or without the standing collar. The front has just enough fullness to avoid even the faintest clumsiness in design or make, being held into the figure by ribbon or cord girdle. The back is made with bias seam down the center, which affords a full sweep at the foot.

The sleeve is of the newest shaping and made in flowing or bishop style. The neck is slightly V-shaped and finished by a cape collar, which gives the fashionable drooping shoulder effect. Provision is made, however, for high neck and standing collar, if one desires that style. The cape collar may be made separate from the dress. In fact, with the revival of "lingerie sleeves" many of the collars are made of thin sheer material in dotted Swiss, Persian lawn or linen and trimmed with insertions and edgings of Valenciennes and point de Paris laces. These collars are easily laundered and when worn over red plum or any bright colored gown the effect is charming. These dressing gowns are an easy article for home manufacture

and inexpensive cotton crepes, silk and wool mixtures and printed silks are successful imitations of expensive materials. Crepon, silk, cashmere and albatross may also be used in construction of the garment.

Material required for 32-inch bust measure; 8½ yards, 36 inches wide; or in the 42-inch size, 9 yards, 36 inches wide.

Sizes 32, 34, 36, 38, 40 and 42 inches bust measure.

### CHILD'S DRESS WITH BOX-PLEATED SKIRT

No. 3438.—Owing to so many requests for a kilted skirt dress, we are showing one today in blue cashmere trimmed with cream lace medallions. The waist with its slightly bloused front, is laid in rather wide tucks, stitched on the outer edge. The shoulders are set off by a pretty round collar which reaches to the neck edge. The pattern provides a standing collar, and long or three-quarter length bishop sleeve. The skirt is laid in box-pleats, a mode that is so pretty and childish that it is no wonder that mothers refuse to give it up. The dress may be made with or without the lining and the closing is in the back. A sash and girdle might be worn with the frock, placing the buckle or rosette in the back, although for everyday wear a belt of the same material is pretty. A satisfactory development would be of pique or mercerized cotton, with rows of machine stitching for decoration. The shops are full of pretty materials that will not be hurt by the use of soap and water and it is these materials that make the most sensible kind of dresses. For dressy occasions a white albatross with cream lace would be pretty, although any of the pliable materials could be used.

Material required for six year child is 5 yards 27 inches wide. Sizes 4, 5, 6, 7, 8 and 9 years. Give age when ordering.

## I Cure Women OF FEMALE DISEASES AND PILES

I Will Cure You So That You Will Stay Cured—Women No Longer Need Submit to Embarrassing Examinations and Big Doctor Bills.

To Show Good Faith and to Prove to You That I Can Cure You I Will Send Free a Package of My Remedy to Every Sufferer.

I hold the secret of a discovery which has never failed to cure women of piles or female weakness. Falling of the womb, painful menstrual periods, leucorrhea, granulation, ulceration, etc., are very readily cured by my treatment.

I now offer this priceless secret to the women of America, knowing that it will always effect a cure, no matter how long you have suffered or how many doctors have failed.

I do not ask any sufferer to take my unsupported word for this, although it is true as gospel. If you will send me your name and address, I will send you a trial package absolutely free, which will show you that you can be cured. The free trial packages alone often are enough to cure.

Just sit down and write me for it today.

Mrs. Cora B. Miller, Box No. 137 Kokomo, Ind.

## To Women Who Dread Motherhood!

Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No woman need any longer dread the pains of child-birth; or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at child-birth may be entirely banished, and he will gladly tell you how it may be done absolutely free of charge. Send your name and address to Dr. J. H. Dye, 112 Lewis Block, Buffalo, N. Y., and he will send you, post-paid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also how to cure sterility. Do not delay—write to-day.

**CANCER** 30 years experience enables us to scientifically treat and effectually cure cancer and tumors without the knife. 78 page book sent free. Address Drs. GKATIGNY & BUSH, 7 Odd Fellows Temple, 7th & Elm Sts. Cincinnati, O.

## PARALYSIS and RHEUMATISM CURED WITHOUT MEDICINE.

Send for free circular. MICHIGAN, MINN.

## GOLD WATCH & RING FREE

An American movement watch with Solid Gold Plated Case, fully warranted to keep correct time, equal in appearance to a Solid Gold filled watch warranted 22 years. Also a Solid Holed Gold Ring set with a rare Chico Gem, sparkling with the fiery brilliancy of a \$50 diamond ring, are given absolutely Free to Boys and Girls or anyone for selling 20 pieces of our handsome jewelry at 10¢ each. Send us your address and we will send you the jewelry post paid, when sold send us the \$2, and we will positively send you both the watch and ring, also a chain for quick work. ERIE MFG. CO., Dept. R 36 CHICAGO, ILL.

**FREE TO AGENTS** Flat thin knife cuts loose a perfect cake. \$2 Outfit free Exp. prepaid. Dept. K9 HOUSEHOLD NOVELTY WORKS, Chicago, Ill., or Buffalo, N. Y.

**WE START YOU** in Mail Order Business. Particulars and samples free. AMERICAN SPECIAL AGENCY, (U.F.) Milwaukee, Wis.

**The Clipper Drill** The Drill That DRILLS LATEST BEST Made at TIFFIN OHIO LOOMIS MACHINE CO.

**BALES 15 TONS A DAY HAY** Our catalogue gives valuable pointers about Press construction and operation. Our 37 years' experience make the Gem and Victor Presses most durable, easily operated and least expensive. Send postal for book. GEO. ERTLE CO., Quincy, Ill.

**Hopkins' Bleaching Gloves** Excellent for protecting the hands in housework, gardening or driving, etc. Made from select glove kid in tan, wine, black and chocolate; also camels. Liberal terms to lady agents. 25¢ a pair. HOPKINS GLOVE COMPANY 24 Murdock Bldg. Cincinnati, O.

**THE SANITARY WASHING MACHINE** A marvelous invention that has successfully overcome all objections to a wooden washer. Lace curtains, comforters, clothing, etc., washed perfectly clean without tearing. Made of Galvanized Steel. Durable, simple, effective. Sent on trial. A modern machine at a price within the reach of all. AGENTS WANTED to introduce this remarkable machine. To the industrious kind we offer interesting inducements and exclusive territory. The Sanitary Laundry Machinery Co., 24 Sixth St. Tell City, Ind.

**FITS** Permanently Cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. Send for FREE \$2.00 trial bottle and treatise. Dr. R. H. KLINE, Ltd., 931 Arch St., Philadelphia, Pa.

**ITCHING SKIN** DISEASES QUICKLY CURED Send Six Cents for Trial Box. W. BULLARD, 349 Theodore St., Detroit, Mich.

**60,000 FLIES** caught in a single day in our trap. AGENTS WANTED. NEW IDEA FLY TRAP CO., Dept. U, Pissna Park, Ill.

# DISCRIMINATION

## Government Against the Farmer

(Concluded from first page.)

Whenever it is suggested that the government ought to establish its own railroads or its own telegraph companies you hear loud protests against the crime of COMPETING with VESTED INTERESTS.

People would think it an outrage if the government should build a cheap competing railroad along the line of the Illinois Central, the New York Central, or any other great railway, or establish a competing express service within the territory pre-empted by one of the great express companies.

Have you ever thought that the government has constantly competed with the FARMER of the United States in the most destructive, wholesale fashion?

WHY are there so many abandoned farms in the East?

WHY are so many Eastern farmers, unable to make a living, driven to seek their fortunes in the West, taking their families and their hopes with them?

IT IS BECAUSE THE GOVERNMENT HAS SUBJECTED THE UNORGANIZED FARMER TO MERCILESS COMPETITION.

The farmer in the Eastern States—in Northern New York, for instance—invests his capital in land at one hundred dollars or more an acre; he wants to raise wheat, but the land, having been used for a long time, requires constant supplies of fertilizer. All that is very expensive.

Just as the Eastern farmer begins to think that he has a chance to make a living the government gives away a million or five million acres of land in the West, infinitely better than his land.

The Western farmer, or the Eastern farmer moved West, gets FOR NOTHING a quarter section of one hundred and sixty acres of land, for which the Eastern farmer has paid sixteen thousand dollars. And that Western land, rich virgin soil, needs no fertilizer.

How can the Eastern farmer compete in wheat raising or corn production with the Westerner who gets his land free and a crop for the mere cost of the seed and plowing?

The Eastern farmer cannot compete. He goes to the wall, gives up farming, or moves West.

This giving away of the Western lands and this impoverishing of the Eastern farmer have been going on for years. Yet nobody raises any protest about the vested interests of the Eastern farmer, or the criminal government competition.

As a matter of fact, though the farmers have suffered, the country as a whole has been benefited.

It is to the interests of all the people that our great Western lands should be put under cultivation. The interests of all mankind demand that those great, fertile plains should be made, as quickly as possible, to yield their hundreds of millions of bushels of grain. It would have been a crime to keep them vacant and unproductive simply to protect the capital of the farmers invested in the East. The greatest good to the greatest number rules, and in consequence the farmers suffer.

But why is it that millions of FARMERS can be treated in this way, submitted to competition that means ruin, without a word being said, while the mere suggestion of government competition with the RAILROADS sends everybody into spasms?

If the government, by absolutely giving away farm lands, can rightly destroy the opportunity of a million farmers, why should it not establish its own railroads, even if it should compel a few dozen Vanderbilts, Morgans and others to live on only a million, or only half a million, dollars a year each?

Of course, the reasons are clear. The farmer has no effective organization, he is beaten individually and has not learned how to protect himself collectively.

The millionaires who own the railroads and express companies—all public monopolies—are banded closely together. They own the government, they select the public officials and control them in office.

The farmers ought to unite and join hands with all other classes of workers

against whom plutocracy conspires to help manage this country for the benefit of those who really own it.

If the government can afford, in the interests of all, to compete with the little farmer who lives alongside the New York Central Railroad, it should not hesitate to compete with the New York Central Railroad itself—also in the interests of all.

### FIGURES AND FACTS.

"Figures won't lie" is a favorite expression, but they may easily be made to deceive. A few years ago a Chicago man exploited a scheme by which he was to save the farmers a vast sum of money on the single item of salt, and he easily made figures to show how he could do it. He assumed that each farmer would need at least ten barrels of salt a year. Twenty cents saved on each barrel would be \$2 to each farmer. As there are twelve million farmers in the United States, that would make a saving of \$24,000,000, always in big black figures. All it lacked was for the farmers to furnish him the 80 cents on the barrel to do it with!

Not at all of this character, but as an instance of how figures may be made to show magnificent results, is a letter from an esteemed Nebraska correspondent. Referring to the advice given farmers by Up-to-Date Farming to be wary of all schemes which require them to put money in new enterprises, the writer fully approves of our position in everything except in the matter of building grain elevators. This he thinks farmers should be encouraged to do to the amount of \$100 a clip, and gives a grand array of figures showing magnificent results and immense profits.

We believe in private elevators. They mean facilities for holding grain off the market and thus defeating speculative deals in "futures," and maintaining an equitable price; and among the wealthy grain growers, whose crops run into the thousands of bushels, such elevators certainly commend themselves and we welcome them as aids to the accomplishment of the great purpose for which we are striving. But for the average farmer whose crops run only into a hundred or two bushels, we think they are too expensive. He can serve his purpose much more cheaply, much more safely and just as certainly by building a granary on his own premises, or by joining with his neighbors and building a grain house at their shipping point.

### VICTORY FOR THE FARMERS IN MONTANA.

Since I last wrote you describing our little organization that is trudging along on the principles of the noble A. S. of E., we have had quite an experience, of which I wish to tell all the farmers, as it was a great victory for us. When the fruit season opened this year, we discovered that the merchants were bent on wrecking our association, for instead of buying our fruit as it was put on the market, they kept shipping in fruit and selling it sometimes at a loss rather than handle the product of organized farmers. We at once called a meeting and incorporated so we could handle our own business. We then hired a factor and rented a store in town, put a wagon on, and went to selling our fruit at wholesale and retail. We didn't only meet the competition of our wreckers, but went them one better, and when they saw we proposed to do business in a business way they tumbled, and now every one of them (except a single house) is handling the fruit of organized farmers, and they are paying cash for it at prices fixed by our agent; and the one store that is handling "scab" fruit is also paying cash, something that was never before known in this valley. The organized farmers are thus benefiting the unorganized. I think most of them will now come in with us, but you know, Mr. Everitt, there are fellows who stand back and reap the benefits secured by the push and zeal of others rather than get at the wheel and help push a good thing along.

In my former letter I spoke of the "Farmers' Board of Trade." These are the grain growers, and the dealers concluded they would make off of them what they had lost in their defeat by the fruit growers, so they put the price of farm machinery away up. The grain growers had foreseen this and were ready for it. So they incorporated and bought out one of the hardware stores,

and will soon be running a farmers' general store. Hence, if the grain growers don't get their price for their wheat this fall, there won't be a bushel of wheat go out of this valley, for the farmers have leased a flour mill, and will manufacture it into flour right here at home.

I tell you, Mr. Everitt, it seems quite funny to set prices on our own products, after letting others do it for so many years. I am anxious to see the A. S. of E. on this side of the Rocky Mountains, so that we may all travel under the banner of a million farmers.

E. J. CRAMER.

Flathead Co., Mont.

### POWER ON THE FARM.

Mechanical or artificial power is being utilized more and more by progressive farmers, and its value on the farm is rapidly increasing, as it is applied to other and more important uses.

The windmill has its peculiar use, and it has long been a feature on the best farms of the day. Even in the time of Cervantes, his hero, Don Quixote, found no readier object of his gallant assault than the broad, spreading, awkward wings of the windmill. But Cervantes never saw the windmills of the present day, nor did his erratic hero ever dream of the many valuable uses to which they are now put. In fact, the thoroughly up-to-date farm seems to lack something if it has not a windmill.

But the more recent invention, the gasoline engine, brings to the farm a power, simple, easy to operate, and effective, which can be turned to wonderful account and applied to almost innumerable uses. It will not only pump water, but it may afford power to saw wood, thresh grain, shred fodder, bale hay, cut feed, etc. The silo is going to become a much more common thing on our better farms, and where these are erected the gasoline engine is a necessity.

Its still more mysterious cousin, the electric motor, is equally effective, perhaps, and possibly a little more convenient, but it can not be made available without a generating plant, which is too expensive for farm use. Near large towns and cities, where currents may be obtained from lighting and other powerful dynamos, the electric motor commends itself—is perhaps the most desirable of all the lighter powers.

In speaking of these newer powers, of course the old reliable steam power is not to be excluded from consideration. The portable and traction steam engine has long played an important part in farm powers, and will continue to do so. Indeed, it is as yet more common on the farm than any other. Its use to furnish power to the threshing machine and hay baler, to cut and elevate ensilage and to draw the road grader have made it quite common and its use very extensive.

Our purpose in this article is to impress upon farmers the value of having convenient powers upon the farm, and to briefly mention the powers most available. As these powers come into use the newer and lighter ones will quite surely supercede the more ponderous steam engines. There are some purposes, however, for which the steam engine will continue best adapted, and for such uses nothing else will take its place. Where a moving power is needed

on the farm the old-fashioned traction steam engine still stands without a rival.

We may conclude by saying that every sign of progress on the farm points to a greater demand for farm powers, and men now grown may live to see them as common as reapers and mowers and disc harrows are now. In the main they are cheap, durable, safe and inexpensive in operation, and their uses are constantly increasing.

### KENTUCKY AROUSED.

(From the Henderson, Ky., Gleaner,

The Society of Equity met in 'Squire J. W. Johnson's office yesterday afternoon and was called to order at 2:45 o'clock by President T. T. Barret. There was a very fair attendance.

The principal discussion of the meeting was whether the farmers should hold their wheat for \$1.

President Barret called upon various persons for an opinion in regard to the matter and finally asked Wm. J. Marshall, one of the local dealers, what he thought of the proposition. Mr. Marshall stated that he thought the farmers could secure \$1 if all of them should hold their wheat as in his opinion there were not over 200,000 bushels of wheat in the county and the local millers usually could use 500,000 bushels; that St. Louis was the only place they could obtain the wheat and even at that place although they often secured an inferior grade of wheat the millers were required to pay over \$1 to have the grain delivered in Henderson; that some of the millers tried the St. Louis wheat last season and secured, in several instances, hard wheat. Mr. Marshall stated further that the capacity of his elevator was 50,000 bushels and to all farmers who were unable to hold their wheat he would advance them 75 cents a bushel on the wheat and let them store it in his elevator until \$1 could be secured and would charge as rent one cent a bushel for a month's time and 8 per cent. interest on the money advanced.

The proposition will doubtless be accepted by many farmers.

J. J. Towles' motion that it be the sense of the meeting that the farmers hold their wheat for \$1 a bushel was unanimously adopted as was also his motion that a copy of the minutes of the meeting be sent to all the unions in the county.

It was stated by many of those present that the grain was better this year than for many years and with such a fine quality of wheat and a scarcity of it at the same time it was thought that \$1 could be secured.

President Barret suggested that the various unions begin the work of obtaining data as to the tobacco acreage for this year and in fact to make a crop report each year of the leading staples grown in this county.

An American Breeding Association is being organized, with a membership fee of \$1. We have yet to see a single old-line farm paper attack it, we suppose because it says nothing about price, but devotes its energies to raising more stuff for the exploitation of the price-making thieves. The A. S. of E. takes up the question of price, and demands fair pay for the producers, and it is—oh, well, everything but nice.

## THE THIRD POWER

(Continued from Page 6)

What difference would it make to the consumer whether the price of wheat is eighty cents or a dollar a bushel? The average consumption of wheat is about five bushels per capita, or twenty cents increase per bushel is one dollar increase a year. This will be eight and one-third cents a month, or less than one-third cent a day. For a family of four persons a little more than one cent a day. The question is, however, whether bread would be dearer. I think present bakers' bread prices were made when wheat was higher, and they have not been put down. Also it is proposed to reduce the price of so many commodities when this society is in operation—notably meat—that the average will clearly be in favor of the consumer.

But suppose the establishment of the farmers' society and the third power would result in a slight advance in food. Wages have been increased out of all proportion to any advance that can result here. Also by giving the farmers a lift now along with the general industrial elevation we will be increasing his consuming powers for all manufactured goods, and for everything he can consume on the farm and in his family, thus benefiting the laborers in prospect of continued high wages. Also if we put the farmers in a position where each of them will keep one or more hired men at union wages, the year around, which is what this movement means, we make a market for labor such as was never before dreamed of.

Is it necessary to illustrate this further? Is it not clear that if marketing was done systematically and the existing demand supplied, and no more, that prices can be maintained at equitable rates? The American Society of Equity, through its board of directors, will be the head or clearing house to the entire agricultural industry. Through the official paper and the press of the country this head will speak to every member weekly and give news about crops and crop prospects; advice about market and marketing. All the millions of farmers will have the same advice at the same time about the same things from an authentic head quite in contrast with the blind guessing as at present. All will thus be possessed of the same knowledge, influenced by the same motives, and they may act as one man—in short, co-operate—for the single purpose of securing the equitable minimum price.

The plan of the American Society of Equity is broad enough and comprehensive enough to care for every branch of agricultural effort—the grain grower, the stock feeder, the dairyman, the poultry man, the cotton grower, the tobacco grower, the fruit grower, etc. As soon as it is in operation it will benefit the largest operator, no difference in what line nor where situated, and also the owner of a few rods of ground, by securing stability of price, which means stability of prosperity.

The plan is to recommend a minimum price at which staple crops shall be sold in leading or base markets. For instance, grain prices will be based on Chicago, cotton on New York or New Orleans, etc. Other markets and the farm prices will then be regulated by the base market. The farm price will be the base market prices less transportation and cost of handling. Farmers whose produce does not go to the base market can calculate the freight from the principal market that receives their crops. This minimum value will be named each year when the crop is produced and will be equitable on the basis of production and consumption, lower in years of large crops than in years of small crops, but always a price that will protect the farmer. If speculators force the price over the minimum price the farmers may, of course, take it. Farmers will be expected, however, to stop marketing when the market will not take more at the minimum price. The minimum price will be the safety valve which will regulate the supply to the demand.

It must be understood that there has not been a genuine surplus of any farm crop produced in many years. All have gone into consumption. It is the temporary surplus that is responsible for low prices, and it is this temporary surplus that the farmers are expected to control in the American Society of Equity. We see illustrations nearly every day in the market reports, when the visible of any crop increases considerably from free marketing the price goes down. When farmers stop marketing prices go up. This is very clearly shown in the cattle markets. We reproduce from the Chicago Live Stock World as follows:

"Country shippers are surely not hurting cattle buyers by sending in little runs of cattle on days when more could be used at steady prices and piling up a glut on one or two days when prices go off ten to twenty-five cents and oftentimes worse.

"It ought not to be hard to figure out who gets the worst of this sort of a distribution of cattle."

But there are those who think that the farmers are getting fair prices now—and of course they do get fair prices sometimes. However, let us consider the case of wheat as typical. Is \$1 too much? For the past fourteen years, from 1888 to 1902, the average price of wheat in Chicago was 76.2-3 cents. The average yield is less than thirteen bushels an acre. Taking thirteen bushels as a liberal average, it appears that during this time the farmer has realized \$9.95

off each acre planted in wheat. This is for the use of an acre for one year, and must cover the cost of labor, of seed, of sowing, of care, of harvesting, of twine, of threshing and of marketing. From this must further be deducted interest on investment, loss of fertility in the soil, wear and tear of machinery and operator's profit. It is such a price as this that is responsible for the farm laborer earning only 26 cents a day and that has put farmers in the very lowest class of laborers. Surely even those who hold that \$1 is too high must admit that 76.2-3 cents is too low.

Thus it is that question of price is fundamental. We are all interested, not simply in the farmer, but in his land—which, in a sense, belongs to all of us. Rudyard Kipling, writing of the American, says:

"An easy unswept hearth he lends  
From Labrador to Guadeloupe;  
Till elbowed out by sloven friends,  
He camps, at suzerainty, on the stoop."

It is so. We have been prodigal with our national domain, and we have invited people from all over the world to come here, take up land, and compete with those already in possession. And now we find that many of our farms are in an impoverished condition from long cropping, and the return from grain and other farm products is not sufficient to justify the expense of restoring the fertility. Farmers have truly sold their birthright for a mess of pottage. This is obviously a very serious matter, and it can only be dealt with by securing equitable prices for all farm products. The farmer should have \$1 for wheat this year (1903), and a proportionate price for all his other products. He can get these prices through the American Society of Equity, which is the organized third power.

## CHAPTER XII.

Having spoken of the present dependence of the farmer on other classes, and having shown the effect of low prices on his consuming power, and also on his land, it seems necessary, before leaving this question of prices, to say a few words about the earnings of the farmer and present additional comparisons. There are many who tell him of his happiness, prosperity and independence. While there is no intention to make things appear worse than they are it is intended to put the exact truth before the farmer. The census of 1900 shows that, taking all the farmers together, the average income per family during the census year was only \$643, or only a little over \$2 a day, counting 300 working days to the year. The average income of the families of other laborers was \$1,146, or over \$4 a day. Two and a third million of farmers' families had a yearly income of less than \$200, while 4,000,000 families had an income of less than \$400 each. Only one family in eight had an income of more than \$800. If these figures are wrong then the census returns are wrong. Remember, they represent the average farmer.

Are farm prices equitable when two-thirds of the families on the farm are limited to an income of less than \$400 a year each? For this they must work longer hours at the most exacting and wearisome labor, oftentimes under the most disagreeable conditions, while the laborers in towns and cities, who are largely engaged in producing the goods that the farmers buy, work short hours, under pleasant conditions, and receive three times the reward. Bradstreet has figured that manufacturers, with an investment of ten billion dollars, produce thirteen billions of products, while the farmer, with an investment of twenty billions, produces only five billions of products. In other words, the dollar of the manufacturer returns him \$1.30 of products, while the dollar of the farmer returns him only 25 cents of products. Where is the equity when a dollar invested in one form of manufacturing returns five times as much as in another? Is not James J. Hill, the railroad magnate, right when he says: "The time has come when the United States should take steps to strengthen the backbone of the country—the farming class," and James Wilson, our secretary of agriculture, when he says: "We can not do too much for our farmers." Prices of farm products will never be maintained at profitable rates by the government, nor by buyers, nor by consumers. Uncertainty of values of farm products will never be at an end until, through national co-operation, farmers make their own prices on the farm.

When we consider the slight reward that the farmer gets for his labor we can understand why rural America is to-day largely the reflection of wasted efforts and hopes not realized. It should be a paradise of prosperous farms, beautiful homes, and happy, contented families. An equitable distribution of rewards will make it all this. Yet it is said that the farmer is responsible for the high prices which have recently prevailed. This is but an effort to shoulder off on him the burden which rightfully rests on the shoulders of the trusts and speculators. An illustration will serve to prove this. A bushel of wheat, for which the farmer may receive 72 cents in the Indianapolis market, will make forty pounds of flour, sixteen pounds of bran, and four pounds of waste. The consumer pays 3 cents a pound for the flour, or \$1.20, and the farmer buys the bran back at \$22 a ton, or 19 cents. Here is a total of \$1.39 produced from an original value of 72 cents. It is thus seen that the farmer's wheat has doubled in price by the time it reaches the consumer. By the route of the bakery 50 to 100 per cent. more will be added. It is the same way with the farmer's meat, butter, eggs, fruit, vege-

possess every quality to commend them to the Farmer and Stock Raiser.

**FROM \$30 TO \$50 SAVED**

the purchaser at the start; there is no pit to be dug, and no expense for bricking up or planking the same. THE "KNODIG" SETS ON THE GROUND. It is also a portable scale; it can be taken to and set up near the work, thus saving hauling. Working parts of the "Knodig" are ALWAYS ABOVE GROUND and always accessible; cannot be clogged with ice in winter; no wooden parts to rot with water. Made of the best steel and iron obtainable; 8 inches over all; steel frame. GUARANTEED FOR ACCURACY AND RELIABILITY. With the exception of floor planks, scale is complete when it leaves the factory. We carry in stock a full line of Boniton Stock Rack Irons. Our illustrated catalogue, with prices, mailed free on request. Address

**NATIONAL PITLESS SCALE CO., 2126 Wyandotte St., Kansas City, Mo.**

tables, cotton, etc. The farmers are not responsible for the price consumers pay. They are not now and never were responsible for the high cost of living. And the consumers should rejoice at the thought that the farmers soon will be in a position, through the help of the American Society of Equity, to cut out the mountains of profit that have been raised between the producers and the consumers.

In the meantime it is important that both the price that the farmer gets and the price the consumer pays are made by organized speculators, trusts, middlemen and manufacturers. They say that prices are made by the law of supply and demand—which is the merest subterfuge. That law, under present conditions, is a myth and a fraud. It may be better called a machine erected by the boards of trade to work in an organized market, and directed against an unorganized source of supply. This machine is equipped with numerous levers, wheels and spigots. As you pull a lever of frosts, floods or drought, you reduce the supply and prices go up. Turn a wheel of increased visible supply or open a spigot of favorable weather in the Argentine or elsewhere, and prices go down. And there are men who put in all their days and nights pulling levers, turning wheels and opening spigots. And thus it is that the farmers and the consumers alike are robbed and squeezed.

We have seen that the farmer does not get high prices, that his annual average income is pitifully small, that the returns on his investment are meager, and that, not getting high prices for himself, he is not responsible for the high prices the consumer pays. And yet, confronting such a situation as this, all that the farmer asks is equity. Shall he not have it? Ought any man, with a proper sense of obligation to himself, to his family and to his country, to be satisfied with anything less than equity? Is it not what we all pretend to want for ourselves, and profess to be willing and eager to grant to others? The American farmer is very patient—proverbially so. He has been compared to Issachar, of whom we have this record in the Bible:

"Issachar is a strong ass crouching down between two burdens, and he saw that rest was good and the land that it was pleasant, and bowed his shoulder to bear, and became a servant unto tribute."

Rest may be good, and the land may be pleasant, but he who consents to become "a servant unto tribute" will know little of what is good or pleasant. It is on the patience and docility of the farmer that the capitalists and politicians have traded. And even now they are predicting the failure of the American Society of Equity, because, as they say, the farmer is contented and happy, and don't need it. Are they right? It is for the farmers themselves to say. If they want "rest" and would enjoy "pleasant" country that they have made their own, they must make up their minds that they will have to free themselves from "tribute," assert their rights as American citizens, and at the same time show that moderation of which we all boast by demanding only what is equitable. So the American Society of Equity offers them the means by which they can demand and secure fair prices.

The need of some such agency as this has been shown, and so far it appears that the American Society of Equity is thoroughly adapted to meet the emergency, inasmuch as its aims, as thus far pointed out, are just what those of the farmer should be. It will be shown as we proceed that the other objects in view are quite as important as those already described. For the present we have the assurance that the society proposes to secure, or enable the farmers to secure, a fair price for their products, and to co-operate with them in securing facilities for holding or marketing products and in getting equity from those with whom they deal.

## UP-TO-DATE WRITERS

MADE \$240.

To Up-to-Date Farming:

You are teaching just what I have advocated for years. We could make the world tremble if we would hold our grain. I held over 900 bushels of wheat from last year until this spring, and I made \$240 above what I would have got at thrashing time. That would build a pretty good granary, wouldn't it?

WILLIAM CRAWFORD.  
Valley Center, Ks.

To Up-to-Date Farming:

I will push equity at all the big meetings and public gatherings in my reach, and get every subscriber I can. I enclose a list of names of important peanut growers of Perry county, Tenn. There should be more said about peanuts; it is a more important crop than farmers generally realize. Virginia is our competitor in the peanut market, and we must be so united that we may have one price. Crops are very fine throughout this belt. Hay, tobacco, corn, oats, potatoes and all a full hundred per cent.

BEN. W. MEDEARIS.  
Bliss, Tenn.

### OLD-FASHIONED PICNIC.

To Up-to-Date Farming:

On Saturday, August 20, there will be an old-fashioned farmers' picnic between Altus and Coal Hill, Ark., on John W. Wilson's farm. We aim to have great speaking, plenty to eat, plenty of good water, and we don't want any swings or anything of that kind on the ground.

JOHN W. WILSON.  
Altus, Ark.

### NEVER BEFORE HAD \$ WHEAT AT REAPING TIME.

To Up-to-Date Farming:

Here is a small list of trial subscribers. Please send back numbers. As soon as I get my crops laid by I am going to get a large list to help the cause along. Keep the ball rolling farmers to the front. Dollar wheat at thrashing time never was known before in this country. I actually know of my neighbors selling at that price last week. May God prosper the work.

ROBERT BAKER.  
Frankfort, Ill.

### "DO IT NOW."

To Up-to-Date Farming:

Enclosed find report of local just organized. Had an enthusiastic meeting, and there are bright prospects for another local next week.

My motto is, "Do it now." Many farmers have what I call the to-morrow habit. They have promised themselves so much when they sold their cotton, and have been so often disappointed, only to build their hopes on another crop, that they have fallen into the to-morrow habit, they say it is a good thing and they will join to-morrow. But I say, "Do it now."

W. E. JOHNS.  
Tifton, Ga.

### A GOD-SEND.

To Up-to-Date Farming:

Having been so fortunate as to subscribe for and read your paper, I wish to say that I regard the effort to organize the farmers of the United States in the A. S. of E. as a God-send, for I believe it solves our problem for us. In order to be still better prepared to aid in the good work, I enclose 50 cents for The Third Power.

JOEL HOPSON.  
Hawkins, Ky.

### WONDERFUL THINGS ARE HAPPENING.

To Up-to-Date Farming:

Surely the millennium has come. At least wonderful things are happening that never happened before. Just think of it. Twelve months ago the farmers here were asking the local millers to take their wheat at 63 to 70 cents. To-day they are taking it at 90 cents from the machine, and are anxious to get it. One miller seven miles south of this place is buying at the machine, has his scales on the ground, and weighs the wheat as it is measured up, has it put in the farmer's granary, pays him 90 to 91 cents and leaves the wheat in the farmer's bins, at his (the miller's)

own risk, to be delivered when called for. Wonders will never cease. Our president of Hodgeville local union asked this man "What is the matter with you fellows? Last year we had to beg you to take our wheat at 70 cents." His reply was honest and emphatic: "The Society of Equity man is in the saddle this year." All this difference in price comes in the face of the fact that there is not half a month's supply difference in the crop of 1903 and 1904, and with the best corn prospect this country has had for several years.

One of the milling companies at this place has just completed a 30,000 bushel elevator, but it is my opinion that they "few up only to miss the roost." So far I have not heard of a single wheat grower that will put a bushel in it on storage. At a meeting of our union a month ago I appealed to all the members who would have a surplus to keep it in their possession on the farm until they could get their price, and to make use of every kind of makeshift rather than put it in public elevators, and they are going to do it. Our union has upwards of 80 members.

T. H. MILLER.  
Hodgenville, Ky.

### F. M. B. A. AND A. S. OF E.

To Up-to-Date Farming:

I enclose a list of three-month subscribers. They are members of Mason lodge No. 21, F. M. B. A. Most of the members of this lodge are already taking Up-to-Date, and we are all in sympathy with the A. S. of E. We do not deem it necessary to form a local union, as we meet every week in our lodge, and as the F. M. B. A. advocates the same principles, we believe we can co-operate by taking the official paper and sending in crop reports. I believe we ought to all stand together, and control the price of farm products. It can be done, and will be done by the persistent efforts of such men as Mr. Everitt. Up-to-Date is one of the best farm papers now published in the United States, and the only one that is fearlessly advocating the right of the farmer to set the price on his own products, and if other farm journals do not take this up, they will be dropped by the farmers.

J. T. INGRAM.  
McLeansboro, Ill.

### A MINISTER'S EXCELLENT ADVICE.

To Up-to-Date Farming:

Since last December I have been an interested and constant reader of this paper, and I stand for every principle I have yet seen advocated in its editorials. I am a minister in regular work, but I read almost with devotion all agricultural works. Have been for years a reader of —, from which I clip and send you what I think is a false step in that publication. I love your paper, and am anxious to see you conquer to the full. "God, speed the plow," and Up-to-Date Farming. Down with elevators' commissions, middle trash and gamblers. Give to all the just value of toils. Let farmers unite and study this matter as magnates do the maps and charts of the commercial world. The ends, just and equitable, can be gained.

JOHN T. DUNCAN.  
Wildwood, Fla.

### FALLING IN LIKE SHEEP.

To Up-to-Date Farming:

We have a nice time at our union. Several have been organized in this vicinity, and I am to organize another next Saturday, which will soon reach 50 or more. We as cotton farmers have but recently learned of this movement, and our people are falling into line like wild sheep. We hope to see the cotton belt get in position to speak and be heard on the subject of the price of cotton. It will not cost them a penny to do it. When they are organized, they only need to say, our cotton this year is worth so and so, and hold it till they get it. It won't be long, and the buyers will be just as glad to get it as they would have been at their own price. We hope before fall we can have a convention of three or four parishes, say of Livingston, East Baton Rouge, West Baton Rouge, and the adjoining parishes, and agree upon what we shall demand for such products as chickens, eggs, butter and other minor products. I venture it will come.

C. A. BRASHEARS.  
Eular, La.

### REVOLUTIONIZING FARMING

To Up-to-Date Farming:

The tobacco growers of Virginia and North Carolina have organized for the purpose of making prices on their products. It is very much on the plan of the A. S. of E., and I hope the day is not far distant when we will join our forces with you. We have a very strong lodge here, and I find Up-to-Date to be a great promoter of our work. It is indeed an educator, and it is revolutionizing the farming industry.

W. S. WALKER,  
Red Eye, Va.

## 1,000 MORE ORGANIZERS WANTED! The American Society of Equity of North America

To the National Organizer, Indianapolis, Ind.,

DEAR SIR:—The undersigned desires to become an organizer of Local Unions of THE AMERICAN SOCIETY OF EQUITY in the following preferred territory:

(If you want to organize your neighborhood only, write the town or towns comprised. If you want to do more, write the county or counties. On receipt of this application, terms and full particulars will be sent. The best season for this work has arrived. We can give profitable and pleasant employment to capable people. All organizers must be members of the society.)

all in the State of \_\_\_\_\_

## How Would Your Name Look on One of These Checks?

Everybody uses coffee. If you will use LION COFFEE long enough to get acquainted with it you will be suited and convinced there is no other of such value for the money. Then you will take no other—and that's why we advertise. And we are using our advertising money so that both of us—you as well as we—will get a profit. Hence for your Lion Heads

WE GIVE BOTH FREE PREMIUMS and CASH PRIZES  
Complete Detailed Particulars in Every Package of

# LION COFFEE

WOOLSON SPICE CO. (CONTEST DEPT.) TOLEDO, OHIO.

## LOW PRICES

Don't always stand for cheap quality. In our case it means that we manufacture and market our goods by the most economical methods. We buy our materials in lots of thousands of tons, and make ADVANCE FENCE on the most perfect and up-to-date fence machines. But where we save our customers the largest amount is in our unique method of selling ADVANCE FENCE direct to the farmer at Wholesale Prices thus saving our customers both the jobber's and the dealer's profits, and giving you a better opportunity to try the fence in actual use than your dealer will give you. If after 30 days use you are not perfectly satisfied you can ship the fence back to us at our expense and we will refund your money. No conditions attached except that you give it a fair trial. Get our new FREE FENCE BOOK and study fence construction. You will be a better judge of fences after you have read it. 25 Styles of fence illustrated—a fence for every requirement of the farmer. We Pay the Freight on 40 rods or more. Your name and address on a postal card will bring full information and wholesale prices. Write today.

ADVANCE FENCE CO., 7627 Old St., Peoria, Ill.

## 20th Century Wagon Box and Rack

Contains 170 ft. of clear, well-seasoned lumber, 200 bolts, and 75 pounds of best Malleable Castings and other irons. Painted two coats with best wagon paint. Honestly made and better than you expect. Can haul ear corn, potatoes, bulk grain, hay, straw, or live stock. Sold direct to the farmer. Your money back if not satisfied. Write for free Catalogue.

MODEL MFG. COMPANY,  
Box 18, Muncie, Indiana.

# A LEAP-YEAR RUNAWAY

BY H. B. GREER

Paul Christy was a good looking young fellow, but very slow and methodical, too slow, some people said, to know a good thing if he should meet it in the road. It seemed as if there might have been some grounds for the latter assertion, from the fact, a fact that was patent to all observers, that the pretty and charming little Miss Gladys St. James, the dark eyed daughter of Mr. Augustus St. James, of Avery Bend, was in love with him, and he didn't know it.

"Never mind," the old ladies said: "Gladys will bring him out all right, see if she don't, now that it's leap year."

But time passed on, the first, and a part of the second month of the year had passed, and still Paul had not yet been developed. It came to pass, however, just at the opening of the third month, that Gladys sent for him one evening, and said to him:

"My dear Paul, (you see she knew how to use soft words all right), I am in trouble, and I want you to help me out. Indeed, Paul, the truth is," and here Gladys blushed and looked down very coyly, "I'm in—in love, and I want you to help me run off to meet my sweetheart so that we may get married. You see, he is afraid of papa and brother, and so won't come to the house. We have it all fixed up with Squire Nelson. Will you help us, Paul, that's a dear good fellow?"

This made Paul feel kinder foolish, for, despite his seeming stupidity, and blindness as to conditions, he had thought Gladys about the sweetest rose on the bush. But, what was he to do? Wasn't she making him her confident, and was not it his duty to help her? Of course it was, and so, Paul just put back the hard feeling that came in his heart, and swallowed the lump that rose in his throat, and said:

"All right, Gladys, I'll help you all I can."

"You are so sweet and good, Paul, dear," murmured the little witch, leaning over so close to him that he could smell the odor of her sweetly perfumed hair, and almost feel the heartbeats in the fair, lace-covered bosom beside him. He felt like saying something in his own interest then, but only ventured to remark:

"I think he's a darn lucky feller, Gladys."

"O, do you really, Paul," and the darling girl actually took one of his big strong hands in her two soft fair ones. This was too much for Paul. He jumped up hastily, and as he passed out of the door looked back and muttered:

"Yes, I'll be darned if I don't think it."

They had arranged it so that Gladys' true-love was to be down at the creek beyond the bridge at half-past ten the following Wednesday night, though Paul didn't know him, and had never seen the fellow in his life, and only knew of him that which Gladys had told him. She had spoken of him as "Neddy."

But, Paul was honest, and he was true, and on the appointed night he was at the spot agreed upon as the starting point, with a close carriage, and Gladys was there promptly, too. They drove off in silence, although Gladys seemed a little agitated, and if it had been daylight, instead of moonlight only, Paul would have seen the blushes that chased each other over her fair face at intervals; but she never lost her nerve, which was something sublime. When they had driven about a mile, and were down in the woods, nearing the creek, they heard the sound of horses hoofs ringing out fast and clearly behind them:

"O, dear me!" exclaimed Gladys, clinging to Paul's arm, "they are pursuing us, dear, turn off to the right up the new cut road; and they will pass us."

"Yes, yes," replied Paul; "but, say Gladys, what about Neddy? They'll be sure to catch him down by the bridge." "Neddy, Neddy," murmured Gladys—her hand actually creeping up to Paul's coat collar behind—"why, my dear, there is no Neddy."

"No Neddy?" cried Paul, pulling the team up short: "do you mean, O, Gladys, do you really mean that I am the fellow that—that?"

"Yes, darling," she whispered, and the little white hand slipped clear around the collar.

"That loves you!" Paul finally managed to say. Gladys' sweet, silvery laugh rippled out on the moonlit scene: "Yes, dearie, the fellow that I love"—as a cloud providentially passed over the moon.

It's like this, you see: Some people don't really know a good thing when they see it, and are afraid to ask for their own, or to claim what's coming to them.

The plowman is tired at the end of a day's work, and so is the team. A bath is restful to the man, and a good grooming is restful to the team. The latter, at least, should not be neglected.

The A. S. of E. don't ask any one to do anything but attend to his own business; that is, to see that his business is done right and not left entirely in the hands of his enemies.

The newspapers of the tobacco country are helping to arouse the people, as are the business and professional men also. All pulling together, a wonderful work may be done even in a short time.

## PRICES TENDING UPWARD

An elaborate statement recently given out by Carroll D. Wright, head of the bureau of labor at Washington, shows that prices are constantly tending upward, and are now on a higher level than during the preceding ten years. It did not require any official statement to convince farmers who buy machinery, clothing and other supplies, or laborers who buy provisions, clothing, etc., of this fact. What they are compelled to pay from their earnings is much more convincing evidence than Mr. Wright's statement; they know it costs more to live now than it did ten years ago.

While the figures of the labor bureau make it appear that farm products have also increased in price, an examination shows that Mr. Wright deals with the finished product, and with the prices after the raw material has left the producers' hands. This is what makes the difference so perceptible to the farmer. He must accept the prices offered by the price making combines, and then he must pay the return prices likewise fixed by the price making combines. Hence, the producer, the first owner, has little to say in the matter, and receives few benefits. Prices go up or prices go down, he has nothing to say in the matter other than to give and to take.

If Mr. Wright and his statisticians wish to do something that would really benefit the people and the country, let them compile a statement that shall show prices in producers' hands, prices of the same articles to consumers, and the legitimate expenditure between the two. This would afford an interesting table indeed, and one the world has never seen. It might knock out some props "very near the throne," but let it knock. The nation's producers are seeking light, and they will have it.

## MEDICINAL FOODS

Some of our common vegetable foods actually possess medicinal properties. For instance—

Asparagus is helpful to the kidneys, and those suffering from kidney troubles should use it freely.

Beets and potatoes are considered fat producers.

Carrots aid digestion, and should be used as food more than they are.

Garlic and leeks stimulate the circulation.

Lettuce promotes sleep. Lettuce, onions and celery are nerve tonics.

Onions are a germicide, and tend to prevent malarial troubles.

Parsley aids digestion, and should be used freely by dyspeptics.

Parsnips are a blood purifier.

Peas and beans are nutritious and flesh producers.

Spinach is anti-bilious and a good liver medicine.

Tomatoes also stimulate a torpid liver. Watercress is an alternative, a general bracer-up of the system.

Of course these vegetables are not strong enough to be rated as medicines, but they possess the qualities given.

## AN OCCASIONAL SMILE

"Doctor, I want to speak to you about my husband."

"Yes, madam."

"He hears awful noises at night, and we are troubled over it."

"While asleep, I suppose."

"Yes. Now, doctor, do you suppose it is possible for a man to hear himself snore? If so, that settles it."

"I'm a regular lightning calculator," said the boastful applicant for position of bookkeeper in the powder factory.

"You wouldn't do here," said the manager; "you'd blow up the whole combination."

Eva—"Mother says I am a descendant of Mary, Queen of Scots."

Brother Tommy—"I am, too, then."

Eva—"Of course not. How could you, and you a boy!"

"Old Easy declares he never had a cold."

"That's nothing. He's too slow to catch a cold."

Teacher—"Why do you call 'opportunity' of feminine?"

Smart Boy—"Don't we read of men embracing opportunities?"

Teacher—"Certainly."

Smart Boy—"Then, of course, it's feminine."

## THEY ARE QUILTS.

He wanted pie like mamma made. She wanted "dough" like papa made.

Teacher—"What do they call having more than one wife?"

Bright Boy—"Polygamy."

Teacher—"What do we call having only one wife?"

Dull Boy—"Monotony."

"Who are you going to send that sheep to, Bill?"

"Pete's up to college workin' hard for a sheepskin, he says, and I'm goin' to surprise him by sendin' him a whole critter."

## THE VEGETABLE GROWERS.

To Up-to-Date Farming:

It is easy to talk of holding wheat, corn, oats, cotton, pork, beef, etc., until called for, but what help can be afforded the growers of fruits and vegetables, and other perishable products? This is the burning question Florida producers are asking, and any helpful suggestions would be equally interesting to others growing like products anywhere. To send such products to the market before they are sold is to court defeat. To intrust them to commission men whose interest and association is with the buyer rather than the seller, is neither safe nor good business. To have each section organized with some efficient head that could be reached by wire, and a representative in the consuming center to take and forward orders to be filled at specified times, would seem to be about as near a solution of the problem as one could reach. Then combined interests could get the best possible rates, save much traveling expense, supply the market as needed at equitable prices, divert shipments to avoid glut and depreciation, and make more certain the business of the now helpless shipper. The A. S. of E. is a national organization whose only purpose is to secure stability and equity of price for all products of the soil. Its official paper reaches every member with the same information. Its already membership of near 100,000 points to a speedy and economic accomplishment of this desirable purpose.

Bartow, Fla.

A. R. CARHART.

Preparations are already being made for the International Live Stock Exposition at Chicago, Nov. 28 to Dec. 3, 1904, and a preliminary classification has already been issued. A great many new and important features are being introduced, and great improvements of old ones are being made. For full information address W. E. Skinner, General Manager, Chicago.

Franklin county, Ill., reports \$1 per bushel for their wheat at the machine, a thing, the reporter declares, that was never known before.

While the wheat growers are getting their price for wheat, they must not forget the growers of other crops. The cotton and tobacco interests should have their united support.

The Farmers' Journal of Abilene, Texas, is a new advocate of unionism among farmers, and Mr. J. L. Hicks, its editor, shows himself a gentleman of energy and ability. We welcome the Journal as an efficient co-worker.

## ANOTHER WARNING.

The Indianapolis Live Stock Journal of July 20th, said:

"It matters not who is to blame for this diluge of stock, the fact remains that the country shipper is the one that has to suffer, and therefore he should profit by this experience and curtail his shipments of stock in the future. The condition of affairs all over the country is still unsettled and very uncertain and nobody knows what a day will bring forth. Probably 6,000 hogs and a large number of cattle remained unsold today."

This is the trouble that the stock business has always suffered from. A hit or miss business will never be satisfactory. Farmers are the only people who continue to do business that way. All others have risen above the vicious system. Farmers can also rise above it. They will when they have a clearing house for their business and agents in all principal cities. Then shipments may be regulated to meet the demand and no more, and uniformity of prices will prevail.

The best way to bring these things about will be through conventions such as we refer to in this number. There the masses may agree and the will of the masses will prevail.

## A WOMAN WINS \$2,500.00

Probably no one was more surprised than was Mrs. Herbert Tetlow, Washingtonville, Ohio, when the postmaster delivered to her an envelope containing a certified check for \$2,500.00, signed by the Woolson Spice Company, of Toledo, Ohio.

This good fortune is the result of an estimate made by Mrs. Tetlow in accordance with the Lion Coffee premium, offer to those coming the nearest to estimating the 4th of July attendance at the World's Fair.

The total paid attendance at the St. Louis Exposition on July 4th was 139,659.

As Mrs. Tetlow's estimate was exactly correct, she was given first reward. Mrs. Tetlow sent in only six estimates.

M. K. Hassinger, Lamona, Pa., received the second prize of \$1,000.00. E. B. Roseboom, Frankfort, O., and James Ashcroft, Raleigh, N. C., each receiving \$500.00 prizes. In all, 2,139 prizes amounting to \$20,000.00, were awarded.

Throughout the last six months, Woolson Spice Company has been publishing in Up-to-Date Farming, an offer of \$50,000.00 in cash prizes. The \$20,000.00 just awarded is in their World's Fair Contest. Another \$20,000.00 will be given in the same way to those who make the best estimates of the total Presidential vote to be cast next November. This contest is awakening great interest throughout the country, and Lion Head trade-mark are being eagerly sought after, some persons offering to pay as much as five cents apiece for them.

# The Queen of the Wheat Field

**STILL VICTORIOUS** is this grand variety. To say "It is Better than the Best" does not overstate its good qualities. IT BEATS THEM ALL wherever tested in competition with other varieties as proven by the reports printed below. If you have not procured seed of the Fultzo-Mediterranean wheat you don't want to put it off another year.

**The Great Hardy, Productive Wheat, Withstands Freezes, Floods, Drought, Rust, Fly, Bugs and Blight to a Remarkable Degree. Stiffest Straw Fine Quality. Farmers and Millers Wild for it. Where first grown always sells for seed at fancy prices. Will you introduce it in your neighborhood?**

The Fultzo-Mediterranean wheat was originated by crossing Fultz on the Hybrid Mediterranean. Hence the name. All experienced wheat growers must acknowledge the parents as being among the hardiest, most reliable, and most valuable varieties of wheat ever grown in this country. A beautiful variety in growth, straw, head and grain, even surpassing the expectations of those who grow it for the first time. The plant is a strong grower, with a corresponding large root development. If sown thinly or damaged in winter it will stool out and usually produce 20 to 100 stalks from one grain. If damaged in winter it usually makes a good crop at harvest on account of its wonderful vigor and recuperative properties. This quality was conspicuously shown this year, 1904. Farmers, by all means sow such a wheat and you will have extra bushels and extra dollars when harvest comes. Read the reports.

The stalks are large, short and very stiff, and stand up where nearly all other kinds would fall. We recommend it as the best that can be selected for very rich ground. The heads are thick and broad, broader at the top than at the bottom, looking at them edgewise. The meshes are compact and contain from three to five grains. Chaff white, heads smooth or beardless; grains large, color red. The Fultzo-Mediterranean is extra early. This wheat appears to be without a peer today for standing hard winters, wet weather, drought, rust, bugs, fly, etc.; in making a vigorous growth and heavy yields. It easily yields 10 to 20 bushels per acre more than the old Fultz, Mediterranean, Gold Dust, Velvet Chaff, Clawson and other old favorites that have lost their original vigor. If you don't get yields like reported in letters below, you want to get rid of the corpses this year and get this vigorous variety with young blood that will stand hardships and produce a good harvest in the end.

**If for any reason you were dissatisfied with your wheat crop this year, obtain seed of Fultzo-Mediterranean. We have made low prices for large lots. You can afford to buy for a field or your entire crop**

## READ THESE REPORTS

The Like of this Wheat was never Known Before

### OVER 50 BUSHELS PER ACRE

"Under separate cover I send you a copy of our county paper. In it you can read an account of my Fultzo-Mediterranean wheat. The two bushels my tenant obtained of you sown on 1 1/2 acres of ground and yielded 75 1/2 bushels. There is no mistake about this as the land was measured and the grain kept separate and weighed. Also I will say that a shower passed over the field just before threshing and I know much wheat was left in the straw."  
Mrs. M. C. Mitchel Co., Kans.

### ONE BAG YIELDS 106 BUSHELS

We are well satisfied with your wheat. The sack had a hole in it and about a peck lost out. From the balance we raised 106 bushels; 2 1/4 bushels of seed.  
B. H., St. Charles Co., Mo.

### 45 BUSHELS TO ACRE—HARDY AS RYE

This is my second year for Fultzo-Mediterranean having obtained a little of your seed two years ago. It has proved the hardiest wheat I ever grew, and yielded last year at the rate of 45 bushels per acre, and this year will yield nearly or quite as much; winter proof; a great stooler; even grower; the field looking like a large level floor, heads large, broad and well filled.  
J. L. M., Jennings Co., Ind.

### GOOD FOR 50 BUSHELS OR MORE

It was with some feeling of doubt that I sent you the order for Fultzo-Mediterranean wheat last fall, but I had good success with other varieties of your introduction, that I thought I would try it. I am more than pleased now, and this is the finest variety of a l. My 18 acre field is a grand sight, and good for 40 to 50 bushels per acre. Your delighted customer,  
M. A. G., Mecosta Co., Mich.

### BEST FOR THREE YEARS

have raised Fultzo-Mediterranean wheat three years consecutively, and every time it has been the best wheat grown. This year it yielded 10 bu. per acre more than my other wheat. It is destined to become the most popular variety in this section.  
J. C., Daviess Co., Ind.

### F.-M. 30 BU., OTHER WHEAT 11 BU.

The wheat crop in Sciota county is poor. Fultzo-Mediterranean obtained of you is by far the best in this section and will average 30 bushels per acre of excellent quality. The Fultzo-Mediterranean was a beautiful sight, while the next field adjoining, with only a wire fence between, only made nine bushels per acre. I am a friend of your seed.  
J. S. V., Sciota Co., O.

### FARMERS COME EXPRESSLY TO SEE IT

I purchased of you last season two bushels of Fultzo-Mediterranean which I sowed on 134 rods of ground on the 25th day of September. I sowed with the wheat 200 pounds of wheat fertilizer. I do not think I lost one plant in wintering, although our farmers complain of severe winter killing. This wheat was in head May 24 and will be in bundle before July 1, (extremely early for New York) It challenges the curiosity of a wide section and many farmers have come expressly to examine it. I expect at threshing not less than 45 bushels per acre. Every kernel that I have to spare is spoken for and I want to buy more.  
Rev. J. W. L., Onondago Co., N. Y.

### AVERAGED 41 BUSHELS PER ACRE

We raised 15 acres of Fultzo-Mediterranean wheat and threshed 615 bushels of beautiful wheat. This is an average of 41 bushels per acre. This is the finest wheat I ever grew.  
N. B. W. & Son, Harrison Co., Ky.

NOTE:—We do not give full address of our customers as that would divert trade from our house. Usually our customers sell all their surplus wheat at a high price in their neighborhood. We would print many more testimonials if space permitted.

### REQUIRED FIVE HORSES IN BINDER

I bought seed of Fultzo-Mediterranean wheat to sow 16 acres last fall and now I am pleased to say it is the best wheat I ever saw. I usually grow good wheat, but this is the best ever grew. It is early stands up straight, and will surely yield 35 to 40 bushels per acre. It is unequalled in all this section I started in to cut it with three horses in my McCormick binder, but was obliged to put in five, and it kept four men jumping to shock it. It required 55 pounds of twine to bind the 16 acres.  
J. M. E., Hancock Co., Ind.

### BETTER THAN FULTZ EVER WAS

Your Fultzo-Mediterranean wheat is giving entire satisfaction. I sold to a number of farmers and not one can pick a flaw in it. I consider this wheat better than the old Fultz ever was. It grows very vigorously; has a fine head in size, shape and structure, with very large grains. It will yield heavily. Will report when threshed.  
A. R. S., Saline Co., Ill.

### A SIGHT TO SEE

My crop of Fultzo-Mediterranean is now in the shock and it is a sight to see how thick the shocks stand. I have 355 dozen, large bind, on 9 acres. In the balance of the 20-acre field I sowed Early Red Clawson, which averaged 15 dozen to the acre. I expect 40 bushels per acre of Fultzo-Mediterranean.  
G. B. S., Montcalm Co., Mich.

### YIELD TWICE AS MUCH

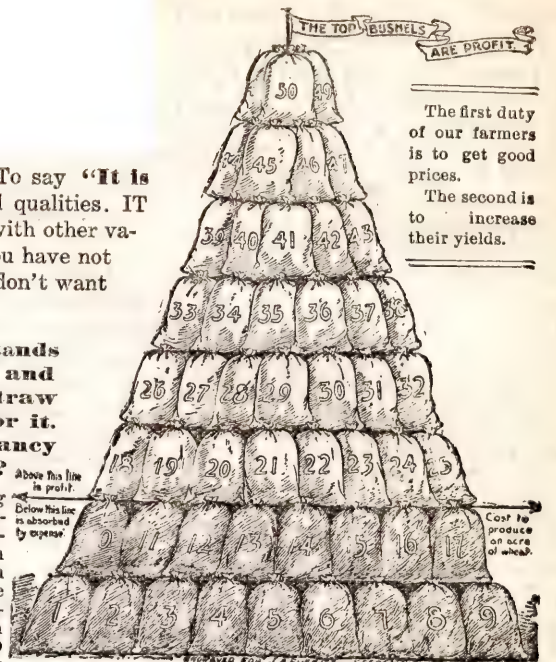

Fultzo-Mediterranean wheat will yield twice as much as any other variety. It is not threshed yet, but it is the best wheat I ever raised. It is free from rust and fly.  
O. C. HITCHENS, Braxton Co., W. Va.

### 33 BUSHELS FROM 1

I threshed the crop from the bushel of Fultzo-Mediterranean wheat and had 33 bushels of fine wheat. Other wheat is about half crop. I am greatly pleased with it.  
PARKS CAMPBELL, Daviess Co., Ind.

### DELIGHTED WITH F.-M.

From 2 1/2 bushels of Fultzo-Mediterranean wheat sowed I threshed 64 bushels of fine quality. It is the best crop of wheat in the community. It has a stiff straw, stands drought, fly and rust better than any other wheat I ever raised. I am delighted with Fultzo-Mediterranean.

**THE TOP BUSHELS ARE PROFIT**  
Farmers, strive for the top bushels. There are several bushels extra per acre for you by sowing the Fultzo-Mediterranean.

The increase in yield will abundantly justify the extra price for seed, besides having seed for your future crops.

### STOOL OF FULTZO-MEDITERRANEAN WHEAT

There were 94 developed stalks with heads in this stool. This shows the vigor of the Fultzo-Mediterranean wheat. Vigor is of immense importance in wheat. It oftentimes brings success out of what looks like failure. The F.-M. is unequalled in recuperative powers.

**ONE YEAR AGO I PRINTED AS FOLLOWS:** "I believe the 1903 crop of wheat is the last one that will be priced for the farmers by the speculators and gamblers, I believe that before another crop of wheat is raised that farmers will be co-operating, and will fix the price on their crops before they leave the farm, I believe the next crop of wheat will make the farmers more money than any crop they have ever raised, and I don't know of any variety of wheat that can be recommended above Fultzo-Mediterranean for seed."

Has not this prediction come true? Farmers put the price of wheat to \$1.00 a bushel and have held it there. The price came to late to benefit the majority of growers, but all will get the benefit in the 1904 crop. Readers of Up-to-Date Farming know how much credit is due me for the good price of wheat. This is another reason why we should have your orders.—J. A. EVERITT.

## Price of Fultzo-Mediterranean Wheat.

By mail post paid, 1 lb., 30c; 4 lbs., 75c. By freight or express, 1 bu. 75c; 1 bu., \$2.00; 2 1/2 bu., (1 bag for 2 acres) \$4.75; 5 bu., \$9.00; 10 bu., \$16.50; 25 bu. or more at \$1.50 per bu. Bags are supplied free. Purchaser pays freight. Price subject to change.

Every Person who Contemplates ordering Fultzo-Mediterranean Wheat at these prices SHOULD NOT DELAY

ADDRESS ALL ORDERS TO

## BULLETIN

### The Oats Crop of 1904

National Union of the American Society of Equity,  
Indianapolis, Ind., Aug. 25, 1904.

TO THE FARMERS OF AMERICA:

From crop reports received from members and non-members in all producing sections, and from all other available sources of information, this society does estimate the yield of the 1904 crop of oats in the United States to be

810 MILLION BUSHEL

A minimum price is recommended for the 1904 crop of  
oats of 40 CENTS PER BUSHEL AT CHICAGO.

### The Barley Crop of 1904

National Union of the American Society of Equity,  
Indianapolis, Ind., Aug. 25, 1904.

TO THE FARMERS OF AMERICA:

From crop reports received from members and non-members in all the sections that produce barley, and from all other available sources of information this society does estimate the yield of the 1904 crop of barley in the United States to be

123 MILLION BUSHEL

This society does also recommend a minimum price for  
the 1904 crop of barley of

58 CENTS PER BUSHEL FOR NO. 2 }  
52 CENTS PER BUSHEL FOR NO. 3 } AT CHICAGO

M. W. TUBBS, Act. Sec.

J. A. EVERITT, Pres.

J. A. EVERITT, Publisher, INDIANAPOLIS

**THIS OFFER ENDS NOW. Back Numbers Will be Sent to All Subscribers. SIX NUMBERS FOR 10 CENTS**

## HOW LONG WILL THIS CONTINUE?

Under present prevailing conditions, the great class of people who produce our food and clothing supplies, and the other great class, the consumers of these products, are exploited by a small middle class who take heavy toll from both. This small middle class known as grain brokers, cotton factors, elevator combines, railroad corporations, packer's combine, together with the large and small speculators and gamblers in futures on Boards of Trade—self-appointed people—assume to place themselves between the millions who produce and the millions who consume, and

### STREAMS OF DOLLARS

flow both ways into their pockets. It is not proposed to attack the fair middlemen who are necessary to both producers and consumers, but the unfair ones. These are the people who must feel the righteous wrath of a long suffering people. Speculation and gambling in farm products must stop. Future selling and buying must stop, and will stop when farmers learn how to regulate their marketing so as to keep their grain, and cotton, and meat, and fruit, and butter, and egg, etc., out of public elevators and ware houses, and let them come off of the farms, or out of store houses owned by the farmers, as the consumers need them. It other words, to market a year's supply to meet a year's demand, and not like the old way—dump their fine products to overwhelm the demand.

Think of it. What would be more natural than for the people who produce the stuff to hold it until the consumers want it? What would be more unnatural than to turn over your goods which are absolutely essential to the millions of human beings and domestic animals throughout the world, to other people to store and manipulate? The world don't use your products in a month, but twelve months are required. The family that consumes don't buy a year's supply at once, but buys every day or week during twelve months. Don't you see now why farmers should market gradually instead of throwing their crop on the market in a lump? But you say farmers can't hold their crops. This is all a mistake. Of 12,123 farmers answering this question, only 262 said they could not hold their crops. Somebody MUST hold them. Farmers CAN hold them. All they need to know is HOW? This is the mission of this paper to teach.

We want to teach farmers how to market their crops over a year, and compel an equitable price for every crop. We want to teach farmers how to kill gambling in farm products; how to get rid of the unfair middlemen, and give to consumers their products at equitable prices.

## YOU CAN LEARN HOW FOR 10 CENTS

**UP-TO-DATE FARMING** This paper is teaching how these things can be done. It is now printing a special educational series of six numbers, (three months) which are edited with the special object in view of educating farmers how to secure profitable prices on all the crops they grow. The special issues and what they are mainly devoted to are as follows:

- JUNE 15.** The most valuable number on Co-operative Marketing ever issued.
- JULY 1.** How to get profitable prices for all Grain.
- JULY 15.** How to get profitable prices for Cattle and Hogs.
- AUGUST 1.** How to get profitable prices for Cotton and Tobacco.
- AUGUST 15.** How to get profitable prices for Fruits and Vegetables.
- SEPTEMBER 1.** How to get profitable prices for Dairy and Poultry Products.

**ALL THESE NUMBERS CAN BE HAD FOR TEN CENTS.**

**THE THIRD POWER** Do you know what "The Third Power" is? It is a book of 275 pages written by J. A. Everitt, President of the American Society of Equity, and Editor of Up-to-Date Farming. The price is \$1.00 in handsome cloth binding. It is in many respects, the most remarkable book ever written. The third edition is nearly exhausted, and its sale will probably reach to millions. This book is being printed as a serial in UP-TO-DATE FARMING. It began in June 15th number, (the first of the educational series;) hence, each three month's trial subscriber at 10 cents will have the rare treat of reading this wonderful work which is truly a revelation to every American citizen. There is an installment in this number. Read this part and you will be hungry for the entire work.

**PRICE GUARANTEED** Any person reading the six special issues of UP-TO-DATE FARMING and The Third Power, we believe, will have no trouble to secure a profitable price on every crop he or she grows, by following the simple plan therein explained. We want everybody to learn this plan. Get all your neighbors to join a club at 10 cents each.

**HOW MANY WILL YOU SEND?** Farmers everywhere must learn of this movement. Up-to-Date Farming and "The Third Power" must be read by a million people. We now appeal to every subscriber and reader. How many 3 month subscriptions will you send at 10 cents each? Every-body you ask will gladly give you a dime. Ten names can easily be secured. One hundred can be secured if you make a little effort. Single names will be thankfully received, but a club of ten or more counts faster. How much time will you give to this movement? If you will give each Saturday afternoon this summer to the cause the results will be great. We want every farmer's name in your community reported to us on this offer at once so the speculators cannot price this year's crop. Right now is the time. Right now we want your help. Send a large club and see how your community will come to the front.

There are still several thousand of our readers who have not sent a club. What's wrong with you? Do you enjoy being a machine to produce, while gentlemen on the Board of Trade set your wages after the work is done, and pocket most of the profits? YOU can end all this quickly. Will you learn how? Will you put others in condition to learn how? IT IS YOUR TURN NEXT IF YOU WILL SIMPLY TAKE YOUR PLACE.

NOTE. With the acknowledgement of each trial subscription will be sent a booklet containing the plan of the AMERICAN SOCIETY OF EQUITY, with constitutions and by-laws, etc. This is the movement through which farmers are coming to the front.

**WE REPEAT THE OFFER** Up-to-Date Farming three months for 10 cents covering June 15th to September 1st. The paper will positively stop at expiration of the time. "The Third Power" book began to appear in June 15th issue. Each ten cent subscriber will receive just these numbers (June 15th to Sept. 1st). Back numbers will be sent as the term advances. This is not a change in subscription price in any respect. This offer is to new subscribers only, for this special purpose.

IF YOU WANT \$1.20 WHEAT, 60 CENT CORN, 75 CENT POTATOES, 7 CENT CATTLE, 6 CENT EGGS, 15 CENT COTTON, 50 CENT APPLES, AND A PROFITABLE PRICE FOR EVERY CROP YOU GROW, come forward and help get them. Wake up your neighbors and send their names along. It can be done the same way that dollar wheat was secured. Numbers give strength. Numbers are irresistible. Hence send as large a club as possible.

**THERE SHOULD BE A REGULAR LANDSLIDE** of farmers to embrace this offer. This offer should bring the million to learn how farmers are to come to the front, and organize the army of a million united farmers. You have friends in distant parts of the country whom you can't see. You cannot do more for them and for yourself than to give them a 3 mo. subscription to Up-to-Date Farming. The paper is bringing farmers to the front. Every Farmer must be educated. We want clubs of ten or more. One dollar of your money will make ten converts, and bring the time nearer when the million co-operating farmers will bring certainty out of uncertainty. Many people who want better conditions to prevail on the farm, have sent clubs of 25, 50, and over 100. It is your turn next.

This is the way subscribers write after they become acquainted with this paper:

"Up-to-Date Farming is a paper that surprises its readers by the greatness of its ideas, the simplicity of truths, and the importance of the results sought. It is the ONLY TRUE FARM PAPER PUBLISHED. It teaches farming as well as others, and it teaches how to get fair prices for farm products, which none of the others do."

A. A. DION, Grand Harbor, N. D.

Here is another:

"Some months ago I began to investigate the great farmers' movement, put on foot by J. A. Everitt, president of the A. S. of E. I spent much time in studying the matter printed in Up-to-Date Farming, and particularly the editorials. The logical and unanswerable arguments of these wonderful writings, produced a profound effect on me. At first I was skeptical as to the feasibility of the proposed plan for deliverance from THE GENTLEMEN OF THE BOARDS OF TRADE. But as the light was turned on I was surprised to find that all my doubts and objections were based on my total ignorance of the real principles that constitute the grand central buttress upon which the whole structure is built. As soon as the light dawned on me I began spreading the news to the farmers of my county. Before the present wheat crop is ready to market we will have our county thoroughly organized."

A. S. Cook, Chetopa, Kas.

NUMBER 17

## Up-to-Date Farming

J. A. EVERITT, Editor.  
JOHN P. STELLE, Associate Editor.

Subscription Price 50c a Year  
PAYABLE IN ADVANCE

**Acknowledgement.** The date in connection with your address on wrapper, informs you of the time your subscription expires. Change of date indicates that your renewal was received. Many club raisers fail to indicate their name separately from the club. We want to know who our workers are, therefore always write: "this club was sent by (name)." Always state if a renewal or a new subscription. Don't Neglect This.

**Your Address** should always be written very plainly. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R.

**Renewals and Change of Address.** Give the same name as before. If a change from one member of the family, so state. If you change your post-office, give old office as well as new.

**Advertising Rate** 50 cents per agate line each insertion; 10 per cent discount when two or more consecutive insertions are taken. About eight words make a line, and fourteen lines make an inch.

**Only Reliable Advertisers** are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurrence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date when you write.

Three month's trial subscribers will be supplied with back issues containing the first chapters of the Third Power. The special numbers are June 15th to September 1st, inclusive. **NOTICE: All trial subscriptions will stop promptly unless renewed.**

Renewals may be sent in at any time during the three months, thereby insuring continuous service. Be sure to inform us if you was a trial subscriber, when renewing.

## Stopped

If you find a blue pencil mark in the square to the left it is there to notify you that this is the last issue of Up-to-Date Farming you will receive unless you renew your subscription. The three months' trial subscription has ended. We hope and believe it has been profitable to you. We don't see how it could be otherwise. If you have read the papers you have learned how any of your crops may be controlled and a fair price obtained, always. This is what farmers are working on now and we expect it will be accomplished on all important products for this year's crops. You have read more than half of the great book, "The Third Power." To read the balance of it will be an education you can never acquire from any other source. Also you have been entertained and benefited by the following articles: "Capitalized Corporations no Relief to Farmers;" "The Equity of It Appeals to All Classes;" "A 'Business' Government;" "A Georgian's Warning to Cotton Growers;" the great speech by President Everitt to Minnesota Farmers; "How Agriculture Is to Be Robbed;" "King Cotton," an appeal; "Our Foreign Markets Lost by Low Prices;" "Shall There Be a Land Monopoly?" "The 1904 Wheat Bulletin;" "Discrimination. The Government Against the Farmer;" "Strikes and Lockouts," and many others.

The work Up-to-Date Farming is doing is not duplicated by any other paper in the country. Therefore, no difference how many other farm papers you take you cannot afford to be without this one.

It is the paper with a mission. It is the paper that is giving definite results to farmers.

It is the paper that is bringing farmers to the front where they should be.

It is the paper that will revolutionize agriculture and make it the best business on earth.

The subscription price is 50 cents. With membership in the great A. S. of E. \$1.00. Attend to this little matter today.

Organizers wanted for the American society of Equity in all parts of the country. The work is under way in the cotton belt, the wheat regions, the tobacco districts and wherever farm crops of any description are grown. We want many more workers. Good pay and pleasant work. Write to headquarters for terms.

The A. S. of E. can give employment to a thousand or more people. The work is pleasant; the compensation, to faithful and capable workers, is ample; the service will be continuous. If out of employment, or you want to change your vocation, write to the American Society of Equity, Indianapolis, Ind.

School teachers and ex-school teachers make the very best organizers for the A. S. of E. Those who want to add a profitable side line to their work and those who want to take up a good line exclusively should write to headquarters for terms and conditions.

One of the most important problems for farmers will be found in transportation and freight rates. There are grave discriminations against certain sections of the country and against certain classes. These can all be regulated and equity may prevail when farmers are sufficiently organized. The Third Power in this issue refers to this matter. Read it.

Crops are maturing. Are you doing anything to guarantee a fair price for them. The first thing to do is to join the A. S. of E. and get advice through the official paper.

The farmer's salary will soon be paid in the price of the crops he sells. Are you satisfied with your salary? If not, you must strike for higher wages through controlled marketing.

Cotton growers usually dump the whole crop, representing a year's supply on the market in three months. There can be only one result. Are you going to continue this practice this year?

Suppose the manufacturers of cotton goods would—from necessity or choice—dump all their goods on the market in three months, do you suppose prices would be maintained? Certainly not.

Any co-operation by farmers that does not fix the value and control the marketing, will be but little better than the old system. A fixed, known price, is the key to the problem. It fixes the time of control.

The speculative market in grains is running a race with the legitimate markets, but no matter how fast the speculative price advances the cash price keeps ahead. Hold your grain for the A. S. of E. price.

In this number is announced the A. S. of E. price for oats and barley. Keep your eye on the markets and your hands on your crops until the demand will pay your price.

Less than three per cent. of farmers must sell their crop as soon as ready

regardless of price. More than ninety per cent. can hold their wheat crop till December to get their price if necessary. These are facts brought out in reports on the 1904 wheat crop. Who dare claim that farmers cannot control marketing if there is the inducement of a better price?

Beware of capitalized co-operative schemes where a company must buy members crops to control them, or in other words where you must put up money to buy what is your own. This includes chain elevator companies. None of these companies have existed more than a few years and frequently there are dissensions and dissatisfaction about the management. Besides they take the price as the speculators make it and seek only for the small saving of freight and commission.

## MEETING AT CORUNNA INSTEAD OF DURAND, MICH.

We are informed by wire at the point of going to press, that the meeting announced in the list on page 7, (already stereotyped,) for Durand, Mich., on September 1, will be at Corunna instead of Durand. Please note this change.

## HAVE YOU A NEIGHBOR?

If you have get his name for the Three Months Educational Series that ends with this number. Put him in a position to know how to market all crops to secure profitable prices and all the other good things these numbers contain. Only 10 cents. See offer in this paper.

## HAY BUYERS CONVENTION.

The fourth annual convention of the Michigan Hay Dealers Association met at Lansing, Mich., August 5th. Among the subjects discussed were the following:

"Co-operation of Michigan Shippers' Organizations," H. H. Vaughan, Caro.

"How Can Buyers Get Weights That Will Hold Out at Terminals?" Thos. Astley, Grand Lodge.

"How Can Reliable Hay Crop Statistics be Obtained and Their Importance to the Trade?" W. H. Meacham, Holly.

Let us ask the question to hay producers, if it is profitable for the people to meet who handle your crops, why would it not be profitable for you who produce the hay and have it first to meet?

## A UNION OF INTERESTS.

Under the above head one of our exchanges says:

The strength of a joint movement between business men and farmers for the education of and co-operation by both, is represented in the building of a bridge truss, with timbers crossing each other at right angles and secured at middle and both ends.

This is exactly what is meant by the organization on the plan of the A. S. of E.—a strengthening of both classes, an increased development of both businesses.

## 1904 WHEAT BULLETIN.

The A. S. of E. wheat bulletin on the 1904 crop was sent out July 25th. On that day speculative September new

wheat sold for 86½c. Cash new wheat 96c, and cash old wheat \$1.02 on the Chicago market.

At this writing, August 15th (21 days later), September wheat sold for \$1.02½, a rise of 16 cents a bushel.

It matters not whether the A. S. of E. is responsible for the rise in wheat or not. If its system of crop reporting gives it a knowledge of the condition of the crop and if it gives information about prices and values so members can hold their crops for the rise it is doing incalculable good to farmers.

We admit that the deterioration of the spring wheat crop has had an effect on the market. But this condition only hastens what was bound to come, even though the Northwest raised a full average crop. If the damage to the spring wheat crop is very great it means even a higher price than the A. S. of E. set. Our advices indicate that the worst has not been told and we predict the full damage will not dawn on the people until threshing is under way.

At this time we want to refer to the liberal marketing of wheat after harvest. It has been from 50 to 100 per cent. more than last season at the same time. This was because farmers had not heard of the higher price set, and thought \$1 was the price. The crop this year is much less than last year, yet the marketing has been much larger. Does this not prove that farmers did hold their wheat last year? Does it not prove that farmers need a price set as a guide? If all farmers had got the A. S. of E. bulletins promptly it would have made a hundred million dollars for them.

## WE CHALLENGE THE WORLD.

Under the above heading, the editor of the Bedford Breeze, printed in Virginia, flings his challenge to the world to prove:

That the American Society of Equity is not founded on sound and safe business principles.

That farmers cannot co-operate on the plan of this society.

That it will be impossible to organize the farmers into a business association that can declare a profitable price for farm products, and establish a system of marketing that will secure that price.

That if farmers were organized, and would follow the plan of the society, prices would not be made thereby.

That if the farmers should refuse to market their produce at a price below an equitable one, that all the aggregated capital of combined dealers and speculators could break the farmers' power.

That if the farmers held their produce during the period that the dealers refuse to pay the equitable prices, the dealers would not pay the reasonable demands of the farmers rather than to stagnate business and cause distress.

That every agricultural paper, every association, every farmer, every business man except speculators, the Department of Agriculture and National government should not aid in every possible way the plan of systematizing the marketing of farm produce in a way that will help to maintain profitable prices.

That the securing of profitable prices for all farm products at all times is not the most important of all farm problems.

Where is the proof?

Use part of the extra price received for your crops to buy fertilizer and restore the lost fertility of your farm.

## SEPTEMBER 15th, 1904 SPECIAL NUMBER

### Prices on the Farm and Prices of Agricultural Products Elsewhere

The above special issue of Up-to-Date Farming is the first of six special issues to be called The Agricultural Economics Series. See announcement elsewhere in this number.

This article will prove that gambling in farm products does depress prices. It is a remarkable array of facts and figures and an astonishing revelation to all farmers and will be an eye-opener to other classes. This number and the five following numbers only 10 cents.

## Let Farmers go to the --

"Be protected with a good shipping margin!" This is the injunction that constantly goes out with the trade letters from the packing houses and stock yards dealers to the local buyers and shippers of live stock. Do stock growers realize what it means? Simply this: "Stock buyers and shippers under present conditions you and not the owners of the stock, are the price-makers on the farms. We make the prices here, and we will keep you advised as to the prices we make from time to time. Don't pay too much. The farmers have to sell, and you can get the stock at whatever price you make. Keep a safe distance below the prices we are making. **"BE PROTECTED WITH A GOOD SHIPPING MARGIN!"** Save yourselves and let the farmers go to the d--!"

That is precisely the meaning of it, and that is exactly the way it works. It is hard to believe that a million farmers would permit such a thing. We could not believe it were it not an es-

tablished fact that we have seen it, and that farmers have suffered it, for all these weary, discouraging years. Is it to continue? Are farm products still to be played with as idle toys for the amusement of and ENRICHMENT of Godless greed? How much longer will one class of people be permitted to price and take at its own terms the property of another class? If this is to continue, farmers should blot from the pages of history the record of the noble deeds performed by them that have made the nation great, and admit that the sons are enthralled as their sires absolutely refused to be.

A remedy? Of course there is a remedy. The growers are the first owners. Nobody can get the stuff without the owners' consent. Control the marketing. Hold till it is needed for consumption. Be protected with a good PRODUCING margin. Organize, and quit cutting each others' throats and ruining your business.

consumer, thus retarding what every grower and the public health are interested in increasing, consumption.

Why may not the growers avail themselves of these benefits of progress? As we think we have shown in another article in this issue, backed by valuable experiments made by scientific men, this is entirely within the possibilities, and every thought, purpose and effort of the grower should be in that direction, and he should be gladly and strongly reinforced by the dairy and poultry men.

## COLD STORAGE

The time is now approaching when people may well begin to think of cold storage. This method of preserving perishable products in order to market them so as to supply the year's demands, will have to come into quite general use before that desirable purpose can be accomplished, and cold storage for such general purpose must be secured by catching and holding the natural cold of winter rather than by cold artificially created.

This involves properly constructed houses, not only for storing the articles to be preserved, but for storing and preserving the ice as well. The Illinois Experiment Station has reported the details of building a storage house capable of holding 2,500 barrels of apples and dependent upon ice for controlling the temperature. This house was built as simply and cheaply as possible, and for the most part by unskilled labor. It cost, when completed, \$3,430.40. During the season 2,000 barrels of apples were placed in it by October 5, and 70 tons of ice put in the refrigerator. The temperature of the storage room fell rapidly after the ice was put in to about 33 degrees F., and this temperature, or a little lower, was maintained throughout the experiment. The cost of storage per barrel of fruit in this building up to April 23, or about seven months, was 19.1 cents, or 30.9 cents less than the usual charge for apple storage. Based upon these results, it is estimated that the building, if stored to its full capacity each year, would pay for itself in five years.

The fruit in the building was examined from time to time during storage. Without exception it kept well. "There was no scald, no withering. The fruit remained plump and in perfect condition, and the percentage of rotten fruit was very small." The results are believed to plainly show the utility of buildings of this character cooled by ice.

But even this is too expensive to meet the needs of the average farmer, or average neighborhood, and we believe much less expensive structures may be employed with entire success. Indeed the identical plant of the Illinois station might be constructed in most rural communities at much less cost.

The great advantage of cold storage may be set down thus:

1. The selling period of fruit could be greatly prolonged.
2. Fruit could go from the tree immediately into storage and be cooled to such degree as would arrest ripening processes.
3. Fruit could be stored in temporary packages, and final grading and packing deferred until the hurry of the picking season was over.
4. In the event of scarcity or high price of barrels during the busy season, fruit could be stored in bulk to be packed later when acceptable barrels could be obtained at satisfactory prices.
5. The facilities for handling the fruit would enable the grower to give better attention to the degree of maturity and pick at just the proper time.

But this summary of the advantages of cold storage must not lead any one to infer that fruit is the only product to benefit by it. There are many others of a more perishable character that may be rendered much more controllable and, therefore, more valuable—poultry and dairying products, for instance.

During the fall and winter such houses as are to be used for cold storage must be constructed so that the necessary supply of ice can be stored in them, hence we shall have more to say on this subject.

### TEN CENTS!

Will you pay it to learn how to get profitable prices for farm crops? See offer in this number.

## PEOPLE DESIRE HOMES

Recently the United States opened to settlement the Rosebud Reservation in South Dakota. The reservation comprises land sufficient for about 2,500 homes, and the government decided to distribute these among settlers by lot. All desirous of filing claims registered their names, and the total registry was 106,326. Over a hundred thousand applicants for less than three thousand homes! This simply emphasizes the wonderful dearth of homes in the United States where one would least expect it. Why is it so? Abandoned farms in the East; a mad rush for farms in the West. It is time economists should take up this question and solve it. They will have to follow different leads, however, from those which have characterized their previous efforts. They may find it in the monopoly of price-making, the monopoly of transportation, the selling out of crops at ruinous prices, before the owners have yet parted from them, that have so long cursed the older and more thickly populated sections of the country, and driven the people from their homes with the mortgage lash. The very best thought of the country may well be devoted to a study of these things.

## ADULTERATION OF FOODS

There is no question but that the adulteration of foodstuffs has become a very serious matter. We are informed by the State Board of Health of New Hampshire that, out of 290 articles examined, they found 139 adulterated, and that four-fifths of the sugar and syrups sold in that State are wholly or partly fraudulent. We are told also that, out of 128 samples of jellies and jams examined at the food laboratory of the State of Michigan, only seven were free from adulteration.

Now, there is no reason to believe that adulteration is any more general in these States than in any of the others, hence it is clear that the people know little of what they are eating.

The object of adulteration is to sell a worthless or inferior article at the price of a superior one; it is, therefore, the offspring of dishonesty and cupidity, and since the only requisites of an adulterant is that it is cheaper than the thing with which it is to be incorporated, and that it cannot readily be told from it, we may be sure no care is exercised as to whether the adulterant is wholesome or injurious. One of our correspondents speaks of the adulteration of flour with white clay. This is a wrong to the wheat grower, whose product ought to be consumed, but it is a still greater wrong to the consumer who is made to pay for something he does not get, and, still worse, is deceived to putting into his stomach what is positively injurious, and likely to destroy health and shorten life. And the same is true of almost every article of food that comes to the consumer's table. We may well have laws forbidding food adulteration, and then every energy of the executive power should be directed to the enforcement of them.

## DESTRUCTION OF EGGS IN ENGLAND

Millions of eggs are destroyed in England every year simply in order to keep the prices up.

When the eggs are coming in too fast from abroad and a glut in the market is threatened, it is the practice to break open cases after case and deliberately smash the contents with a stick. Thousands of cases, too, are thrown overboard at sea, and one way or another it is no uncommon thing for half a million foreign eggs to be destroyed in a week.—From the London Daily Mail.

This simply bears out our advice to producers that it is better to let stuff perish at home than to send it to market where it will sell at a loss and destroy the value of a legitimate supply.

About 450 farm papers are teaching farmers how to produce crops, without a word as to how to get good prices for the crops. There are about a half dozen papers now devoted to the problem of securing profitable prices, of which Up-to-Date Farming was the pioneer and is still the chief.

## The Farmer is Left Out

The farmer produces nothing but raw material. His only profit is his surplus, and before that can be made available it must go into other hands under present methods without his being able to say a word as to its value. As soon as it leaves his hands, whoever gets it puts his own price upon his services connected therewith. A very forcible writer makes this very clear in the case of cattle raising. Stock intended for human food as a grower's surplus, must go through five stages. The first is the raising of the cattle, or production. In this stage all the risk is involved, such as sickness, death, pasturage, shelter, feed, care, etc. This is the farmer's part in the process, and his only part; and as he raises cattle in competition (we speak as it is with the farmer unorganized) with every other farmer, and as he must sell before he can realize any profits, he has no control of the price to be paid. The next stage is the transporting of the cattle to the place of slaughter. This work is performed by the railroads, which are so closely organized as to not compete in rates with each other, hence they fix their own price for the service. The next stage is the packing, as it is called, which is practically performed by four

huge corporations, who have so thoroughly an understanding that they do not compete with one another either in buying or selling, hence they make the price at which they shall both buy and sell, and thus fix for themselves the amount of their compensation. The next stage is the distribution of the finished product, the beef, where the railroads come in for another share also fixed by themselves. The next and last stage is the selling at retail, the getting the product to the consumers' table. Here the local butcher or retail dealer comes in, and, as he buys to sell again, he fixes his own price, making it cover all costs and charges, all wastes and losses, and a profit satisfactory to himself. **THE FARMER ALONE IS LEFT COMPLETELY OUT.** He makes it, takes all the risks, suffers whatever losses, and **DARES NOT SAY A WORD AS TO WHAT HE SHALL RECEIVE FOR IT WHEN IT GOES INTO THE HAND OF ANOTHER.** And this, says such papers as the Farm Journal, is the "natural flow," the God ordained flow, of commerce. Up-to-Date Farming proposes that flow shall be dammed up, or at least turned so that the farmers who make the things shall get a little of the "moisture."

## Shut out American Fruit

A Berlin dispatch of August 6 says, "The German farmers are clamoring for a law against the importation of American fruit into Germany, or at least a **TARIFF HIGH ENOUGH TO ENABLE THEM TO COMPETE WITH FARMERS OF THE UNITED STATES.**"

What further proof do we need to establish our contention that the miserable system our authorities have permitted to beat down the prices of American products to such beggarly rates is what has destroyed our foreign trade? We cannot produce apples any cheaper than they can be produced in Germany, and it is admitted that American apples are far superior to those grown in that country, but our vicious price-making system compels American fruit growers to accept prices which German orchardists will not stand, hence they appeal to their government to shut out the American product which leaves our shores without any profit to the growers here to destroy the profit to the growers there. We predict that if our inexcusable price-making system be permitted to continue, less than a decade will find our products shut out from every European market. We appeal to the farmers to consider the gravity of this situation, and through them to our State and National authorities, and implore them to take prompt measures to eradicate these wrongs. Our farmers deserve as wholesome profits as do those of other lands, and they would have them if greedy speculators were not permitted to make the prices. While foreign nations are enacting tariffs to shut out our products, our people and

rulers ought to be doing something to destroy the miserable system that robs American farmers and makes foreign tariffs against us necessary.

## Benefits of Progress

But for the discovery and application of cold storage the outlook for the fruit growers would not be bright. There are not more fruits grown than the world needs, but there is more than could be consumed in the natural life of the fruit. Canning and cold storage extends its use throughout the entire year, and immeasurably increases consumption. And what makes the outlook more cheerful for the growers is the fact that individual or per capita consumption is rapidly increasing, so it is entirely probable that the crop will be consumed even when the output shall be much greater.

But who is to get the benefit of this extension of consumption? The grower must sell when the fruit is ripe; must dump his product on the market when the market does not want it. It is only proper, therefore, that he who provides a means for holding it, thus extending the period of consumption and making himself a benefactor of the grower, should have a reward for so doing. If his charges were always reasonable, the grower would have no cause for complaint and might well turn this end of the fruit business over to the storer. But greed gets between the orchard and the cold storage plant, and, like the "bulls" and "bears" of the grain and cotton pits, beats the price down to the very lowest notch to the grower, and then raises it too high upon the belated

# How Crops can be Controlled and Prices Made

## No. 5--DAIRY AND POULTRY PRODUCTS

(This series of articles began with July 1st Number, which gave directions for getting a profitable price for Grain crops, followed by July 15th, Cattle and Hogs; August 1st, Cotton and Tobacco; August 15th, Fruit and Vegetables, and September 1st, Dairy and Poultry Products. Six special numbers, June 15th to September 1st inclusive, can be had for 10 cents. This is the last number of the Educational Series.)

Probably in no department of farm effort are manipulations carried on to a greater extent than in eggs and poultry. Butter is a commodity of more uniform production, besides in recent years butter producers have combined to a large extent, insuring more uniformity of prices. Elgin, Ill., is the recognized centre of butter production of the country and practically makes grades and prices for the country. We might compare Elgin, in its relation to the butter industry, to what Indianapolis will be when the American Society of Equity is fully developed, to the entire agricultural business—the clearing house. Buyers go to or send to Elgin to buy instead of the butter going out over the country to take its chances with buyers. Also, the price of butter of equal quality made elsewhere is regulated by this market.

Dairymen can, however, realize great benefits through organization, particularly those who supply milk to city markets. The distributing end of this industry, like all others, is being organized and we now have in all the leading cities a milk trust or company whose policy is to squeeze the producer down to the lowest point and charge the consumer the highest price he can be made to pay. Organized producers is the only power that can cope with organized distributors and they can make these trusts harmless at both ends.

Eggs are chiefly produced in the summer and at that time bring the producers 8 to 12 cents a dozen. As farmers have no facilities for storing them they are bought up by the food trust and companies or individuals who put them in cold storage until between seasons, when they are brought out at 30 cents to 50 cents a dozen. The system is bad in all respects. In the first place farmers are not encouraged to produce at the price they get and in the second place the price is so high much of the year as to curtail consumption. Give a uniformly profitable price to the producers the year around and a uniformly equitable price to consumers the year around and the production and consumption of eggs would increase greatly.

The American Society of Equity can greatly benefit both producers and consumers of dairy and poultry products. When farmers are organized they will have their own cold storage plant, belonging to one or several local unions. One-half or any other proportion of the eggs, butter, poultry, cheese, etc., can be stored for the producers' account. The others go on the market in the summer time at profitable prices, and the stored portion come out in the winter at a slightly higher price. It is a simple plan. It is entirely practicable and will be welcomed by all but those few individuals who are making mountains of profit under to old, bad system.

Controlled marketing is the plan. Supply the demand as it appears, but do not let the temporary surplus go into the hands of market manipulators and speculators. As the world must be fed 365 days (covering summer and winter), the people who produce the stuff must have the supply all the time, summer and winter, to meet the demand.

### The Wheat and Barley Bulletins

In this number The American Society of Equity announces the yields of the two important crops, oats and barley, and has fixed the equitable price for which farmers should hold.

In view of the fact that comparatively few of the farmers who grow these crops will see the bulletins, we cannot expect the markets to rise to these fig-

ures at once. But we believe all those who hold their crops and ask these prices will receive them before the next crops of oats and barley are raised. Never before has any society or publication so clearly and correctly forecast values of farm crops as the A. S. of E. and Up-to-Date Farming. It has paid farmers to be members of this society in the past and to follow its recommendations and it will pay every farmer who takes its advice now.

The prices set on oats and barley we consider are equitable from every view point. Farmers should not be required to grow them for less and be expected to pay current rates for machinery, labor, taxes, living expenses, etc., and at the same time keep up the fertility of their farms. Farmers must have more for their crops or the yields of our staple crops will shrink to a point where enough will not be produced to support our rapidly increasing population. Intensive farming is the crying need of our times, but intensive farming cannot come until better prices are secured. Compared with the price of wheat, (which by the way largely influences the price of other grains), these prices are in equitable proportions as they should be.

Enough evidences have been presented to prove that if only a small fraction of growers of any of our staple crops will withhold their crops from the market that the price can quickly be made. The rule should be: LET ALL HOLD WHO CAN HOLD AND THOSE WHO CANNOT HOLD ALL, LET THEM MARKET JUST ENOUGH TO MEET THEIR NECESSARY EXPENSES. Then those who cannot hold can get the equitable price at once and all can get the equitable price as the demand comes during the year. This belief is now held and publicly advocated by many people outside of the A. S. of E., and other farmer's organizations have accepted the plan as the basis for their work, while a year and a half ago when we publicly announced the idea, it was generally ridiculed.

Farmers, we appeal to you to hold for these prices. We also appeal to you to circulate these bulletins among your brother farmers who grow these crops and do all you can to advance the interests of the A. S. of E.—your society—until its benefits are enjoyed by every tiller of the soil throughout the length and breadth of our beautiful land.

### One Sided View

The Syracuse, N. Y., Post-Standard thinks for the farmers to hold their crops for an equitable price is as bad as the action of the beef trust in putting the prices of beef so unreasonably high. The Post-Standard, like other papers of its class, takes too narrow a view of the situation. It does not seem to understand that the beef trust first puts the price of beef cattle and other meat producing animals down to very low prices in the hands of the producers, and then puts the finished product to the most extortionate prices to the consumers. It seems not to have noticed also that farmers have been for years producing the world's food and the raw material for its clothing, which they have been compelled to surrender at prices fixed by others without themselves being consulted. The only change in the situation it that the farmers claim the right to price their products, and demand a price fair and equitable to both producer and consumer, and if the Post-Standard will join with us in knocking out or tempering the monopolists that fatten between the producers and consumers, the latter may get their supplies even cheaper than they now get them.

But, regardless of whether the mountains of profit to the middle class are cut out and largely regardless of the cost to the consumers it is the duty of farmers to see that their prices and profits are right before they part with their goods. The farmers can make their prices without help from any other

class. If consumers will join with the farmers they can also be all powerful in guaranteeing fair prices to them also. Farmers want to do this so the maximum markets that only come through attractive prices may be made and maintained.

### Controlled Cotton

A plan for securing an equitable price for cotton was presented to the Farmers' Union of Texas recently. It was designated as the "Garrity" plan, although it is the A. S. of E. plan exactly. It covers a known minimum price and controlled marketing, which it is argued will compel the equitable price.

We congratulate the cotton growers that the A. S. of E. plan is endorsed and it will be a glad day for them when enough join together to put it in operation.

Also from The Atlanta Journal we take the following, which is the plan of the A. S. of E. It is plain to see that the seed we have sown is springing up all over the country. Here are people who now believe that controlled marketing will make the price. The country is full of them and we hear less of croakers who were wont to say "It can't be done." With the South awakened on cotton as the north has been on wheat it will be an easy matter to set the equitable price on cotton and get it. The article follows:

Griffin, Ga., Aug. 10.—At a meeting of Spaulding County Agricultural club, Hon. Harvie Jordan, of Monticello, addressed the members present, using as his subject the best methods of marketing crops.

He said there was no trouble about producing enough on the farm, but that the farmer showed no business ability when it came to selling his products—that he allowed the merchant to fix the price both of what he sold and what he bought.

He said that the cotton seed buyers had already met in Atlanta and fixed the price of the coming crop at \$8 per ton, despite the fact that at an additional cost of \$3.50 per ton they got \$20 per ton for the products. The seed is worth \$12.50 per ton as a fertilizer, and that those who held it for its true value last year got \$20 and \$21 per ton for it, and could do it again this year.

There is greater wealth and greater profit in cotton than in any other crop, argued Mr. Jordan, and the producer ought to get his share of it. It is worth 12 cents to the spinner and should be worth that to the producers and will be if it is marketed properly and slowly, even if it should turn out to be a twelve-million bale crop. The size of the crop can not be told before the December report, yet by that time 75 per cent. of it is already sold as a rule. He advocated holding on the plantations and marketing it slowly, otherwise the average farmer would not get more than eight cents for his crop.

But the farmers of Texas are already organized, and if only the Texas crop moves slowly, there need be no fear as to the price. The campaign is on in all the southern states and a convention of cotton growers will be held at St. Louis on the last week in September, when they propose to solve the question of properly meeting and inaugurate an era of universal prosperity. The railroads would give a rate of one cent fare each way and the whole cost for a week, including all the sights of the great fair, would be only \$40. A special train will leave Georgia on the 24th and everybody is invited to go and he would insure them the best time they ever had.

At the conclusion of Mr. Jordan's address the following resolutions were unanimously adopted, with the request that the state press reproduce them:

Whereas, The bad system of marketing the cotton crop by the producers during the short period of from 90 to 120 days creates an enormous oversupply when there is no legitimate demand for the staple; and

Whereas, The marketing of a twelve months' supply in four months under the conditions stated above makes a speculative market subject to the evil and disastrous influences of severe depression in prices; and

Whereas, The buyers and speculators are quick to take advantage of a system of marketing which gives them absolute control of the prices of the staple, which has proven most detrimental to financial interests of the producers for the past thirty years; and

Whereas, We fully recognize the wisdom and business policy of regulating the sale of any product to meet the legitimate demands of the manufacturers or consumers that the prices of such products may be enforced and maintained upon a fair and equitable basis of their true value to the producer; therefore, be it

Resolved, That we, the officers and members of the Spaulding County Agricultural Club in regular session assembled today urge upon the cotton producers of this and other cotton growing states the imperative importance of marketing the next cotton crop slowly, to the end that a proper distribution of the staple may be

had each month to meet the actual demand of the mills for consumption and to the further end that the enormous receipts placed upon the markets during the early months of the season may be checked.

Resolved, Further, That we urge upon every producer to hold a part of his crop, who is financially able to do so, on his own premises, well protected from the weather, and insured against probable loss or damage by fire, and urge upon those who must have funds to meet maturing obligations, to warehouse their cotton and use the receipts to borrow money from their local banks, to the end that the usual heavy rush of the staple on the market may be avoided and that thereby better prices may be maintained throughout the next ten months.

Resolved, Further, That we heartily endorse the recent action of Texas farmers' congress at College Station, Texas., the Waco Business Men's League at Waco, Texas, and the North Carolina state convention of cotton producers at Raleigh, N. C., in urging the immediate adoption of the local warehouse system to secure the necessary financial aid through our local banks to enable a slow movement on the market of the cotton crop by the producers all over the south.

Resolved, Further, That in thus giving our views on this important matter from a strictly business standpoint and with a full knowledge of the active co-operation of our State Bankers' Association, we hereby pledge our co-operation to the movement and urge united concert of action throughout the cotton belt.

Resolved, Further, That the general press throughout this and other cotton states be, and is hereby, earnestly requested to publish these resolutions and as far as consistent, give their valuable aid and influence to the movement.

### 10,000 LETTERS A DAY

THERE are many firms in this country who receive 10,000 letters, and even 25,000 letters a day, not counting the hundreds of papers and pieces of advertising matter.

#### DO YOU WANT LOTS OF MAIL?

You can have it by placing your name and address on our list. We want to add 100,000 new names at once and make this liberal offer. Manufacturers, publishers, importers, printers and dealers everywhere send samples and literature to names on our list. Send 10c and we will place your name and address in our 1904-5 list. If you want your share send your dime now.

**FREE** To make our offer doubly attractive we will send ABSOLUTELY FREE a new musical instrument, The Zophophone. Any one can play this novelty without a moment's instruction. Sent postpaid to your address and special agents prices so you can sell them.

**SEND TODAY, 10 CENTS** to list your name and get one Zophophone.

**THE THIRD POWER.** (Farmers to the Front) is a book of 275 pages, by J. A. EVERITT, President of the American Society of Equity. It began in June 15th issue and will continue until completed. Back numbers may be obtained by embracing the special three months offer in this number for 10c. The book may be obtained complete at \$1.00 in handsome cloth binding, 50c in paper cover, 10c extra for postage. Send orders to the publisher of UP-TO-DATE FARMING.]

## CHAPTER XIII.

There is not one thing that the American Society of Equity proposes to do that does not bear directly on the question of price. As we have seen, it is intended to secure equitable rates for transportation. The price he is to ask is the minimum price that he may decide is fair in some selected market, and then deduct from that the fair cost of transporting and handling the products. When the minimum price is decided upon then the smaller the amount he has to deduct on this account the more will there be left for the farmer. With reasonable rates, and with his crops stored in elevators or warehouses owned by the American Society of Equity, or local unions of the same, so much larger will be the profits of the farmer. So the plan is to increase his income both by raising prices and by lowering the cost of moving, handling and marketing the crops. This latter, however, is more in the interest of the consumer. What matters it to the farmer whether the middlemen or railroad charge 50 cents a bushel or \$1 a cwt. for carrying his produce to market? In his fundamental position he puts his price on the absolutely necessary articles of food and clothing before any other person or corporation can touch them. Therefore, he takes his profit—all that he wants or in equity should have—first. You cannot fail to realize the strength of position of the farmer, when organized, by this illustration. Therefore, it is mainly to protect the consumer and secure the maximum market that he, through his society, will interest himself in the elevator charges, railroad rates, taxes, insurance and a thousand other things. None of these things can hurt the farmer when organized, but through his strength he can prevent them from working injury to others.

It has been shown already what an influence the farmer could have on the railroads by simply putting himself in a position where he could refuse to ship unless the prices and freights were satisfactory to him. The railroads cannot exist unless they have stuff to haul and plenty of it. They are dependent, directly or indirectly, on the farmer, and they cannot easily be made to feel their dependence. This question of transportation is a very large and important one, in that it involves the future development and settling up of the coun-

try. Indeed, the whole history of the march of men across this continent is a history of transportation. It has been said by some supposedly wise men that our people have moved westward along the parallels of latitude. But it is not so. They moved along the watercourses, first down-stream, and then up-stream. Always the effort was to make transportation as easy as possible. And the railroads have contributed powerfully to the making of the country. We must give them full credit. Still when it comes to carrying the farmer's produce east they have not always been reasonable in their charge.

And it seems to be probable that they are going to be more unreasonable as time goes on. While there was fierce competition competing points at least got the benefit of low rates, though non-competing points suffered severely. The railroads taxed the latter to make up for low rates of necessity granted to the former. Certain sections have been discriminated against; all rates have often been too high. But it has been suggested that the situation may get worse for the farmer. If the tendency toward railroad consolidation goes on we may see an end to competition. It is certain that the purpose of combination is to check and control competition. If it succeeds the farmer will be forced to look out for his own interests. He should be in a position to say that he will not ship at all unless he can be sure of a fair net price on the farm for the products of his own toil.

The farmer is often told that the railroads are his friends. He himself need not be an enemy to the railroads in order to realize that there are no friendships in the business world. That world is a world of struggle and conquest. In that struggle the strongest win. Under present conditions the railroads will be as fair to the farmer as it pays them to be. Under the conditions which it is proposed to create they will be as fair as the farmer can compel them to be. Other men use the power that they possess, often in illegal and criminal ways, to coerce the railroads into favoring them. It is not intended that the farmers shall do anything illegal or criminal, but it is meant that they should realize that these unfair concessions are paid for by less powerful and favorable shippers, the farmers among them. So it is important that these latter should stand up for their own rights. If all shippers were treated equally there is no reason to believe that freight rates could not be reduced considerably, to the great benefit of the whole country.

Further, in the vast reorganization schemes of which we have heard so much, some of the railroads have been over-capitalized just as other industries have. And the farmer has to pay enough to enable these roads to pay interest and make dividends on their vast issues of bonds and stocks that don't represent real value. He may well question the fairness of this arrangement. At any rate, the American Society of Equity will give some attention to this vital question of transportation. The individual farmer cannot fight the railroads, but he can make a good showing as a member of a great and powerful organ-

# BE GOOD TO YOUR FEET

Keep them dry and warm by wearing the genuine

## Buckskin Brand

(Not Made by a Trust)

### Rubber Boots and Shoes

They'll outwear any pair you ever bought—because they're honestly made of pure, new rubber, guaranteed free from cheap adulterations. Don't be imposed upon by shoddy goods. Get the Genuine Buckskin Rubber—the boots and shoes with honest wear in them. They cost no more than the "cheap" kind, because we sell direct from our factory—no traveling men.

If your dealer does not handle the genuine Buckskin, send to us direct. We have a special proposition for first inquiry from each neighborhood. Send to-day for Free Booklet.

400 Bittner St.  
St. Louis, Missouri.

ization numbering a million or more, made up of farmers all over the country determined to get their rights. Mr. John D. Rockefeller, who knows something of the virtues of combination, and who has recently been engaged in an effort to secure control of large systems of railroads, says:

"To fight the battle alone is to be lost. Association with others is an absolute necessity if we would be successful. In union there is strength and success. We can see this illustration every day in the business world."

Mr. Rockefeller is right. Especially is organization necessary for the farmers who are at the present moment unorganized themselves, fighting organizations in practically every branch of industry. Mr. Rockefeller's reference to the "business world" does not at present include the farmers. Everybody knows that they are not considered business people. But is it not time for them to get into the business world? What is good for one class of people who produce, manufacture and sell, is good for others. If "in union there is strength and success" for Rockefeller and his associates, why would it not mean strength and success for the farmers? A good many years ago the Chinese were oppressed and harried by the civilized nations of the world very much as they are today. The people of China could make no headway against the trained soldiers of Europe. Finally a formidable rebellion broke out in the empire, and the authorities secured the services of that great Christian soldier, Charles George Gordon, who organized his Ever Victorious Army, and with it suppressed the rebellion without losing a single battle. No better army followed a gallant leader to victory. And today, if there were another Gordon at the head of a Chinese army, he might sweep Russia out of Manchuria and compel all the powers of the world to respect the integrity and the sovereignty of that ancient empire. Yet precisely the thing that the Chinese lacked was the power of organization and co-operation. But when they did act together it was with decisive results.

It can be so with the American farmers. They, too, have been oppressed and harried by highly organized bands of marauders, and they have been unable to protect themselves simply because they have not acted together. What we want to see is an Ever Victorious Army

of American farmers, which shall fight, not for conquest, but in righteous defence of their rights, their families and themselves. Their victory, which will be sure, will redound to their own honor and prosperity and to the welfare of the whole country. We want a new declaration of independence and a new independence day. God grant it will come speedily.

(Continued in next issue.)

## Thanks to Up-to-Date

To Up-to-Date Farming:

I am an interested reader of this paper, and I wish to express my thanks for what Up-to-Date Farming has done for me. I threshed last year 4,100 bushels of wheat and 1,700 bushels of oats. Circumstances compelled me to sell about 1,500 bushels of wheat to meet expenses. For this I received from 52 to 57 cents.

About this time I subscribed for Up-to-Date Farming, and became a member of the A. S. of E. I saw the wisdom of holding wheat for \$1 at Chicago, which would be about 75 cents here. I held on to my wheat, watching your paper very close, and about three weeks ago I received a letter from a mill in the eastern part of this State, offering me 80 cents for No. 2 wheat, and saying if I would not accept their offer to set my price and let them know what I would take. I replied that I would take 90 cents f. o. b. cars at my station. They accepted my offer, and I am proud to say that I must thank Up-to-Date for my success.

Oats was rather cheap last fall. I did not care to sell mine, but offered it at 40 cents. No one expected me to sell any, but I got my price in the spring, and could have sold much more. This year I did not raise any wheat, but will thresh about 1,200 bushels of oats, it yielding about 30 bushels per acre.

Crops are not much in this part of Kansas this year. Wheat was almost an entire failure, and such as they did raise is only fit for chicken feed. Corn does not promise much; it is injured by a drouth. HENRY SCHEETZ, Jennings, Kansas.

Nothing but the best and purest shaving soap should ever be used on the face. The tendency to use "any old soap" is dangerous and untidy and often causes soreness and irritation that may result seriously. Poor soaps bite and sting and take the edge off your razor; in fact, they are unsatisfactory in every way. We advise the use of Williams' Shaving Soap as a means of overcoming all these difficulties. Send a 3-cent stamp to the J. B. Williams Co., Gastonbury, Conn., for a trial sample.

**A**T this time of the year the farmers' crops are maturing and they are about to receive their wages for a **S**EASON'S work. Who will set the price for your labor. You paid the price set by others on everything you used in the production of the crops. Now will you let the same people price your crops and set your wages? Or will you join the American Society of **E**QUITY, build up the membership until every farmer in the land secures a profitable price on every crop he grows.

## 10,000 SETS

OF THE

## EDUCATIONAL SERIES

We have ten thousand sets of the six issues comprising the educational series to sell at 10 cents each set. **WHO DO YOU WANT TO HAVE THEM?** Send some names and 10 cents each and they will be sent at once. Each set will make a convert to controlled marketing and bring the time nearer when farmers will come to the front.

# THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS  
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

This is the co-operative farmers' own department. It is the desire to make it the life and strength of the Local Union. Every member is a welcome contributor, and every communication will have courteous consideration. Address JOHN P. STELLE, care Up-to-Date Farming, Indianapolis.

More than politics should be the A. S. of E. to you. More than the voting place your Local Union. Here your troubles will end and your triumphs begin. All credit to the Local Unions. They are your forts—your strength. Stand by them as you would by your guns within the real fort to repel the enemy.

## Annual Meeting of A. S. of E.

It has been decided to hold the annual meeting for election of officers and transaction of business for the American Society of Equity on Thursday, December 8, 1904, at headquarters, Indianapolis, Ind. The meeting will cover more than one day if necessary.

Nominations of candidates for the various offices are now in order. The officers to be elected are president, secretary, treasurer, statistician, organizer, attorney, and seven directors. The board of directors shall consist of the president, secretary and four others. Candidates names must be published in the official paper at least six weeks before the election. This makes it compulsory that the names be proposed and received at headquarters by or before Oct. 20th, when the November 1st number will close.

It is desired that all the officers for the next year shall be men who can give as much of their time to the development of the society as necessary. Any member or local union can put a name in nomination and it should be accompanied by a statement showing the fitness of the party for the position, which will be published for the information of members.

Votes will be cast on blanks to be supplied for this purpose and which will be printed in the official paper in due time.

J. W. Glover, county secretary of the F. M. B. A., of Hamilton county, Ill., went to Hardin county last week to instruct some old lodges that had reorganized. The result was 95 members, the organization of a county assembly, and a large club of subscribers to Up-to-Date.

Do not let the blare of the political trumpet and the hollow sound of the drum drown your interest in the vital matter of farm economy—of price and production.

The best time of all for organization is now at hand. Don't let anything get in the way. Our results with wheat show that victory is near.

The excessive wet weather in many places has seriously damaged the hay crop, which must necessarily affect prices, and make it more difficult to maintain the minimum price, which, of course, is for No. 1 hay.

There is every inducement for the cotton and tobacco growers to be active in organization. If the prices of their products be maintained it must be by organization.

Our letter writers have not had a fair show this issue. Many excellent letters have had to go over. We like those letters and our Up-to-Date people love to read them. Don't neglect to write.

There has been an immense hay crop harvested. It is worth \$12 a ton on basis of Chicago market. The A. S. of E. says so and all you need to do is to hold on until you get the price which will come during the crop year.

Europe has suffered the most destructive drought in many years, crops were destroyed over vast areas. This will stimulate exports to those countries including hay, clover seed, corn and oats.

Mr. W. C. Webber, of Rochester, Minn., an earnest and intelligent worker, is preparing to enter upon a systematic work of organizing in that state. Farmers who will aid in this work, and assist in getting up meetings should write to Mr. Webber, as above. We urge them to do so.

## Send the Dates of Your Meetings

Large meetings or picnics should be held everywhere under the management of the American Society of Equity. Many A. S. of E. local unions have held or will hold such meetings. Also county fairs, street fairs, farmers' clubs, granges, lodges, etc., have obtained speakers from headquarters, to address the assemblages on the important matters for which the A. S. of E. stands. Too much of this work cannot be done. It is educational along the right lines. The people are hungry for such knowledge.

If the A. S. of E. has not had a great mass meeting, barbecue or picnic, or been represented at such in your neighborhood, see to it at once that one is gotten up. Notify us of date and particulars as soon as possible. Announcement in this paper will do an immense amount of good.

We are authorized to announce the following meetings.

Whitmore Lake, Mich., Aug. 27; Geo. G. Winans in charge.

Eckford, Mich., Aug. 30; D. M. Babcock in charge.

Albion, Mich., Aug. 31; D. M. Babcock in charge.

Durand, Mich., Sept. 1; Geo. G. Winans, state organizer, and others in charge.

Kingston, Mich., Sept. 2; Geo. Giddings in charge.

Lewisport, Ky., Aug. 27; H. G. Smith in charge.

Greenville, Ky., Aug. 29; Hon. H. B. Sherman will speak.

## SPECIAL To Our Readers and Members of A. S. of E.

We are going to ask you a few questions, and we hope you will answer them at once. Here they are:

1. Have you been benefitted by reading Up-to-Date Farming?

2. What is the nature of those benefits—moral, intellectual, financial, or all combined? (It is not necessary to go into great detail; give us briefly the facts, as you feel them to be.)

3. Has belonging to the A. S. of E. been of financial benefit to you? Cite any cases that may have come to your notice.

Here are only three questions. We have been working hard, and feel that we have a right to know something of the result. We can only know from your reply.

This is of more importance than you may think, and we hope you will answer these questions promptly. Please consider this appeal just as personal to each reader or member as though it reached you in a letter, accompanied by a stamped envelop for a reply. We would willingly send these were it practicable to do so, but we know you will not hesitate to reply on account of the postage. The danger is that you may put it off "till tomorrow." Tomorrow is a fleeting phantom that is always a day ahead of you.

DO IT TODAY PLEASE, and then you may know that you have done the publisher of this paper and the National Union of your society a VERY GREAT FAVOR.

[The above was written by Mr. Everitt, who, I can testify, has done as much or more for the farmers than any other man in the country; and I add my request to his for a reply from EACH subscriber and EACH member, and when replying you may greatly aid the cause by giving us an additional name or two of persons who might be interested in this cause.—JOHN P. STELLE Associate Editor.]

## IMPORTANT ANNOUNCEMENT!

### SPECIAL ISSUES OF UP-TO-DATE FARMING

Immediately following the SPECIAL EDUCATIONAL SERIES—six issues of UP-TO-DATE FARMING June 15 to September 1—we will commence the publication of six other special issues. These will begin September 15, and will be called THE AGRICULTURAL ECONOMICS SERIES. We will repeat our liberal offer of THREE MONTHS FOR TEN CENTS, covering this period, but old subscribers for three months, or for a longer period, cannot embrace this offer. They must be new subscribers.

These special issues and special prices are made to secure new subscribers. (We believe every person who reads UP-TO-DATE FARMING for three months will want to read it always, thus we hope each three months subscriber will become a yearly one.)

The leading articles in these numbers will be as follows:

1. September 15.—PRICES ON THE FARM AND PRICES OF FARM PRODUCTS ELSEWHERE. We prove that gambling in farm products has an astonishing effect in depressing prices. An exhaustive treatment of this vital subject.
2. October 1.—PROSPERITY OF THE NATION DEPENDS ON THE PRICES OF FARM PRODUCTS. We prove that low prices of farm products have been responsible for seasons of depression in business; that prosperity returned with the return of good prices, and incidentally we show that hard times and good prices for farm products cannot exist at the same time. An exhaustive treatment of this very important (to every true American) subject.
3. October 15.—THE UNITED STATES DEPARTMENT OF AGRICULTURE—What it is and What it Should Be. Contains many startling statements and important recommendations, which if carried out, will result in incalculable good to Agriculture.
4. FARMERS' INCOMES AND FARMERS' TAXATION. Shows how the politicians repay the farmers for their votes by saddling on them the bulk of taxation; with advice how to equalize the taxes.
5. November 15.—THE ELEMENTS OF EXPORT PRICES OF AGRICULTURAL PRODUCTS. Much light on a dark (to the farmers) subject.
6. December 1.—THE SO-CALLED COMPETITIVE PRICES FOR AGRICULTURAL PRODUCTS DO NOT EXIST. Proves that America has fixed the world's prices for staple farm products in the past and will for the future.

THESE ARTICLES will constitute a unique addition to American Agricultural literature, and at the same time they will possess a value from an educational standpoint never before approached. Never before in the history of this country has agriculture been favored with so many valuable literary and educational contributions as are now appearing through UP-TO-DATE FARMING. Farmers and others should interest themselves to help the publisher to give these special issues the widest circulation possible.

It is time now for the many thousand three months trial subscribers to renew for a year so the paper may go to them without interruption. Always state that you are a "trial subscriber."

## After Harvest Work

In the interim between the harvesting and threshing of wheat, oats, etc., and the gathering of the corn crop, comes a period which is familiarly known as "after harvest."

It transpires each season that in the rush and steady strain incident to the planting and cultivating of corn, the sowing and ultimate harvesting of the small grains and the annual haying, many important farm operations are put off for the "after harvest" period.

There is the hauling out and spreading of the season's accumulation of manure; the clearing of the wood lot; the removal of stumps, boulders, stones, etc.; the repairing of farms and pasture fences and the filling of silos. Then, too, there is the shelling and marketing of last season's corn, which has been held until the present crop has given evidence of success. The marketing of the spring and summer fed hogs, etc.

Every one of these operations brings the farm wagon into frequent and almost continued use. It is important then that the farm wagon be a good one. It should be as light as is consistent with requisite strength. It should be low down so that it may be easy to load. It should have broad faced tires in order to avoid cutting up and "rutting" of meadows, pastures and farm lands, and to reduce the traction and draft to the minimum.

These good qualities and advantages in a

farm wagon are embodied in a high degree in the Electric Handy Wagon, a cut of which is shown with this article. As its name indicates, it is a low-down, handy wagon in every sense to which this term will apply. It is very easy to load, saving, we think it safe to say, more than half the lift as it is the part of the lift above the center of gravity—the last half—which requires the heavy strain. This advantage will be appreciated almost beyond comparison in hauling manure, stumps, logs, boulders and green corn for filling the silo. All these substances are heavy, and the greatest labor in connection with their handling is in the loading.

Being heavy, the load would cut into the sod or other land badly if it were not for the broad tires which enable the load to be drawn smoothly and easily over the surface without injury to the land.

Then, too, there is the great durability and lasting quality of this steel wagon in its favor. It is proof against decay of every form. In fact, it is a good thing for the farmer from every point of view.

The whole story of its worth, as well as details of construction, etc., will be found in the large illustrated catalogue of the Electric Wheel Co., of Quincy Ill. Write for the book. They mail it free to all our readers if they mention this paper.

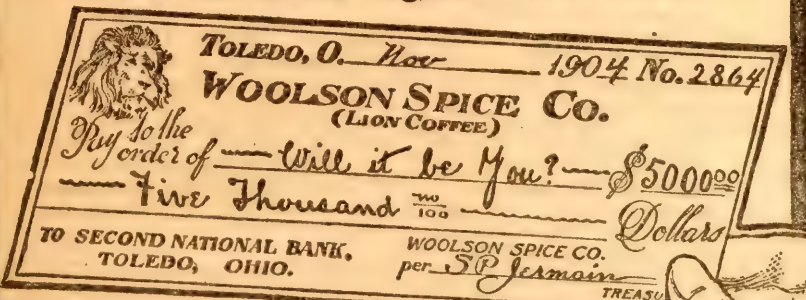

# \$50,000.00

## Cash Given Away

TO USERS OF

# Lion Coffee

In Addition to the Regular Free Premiums

## How Would You Like a Check Like This?

WE HAVE AWARDED \$20,000.00

Cash to LION COFFEE users in our great World's Fair Contest—2139 people get checks, 2139 more will get them in the

## Presidential Vote Contest

Five Lion-Heads cut from Lion Coffee Packages and a 2-cent stamp entitle you (in addition to the regular free premiums) to one vote. The 2-cent stamp covers our acknowledgment to you that your estimate is recorded. You can send as many estimates as desired.

What will be the total popular vote cast for President (votes of all candidates combined) at the election November 8th, 1904? In 1900 election, 13,959,633 people voted for President. For nearest correct estimates received in Woolson Spice Company's office, Toledo, O., on or before November 6, 1904, we will give first prize for the nearest correct estimate, second prize to the next nearest, etc., etc., as follows:

1 First Prize	\$2,500.00
1 Second Prize	1,000.00
5 Prizes—\$500.00 each	1,000.00
5 Prizes—200.00 "	1,000.00
10 Prizes—100.00 "	1,000.00
20 Prizes—50.00 "	1,000.00
50 Prizes—20.00 "	1,000.00
250 Prizes—10.00 "	2,500.00
1800 Prizes—5.00 "	9,000.00
2139 PRIZES,	TOTAL, \$20,000.00

**Grand First Prize of \$5,000.00**

Will be awarded to the one who is nearest correct on both our World's Fair and Presidential Vote Contests.

We also offer \$5,000.00 Special Cash Prizes to Grocers' Clerks. (Particulars in each case of Lion Coffee.)

## How Would Your Name Look on One of These Checks?

Everybody uses coffee. If you will use LION COFFEE long enough to get acquainted with it you will be suited and convinced there is no other of such value for the money. Then you will take no other—and that's why we advertise. And we are using our advertising money so that both of us—you as well as we—will get a profit. Hence for your Lion Heads

**WE GIVE BOTH FREE PREMIUMS and CASH PRIZES**

Complete Detailed Particulars In Every Package of

# LION COFFEE

WOOLSON SPICE CO. (CONTEST DEPT.) TOLEDO, OHIO.

Let nothing go to waste.

No matter what the crop, as it matures save it.

Begin to look after the seeds for the next year.

How many bushels of weed seeds have matured on the farm? Every one of them will rise up to call you—Dennis next spring.

The first of September is a good time to sow rye for pasture, if it has not already been done.

Sow the timothy for permanent meadow as soon as possible now.

If the wheat land is not already turned, get at it immediately, and keep at it. Work it down so as to induce the weed seeds to sprout previous to the final working before sowing.

In seeding to wheat go on the theory that a hundred bushels from five acres is a better bargain than a hundred bushels from ten acres, and work accordingly. Don't put wheat in any but the most suitable land, use none but the very best seed, put it in the best possible condition, fertilize if at all necessary, and then cut your notch for 150 bushels for every five acres, and not less than a dollar at home for every bushel.

What crops have done best, and under what conditions, and what crops have you wished during the season you had put out the previous spring? Now is the time to make up the record for use next year.

The castor bean is an easily grown crop, the product is useful, the demand is seldom over supplied, and it is generally fairly remunerative. It does well on average corn land in the central Mississippi and the lower Ohio valleys.

Broom corn is extensively grown and is a remunerative crop in portions of central Illinois, and it is also being grown very successfully in Oklahoma.

The sunflower is grown for the seed quite extensively in southern Illinois, and it is considered quite remunerative at two cents per pound, which it often brings. The culture is very simple, about like that of corn.

I wish every farmer could tell just how many days' work of man and team each of his crops had cost him. That would seem like getting down to a business basis.

Have a mind now to the saving of the corn fodder. Cut and shocked and thoroughly cured, then shredded and shedded, it makes excellent feed for cattle and sheep, and some claim it is good feed for horses. The old way of cutting corn and leaving it in the field in the shock all winter is very wasteful, and it is bad economy so far as the handling is concerned.

Don't sow bad seed wheat. The best is none too good.

## The Rice Crop

In some portions of the South our readers are interested in the rice crop as producers; all over the world they are interested in it as consumers. Like all other products that take the "natural flow of commerce," there is a mighty big screw loose between the producer and consumer of rice. Just now the rice growers of the South claim to be "suffering from too good a crop last year." Strange isn't it, that the producers of anything should suffer from having made too good a crop? But northern consumers have never found out that there has been too heavy a crop of rice in the South; prices to us have remained just about the same. The fact is, the consumers pay for rice

about 200 per cent. more than is paid for it at the mills. This is an unjustifiable wrong to two classes, the growers of rice and those who buy it for food. That 200 per cent. of profit between the two should be divided; we are sure it might well be divided into three parts—add one of the parts to the price paid the producers, take one of the parts from the price charged the consumers, and leave the other part as fair remuneration to all who handle the product between the mills and the eaters. The effect of this readjustment would be an increase of the consumption of rice on account of its being so much cheaper, which would call for an increased production that would also be stimulated by the better price, and an increased business for those who handle rice in all its stages between the field and the kitchen. The miserable system of hogging all the profits between the producer and the consumer is a worse blight than mildew, and even greed o'er leaps itself and stabs its own prosperity.

## The Broom Corn Crop

Broom corn is an important product, and one which the modern world could not well do without, yet its production is of local interest, and there is not sufficient attention paid to it by the statisticians of the Department of Agriculture. About all the data available concerning the crop is that procured by the census of 1900, which comes down to a date no later than 1899.

The origin of broom corn is something of a mystery. It is generally considered a native of India, though it seems no one has ever found it growing in a wild state. The United States, Italy, France and Germany are the only countries which produce it solely for brooms, and like purposes. It is not exactly known when broom corn was introduced into the United States, though in an old publication of 1798 it is mentioned as "the cheapest and best plant growth for making brooms, velvet whisks, etc.," and that its seeds are good for poultry feed. But it was long after that before the crop attained any commercial importance. It is surprising even now that it is so restricted in its cultivation, for it may be grown successfully on any soil and in any climate where Indian corn will grow.

In 1899 there were in the United States 178,584 acres devoted to broom corn, which showed a rapid increase during the preceding ten years, for the total acreage in 1889 was only 98,425 acres. The product in 1899 was 90,947,370 pounds, which sold for \$3,588,414, or an average of 4 cents per pound, or \$80 per ton, and the crop made a little over \$20 per acre.

In 1879 Illinois, Iowa, Kansas, Missouri, Nebraska, New York and Ohio produced more than a million pounds each, but ten years later only Illinois, Missouri and Nebraska produced more than a million pounds each. Why the other states named abandoned its cultivation does not appear. In 1899 California, Illinois, Iowa, Kansas, Missouri, Nebraska, Oklahoma, Tennessee and Texas produced more than a million pounds each, and the combined product of these states equaled 96 per cent. of the total crop, while that of Illinois, Kansas, Missouri and Oklahoma equaled 87 per cent. of the entire crop.

The producers of broom corn seem to have held their crop well in hand during the past few years. A combination of capitalists seems to have been formed in the central part of Illinois, which is the center of production, for the purpose of controlling the price, which, we believe, has sometimes gone as high as \$150 per ton. Unlike most combinations of that character, this one seems to have held up the price for the producers, which for several years has not gone below from \$75 to \$80 per ton on the farms. This is a product which would be very easy for the growers to control on account of the nature of the product itself, easily and safely stored when baled, and because of the local character of its production. The broom corn growers should promptly organize.

# 89 CENTS FOR A NEW 1905 HEATING STOVE

HOW WE CAN SELL a new 1905 model high grade heating stove under our BINDING GUARANTEE for only EIGHTY-NINE CENTS. Not a deposit of 89 cents, with something to pay later on, but just 89 cents to pay; no more, no less. HOW we can do it and WHY we do it is fully explained in OUR NEW FREE 1905 SPECIAL STOVE CATALOGUE. Illustrates and describes our New 1905 Style Heating Stove, which we sell for 89 cents; explains our new and marvelously low price making policy, illustrates and describes an almost endless variety of Heating and Cooking Stoves and Ranges; all kinds and styles of Hard Coal, Soft Coal and Wood and Iron direct draft, double draft and base burning HEATING STOVES. EVERYTHING IN STOVES at prices so astonishingly low that you will be surprised and pleased. Bigger and better than ever—6½ pounds of valuable information, 1200 pages of rare values—printed on heavy white book paper, carefully edited, handsome cover by the famous artist, Ike Morgan—a catalogue that should be in every household.

## You Can Get a Copy Absolutely FREE

Also a handsome D'arcy photographure, suitable for framing, by ordering any of the 14 lots described below. Don't delay. WARD'S CATALOGUE is the POPULAR ONE everywhere, and is preferred by almost everybody to all others. We expect thousands of applications as soon as this announcement is read, so we urge you to get your application in early.

### It's the Only Complete Catalogue

Published the only one that is absolutely up to date and complete in every detail, the only one that quotes nothing but perfectly dependable goods at prices the lowest obtainable anywhere. Catalogue No. 73 is all that a good catalogue should be. It represents the largest stock of goods in the world—21 different divisions, each a store in itself, 85 separate and distinct lines open for your examination. Practically everything we have to sell is included; no sending for special catalogues after you receive the big one. Everything is in Catalogue No. 73 this year—an improvement we know will be hailed with delight by our thousands of friends and old customers.

**Edition de Luxe** Nothing like it ever before attempted. Printed on heavy white book paper, making it strong and durable, rich in appearance, easy to read, and more desirable in every respect. The Edition de Luxe is a triumph in catalogue making. It contains over 30,000 illustrations, most of which are new and printed perfectly on the fine white paper used for the Edition de Luxe. 35,000 quotations of high-grade, absolutely honest merchandise, set in new type cast especially for this catalogue; 12 pages of carpets, rugs and portieres printed in actual colors, 2 pages of men's neckties in actual colors, about 200 pages of satin finished paper showing actual photographic reproductions of lace, embroideries, millinery, woman's fashions, furs, etc. This catalogue weighs over 6½ lbs. and is 3 inches thick. When we tell you that other catalogues don't weigh over 3 lbs. you will quickly see what an enormous book Catalogue No. 73 is. Experts pronounce it the finest specimen of a catalogue ever produced.

**For the Men** The largest stock of hardware in the world home, your barn, your farm, your ranch. No matter what your occupation is, we have what you need—your clothing, your shoes, farm implements, vehicles, harness, photo and electrical goods, books, watches, etc. Everything from windmills to fish hooks—all at prices so low that you can save anywhere from 15 to 50 per cent by trading with us.

### For the Women

The very latest styles in women's wear, furniture, notions, groceries, glassware, toilet articles, stationery, sewing machines, books, jewelry, carpets, curtains, and 10,000 other good and necessary articles. Particular care has been given to our fashions in women's wearing apparel. Our buyers have picked up the best of everything shown in New York and other Eastern markets. Our styles are correct and the very latest—later than those shown in any other general catalogue. Don't buy from an old catalogue with last year's styles. Catalogues of other firms issued ahead of ours contain last year's fashions, and are not trustworthy. We know this to be a fact, because this year's styles were not shown by the New York designers until August 1, and we have delayed the publication of Catalogue No. 73 until our buyers returned from New York with the new samples for next winter.

It is our policy to lead the procession, and you can positively rely upon our catalogue. Among other things of interest to women in Catalogue No. 73 is the largest retail stock of dry goods in the world. Choice silks, dainty linens, fashionable dress goods, sheeting, towel, cotton goods, etc.; in fact everything a wide-awake dry-goods store should have—all of the best quality and very reasonable in price. With Catalogue No. 73 in your hands you can, at your leisure, select everything for your home, for yourself, for your family, without the trouble of a shopping trip, and with the absolute certainty that everything will be just a little bit better than you expect.

### For Everybody

Catalogue No. 73 will be found a source of great convenience and economy. Regardless of your age, your occupation, or your wealth, it enables you to select exactly what you want without the annoyance of visiting a dozen stores and taking what they have to offer, whether it is just what you want or not.

**We Do Not Sell Trash** Nothing but the best is good enough for our customers. Many firms are making a noise about their low prices; but don't be misled. A low price is no bargain unless you get quality. Anybody can sell worthless goods cheap.

## Catalogue No. 73 is FREE with any of the following Bargain Lots

With each lot we pack an attractive D'arcy Photographure with our compliments. Cut out and use order coupon below

### Lot A

To be Shipped by Freight, A copy of Catalogue No. 73 (Edition de Luxe) and a souvenir photograph, both absolutely free. For Lot "A" \$2.40. Order this lot ALONE if you want it.

### The D'arcy Photographures

Beautiful reproductions of famous masterpieces FREE with our compliments, with Lot "A" and Specials "B" to "O"—Platino Black Tones, 16x20 inches. Fine Kid Finish Paper. The D'arcy Photographure Gelatin Process, the finest method known for securing perfect photographic effects. The accuracy with which details and perspective, as well as the general beauty of the original paintings, are all preserved in the pictures has caused experts to pronounce the reproductions far superior to the finest and most expensive photographs. Any one of these five magnificent photographures would be a beautiful decoration to the finest home. The originals were painted by masters whose names have long been famous the world over. FIVE SUBJECTS, EACH ONE A MASTERPIECE:

A Country Scene in Normandy, by Verschuor, a famous Dutch landscape painter. Not to be convinced, by Alfons Spring, a Russian artist. Fleeing From the Flames, a remarkably dramatic painting, by Adolf Schreyer, a German painter. The Farmer's Lunch, by Julien Dupre—a beautiful pastoral painting. The Defense of Zapote Bridge, by Verestchagin, the famous artist who was killed on the Russian battleship Potemkin at Port Arthur.

**Special B**—Polished Oak Writing Desk, 5 feet high, 30 inches wide. A fine piece of furniture. A catalogue with each . . . **\$3.95**

## Completes the Educational Series

This number completes the Educational series. We have given instructions how the various crops can be controlled for marketing and how prices can be made. No person can have read these numbers without being better prepared for farm work and particularly that part of it which relates to marketing the crops. This is the most important part of a farmer's work, yet strange to relate, it has been totally neglected—ignored—until this paper undertook to help farmers about two years ago.

We will not dwell on what has been accomplished in practical results already, our readers know. We only wish here to assure our readers, one and all, that every crop farmers grow can be controlled for marketing and compel the price. Farmers are the only people who can control the marketing of the A. S. of E. is the only organization with a plan that is practicable to control marketing of farm products. This is true.

Nearly thirty thousand people took part of our three months offer. These people now bid farewell to Up-to-Date Farming and no more learn in its columns? Or will they send the subscription price for a year, 50 cents, to continue to grow in knowledge of twentieth century agriculture,

which will be intensive and profitable agriculture? Or, better yet by far, send \$1 and join the army of co-operating farmers, receive and wear the badge and encourage the one hundred thousand other farmers who have already joined this movement that is sweeping the land. Will you come to the front or will you always stay in the rear?

## The Third Power

We thought, when we began printing this book as a serial, that we could print it in the six issues of Up-to-Date, constituting the Educational series but we have failed. We gave all the space to it that we could possibly spare and there is nearly half to run yet. The question will now arise with the many thousand readers, How will I get the balance? The only ways are to subscribe for Up-to-Date Farming, beginning with September 15th number or buy the book.

Of course we expect every person who has taken this paper for three months to become a yearly subscriber. This was our object in making the offer, coupled with a desire to benefit farmers by teaching them controlled marketing and price making. We will be greatly disappointed if many of them refuse to renew and allow this paper to stop now when they have only got a glimpse of the greatness and beauty of agriculture in America, when farmers come to the

front where they should be.

The best part of The Third Power is yet to be printed. It increases in interest until the last paragraph. Arrange for the continuation by subscribing at once or you can buy the book in paper cover for 50 cents; in cloth for \$1; 10 cents extra in each case for postage.

## Special Lines Organizing

The tobacco growers are organizing very rapidly. They propose to hold a national convention at Lynchburg, Va., in October, to agree on a schedule of prices for the 1904 crop. The bean growers in Michigan are organizing. Geo. G. Wynans, of Hamburg, and Milo Marsh, of Lansing, are the prime movers. If you want a meeting or further particulars, write to either of these gentlemen. The barley growers are organizing under the leadership of W. C. Webber, Rochester, Minn.

All these industries are organizing in the American Society of Equity.

## Controlled Marketing

Mr. George H. Shannon, president of the National Live Stock Exchange, in a recent interview, said: "In view of the present condition of the cattle market, I would suggest to those

having cattle ready for market, to spread their shipments out as much as possible, by dividing same and making two or more shipments instead of one, thus equalizing receipts, avoiding congestion and saving the heavy decline in market values occasioned by excessive 'runs' on one or two days in each week."

How can excessive runs be prevented unless there is a head to the whole business and a medium for communication with members. It cannot be done. Controlled marketing, if intelligently controlled, will prevent gluts, and make prices, but it cannot be done without a paper or bulletins.

## A Slight Tax

If the farmers would contribute one-tenth of one per cent. of the amount they yearly contribute to the never-satisfied man of speculative price for one season, they, and not the "bulls" and "bears" of the boards of trade, would be benefited by the millions that are now flowing into monopolies' coffers; then these unjust tributes they now pay to speculative price fixers would be turned into their own pockets. Then, and not till then, can the tillers of the soil hope to receive a just profit from the results of their toil.—The Livingston Herald, Howell, Mich.

The price consumers pay, is no criterion by which producers' prices may be judged. Purchasers of food supplies should remember this.

## UP-TO-DATE FARMING RAISING AND MARKETING

This is the last issue of the educational series, and we make the dairy interest the leading feature.

While dairying is widely extended, it is a business with local characteristics—there are strong localities devoted almost entirely to it.

Dairying is a business, a trade. To succeed at it one needs to serve an apprenticeship.

No matter what line of business one may take up, he must have good tools, good machinery. The dairyman's most important machine is his cow. None but the best are good enough.

No matter how good the machinery one may use, results cannot be satisfactory unless that machinery be well handled. That is emphatically true of the dairyman's machine, the cow.

Cleanliness should be the dairyman's first, second, third and last consideration. There is no room for dirt or impurities in any part of the business.

Don't expect the cow to make good milk and butter fat out of bad water and bad feed. If she turn out the product she must have the necessary raw material.

If you have a cow that you can't afford to feed well for milk, feed her for beef, and turn her over to the butcher.

Encourage the consumption of cheese. People like cheese, and it is nutritious, but it is highly concentrated, and most persons eat too much of it at a time, or they eat it when they don't need anything, after they have already finished a full meal. Then they think it burdens the stomach.

It is a pity that greedy man should set up shop in opposition to the meek faced cow, but he had to give his product a mighty hard name, no harder though than is the thing itself—oleomargarine.

The Jersey for butter,  
The Holstein for cheese,  
The Angus for steak,  
And Old Red for all these.

Dairying and small fruits run mighty well together. Dairy work is night and

morning; small fruit work is through the day, and the dairy farm furnishes the manure for the fruit plants.

Clover, pea hay and shredded corn fodder is as good "roughness" as can be had for milch cows. Where alfalfa grows of course that is to be counted in with these.

Sept. 1st. Boom the pigs. Feed and handle the colts. See that the calves lack nothing. If the lambs have been dwindling for a few weeks, lag behind the flock and frequently lie down, it is stomach worms, most likely, and a bad case.

While out among the live stock, remember that an early spring pasture is an excellent thing, especially for the young stock. Rye makes it. Sow it now.

It isn't a bit too early to begin to feed the stock that is to be fattened for the fall market. Don't put anything on the market until it is at its best, then demand the top price.

Prosperity on the farm is our prosperity, and everybody's prosperity.

That's one reason why Up-to-Date Farming wants better prices for farm products. Another reason is because it is RIGHT. All we ask is that the farmers themselves help us. We'll make it.

### Actual Cost of Milk

The experiment stations have busy people. They make many "discoveries" to-day to find that they are not "it" tomorrow. But, for all that, they are very good people, make some intelligent and useful investigations, and develop some valuable truths. Some of them have been trying to determine the actual cost of milk, and have fixed it at 55 cents per 100 pounds, or 13.3 cents per pound of butter fat. This cannot be very reliable, though, because the cost of milk and butter fat depends upon too many varying conditions—cow, feed, water, treatment, etc., etc., etc. Aunt Sally can take old Bess and her clover and blue grass pasture, with the spring bubbling up from under the root of the maple, and make milk and butter fat cheaper than they can at five or six experiment stations.

### The Dairy Industry

An idea of what the dairy industry is, or may be, can be had from the following report of the dairy business of one county (Jefferson) in Wisconsin. That county has but sixteen townships, but the number of creameries in the county is 74; value \$213,800; number of cheese factories, 6; value \$9,300; number of patrons of creameries, 3,087; number of patrons of cheese factories, 201; number of cows contributing to creameries, 32,087; to cheese factories, 2,275; pounds of milk received by creameries, 138,679,452; pounds of butter made, 5,565,014; milk received by cheese factories, 9,444,160 pounds; cheese made, 893,834 pounds; received for butter, \$1,469,959.02; for cheese, \$94,884.23.

The county has a cow for every man, woman, and child, and the annual returns from milk alone are over \$2,000,000.

### Cheese as a Food

It is a wonder that the American people have not become greater cheese eaters than they are. It is certainly a very excellent food, and where meat has to be bought after it has come through the machinery of the packing houses, it is cheaper than meat. A full cream cheese is, approximately, one-third water, one-third fat and one-third casein, and it should cost not to exceed 16 cents per pound. Good beef is

## DON'T MAKE A MISTAKE IN BUYING A CREAM SEPARATOR

The average farmer can't afford to make a mistake in buying a Cream Separator. It is something he is only likely to do once in a lifetime—at any rate if he does it right.

Why not profit by the experience of the oldest, largest and most competent users of Cream Separators. These it may readily be learned are almost universally users of the

approximately two-thirds water and one-third nutritive matter, though not all the solid matter of meat is digestible. This would cost about 12 cents a pound. Hence, taking the nutritive value of the two products, cheese is the cheaper. In spite of this fact we use less than four pounds of cheese per capita in this country.

It is most likely that the reason why cheese is not more popular as a food is because it is very concentrated, and to eat it as we are accustomed to eat other food, we are very likely to eat too much, which is followed by unpleasant results that we charge to the cheese rather than to our reckless and extravagant way of eating. When we eat cheese we must eat plenty of lighter stuff, just as we feed the horse or cow a bulk of hay or fodder, and only a small ration of grain.

It is true that the cheese product exceeds the demand for consumption, but the cheese maker may be encouraged by the fact that every facility is now provided for holding, curing and shipping cheese. And the average American may be informed also that the quality of American cheese has been greatly improved, and there is no reason why beef trusts and packers' strikes should seriously affect the people. Eat cheese—not as something to be eaten after you have already had a full meal, but as the nourishing part of the meal itself.

### \$19.90 BIG PARLOR ORGAN

FOR \$19.90 we furnish this big handsome solid golden oak Parlor Organ, stands 6 feet high, 4 feet long and 2 feet wide, latest style for 1904-5, guaranteed the equal of organs sold by others for nearly double the price. Shown by a large picture and fully described in our big free Organ Catalogue sent to any one for the asking. AT \$25.95 to \$51.95 we sell other beautiful ORGANS, all made in our own organ factory and sold direct to you at only a little above actual manufacturing cost, at much lower prices than any dealer can buy. WHY we can build and sell the best ORGANS in the United States for so much less money than all other manufacturers and dealers, is all explained in our new free Organ Catalogue. OUR NO MONEY WITH ORDER PLAN. FREE TRIAL OFFER. OUR TWENTY-FIVE YEARS BINDING GUARANTEE, fully explained in the Big Free Organ Catalogue sent on request. HAVE YOU ANY USE FOR AN ORGAN? If not, have you a friend who could use an organ if the price was low enough, the offer liberal enough, the greatest chance ever known? If so, cut this ad out and send to us, and the catalogue, our several propositions, and our new and most astonishingly liberal offer ever made, will all go to you free by return mail, postpaid. ### A Big Package "Salt of Life" Free to the Sick

Send for it today

Send for it today

This is not a drug, nor a medicine, nothing made by human hands, but a direct gift from God to kill disease and lengthen human life. This salt is a wonderful substance discovered in the mountains of Virginia. The world stands astonished by its marvelous curative powers. It is the essence left by the evaporation of the waters of Virginia's famous Seven Iron Alum Springs—a positive panacea for all human ills. You can now drink from this Fountain of Life, FREE. No matter how sick or old you may be, what the disease is, it cures. Doctors may pronounce you incurable, but Salt of Life dumbfounds them with surprise. Even when everything else has failed you this marvelous natural remedy will cure and restore you to perfect health. Salt of Life conquers all disease be it internal, external, chronic, malignant, infectious or death-dealing. Invigorates and strengthens; purifies the blood, adds bone and muscle and prolongs the life-giving elements. It brings all the joys of life and it costs nothing to find this out, for we will send you a big package so you may test it free, if you will only send us your name and address. SALT OF LIFE CO., 110 Governor St., Richmond, Va.

# UP-TO-DATE DOWN-TO-EARTH PRODUCING AND MARKETING

The moulting season ought to be over. There may, however, be a few hens still in the moult, and they should have a little extra care.

And now is the time to lay the foundation for winter eggs. The early pullets must be the basis of it.

The next essential to winter eggs is comfortable quarters. Arrange them before winter.

The young turkeys are "gallant rangers" now, and they no doubt get a great deal of feed abroad, but they should be fed enough at home to keep them gentle.

Don't let the young roosters get too large before you market them. Capons are very profitable near the cities where there is a special demand for them. To test the matter, a lady had a young rooster caponized, and then permitted him to grow up with his mates, having precisely the same treatment. All were sold at the same time. The roosters brought 77 cents each, the capon brought \$1.95. The only difference in cost was the five cents she paid for having him caponized.

A mistake may be made in keeping too many hens through the winter. Don't keep more than you can house comfortably, and care for properly. Winter board of fowls is expensive, and it takes eggs to pay it. It is well to remember in this connection that roosters don't lay eggs.

Bee keeping and poultry raising fit very well together, but each require more or less skill and care in management, and ladies often make good success with both. But the ladies of the farm usually have enough "business,"

without any side lines, unless the men are to help with them.

Don't think of marketing fowls that are not fat. You would not expect to sell a house at a profit that only had the frame up. The finishing touches bring the money.

The first of September is a good time to clean out the poultry house.

In Canada, farms are being devoted specially to the fattening of poultry, and they are proving profitable. Yet thousands of dollars worth of poultry go to market annually without a thought as to whether the fowls are fat or not. Nothing should be put on the market until it is in condition to take its place at the top.

Writers on poultry still talk about "pin money." It is time they should quit it. That is a term used in old English law to represent an allowance the husband was required to make to his wife, and it grew to be regarded a matter of little significance. The income from the poultry is often the surest, if not the most important, income of the farm.

Don't set aside any room in the poultry house for fowls that won't pay their board. Those who make money from poultry must exercise judgment, the same as those must who make money in any other way.

I am persuaded that much of the dwindling in the flock is for lack of grit even on the farms. Haul up and dump a load of gravel in the yard, and see how soon the chickens will get busy.

Some one declares that the best egg producer in the market is a plentiful supply of good, clean water. It is, at least, a good health maintainer as compared with the filthy water fowls are too often compelled to drink.

## 50-CENT CATALOGUE

IT WILL COST YOU NOTHING

TO RECEIVE BY RETURN MAIL, POSTPAID, the largest, handsomest, most complete and by far the lowest priced general merchandise catalogue ever published. NEVER BEFORE SOLD for LESS THAN 50 CENTS. Worth easily \$8.00. Now FREE to any one for the asking. Cut this ad. out and send to us on a postal card, say: "Send me your big No. 114 Catalogue free," and it will go to you by return mail free, postpaid. **ENORMOUS SIZE. BIGGER THAN EVER.** 1,200 large, over 100,000 quotations, over 10,000 illustrations. Our new and marvelous low price making policy fully explained; 55 vast merchandise departments fully represented, much larger than ever before; prices much lower than ever before. New and lower prices on everything carried and sold in the largest store in the world. Makes all other catalogues look very small. **MAKES ALL OTHER PRICES LOOK VERY HIGH.** Is shown in one section of the Big Book. If you have ever bought anything from us, or if you ever do buy anything from us, then something in this big business belongs to you, and it is all explained in a 16-page section of the Big Book. **THIS PART OF THE BOOK IS YOURS, not OURS.** The most liberal offer ever heard of.

### 16 PAGES—YOUR PAGES

devoted to explaining how you can make money by getting others to send to us. A big chance for dealers. Money making made easy for everyone. The grandest offer of the age. An opportunity that is yours—something that belongs to you, and no other house.

### QUICKER SHIPMENT

As we carry in stock constantly all kinds of merchandise in amounts far greater than all other mail order houses combined and we have factories and warehouses for immediate shipment South, North, East and West, we can ship you goods much quicker than any other house. If you send your order to us, no matter where you live, you will get your goods in just a few days, usually less than one-half the time it takes to get goods from other houses, and on a great many goods you order from us you will have less than one-half the freight charges you would have to pay if you ordered from any one else, for if your order contains goods we can ship from one of our factories or warehouses nearest you, we will ship from the warehouse nearest you, bringing the goods to you in a day or so at a very low freight rate.

FEEDS FOR ONE CENT

## MADE HIS SOW GAIN 400 LBS. IN 100 DAYS

INTERNATIONAL STOCK FOOD CO., MINNEAPOLIS, MINN. BAINBRIDGE, INDIANA.

Gentlemen:—My sow gained 400 pounds in 100 days by feeding her about 75 cents' worth of "International Stock Food" and 20 bushels of corn with some slop. The total cost of the "International Stock Food" and grain I fed was less than \$5.00. How is that for profit? Over 20 per cent. profit is a very satisfactory rate. One of my neighbors gave me the sow because he thought she would die within a week. She could not walk to my place, a distance of one and a half miles, and I had to haul her. I never saw or heard of any "Stock Food" having such great value as a conditioner and fattener. I had fed a good deal of "International Stock Food" before this and take pleasure in recommending its constant use by all farmers.

A. K. CAMPBELL.

Beware of Inferior Imitations and Substitutes. Write Us About "International Stock Food." We Have Thousands of Testimonials and Will Pay You \$1000 Cash If They Are Not Genuine.

"INTERNATIONAL STOCK FOOD" FEEDS FOR ONE CENT. It won the Highest Medal at Paris Exposition in 1900 as a High-Class Medicinal Preparation, made from powdered roots, herbs, seeds and berries, to give to Horses, Cattle, Sheep, Goats, Calves, Lambs and Pigs, in small amounts as an addition to their regular grain feed to secure better digestion and assimilation so that each animal will obtain more nutrition from all grain eaten. Scientific authorities prove that the average animal digests 55 per cent. of the average kind of feeds. "International Stock Food" will cause them to digest 70 to 75 per cent. We paid the government \$40,000.00 war tax because "International Stock Food" was a high-class medicinal preparation. Many other kinds did not pay any war tax because they claimed to the government that they did not use medicinal ingredients and did not claim medicinal results. You can afford to use preparations of this kind only on a medicinal basis. "International Stock Food" purifies the blood, "tones up" and permanently strengthens the entire system. It cures or prevents many forms of disease. It will save you \$10.00 per year in feed of Every Horse You Work and its use will only cost you \$2.50 per year. It saves grain and 20 to 30 days' time in growing and fattening all kinds of stock and is endorsed by over one million farmers who have used it for fifteen years. It is absolutely harmless even if taken into the human system. Beware of the many cheap and inferior imitations and substitutes. No chemist can separate and name all of the ingredients we use. Any company or chemist claiming to do so is a Self-Confessed Ignoramus or a Paid Falsehood. Insist on having the genuine "International Stock Food." It is sold by 100,000 Dealers on a "Spot Cash Guarantee" to Refund Your Money if it ever fails to give you satisfactory, paying results and its use only costs you FEEDS FOR ONE CENT.

## A \$300000 STOCK BOOK FREE

### IT CONTAINS 183 LARGE ENGRAVINGS

WE WILL PAY YOU \$10.00 CASH IF BOOK IS NOT AS DESCRIBED

The Cover of this Book is a Beautiful Live Stock Picture. Printed in Six Brilliant Colors, and Without Any Advertising on it. Size of Book is 12 by 9 1/2 inches. It cost us \$3000 to have our Artists and Engravers make these Engravings, which are the finest engravings of Horses, Cattle, Sheep, Goats, Hogs and Poultry that you have ever seen. These 183 Engravings are all made from actual photographs and are worthy of a place in any library. It also gives Description, History and Illustrations of the Different Breeds of Horses, Cattle, Sheep, Goats, Hogs and Poultry. It contains Live Engravings of many very noted Animals. It contains a Finely Illustrated Veterinary Department That Will Save You Hundreds of Dollars, because it describes all common diseases and tells you how to treat them. The Veterinary Illustrations are large and absolutely reliable. All Correspondence will be promptly answered as we have an office force of 235 including 121 typewriters.

WE WILL MAIL BOOK TO YOU FREE, POSTAGE PREPAID

If You Will Write Us At Once, Letter or Postal Card, and ANSWER THESE TWO QUESTIONS:

## \$15.00 TO TEXAS

August 9 and 23, September 13 and 27, Cotton Belt Route will sell round trip homeseeker tickets from St. Louis to Dallas, Ft. Worth, Waco, Houston, Galveston, San Antonio, Corpus Christi, Brownwood, Amarilla, Quanah and intermediate Texas points at rate of \$15, stopovers both ways, return limit 21 days. "The Texas Train," a fine fast service to the southwest, leaves St. Louis daily, 5 p. m. Write for particulars.

E. W. LABEAUME, G. P. & T. A.

Cotton Belt, St. Louis, Mo.

## ALL ABOUT THE NEW SOUTH

The Bedford Breeze, a monthly magazine published at Bedford City, Va., by a former Iowa farmer, tells the exact truth about the Agricultural conditions in the South, and gives especial attention to the making of new homes by Western and Northern Farmers. It is one of the most sprightly and readable magazines devoted to the up-building of farms in the South. 25c per year—Send for a sample copy free.

THE BEDFORD BREEZE Bedford City, Va.

## UP-TO-DATE AND SMALL FRUIT

It pays to can peaches, but I really believe too much hard, hot work is done over the stove during canning season. Use more green fruit, and do less canning. I have known women to fill all their cans with apples, and then hurry to use them up so as to again fill the cans before the apple season was over. What is the use? Use the green fruit so long as it lasts, and can only at the close of the season. Apples can be kept the year round. What is the use then in canning them?

This is the time of year when orchards are too often permitted to grow up in weeds and sprouts. Our Up-to-Date people don't do that.

Carefully cut out and burn the blighted twigs, in both pear and apple trees.

In large sections of the fruit belt there are very few apples this year. The trees are resting, and will most likely bear very heavily next year. Prepare for it by cleaning up the orchards, plowing them, and, if the trees are old, give them a little later a thorough and systematic pruning—take all the surplus brush away and make new trees of them. From most large trees, as they are in the average orchard, a fair sized brush pile can be taken.

Head the peach trees low. That is, let them sprout out near the ground and make several trunks instead of one only. This advice is specially applicable to the northern edge of the peach belt.

A heavy dressing of lime is a first class application for the orchard in all but the limestone regions. In all the lower glacial formations the soil is more or less acid, which is unfavorable to fruit trees. Besides most fruits do best in soils rich in potash.

Don't lose sight of the importance of marketing. If you depend upon a local market, take pains to work up a special trade, and then don't fail to deliver precisely the kind of fruit you sell, and deliver it exactly on time, and in the best possible condition. No up-to-date breeder ever takes a horse to market without first rubbing and currying him. And he don't rub the horse's back only, but the entire animal. So don't put a few extra fine specimens on the top of the basket, crate or barrel—make each package an honest one.

Orchardists must necessarily depend upon nurserymen for their stock. All nurserymen are not dishonest; perhaps not many of them are, but there are some who must be placed in that class, and in buying fruit trees is where the purchaser cannot afford to be deceived or dealt with dishonestly. It takes too long to discover the wrong and possibly destroys a life's opportunity. We urge our Up-to-Date people to be specially careful in buying fruit trees and plants. Better deal with well known firms.

Aunt Eliza thinks there are few things superior to her bed of petunias.

And those brilliant nasturtiums! What can make a more showy dressing for the summer house?

The writer has been spending several days in the country, both in prairie and woodland. After all, the flowers of God's own planting are very fine—it is difficult for man's most patient skill to surpass them.

The weeds! The weeds! Rich soil and plenty of rain is a combination which makes big weeds and lots of them. Our Up-to-Date people are not allowing them to grow up in the garden to make seeds to trouble the folks next spring.

Watch this paper. Learn the price your crops are worth. Hold for the price if you can; sell if you cannot hold. Enough can hold to put the price to the market quickly on every crop this country produces; but if it takes some time, hold on and you will get your price because it is all needed for consumption.

It matters not what farmer's society you have joined. You need Up-to-Date Farming to get the necessary advice about prices and controlled marketing. This is the ONE paper that every farmer in America must read.

### FREE SEED REPORTS.

We are receiving some beautiful reports from our subscribers about the seeds and potatoes we gave them last spring. We are always glad to hear from our pleased and benefited subscribers, therefore ask others to report results. Following are a few specimens:

The one-half pound of potatoes received of you last spring made twenty-four pounds of nice large potatoes and was well pleased with rest of your seed collection and more so with your valuable paper.

Yours for success,  
WILL A. HOUSER, Benton, Ky.

I dug my potatoes, Up-to-Date No. 1 the three little ones you sent me and I got 218 potatoes from the three little ones you sent me, is that good or has anybody got more than this from three.

J. E. SEBRING, Hartford City, Ind.

I planted the one-half pound of Up-to-Date No. 1 potato and raised twenty-six and one-half pounds. They are nice potatoes. Will save them for seed. Please send me the permanent name of them.

Yours truly,  
CHESTER WATERS, Richwood, O.

### IMPURE BLOOD

Almost every one is a sufferer from some disease caused by impure blood, but only here and there one recognizes that in his blood lurk the seeds of disease, ready to manifest themselves at the first opportunity, in some of the innumerable ways so dreaded by everybody. Every neighborhood has its afflicted, many seemingly incurable, with complaints that have gradually made their appearance, growing a little worse with each change of the season until Chronic Ailments, such as Stomach, Liver and Bowel Troubles are well developed. Each takes one or more forms peculiar to such diseases, but all are due to impure blood, to the absence from the blood of some necessary vital force, or the presence of some foreign element, which impairs its power to faithfully perform its duties, causing a long list of complaints, which yearly drag thousands to the grave.

To purify the blood, eradicate disease, build up the system, Vitae Ore is without a peer among remedial agents. No other remedy can equal it as a constitutional tonic, a blood vitalizer, renovator and regenerator. It contains elements needed by the blood, which are absorbed by it, and, taking their proper place in the circulation, expel all foreign secretions that have been undermining the health. It supplies the wants of nature and can be depended upon to do its work under all conditions.

Read the 30-day trial offer made in this issue by the proprietors, the Theo. Noel Company, of Chicago.

### INDIANA STATE FAIR

Following its usual custom, Indiana will hold its annual fair at Indianapolis, September 12th to 16th.

Big specialty acts, including Holloway's High Diving Horses; Dare Devil Tilden, Bicycle High Diver; Mille Zoar, novelty slack wire artist; Rice and Adams, comedy acrobats; Reklaw, Champion Comedy Cyclist and the original four Flying Banvards will be given five times a day in front of the grand stand.

The Indianapolis Military Band will furnish the music. Prizes aggregating \$3,000 are offered, prize list of which can be obtained by mailing postal card to Chas. Downing, Secretary, Room 14, State House, Indianapolis.

### FARMERS USE OWN HUSKERS

If through idle curiosity we should wander from farm to farm, looking into conditions of affairs and noting the changes most prominent in the last few years, one which would be quite noticeable would be the fact that almost every farmer owns his own corn husker.

A few years back, such conditions did not exist. The farmer was compelled to depend upon the wandering husker which came to him at the owner's convenience.

It became evident to the progressive farmer that his time was worth money—he could not wait for the wandering husker. He wanted his work done quickly and in the proper season.

Thus it was that a simple, easily operated and inexpensive machine was invented—one that will husk, cut and shred the corn, requiring only 6 to 8 H. P. to do the work. Hundreds of farmers are using them.

The most popular machine in use is that manufactured by the Rosenthal Corn Husker Co. This machine husks, cuts and shreds the corn, is inexpensive, and sufficient power is found on every farm to run it.

The Rosenthal Company report a large demand this season, as the existing conditions indicate a heavy crop.

This company is sending out some very interesting reading matter relating to corn huskers. Any farmer interested may have same by sending his name to them. Their address is, ROSENTHAL CORN HUSKER, Co., Box 4, Milwaukee, Wis.

### RUSSIA-JAPAN WAR ATLAS, 10 CENTS

Three fine colored maps, each 14x20; bound in convenient form for reference. The Eastern situation shown in detail, issued by The Chicago & North-Western R'y, mailed upon receipt of ten cents in stamps, by W. B. KNISKERN, P. T. M., 23 Fifth Ave. Chicago, Ill.

## STOVE REPAIRS

WE ARE THE LARGEST MAKERS OF STOVE, RANGE, AND FURNACE REPAIRS IN THE WORLD AND CAN SHIP IMMEDIATELY AND SAVE YOU MONEY

WE SELL EVERYTHING NEEDED FOR A STOVE EXCEPT FUEL.

We Have the Repairs for Your Stove. Price Given on Request. Follow instructions carefully and We Guarantee a Fit.

Give name of stove (give all that appears); number of stove (as it appears on stove), usually found on pipe collar or front part of stove; latest date of patent; name of maker. State if lining in stove is brick or iron; if stove has a flat bottom grate or in two pieces; if fuel can be put in through front door or put in through covers. What kind of fuel does stove use? Parts wanted.

### THE OLD, OLD STORY--AND A NEW

BY CLARENCE RYLER

After all was said and finished,  
We began right where we quit,  
With the time worn words unuttered,  
"We can't pay the mortgage yet."

Father's farm with age grew feeble,  
Mother too with age grew slow;  
Then we knew we couldn't pay it--  
Money that we long did owe.

Strangers came and took possession;  
Parents both soon passed away;  
Sister and I were told when leaving,  
"Make your living best you may."

But there came among the farmers,  
A slight change that we could see,  
Starting like a little ripple  
Far out in the open sea.

And it grew and grew in volume,  
Like the mighty waves that beat;  
The American Society of Equity,  
Is the mighty thing you see.

It has come to even prices,  
By a plan of equal fee;  
Farmer friends, its for all workers,  
As much as 'tis for you and me.

Equity don't mean oppression  
To any class or any one;  
But it does mean equal prices,  
And what's just to every one.

### OUR NEW CERTIFICATE OF MEMBERSHIP AND MEMBERS' MANUAL

We are now able to announce a new pocket form of Certificate of Membership and Member's Manual combined. It is designed to show the validity of a person's claim to membership in THE AMERICAN SOCIETY OF EQUITY at all times. This is to be accomplished by a system of stamping with official "Dues Stamps" like cut below. It will also show a MEMBER'S affiliation with any Local Union. It is designed to take the place of signs and passwords so that members may have a way to verify their claim to fraternal courtesies, and to prevent imposition.

It is a vest pocket booklet, size 2 3/4 inches by 5 1/2 inches, and contains sixteen pages besides a cover. It will be issued only by the National Union direct to all new members and to all old members as they renew their subscriptions, which at present corresponds with the annual dues to the national union. In other words the old members are only required to keep their subscription to the official paper paid in advance to keep their membership alive and this policy will be followed until object No. 1 is accomplished. It is hoped that all members of the society will procure this new Manual as soon as possible.

The Manual will be issued to old members whose subscriptions expires any time in 1905-6 or 7 on receipt of 5c to cover cost of issuance and mailing and to all others on renewal of their subscription to the official paper.

ANNUAL DUES are the subscription price of the Official paper, 50 cents. Co-operation, controlled marketing and price making CANNOT be carried out without a medium of communication between headquarters and members. Hence, the necessity of the official paper. You can only keep your membership alive by keeping your subscription alive.

As above stated, these manuals will be issued to all members as they renew their subscriptions to the official paper, which amount, 50 cents, pays all expense for one year. They will be issued on request if accompanied by 5 cents to cover cost of issuance and mailing. In either case the below blank should be used.

Judge—"Did the prisoner offer resistance when arrested?"  
Officer—"None worth noticin', yer honor; only two dollars."

If a billy-goat's a butter, is a nanny-goat a buttress?

"What makes you think Bilkins is above his wife?"  
"Bound to be; she keeps blowin' him up."

Proud Mother—"Do you hear my daughter? She's taking music lessons by the quarter."  
Dyspeptic—"It sounds to me like she's taking 'em by the pound."

## Spavin and Ring-bone

Once hard to cure—easy now. A 45-minute treatment does it. No other method so easy, quick and painless. No other method sure.

### Fleming's Spavin and Ringbone Paste

cures even the very worst cases—none too old or bad. Money back if it ever fails. Lots of information if you write. Book about Spavin, Ringbone, Curb, Splint, Bog Spavin and other horse troubles sent free.

FLEMING BROS., Chemists,  
307 Union Stock Yards, Chicago, Ill.

## LETTER FROM DAVID DOBETTER

—No. 44—

Near Williamsport, Ind., Aug 15, '04.

Dear Mr. Everitt: Everything running along nicely; crops coming on all right; boys and girls and everybody happy—what more could we ask for on Four-Leaf Clover Farm? I am pretty well satisfied myself. Bound to be so, anyway. Of course, things do not always go along without little things to trouble. We have none of us reached heaven yet. It isn't on this old earth to any great extent; but here and there we may find patches of it, and we at Four-Leaf Clover Farm think we have about as near found it as folks usually do in this world.

Speaking about the little things that sometimes annoy us calls to my mind something along that line that happened only the other day. I was out in the garden working away with a song in my heart and a thankful spirit that our lot has fallen in such pleasant places when I heard a couple of farmers jogging toward the city talking to themselves. They evidently had been looking things over at our place and remarking on the present condition. At any rate this is about what I heard one of them say: "I never went to an agricultural school myself. I don't expect to; and I have no money to send a boy of mine there. If I had, I would use it for something else!" That was all there was of it, but for a minute I must confess it did roll me up clear down to the bottom. I knew it was also a slap at Ben and me. For a little while it took the tuck all out of me.

But after all, Mr. Everitt, the man did not know what he was talking about. Nobody that speaks that way does. I don't know who the man was. He came from away up the river. I never saw his farm, but I will wager that if he had kept on and told the exact truth about himself he would have said something like this: "I never was much of a farmer myself. I never took any pride in my business. I have always had bad luck with my cows and other stock. Things always have looked like the very Old Nick around my house and barns. My boys have all put out for town except one, and he is just waiting till he is of age and then he will go, too. This talk about farming being such an awful good business is all right enough for the papers to harp on, but I never saw any of it myself." And so on. After I had really got cooled down I began to be sorry for the man, and the more I have thought about it the sorer I am.

Such talk as this simply shows how much we as farmers have to learn. Too many of us think there is no value in a good education, especially an education in the things a farmer has to do. But I know there is a value, and a tremendous value in studying this line of work. If it is worth while to go away and spend years to learn how to keep books or teach school, why is it not just as important to know everything we can about farming? I am sorry every day of my life that I did not have the chance to learn about these things. Now I am getting too old to go away and study; but I want my children to do it; and I am ashamed that I have done all I could to widen their opportunities. Ben is going back another year, if we carry out present plans. After that he will be ready to do better work on the farm than I have ever done. Already he understands more about the whys and wherefores of things than I do or ever can. You can see it in everything he does. Farm work is not a drudgery to him; it is a most congenial business and he will win in it.

We got a thresher in and cleaned up the wheat in splendid shape. The weather was fine with us and we saved every dollar's worth of the grain. We were fortunate enough to get the elevator all finished in time to receive the year's crop all right. We have a nice lot of it in already and more is coming. Some of the farmers feel as if they must have the money for their wheat before better prices come. These are the men who are in debt for their farms and must keep up their payments or lose their places. I am always sorry for such folks, for I know how it seems to be in the same boat myself. But we have made arrangements to help these close-pressed farmers out. We have a good working capital on hand and wherever a man really needs money we have decided to advance them the amount decided at a very low figure and let them wait till the wheat reaches a good living figure before selling. That is all we want—a good living price. We are none of us into this as a matter of speculation. I do not think farmers have as much of that spirit as men in some other lines of business. I am glad of it, too.

They keep talking about me for township trustee. Makes me feel queer, too, for I am no politician. So far as the honors of the office are concerned, I would not turn my hand over for them. The only thing that urges me to think at all favorably of it is because I may be able to do a little something toward helping the farmers of this community. That would be worth while. Surely, there is need of such help. Why, just look at it. In this county the whole thing is run in the interest of the officeholders. There is a regular court-house ring and they all work together. They have kept at it year after year

until they have got the salary of every official that I know of increased far beyond what it should be. Not once in a dog's age does a farmer succeed in getting on the board of township trustees; the machine looks out for that; and when by chance one does slip in, he might as well be dead as alive, so far as getting any wrongs righted. He may have lots of good ideas in his head, but the minute he sets out to bring some of them to pass he is set down on, kerthump! And there he sits ever afterward, wondering what a world this is. There is an exception to this rule, as to all others, and that is, if the new man swings into line with the powers that be, he is an awful good fellow and can hold right on as long as anybody. Yes, and there is one other exception. Now and then a man gets an election that makes the powers that be a whole lot of trouble. Such men are natural born fighters and they kick and keep kicking till they upset something and then see how rotten things really are. Then some good comes of his kicking. But he must have the people back of him. Seems as if the people would always be back of the right man, doesn't it?

These hot nights are just what we need to shove the corn along, and how it does grow! As I sit at my open window with the sash up, the smell from the fields comes in to greet me. How sweet it is! And when I turn my eyes out they rest on the great sea of green now hurrying on to ripening. Once in a while I can see an ear that is big enough for green corn. In a couple of weeks more it will begin to harden. Well, the boys have done good, faithful work there. They kept the cultivator going as long as the horses could get through the rows and not break the stalks off. You might go all through the piece and not see a single weed. That's the way we like to do our work now. And how it does pay! Not simply in the larger amount of money we get, although that is an important item, but there is a satisfaction in having everything done right. There is so much slipshod farming. That's what is the matter with most of the men who fail to make the world go. But there are fewer of them than there used to be, and I am glad of it. Well, supper is ready again. Come in and have a seat with us! Yours sincerely,

DAVID DOBETTER.

## A WORD FROM FLORIDA.

To Up-to-Date Farming: Having been requested by several readers of Up-to-Date to write something more about Florida. The climate out here is different from that of any other State of the union. Dade City is the county seat of Pasco county, and it is situated inland in the high lake region. The climatic changes are not so sudden as on the coast. The lakes abound with the finest of fish. The country is level with sandy soil. The hammock lands are very rich and grow good crops, vegetables and fruits, being the principal products, and good prices are realized for them. Two to three crops are grown on the same land in one year. Unimproved land can be had for from two to ten dollars per acre. Improved property is also very cheap where for sale. Some groves are not for sale at any price. All kinds of vegetables and fruits grow here in abundance, and farm crops do very well. Stock raising is a good business. Cattle live on the range the year round, and range is free. Stock does not require shelter even in winter, and are killed for beef off the range in summer and fall. Malaria is almost unknown. Insects, such as mosquitoes, etc., are not here, but in some parts, especially on the coast, they are plentiful.

I consider this the most delightful and healthful climate I was ever in. The cost of living is about the same here as other places. Vegetables may be had out of the garden every month of the year; it only requires a little work.

FOSTER THRELKELD.

Dade City, Fla.

## DON'T COUNT TIME AND WORK.

To Up-to-Date Farming:

It will be almost impossible to get minimum price in cotton high enough, as many cotton growers seem to count nothing for labor, land, taxes, team, tools, interest, etc., to say nothing of a profit. In other words, if a cotton growers expenses are \$35 per bale to raise and get ready for market, and he sells for only \$25 per bale, he counts it \$25 clear, when really he fell \$10 in the hole; and when you ask him what about the work of himself and family, he says, "O, I do not count my time and work anything!" Even the farmers that claim to be posted and up-to-date, seem to fall short on their estimates of what would be an equitable price for cotton. I hope people will get to where they will have sense enough to price their produce, and backbone enough to stand up for it. But it is the hardest matter to get them to understand and see that they can price. They have been made the dupes of humbugs and frauds until it seems that they are determined to be humbugged and robbed. They are afraid if they demand a fair price for their stuff, everything they have to buy will still go higher, so that conditions will be the same or worse. Let

## WHO'S YOUR FAVORITE ROOSEVELT OR PARKER?

Everybody will choose sides in the coming Presidential campaign and each should wear an emblem of their choice. What is more appropriate than a picture of the favorite? The coming election will, in many respects, be the greatest we have ever had. Campaign days will be days of activity. Loyal partisans of both sides should wear their nominees' pictures. Our buttons are illuminated in many brilliant colors. It is indeed difficult to imagine their beauty before you see one. They are the finest specimens of the engraver's art. All buttons have famous patent pin back that fastens tightly to the coat or dress.

Be the first in your town to have one. Show

them to your friends and you can take lots of orders. LIBERAL TERMS TO AGENTS. Made in four sizes:—7-8 in. 6c each, 1 1/4 in. or 1 3/4 in. 10c each, 2 1/8 in. 15c each. Postpaid at these prices. Special rates on quantities. SEND FOR OUR FREE ILLUSTRATED CIRCULAR Order now and get Special Agents Terms

(This size 10c, either party)

COOKER &amp; FORTUNE CO., INDIANAPOLIS

us not be in a hurry about putting a low price on cotton. If cotton is worth from 15 to 18 cents after it gets into the hands of speculators, it is worth that much in the hands of the producers. Let the factories buy direct from the farmers, and save from one to three extra profits. Winthrop, Ark. J. T. BOLAND.

## THREE UNIONS—214 MEMBERS.

To Up-to-Date Farming: I have organized three local unions with 214 members. We are in the cotton belt of Oklahoma, and we are preparing to sell our cotton in a bulk. We learn from the A. S. of E. that it is the only way to secure profitable prices. We will have our cotton ginned, gather it at a shipping point, and have the buyer come and inspect and buy it. Local buyers have told me that they make from \$7 to \$12 on every bale they buy. If we sell to the buyers ourselves, why not save this money. I have good hope of organizing the whole territory if we can handle our cotton as above proposed. I know you will do all you can through Up-to-Date to help us. I have made arrangements with different gins to have our cotton ginned at a reduced price. That of itself should teach the farmers that organization is good for them.

I instructed my members in the early spring to plant everything they could to live on, so they would not have to buy what they could raise themselves, and every member took the advice. The result is we are almost independent of our cotton crop. Merely to organize don't amount to much; to get benefits out of the organization is the thing. Our unions meet regularly, and we discuss the affairs of our neighborhood and how to better the conditions.

I hope all the cotton growers will organize for better prices. I venture to say before the next planting season there won't be a farmer in Oklahoma who is not a member of the A. S. of E. Merrick, Okla. E. A. HARRISON.

## FLOUR ADULTERATION.

To Up-to-Date Farming: If the wheat that is sold on the market were ground into flour without adulteration, it would be easier to maintain prices. I am reliably informed that beans and a kind of white clay are mixed with it to make it heavy and increase its bulk. Our pure food laws should be enforced. Bernardstown, W. Va. S. B. H.

## FROM THE FAR NORTH.

To Up-to-Date Farming: No. 2 wheat is quoted at 93 cents in Olivia, and we are expecting the A. S. of E. price, \$1.20 freight off to Chicago. I expect to have this county thoroughly saturated with local unions later on in spite of all opposition. The price gamblers are fighting us, but we are fully prepared to meet them. Olivia, Minn. J. J. SCHNEIDER.

## GRAND MEETING AT BRAZIL, N. D.

To Up-to-Date Farming: The picnic at Brazil, N. Dak., July 30, was a grand success, though a heavy wind blew all day.

The parade was a sight long to be remembered. The members all formed in line, and led by C. H. Olive, marched to the large bower erected for the meeting. Mr. Fred Romig, president of Brazil local, introduced Charles Olive, who delivered the welcome address, and took charge of the exercises. He introduced Mr. E. C. Carney, of Rugby, who gave the principal address, which was a masterful oration. Next on the program was a speech by Thorwald Sollin, secretary of Rugby local. Mr. Sollin made several good points, and was applauded time after time. Next was a song, "Equity," everybody taking part. Then Mr. B. C. Scott, president of Reno local gave the audience a good talk. Then another song "The Farmer's Future." Mr. Fred Romig, of Brazil, gave the closing address, after which everybody took in the amusements, lasting till 3:30 a. m., and went home well satisfied. Pierce Co., N. Dak. C. H. OLIVE.

We had a "rousing old time" yesterday at Howell. There were over 500 bean growers in the hall from Livingston and adjoining counties. Wastanan county will hold a bean growers' meeting first week in September. We show the buyers that we growers can have conventions as well as they. K. H. WHEELER, Dexter, Mich.

We are working now with the truck growers in good old Johnson county, and at the present rate of progress, we will soon have them in line. By September 15, we will have control of the potato marketing. The merchants are shipping in supplies now. We ask the co-operation of all A. S. of E. members, both in this and other markets. We need the merchants, but we will respectfully ask the home merchants to handle home products first. If they refuse to do this we can buy our supplies from other sources. J. L. BUCHANAN, Dale Ark.

# The Queen of the Wheat Field

## FULTZO-MEDITERRANEAN WINTER WHEAT

**STILL VICTORIOUS** is this grand variety. To say "It is Better than the Best" does not overstate its good qualities. IT BEATS THEM ALL wherever tested in competition with other varieties as proven by the reports printed below. If you have not procured seed of the Fultzo Mediterranean wheat you don't want to put it off another year.

**The Great Hardy, Productive Wheat, Withstands Freezes, Floods, Drought, Rust, Fly, Bugs and Blight to a Remarkable Degree. Stiffest Straw Fine Quality. Farmers and Millers Wild for it. Where first grown always sells for seed at Fancy prices. Will you introduce it in your neighborhood?**

The Fultzo-Mediterranean wheat was originated by crossing Fultz on the Hybrid Mediterranean. Hence the name. All experienced wheat growers must acknowledge the parents as being among the hardiest, most reliable, and most valuable varieties of wheat ever grown in this country. A beautiful variety in growth, straw, head and grain, even surpassing the expectations of those who grow it for the first time. The plant is a strong grower, with a corresponding large root development. If sown thinly or damaged in winter it will stool out and usually produce 20 to 100 stalks from one grain. If damaged in winter it usually makes a good crop at harvest on account of its wonderful vigor and recuperative properties. This quality was conspicuously shown this year, 1904. Farmers, by all means sow such a wheat and you will have extra bushels and extra dollars when harvest comes. Read the reports.

The stalks are large, short and very stiff, and stand up where nearly all other kinds would fall. We recommend it as the best that can be selected for very rich ground. The heads are thick and broad, broader at the top than at the bottom, looking at them edgewise. The meshes are compact and contain from three to five grains; Chaff white, heads smooth or beardless; grains large, color red. The Fultzo-Mediterranean is extra early. This wheat appears to be without a peer today for standing hard winters, wet weather, drought, rust, bugs, fly, etc.; in making a vigorous growth and heavy yields. It easily yields 10 to 20 bushels per acre more than the old Fultz, Mediterranean, Gold Dust, Velvet Chaff, Clawson and other old favorites that have lost their original vigor. If you don't get yields like reported in letters below, you want to get rid of the corpses this year and get this vigorous variety with young blood that will stand hardships and produce a good harvest in the end.

**If for any reason you were dissatisfied with your wheat crop this year, obtain seed of Fultzo-Mediterranean. We have made low prices for large lots. You can afford to buy for a field or your entire crop**

### READ THESE REPORTS

The Like of this Wheat was never Known Before

#### OVER 50 BUSHELS PER ACRE

"Under separate cover I send you a copy of our county paper. In it you can read an account of my Fultzo-Mediterranean wheat. The two bushels my tenant obtained of you sown on 1½ acres of ground and yielded 75½ bushels. There is no mistake about this as the land was measured and the grain kept separate and weighed. Also I will say that a shower passed over the field just before threshing and I know much wheat was left in the straw."  
Mrs. M. C. Mitchell Co., Kans.

#### ONE BAG YIELDS 106 BUSHELS

We are well satisfied with your wheat. The sack had a hole in it and about a peck lost out. From the balance we raised 106 bushels; 2¼ bushels of seed.  
B. H., St. Charles Co., Mo.

#### 45 BUSHELS TO ACRE—HARDY AS RYE

This is my second year for Fultzo-Mediterranean having obtained a little of your seed two years ago. It has proved the hardiest wheat I ever grew, and yielded last year at the rate of 45 bushels per acre, and this year will yield nearly or quite as much; winter proof; a great stooler; even grower; the field looking like a large level floor, heads large, broad and well filled.  
J. L. M., Jennings Co., Ind.

#### GOOD FOR 50 BUSHELS OR MORE

It was with some feeling of doubt that I sent you the order for Fultzo-Mediterranean wheat last fall, but I had had good success with other varieties of your introduction, that I thought I would try it. I am more than pleased now, and this is the finest variety of a l. My 18 acre field is a grand sight, and good for 40 to 50 bushels per acre. Your delighted customer,  
M. A. G., Mecosta Co., Mich.

#### BEST FOR THREE YEARS

have raised Fultzo-Mediterranean wheat three years consecutively, and every time it has been the best wheat grown. This year it yielded 10 bu. per acre more than my other wheat. It is destined to become the most popular variety in this section.  
J. C., Daviess Co., Ind.

#### F.-M. 30 BU., OTHER WHEAT 11 BU.

The wheat crop in Sciota county is poor. Fultzo-Mediterranean obtained of you is by far the best in this section and will average 30 bushels per acre of excellent quality. The Fultzo-Mediterranean was a beautiful sight, while the next field adjoining, with only a wire fence between, only made nine bushels per acre. I am a friend of your seed.  
J. S. V., Sciota Co., O.

#### FARMERS COME EXPRESSLY TO SEE IT

I purchased of you last season two bushels of Fultzo-Mediterranean which I sowed on 134 rods of ground on the 25th day of September. I sowed with wheat 200 pounds of wheat fertilizer. I do not think I lost one plant in wintering, although our farmers complain of severe winter killing. This wheat was in head May 24 and will be in bundle before July 1, (extremely early for New York) It challenges the curiosity of a wide section and many farmers have come expressly to examine it. I expect at threshing not less than 45 bushels per acre. Every kernel that I have to spare is spoken for and I want to buy more.  
Rev. J. W. L., Onondago Co., N. Y.

#### AVERAGED 41 BUSHELS PER ACRE

We raised 15 acres of Fultzo-Mediterranean wheat and threshed 615 bushels of beautiful wheat. This is an average of 41 bushels per acre. This is the finest wheat I ever grew.  
N. B. W. & Son, Harrison Co., Ky.

NOTE:—We do not give full address of our customers as that would divert trade from our house. Usually our customers sell all their surplus wheat at a high price in their neighborhood. We would print many more testimonials if space permitted.

#### REQUIRED FIVE HORSES IN BINDER

I bought seed of Fultzo-Mediterranean wheat to sow 16 acres last fall and now I am pleased to say it is the best wheat I ever saw. I usually grow good wheat, but this is the best ever grew. It is early stands up straight, and will surely yield 35 to 40 bushels per acre. It is unequalled in all this section I started in to cut it with three horses in my McCormick binder, but was obliged to put in five, and it kept four men jumping to shock it. It required 55 pounds of twine to bind the 16 acres.  
J. M. R., Hancock Co., Ind.

#### BETTER THAN FULTZ EVER WAS

Your Fultzo-Mediterranean wheat is giving entire satisfaction. I sold to a number of farmers and not one can pick a flaw in it. I consider this wheat better than the old Fultz ever was. It grows very vigorously; has a fine head in size, shape and structure, with very large grains. It will yield heavily. Will report when threshed.  
A. R. S., Saline Co., Ill.

#### A SIGHT TO SEE

My crop of Fultzo-Mediterranean is now in the shock and it is a sight to see how thick the shocks stand. I have 355 dozen, large bind, on 9 acres. In the balance of the 20-acre field I sowed Early Red Clawson, which averaged 15 dozen to the acre. I expect 40 bushels per acre of Fultzo-Mediterranean.  
G. B. S., Montcalm Co., Mich.

#### YIELD TWICE AS MUCH

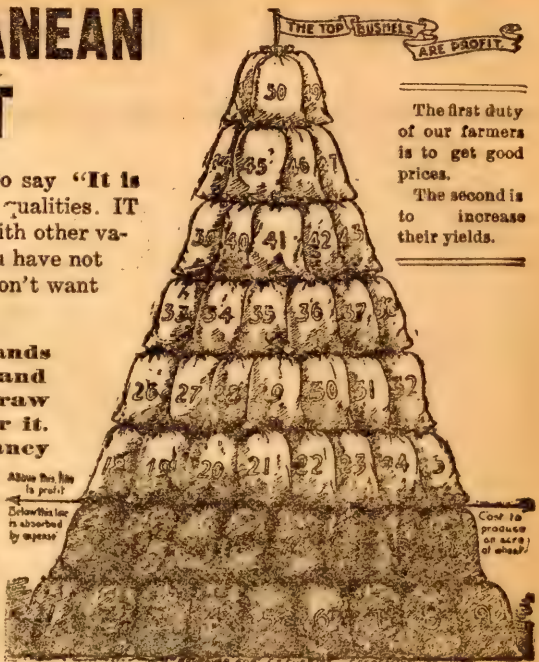

Fultzo-Mediterranean wheat will yield twice as much as any other variety. It is not threshed yet, but it is the best wheat I ever raised. It is free from rust and fly.  
O. C. HUTCHENS, Braxton Co., W. Va.

#### 33 BUSHELS FROM 1

I threshed the crop from the bushel of Fultzo-Mediterranean wheat and had 33 bushels of fine wheat. Other wheat is about half crop. I am greatly pleased with it.  
PARKS CAMPBELL, Daviess Co., Ind.

#### DELIGHTED WITH F.-M.

From 2¼ bushels of Fultzo-Mediterranean wheat sowed I threshed 64 bushels of fine quality. It is the best crop of wheat in the community. It has a stiff straw, stands drought, fly and rust better than any other wheat I ever raised. I am delighted with Fultzo-Mediterranean.

The first duty of our farmers is to get good prices. The second is to increase their yields.

#### THE TOP BUSHELS ARE PROFIT

Farmers, strive for the top bushels. There are several bushels extra per acre for you by sowing the Fultzo-Mediterranean.

The average yield of wheat is 13 bushels per acre. If every farmer sowed Fultzo-Mediterranean it would be much higher at once.

The increase in yield will abundantly justify the extra price for seed, besides having seed for your future crops.

#### STOOL OF FULTZO-MEDITERRANEAN WHEAT

There were 94 developed stalks with heads in this stool. This shows the vigor of the Fultzo-Mediterranean wheat. Vigor is of immense importance in wheat. It oftentimes brings success out of what looks like failure. The F.-M. is unequalled in recuperative powers.

ONE YEAR AGO I PRINTED AS FOLLOWS: "I believe the 1903 crop of wheat is the last one that will be priced for the farmers by the speculators and gamblers. I believe that before another crop of wheat is raised that farmers will be co-operating, and will fix the price on their crops before they leave the farm. I believe the next crop of wheat will make the farmers more money than any crop they have ever raised, and I don't know of any variety of wheat that can be recommended above Fultzo-Mediterranean for seed."

Has not this prediction come true? Farmers put the price of wheat to \$1.00 a bushel and have held it there. The price came to late to benefit the majority of growers, but all will get the benefit in the 1904 crop. Readers of Up-to-Date Farming know how much credit is due me for the good price of wheat. This is another reason why we should have your orders.—J. A. EVERITT.

#### Price of Fultzo-Mediterranean Wheat.

By mail post paid, 1 lb., 30c; 4 lbs., 75c. By freight or express, ¼ bu. 75c; 1 bu., \$2.00; 2½ bu., (1 bag for 2 acres) \$4.75; 5 bu., \$9.00; 10 bu., \$16.50; 25 bu. or more at \$1.50 per bu. Bags are supplied free. Purchaser pays freight. Price subject to change.

Every Person who Contemplates ordering Fultzo-Mediterranean Wheat at these prices SHOULD NOT DELAY

ADDRESS ALL ORDERS TO

Indianapolis, Indiana.

# You Are to Be the Judge!

## A BARREL

of VITAE-ORE is NOT NECESSARY to convince you that it is the best remedy in, on or out the earth for ailing people, to PROVE TO YOU positively that it will CURE YOUR ILLS, as it has the ills of so many others.

ONE OUNCE OF THE ORE (one package) mixed with a quart of water. ONE MONTH'S TREATMENT, is all that you need for the TEST. all the EVIDENCE we want to submit, and we want to send it to you at OUR RISK. YOU ARE TO BE THE JUDGE! One month's treatment with the NATURAL REMEDY will do for you what six months' use of other advertised treatments cannot. If it does not, YOU TO DECIDE, we want NOTHING from you!

## READ OUR SPECIAL OFFER

TO THE READERS OF UP-TO-DATE FARMING

WE WILL SEND to every subscriber or reader who writes us, mentioning UP-TO-DATE FARMING a full-sized One Dollar package of VITAE-ORE, by mail, postpaid, sufficient for one month's treatment, to be paid for within one month's time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs or dopes of quacks or good doctors or patent medicines he or she has ever used. Read this over again carefully, and understand we ask our pay only when it has done you good and not before. We take all the risk; you have nothing to lose. If it does not benefit you, you pay us nothing. Vitae-Ore is a natural, hard, adamant, rock-like substance—mineral—Ore—mined from the ground like gold and silver, and requires about twenty years for oxidation. It contains free iron, free sulphur, and magnesium, and one package will equal in medicinal strength and curative value 800 gallons of the most powerful, efficacious mineral water, drunk fresh at the springs. It is a geological discovery, to which there is nothing added or taken from. It is the marvel of the century for curing such diseases as Rheumatism, Bright's Disease, Blood-Poisoning, Heart Trouble, Dropsy, Catarrh and Throat Affections, Liver, Kidney and Bladder Ailments, Stomach and Female Disorders, La Grippe, Malarial Fever, Nervous Prostration and General Debility, as thousands testify, and as no one, answering this, writing for a package, will deny after using. Vitae-Ore has cured more chronic, obstinate, pronounced incurable cases than any other known medicine, and will reach such cases with a more rapid and powerful curative action than any medicine, combination of medicines, or doctor's prescription which it is possible to procure.

VITAE-ORE will do the same for you as it has for hundreds of readers of Up-to-Date Farming if you will give it a trial. Send for a \$1.00 package at our risk. You have nothing to lose but the stamp to answer this announcement. If the medicine does not benefit you, write us and there is no harm done, we want no one's money when Vitae-Ore cannot benefit. Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it, would hesitate to try VITAE-ORE on this liberal offer? One package is usually sufficient to cure ordinary cases; two or three for chronic, obstinate cases. We mean just what we say in this announcement, and will do just what we agree. Write today for a package at our risk and expense, giving your age and ailments, and mention Up-to-Date Farming, so that we may know that you are entitled to this liberal offer.

## YOU ARE TO BE THE JUDGE!

### DON'T EXPERIMENT!

Some experiments are necessary for the advancement of civilization; and although frequently lives are lost and much damage done, the ultimate results and benefits are the cause of much good to humanity. Others result in loss of life from no apparent cause other than the obstinacy of the experimenter, who will not heed the advice of friends, and refuses to see that his experiment is impossible or impracticable for the results aimed at or intended.

As all experiments are dangerous, so it is a dangerous thing to experiment with worthless patent medicines and nostrums of the kind that spring up in the night, and "none knows from whence they came" or what their origin. It is seeking after an impossible result to look for health in a bottle of alcohol and sarsaparilla, or a package of seeds and straw; and such experiments are often disastrous to the experimenter.

Vitae-Ore, Nature's Remedy, is not an experiment, and the sick and suffering person who seeks its aid is not experimenting. It has stood the test of the American public, a critical judge, for a generation of time, and is growing in popularity and selling more rapidly from year to year, and has fully substantiated our claim to being the best thing in, on or out the earth for afflicted people. Beware of experiments in medicine, and when you need a remedy let the experience of others be your guide. If you have been using other treatments without the results that were promised and that you anticipated, THROW THEM AWAY and begin with this natural healing and curing ORE. It will NOT FAIL YOU.

### MIDDLE-AGED AND ELDERLY PEOPLE SHOULD USE IT

As old age approaches the necessity for such a tonic as VITAE-ORE becomes each year more and more manifest. As is generally known, all through life there is a slow, steady accumulation of calcareous deposits in the system, marking the transition from the soft, gelatinous conditions of infancy to the hard, osseous condition of old age. These calcareous deposits naturally interfere with the functions of the VITAL ORGANS; and when they become excessive and resist expulsion, result in the dryness and stiffness of old age. In early life these deposits are thrown off, but age has not the power unless assisted by some outside stimulant. VITAE-ORE, apart from its powerful disease-curing, health-restoring action, is just the IDEAL STIMULANT for middle-aged, elderly people, in that it enters the blood, dissolves the hard, calcareous matter, and almost entirely eradicates the osseous deposits so much dreaded by old people. IT ENRICHES THE BLOOD with the necessary hematin properties, drives all foreign matter from the circulation and prolongs vigor and activity in both men and women to ripe old age.

### NATURE'S CREATIONS

#### ARE SUPERIOR TO

#### THOSE OF MAN.

So Testifies Levi Votaw, Who Has Good Reason to Know—A Wonderful Change and Improvement.

I ought to be able to consider myself quite an authority on advertised medicines as I have spent during my long period of ill-health many dollars for so-called restoratives, tonics, etc., but I have found nothing to equal the Vitae-Ore remedy. I believe this remedy to be a true and worthy example of the fact that nature's creations are superior to those of man's. I

have at the present time used two packages of Vitae-Ore, including the 30-days' trial treatment and one other, and am now on the third package, all three packages having cost me but \$2.00. When I began using the trial treatment I could only work about four hours a day, being so fatigued from my weakness that I would

be compelled to stop off short. After using this medicine for only two months' time I can work the full eight hours a day and feel no more fatigued than the ordinary healthy man does after a hard day's work. I was troubled with shortness of breath and was so terribly nervous at many times that I could scarcely write my name; in fact, was completely run-down. It is almost impossible to write the wonderful change and improvement in my condition so that any person who has not experienced a similar change would understand and appreciate it. I believe that Vitae-Ore will restore any man to full vigor and strength of manhood. I am now 63 years old. I went through the hardships and exposures of the war of the Rebellion, coming out badly shattered in health as did many of my comrades, and consider a medicine that will benefit any one in this condition a blessing to mankind.

LEVI VOTAW,  
Buna, Tex.

### AT THE AGE OF 70

CURED OF DROPSY AND RHEUMATISM AFTER TEN YEARS OF FRUITLESS AND HOPELESS DRUGGING.

When Vitae-Ore Completely Cures In Such Stubborn Cases, Where Extreme Age is Against the Cure, Is It Not Reasonable to Expect That

IT WILL CURE YOU EASILY.

Vitae-Ore Cured me entirely of Rheumatism and Dropsy and made me almost a new woman

in my 70th year. On the fifth night after beginning the use of Vitae-Ore I could sleep without pain and have not since lost any sleep on account of pain in my body. I used to walk with a cane, but now I can go to church 1 1/2 miles and back again and don't mind it at all. I used different kinds of drugs for ten years, and the doctors said I was worn out and that they could only patch me up a little, so I gave up all hopes of ever getting well. I read about V.-O. and thought perhaps it would help me as it had others, for at that time I was in great agony. It is wonderful what it did for me. I hope all people who suffer will try Vitae-Ore. Many of my neighbors are using it and all are getting well. People are surprised that I can now do all my own work, except washing. There are five in our family.

REBECCA S. GREY,  
Holts, Pa.

## YOUR DOCTOR

may tell you that your case is incurable, that medical science is unable to help you, that all you can expect is temporary or slight RELIEF. Well, let HIM think so. He is certainly entitled to HIS OPINION. You need not think so unless YOU WISH TO.

Many people whose testimony appears in books and pamphlets of the THEO. NOEL CO., were told that their cases were hopeless, helpless, impossible, incurable, past all recovery, yet—READ THEIR TESTIMONY. Many were told that they had but a few short years—some but months—to live, yet—READ THEIR TESTIMONY. There are more things in HEAVEN and EARTH than are dreamed of in the Doctor's philosophy, and Vitae-Ore is one of them.

## NOT A PENNY UNLESS BENEFITTED.

This offer will challenge the attention and consideration, and afterward the gratitude of every living person who desires better health or who suffers pains, ills and diseases which have defied the medical world and grown worse with age. We care not for your skepticism, but ask only your investigation, and at our expense, regardless of what ills you have, by sending to us for a package. ADDRESS

## BULLETIN

### The Cotton Crop of 1904

National Union of the American Society of Equity.  
Indianapolis, Ind., Sept. 6, 1904.  
TO THE COTTON GROWERS OF AMERICA:

From crop reports received from members of this society, and non-members, in all sections where cotton is produced, and from information gathered from other sources, this society does estimate the 1904 cotton crop, if saved without any material depreciation after this date, at

**ELEVEN MILLION TWO HUNDRED THOUSAND BALES**  
(11,200,000 BALES)

Also this society recommends a minimum price for the crop, on the basis of the New York market, for "middling" cotton of 12 CENTS PER POUND.

M. W. TUBBS, Act. Sec.

*J. A. Everitt*  
Pres.

## Arguments

In estimating the cotton crop at 11,200,000 bales, we admit the impossibility of arriving at exact figures. There are elements that enter into the question that cannot be accurately measured by any present system. We believe the American Society of Equity has the best system of any institution now attempting to make crop estimates, and when the society is fully developed, its estimates will be as nearly correct as any human agency can promise.

The point we want to emphasize, however, is this: As far as the grower is concerned it matters little whether there is a crop of five million bales or of thirteen million bales. He has planted, cultivated and harvested. He, and probably his wife and children, with hired help, have labored from early spring till autumn, looking ahead to the day of reward

(Continued on Sixth Page)

J. A. EVERITT, Publisher, INDIANAPOLIS

# Montgomery Ward & Co.'s Big Catalogue No. 73 is Now Ready

Bigger and better than ever—6½ pounds of valuable information, 1200 pages of rare values—printed on heavy white book paper, carefully edited, handsome cover by the famous artist, Ike Morgan—a catalogue that should be in every household.

## You Can Get a Copy Absolutely FREE

Also a handsome D'arcy photograph, suitable for framing, by ordering any of the 14 lots described below. Don't delay. Ward's Catalogue is the POPULAR ONE everywhere, and is preferred by almost everybody to all others. We expect thousands of applications as soon as this announcement is read, so we urge you to get your application in early.

### It's the Only Complete Catalogue Published

the only one that is absolutely up to date and complete in every detail, the only one that quotes nothing but perfectly dependable goods at prices the lowest obtainable anywhere. Catalogue No. 73 is all that a good catalogue should be. It represents the largest stock of goods in the world—21 different divisions, each a store in itself, 55 separate and distinct lines open for your examination. Practically everything we have to sell is included; no sending for special catalogues after you receive the big one. Everything in Catalogue No. 73 this year—an improvement we know will be hailed with delight by our thousands of friends and old customers.

**Edition de Luxe** Nothing like it ever before attempted. Printed on heavy white book paper, making it strong and durable, rich in appearance, easy to read, and more desirable in every respect. The Edition de Luxe is a triumph in catalogue making. It contains over 30,000 illustrations, most of which are new and print perfectly on the fine white paper used for the Edition de Luxe; 35,000 quotations of high-grade, absolutely honest merchandise, set in new type cast especially for this catalogue; 12 pages of carpets, rugs and portieres printed in actual colors, 2 pages of men's neckties in actual colors, about 200 pages of satin finished paper showing actual photographic reproductions of laces, embroideries, millinery, woman's fashions, furs, etc. This catalogue weighs over 6½ lbs. and is 3 inches thick. When we tell you that other catalogues don't weigh over 3 lbs. you will quickly see what an enormous book Catalogue No. 73 is. Experts pronounce it the finest specimen of a catalogue ever produced.

**For the Men** The largest stock of hardware in the world is at your command, everything for your home, your barn, your farm, your ranch. No matter what your occupation is, we have what you need—your clothing, your shoes, farm implements, vehicles, harness, photo and electrical goods, books, watches, etc. Everything from windmills to fish hooks—all at prices so low that you can save anywhere from 15 to 60 per cent by trading with us.

**For the Women** The very latest styles in women's glassware, toilet articles, stationery, sewing machines, books, jewelry, carpets, curtains, and 10,000 other good and necessary articles. Particular care has been given to our fashions in women's wearing apparel. Our buyers have picked up the best of everything shown in New York and other Eastern markets. Our styles are correct and the very latest—later than those shown in any other general catalogue. Don't buy from an old catalogue with last year's styles. Catalogues of other firms issued ahead of ours contain last year's fashions, and are not trustworthy. We know this to be a fact, because this year's styles were not shown by the New York designers until August 1, and we have delayed the publication of Catalogue No. 73 until our buyers returned from New York with the new samples for next winter.

It is our policy to lead the procession, and you can positively rely upon our catalogue. Among other things of interest to women in Catalogue No. 73 is the largest retail stock of dry goods in the world. Choice silks, dainty linens, fashionable dress goods, sheeting, towelings, cotton goods, etc.; in fact everything a wide-awake dry-goods store should have—all of the best quality and very reasonable in price. With Catalogue No. 73 in your hands you can, at your leisure, select everything for your home, for yourself, for your family, without the trouble of a shopping trip, and with the absolute certainty that everything will be just a little bit better than you expect.

**For Everybody** Catalogue No. 73 will be found a source of great convenience and economy. Regardless of your age, your occupation, or your wealth, it enables you to select exactly what you want without the annoyance of visiting a dozen stores and taking what they have to offer, whether it is just what you want or not.

**We Do Not Sell Trash** Nothing but the best is good enough for our customers. Many firms are making a noise about their low prices; but don't be misled. A low price is no bargain unless you get quality. Anybody can sell worthless goods cheap.

1 Handsome D'arcy Photographure	FREE
1 Catalogue and Buyers' Guide No. 73—Edition de Luxe	FREE

## The D'arcy Photographures

Beautiful reproductions of famous masterpieces FREE with our compliments, with Lot "A" and Specials "B" to "O"—Platino Black Tones, 16x20 inches. Fine Kid Finish Paper. The D'arcy Photographure Gelatin Process, the finest method known for securing perfect photographic effects. The accuracy with which details and perspective, as well as the general beauty of the original paintings, are all preserved in the pictures has caused experts to pronounce the reproductions far superior to the finest and most expensive photographs. Any one of these five magnificent photographures would be a beautiful decoration to the finest home. The originals were painted by masters whose names have long been famous the world over.

**FIVE SUBJECTS, EACH ONE A MASTERPIECE:**  
A Country Scene in Normandy, by Verschuier, a famous Dutch landscape painter.  
Not to be Convinced, by Alfons Spring, a Russian artist.  
Fleeing From the Flames, a remarkably dramatic painting, by Adolf Schreyer, a German painter.  
The Farmer's Lunch, by Julien Dupre—a beautiful pastoral painting.  
The Defense of Zapolie Bridge, by Verestchagin, the famous artist who was killed on the Russian battleship Petropavlovsk at Port Arthur.

### The People's Favorite Catalogue FREE

Ward's Catalogue No. 73—The biggest, best and most reliable catalogue issued by any catalogue house in the world—we make no exceptions. See Lot "A" below. READ IT.

Until October 15, 1904, Lot "A" — Packed in case for shipment by freight; weight, about 75 pounds. **\$2.40**

**Special B**—Polished Oak Writing Desk, 5 feet high, 30 inches wide. A fine piece of furniture. A catalogue with each . . . **\$3.95**

**Special C**—8,000 of these fine Rockers bought especially for this sale. A good, large basket seat Reed Rocker. A catalogue, edition de luxe, packed with every chair. Weight, complete, about 30 lbs. Special C—a \$3.00 rocker for . . . **\$1.95**

**Special D**—Box calf, solid leather shoes. A shoe that sells for \$3.00 at most places. Don't forget size. Sold only with Lot A. These fine shoes \$1.90 Lot A \$2.40. Both, by freight **\$4.50**

# UP-TO-DATE FARMING

Official Organ of  
The American Society of Equity

PUBLISHED SEMI-MONTHLY  
At 227 West Washington Street

Entered at the Indianapolis  
Post-Office as Second Class Matter

VOLUME 7

INDIANAPOLIS, SEPTEMBER 15, 1904

NUMBER 18

## Up-to-Date Farming

J. A. EVERITT ..... Editor.  
JOHN P. STELLE, Associate Editor.

Subscription Price 50c a Year  
PAYABLE IN ADVANCE

**Acknowledgement.** The date in connection with your address on wrapper, informs you of the time your subscription expires. **Change of date** indicates that your renewal was received. Many club raisers fail to indicate their name separately from the club. We want to know who our workers are, therefore always write: "this club was sent by (name)." **Always state if a renewal or a new subscription. Don't Neglect This.**

**Your Address** should always be written very plainly. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

**Renewals and Change of Address.** Give the same name as before. If a change from one member of the family, so state. If you change your post-office, give old office as well as new.

**Advertising Rate** 50 cents per agate line each insertion; 10 per cent discount when two or more consecutive insertions are taken. About eight words make a line, and fourteen lines make an inch.

**Only Reliable Advertisers** are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurrence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date when you write.

### PROFITABLE PRICES

Below are the prices recommended by the American Society of Equity. They are the minimum prices, below which farmers should not sell. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should see that marketing is controlled so that the demand seeks the supply when it will pay your price.

Wheat, No. 2 red, Chicago...	\$ 1.20 per bu.
Hay, No. 1 timothy " ..	12.00 " ton
Oats, No. 2 white " ..	.40 " bu.
Barley, No. 2 " ..	.58 " "
" " 3 " ..	.52 " "
Cotton, New York.....	\$0.12 per lb.

This list will be extended as other crops mature.

### SUGGESTIVE PRICES.

Bulletins will be issued for these crops as they mature and reports are received. The below prices are suggestive of what they may be.

Corn, No. 2, Chicago...	\$0.60 per bu.
Hogs, " ..	\$6.00 to \$6.50 cwt.
Cattle, " ..	6.00 to 7.50 "

This is a strong cotton number. Have you ever seen its equal? This question is addressed to our Southern readers.

Get a good price for this year's cotton crop. Begin the next year with superior preparation of the soil, including fertilizing and up-to-date cultivation, and if the South has a problem to solve these things will be the solution.

I rejoice to know that, so far as all the farmers of Georgia are concerned, the close of 1904 will see the Rubicon passed; the battle on all issues fought and won.

MARTIN V. CALVIN.

Augusta, Ga.

[He is basing his calculations on 12c cotton.—ED.]

Railroad managers, bank presidents and business men generally are calculating on a continuance of the present prosperous conditions because crops are good and prices for farm crops are good, with rising tendencies. Keep the farmers prosperous and this country cannot have hard times.

The flax crop is late, and there is danger of frost; otherwise, the prospects for a good crop are satisfactory.

Barley is a good crop, and the quality is good.

We have a surprise in store for our subscribers. It will be sprung very soon. It will be a pleasant surprise to them, and will make the publisher prouder than ever of UP-TO-DATE FARMING.

"Farmers are holding wheat for higher prices." We see this in nearly every paper we read. There can be only one result. They will get the higher price, and no power on earth can prevent it.

To show how late the spring wheat crop is this year, we compare the receipts at Duluth with last year. A year ago at the ending of August, wheat was coming forward in large quantities, while to same date this year only one car had arrived. It is reported, however, that samples are coming freely, and they are poor and shrunken. Spring wheat farmers can afford to wait until the truth is known about their crop.

The markets for grain in London, (Eng.), follow the American markets very closely. If it was not for the frequent manipulations and set backs, there can be no doubt that they would come to our price, and then American wheat would be on an export basis.

July 25th, we wrote: "Don't be alarmed about the export demand. You have very little wheat for export, but the probabilities are, Europe cannot do without some of your wheat at any price."

In the North Western Miller is printed a letter from Kruger, Darsil & Co., Liverpool, Eng., who are large flour importers, in which this statement appears, "Europe will require 104,000,000 bushels of wheat from North America, and largely from the United States, in the six months ending Dec. 31, 1904." This firm is mentioned as being close students of the flour and wheat situation, and their estimate certainly presents a problem that this country of immense possibilities, will probably find difficulty in solving this year.

Millers and dealers will minimize any damage to the wheat crop in order to get farmers to sell. Farmers will do well to wait awhile until the true conditions are known. This advice is directed to the spring wheat growers particularly.

Wheat sold at 91 cents a bushel in Western Kansas, or on basis of \$1.00 at Chicago without allowing anything to the handler. That's pretty good for wheat right after harvest time.

Wheat prices are likely to go above \$1.20 before the next crop is harvested, but the A. S. of E. will not issue a revised bulletin. \$1.20 is a good price for any grower who has the wheat. \$1.50 will not help the man who had a crop failure. This society undertakes to name and work for an equitable price, but it never contracts to compel farmers to sell at the price. This would be a more difficult undertaking than to teach them to hold for the price.

It matters not how expert farmers become in producing grain, fruit or fat stock, some new form of exploitation will be discovered by the class of people who live on their wits and produce nothing to relieve them of everything but a bare living. They may get ahead some years only to slip back other years. This will be kept up until they make their own prices.

Exhaustion of fertility in our farm land is responsible for more crop failures and short yields than farmers realize. We believe this country will never take its former enviable place as an exporter of grain, until the average yields of our grain crops are increased. The increasing consumption of our own country will come pretty near consuming all we can produce. Better prices will soon remedy this, however. We know many farmers have only been waiting for the time when the price of grain will warrant them in buying fertilizer.

When we came to make up the September first issue we found such a demand for advertising space that we were obliged to curtail some of the regular departments. This was the case with The Third Power. We now tender our apologies. A liberal installment is given in this number.

Europe buys 500 to 550 million bushels of wheat annually from foreign countries. It is supplied by the United States, Canada, Russia, India, Argentine and Australia. This year some European countries have been particularly unfortunate in crops, and may need more than the average. For instance, the Austria-Hungary crop is 25 per cent. short. Italian, 10 to 20 per cent.; Spanish, 15 per cent.; Romanian, 40 per cent.; French 15 to 20 per cent. short. The Russian winter crop is reported from short to a failure, and the American crop so short that we cannot spare any unless we substitute other grain for our own food.

Holders of wheat, handlers, and consumers can draw their own inferences.

Our advices are that a greater number of farmers in Kansas, Nebraska, Minnesota and the Dakotas, are stacking their grain this year more than ever before. Also, more granaries are in service than was ever known before. This feature of farming cannot be too highly commended. It is exactly what this paper has advocated and urged ever since it began its fight for controlled marketing and profitable prices. Up-to-Date Farming was the pioneer to urge farmers to beat the speculators and rings, by keeping the supply until the LEGITIMATE demand is ready to use it.

Wanted: Organizers for the Society of Equity in every part of the country. Come forward, good men and true, and women too. Here's work for you, and pay to boot. The million must come, and will come, before many months have passed.

Good friends and subscribers: We want the million members to the A. S. of E. You can help. This society has made millions of dollars for the farmers of America. Will you now complete the society so it can guarantee to you profitable prices for ever? We can do ten times as much good if we have the million.

\$1.00 is the membership fee in the American Society of Equity, and the society pays for the official paper out of this sum. Would you not pay this sum if by the advice of this paper you can realize from ten to 50 per cent more for your crops? This is just what you can do if you help to build up the society.

INFORMATION:—Every subscriber of this paper is entitled to the latest information regarding crops, and the benefit of the best judgment of the officers and directors of the society regarding crops, markets, prices, etc. If you don't get what you want through the columns of the paper, write to us.

Truck growers in Gloucester county, N. J., are said to be letting their stuff rot in the fields because the price is so low it will not pay to take it to market. No business but farming could stand that, and yet whenever a farmer suggests any method of relieving this miserable condition the carrion crows of commerce and the ravens of the press, including many so-called farm papers, are ready to jump on him and pick his bones.

An opportunity is now offered the cotton growers they never had before, and perhaps never may have again. The American Society of Equity comes to them with the laurels of victory already won, and the assurance of victory for cotton, if the growers will but stand up as men. Will they do it?

Southern manhood may well be brought to a test in this year 1904. They have a cotton crop which they have made in the midst of hard work and many discouragements. The sharks and vultures of speculation are determined to get this crop to enrich themselves, even though they impoverished the growers. But the growers have the first word. What shall it be, an assertion of manhood, or an admission of serfdom?

In writing long articles correspondents are almost sure to cover ground that has been gone over in other issues of this paper, hence writers are urged to be brief. Tell what you are doing, how you are doing it, and what you intend or hope to do, or express your opinion of what has been done, or what ought to be done. These are always gladly received by the editor, and eagerly read by the people. It is very seldom we can make room for long articles.

## Did Not Know the Price

Many millions of bushels of wheat were marketed this year on the basis of \$1.00 per bushel by farmers who were not members of the A. S. of E. before they heard of the union farmers' price, \$1.20. It is a penny wise and pound foolish policy to stand aloof from the only movement that ever taught a practical way to get equitable prices and has never failed to benefit its members. It does seem that every farmer in the country would embrace the very first opportunity to belong to such an organization. They will as soon as they understand it, and the quickest way to get wise is to read the official paper.

## Just Think of It

If it had not been for the A. S. of E. and UP-TO-DATE FARMING the 1903 crops would have sold as follows: Wheat, 75c to 80c; corn, 35c to 40c; oats, 25c to 30c. This society and its official paper have done more for American farming than any other factors that have been present for many years. Some of our admiring friends even give them credit for warding off a panic which was scheduled for 1903. Who knows? True it is, that they brought better prices for farm crops, and panics cannot breed in soil that grows \$1.00 wheat, 60c corn, 40c oats, 12c cotton, etc.

## 1904 the Best Year

It is probable that the money realized by the producers for the farm crops this year will aggregate a greater sum than for any other season's crops. Farmers, is this not what UP-TO-DATE FARMING has been contending for? Is there any other paper in the country that has made any particular effort to improve your prices? Are there not many that hooted at the idea? Or don't you believe farmers have had any influence on prices? Do you think they just happened, like "Topsy"? If so, what does it mean that farmers are stacking their grain, building granaries and holding their crops off the market? What does it mean that the elevators and warehouses are groaning, not from fullness, but from emptiness? Why don't the farmers dump their grain now like they did only two years ago and before, and let the other fellows hold it? We ask you these questions and will let you answer them, because there can be only one answer, and we know you will answer correctly.

## Tobacco Growers' Organization

The organization in the tobacco districts goes on at an encouraging rate. Remember, you are organizing for controlled marketing and profitable prices. The former is bound to bring the latter. Increase your membership. Write to your paper. As the time approaches, we want to conduct a red hot campaign to make all tobacco growers brave to face the trusts and demand an equitable price. Just try to imagine the little grower meeting the big trust and defeating it because he has the tobacco. The absolutely necessary goods in the hands of the producer is the stone in the sling of David which will kill (or conquer) the giants.

## Apples and Potatoes

Controlled marketing may be applied to apples, potatoes and some other vegetables. Cold storage houses or even pits may be employed. We would risk pits carefully constructed and vigilantly watched rather than sacrifice them to buyers in the fall at unfairly low prices.

Some cotton growers may say, "My circumstances compel me to sell my crop this year!" When will it be otherwise? When will the sharks be satisfied? When will you be a MAN? Never till you get fair prices for your crops, and you will never get fair prices until you stand out for them. Be honest. Pay your debts. But induce your creditors to help you. You are under no obligation to sacrifice your lives, to give your flesh and blood, and that of your families, to fatten the vultures of New York that hover over your homes, to devour your substance.

# A Fair Price for Cotton

## The Society That Brought Wheat to One Dollar Discusses Cotton

Outside of the leading cereals, America has no more important crop than the cotton crop, and none which has a more interesting history. But, as the subject which most concerns us now is production and price, we must confine ourselves in this article to that phase of the question.

The production of cotton has almost constantly increased in the United States since the year of our first record, 1791, when the production was 8,889 bales. The demand has likewise increased, but the price shows considerable variation, and yet, leaving out the phenomenal years of the war, there is not so wide a range as one might expect. The lowest (high) price since 1791 was in 1845, when the highest price for the year was 6½ cents. The highest price since 1791, leaving out the years evidently affected by the war, was in 1799, when the price was 44 cents, and the crop was 88,889 bales, the largest crop that had been produced up to that time. To prove that the amount of the crop does not govern the price, we may mention a few instances. The crop of 1824 was 762,411 bales, and the highest price for that year was 18 cents. The crop of the very next year, 1825, was 891,608 bales, 129,197 bales greater than that of the year before, but the price of cotton in 1825 was 30 cents per pound, against the 18 cents of the year before. The two following years show the very same fact, but in a reverse order. The crop of 1826 was 1,121,667 bales, and the price for that year was 17.5 cents; the crop of 1827 was only 957,281 bales, but the price dropped to 11.5 cents.

But coming down to more modern times, the crop of 1878 was 4,773,865 bales, and the price was 12½ cents; next year the crop was 5,074,155 bales, more than 300,000 bales in excess of the year before, yet the price rose to 13½ cents. Take the years 1900 and 1901. The crop of 1900 was 9,439,554 bales, and the price was 10½ cents; that of 1901 was 10,425,141 bales, nearly a million bales more than the year before, yet the price rose to 12 cents. The two following years, those of 1902 and 1903, show a still greater increase of price on an increased crop, but special manipulation is said to have influenced that price. The object of this reference is to show producers that they need not be frightened by the "Bear stories" of a heavy crop for the present year. In the first place those stories are not well sustained, and in the second place, some of the largest crops have brought the highest prices.

Even the anomalous prices of the war period are not without an important lesson. It is urged by those who benefit by low prices for cotton, whose profits increase as the price of cotton decreases, that to raise the price of cotton even to a profitable basis would ruin the country by destroying its leading industry, as the world would seek and obtain its supply of cotton elsewhere—from Africa, India, Egypt, and the Lord knows where. This is but a scarecrow to frighten the timid. The war period so far as the cotton crop is concerned, includes the years from 1861 to 1870, ten years. True, fighting ceased in 1865, but cotton's normal condition in the world's market was not restored until five years later. The price of cotton in 1861, on a crop of 3,849,469 bales, was 22 cents, exactly double the price for the year before. In 1862 the price was 51 cents, and in 1863 it was 92 cents. In 1864 it rose to the enormous price of \$1.89 per pound on a crop of 1,450,000 bales. The next year, 1865, it fell to \$1.82 per pound on a crop of 1,300,000 bales. In 1866 it dropped to 60 cents, and stood each subsequent year up to and including 1870 thus: 42, 32½, 35, 35, when in 1871 it dropped to 21 cents, and may be said to have returned to its normal condition.

Now, if there is danger that cotton consumers, either in this country or Europe, will seek other sources of supply

on account of equitably increased prices in this country, why did they not do so during the remarkable ten years of 1861-70, when cotton went to the enormous price of \$1.89 cents per pound in this country and yet found an eager market? It will doubtless be urged that the production of cotton in foreign countries has greatly increased since then. Even if we grant this, which is really a matter of doubt, the demand has greatly increased both in this country and in Europe, Asia, and in Asia also. The South need not be alarmed about the demand for its great staple.

But this war period contains another lesson which may well be studied and applied. The production of cotton did not diminish anything like in proportion to the increase in price. We append the following table of crop and price for the ten years which we class as the war period so far as the effect on cotton was concerned:

Year.	Crop.	Price.
1861.....	3,849,469	\$.22
1862.....	4,500,000	.51
1863.....	1,600,000	.92
1864.....	1,450,000	1.89
1865.....	1,300,000	1.82
1866.....	2,269,316	.60
1867.....	2,097,254	.42
1868.....	2,519,554	.32
1869.....	2,366,467	.35
1870.....	3,122,551	.35

No crop previous to the war had reached five million bales, that of 1860 approached nearest to it and was the largest previously recorded, being 4,861,292 bales, and commanded a price of only 11 cents.

Why the great increase of price without a corresponding decrease of production? There are three reasons, all of which sustain our contention. 1. Cotton was declared by the North contraband of war, and the producers were compelled to hold it off the market because they could not get it through the army lines. 2. What could be reached by the army was seized, and could not be marketed until it had gone through long and tedious red tape processes—it also was held off the market. Much of it went into the hands of as unprincipled a set of cotton thieves as ever followed a victorious army—worse than sharks in the wake of a ship, for the latter devour only what is thrown overboard, the cotton thieves often penetrated the lines and stole what had never been reached by the army. Of course they had to be careful about marketing their plunder, and this, too, went slowly into the market. 3. The heavy war expenses made money plentiful in the North, greatly stimulating the demand for higher priced goods.

Our contentions sustained: 1. That controlled marketing, keeping products temporarily off the market, controls and may increase the price. 2. To increase the ability of the consumer benefits the producer of the article consumed. Hence to give the cotton grower better prices makes him a better customer of the wheat grower, and so on through the entire line of production and consumption, knitting all together in the strongest ties of mutual interest.

The thing of most interest to the cotton grower, however, in this review of the production and prices of cotton, is the range of prices during the year. This is almost without exception very great. For instance, in 1872 the lowest price was 18½ cents, the highest price was 26½ cents. In 1874 the lowest price was 13½ cents, the highest was over 20 cents. In 1890 the lowest price was nearly 8 cents, the highest was nearly 11 cents. In 1900 the lowest price was 6½ cents, the highest was 10½ cents. In 1901 the lowest price was 8 cents, the highest was 12 cents.

This difference between the lowest and highest prices means much to the producers. The lowest prices always prevail when the producers are selling. The HABIT (it really is little more than a habit) of rushing the crop to market in a short time,—of dumping a year's production and a year's supply in such a

time that the demand is overwhelmed and cannot take it,—can be nothing else but disastrous to the producers. This system has created the speculator, and he is not to blame. Indeed, he performs an act of benevolence in taking charge of and caring for the commodity, rejected by the producers and refused by the consumer, and holding it until it shall be needed, which it is very sure to be, always has been, before another crop shall be gathered. It was very natural for the speculator to see his opportunity here, and as the crop grew in importance his greed grew with it, and he easily learned to charge too much for his "benevolence." But whether he does or not, his charge is a part of the value of the product which the producer has earned, which he deserves, which he needs and which he ought to have, and CAN HAVE, if he but exercise the ordinary intelligence displayed in other things.

The hay grower holds hay for a year's feed for his team, the corn grower stores a year's supply of corn. Now why can't the cotton grower hold his cotton, or a portion of it, until consumption requires it, not to force an extortionate price, but to secure a steady price. The mills don't get the cotton at the low prices; they pay the high prices, and they would just as leave the cotton they must

have as the season advances was in the storage rooms of the farmers as in the warehouses of cotton exchanges. They would rather it was so, for then the farmers would get more for it, though it cost them no more, and the farmers would, therefore, be able to buy more of the products of the mills, and possibly at better prices.

Does the cotton grower ask how he may know when to sell? That is easy. SELL WHENEVER YOU CAN GET YOUR PRICE. QUIT SELLING AS SOON AS THE OFFER DROPS BELOW YOUR PRICE.

How can the price be made? Easy, fair and equitable—profitable to the producer and reasonable to the consumer. The National Union of the American Society of Equity has in its possession the highest, lowest and average prices paid for cotton every year since 1791, and also the amount of cotton produced each year since then. It also has facilities for obtaining the current production and current demand of each year. Is any one so stupid as not to believe with this information and these opportunities an equitable price may not be fixed each year, and does any living intelligence doubt that by refusing to flood the market at inauspicious times, the producers can secure that price and maintain it throughout the season?

## NO DANGER OF TOO MUCH COTTON

### Don't be Stampeded

Our advices are to the effect that there is not to be an excessive crop of cotton this year. There has been much damage by overflows in some places; in a few there have been drouths; in many there has been terrible destruction by the boll worm.

But even if there should be a great crop, that is no reason why cotton should not command an equitable price. There has never yet been too much cotton raised, and it is not likely that there will be. The mills have always been anxious for the new crop by the time the first pickings were ready to leave the gins. The only trouble heretofore has been that the crop was hurried from the gins to the market, which it has not only glutted but smothered, and, of course, broke the price. The thing to do is to let it go as a reasonable market requires it. But how can this be done?

Suppose a large percentage of the cotton growers were compactly organized and determined to stand together for equitable prices. Suppose a board representing them, with statistics giving production, consumption and prices for years and under all conditions, with like statistics of the current crop, and the special conditions connected with it, including the cost of production, should determine a fair and equitable price for the current crop, based upon these statistics and conditions, and proclaim that as the minimum price for the crop, and that the organized growers should stand by that price and accept nothing less. Is there any doubt that they would get the price?

But cotton growing covers a large territory; how can the growers know when to sell? Sell when they can get their price. As before said, the price must be reasonable, equitable. It is not the purpose to hold up the crop. It will be open to the market the same as ever, but it must bring the growers' price; when it will not bring that the growers will hold it. This is no departure from the business rules followed by every other productive industry but farming, and farming must come to it or perish.

But how can those do whose necessities demand that their crops go on the market as soon as made? In many cases they may be helped by those who are more fortunate. In other cases business

men's leagues like that of Sulphur Springs, Texas, may come to their relief. Where nothing of this kind can be done for them, let them sell. Even those who have to sell direct from the gin will get better prices on account of the knowledge that the bulk of the crop will not come at a price below the one fixed, because the market will be more eager. Besides, it is not the small growers that glut the market, but the large growers. Those that are compelled to sell, therefore, cannot satisfy the market, nor seriously interfere with getting the minimum or growers' price.

This does not affect the market as a whole. The mills get their supplies as readily and as cheaply, perhaps more cheaply, than at present, but the growers get more, and can therefore buy more of the products of the mills. The only difference is that the cotton awaits the needs of the mills in the hands of the growers instead of in the warehouses of the cotton traders.

We referred to the Business Men's League, of Sulphur Springs, Texas, of which we gave an account in a recent issue. The business men put up a small capital to buy cotton, first determining on a price the crop ought to bring, and they bought only when no one else would pay the price. They only had to buy about a third of a crop of 15,000 bales, and maintained the price throughout the entire season, making for their people \$2 per bale, or \$30,000, at a loss to themselves of only \$25, which they hundreds of times made up in the increase of their business. This proves that markets CAN be controlled, and prices maintained.

A letter just received from one of our ablest workers in Kentucky, says: "The people, or many of them, are in sore financial straits!" In financial straits in Kentucky? Farmers in financial straits in this "era of prosperity?" It is just as well to throw off the mask. The prosperity lauded by the press and politicians is a shell, a crust, an upper crust, the prosperity of boodle, graft, extortion, gambling and speculation. The farmers on whose over-burdened backs this alleged prosperity rests like a clinging Old Man of the Sea, can not be otherwise than in financial straits, so long as the classes price their toil and take it.

# A Question of Profit In Corporation's Grasp

Positions assumed by many intelligent people as to the financial status of agriculture in this country would be amusing if they were not serious. At a recent meeting of farmers a speaker ventured to assert that no farmer, under present conditions, need hope to realize more than five per cent. on his investment. In a spirit not at all unfriendly, a prominent daily paper which is read by tens of thousands of people every day, took up the question and said:

Five per cent., or even 4, is pretty good interest these days, and if the agriculturist can realize that much, men in certain other lines of business will be disposed to envy him. But possibly the dissatisfied speaker was demoralized by reading of "get-rich-quick schemes," and regarded no business a success which did not show returns of 10 per cent. a month or thereabouts.

We imagine the speaker was not at all "demoralized;" that he had had nothing to do with, and was not at all influenced by, "get-rich-quick" concerns. These concerns do not flourish on the farms, but in the speculative purlieus and hidden recesses of the cities. He was speaking but the words of truth and soberness. Five per cent. on the farmer's investment is very different from five per cent. on investments in stocks and bonds and other securities. The farmer must work hard and skillfully, and put in full time, and he must call to his aid the entire resources of his family and his serving domestic animals, and such machinery as he may be able to employ, if he make any per cent. at all. The investor in stocks and bonds and other securities is not called upon to exert a single power of body or mind, unless clipping coupons and collecting, usually done by proxy, may be called an exertion. We imagine that very few of these dignified absorbers of percentages created by somebody else, would be willing to exchange with the farmer though the latter's per cent. were raised to ten, fifteen, or even twenty, if the farmer's toll had to be taken with it.

But these are not the only kinds of investments. There are far more commendable ones, in business, manufacturing, etc., where the investor is also a

worker. But these investors have a decided advantage over the farmer in that they expect to turn their money frequently, and they are doing a poor business if they do not make a per cent. on it every time it is turned. But they have a still greater advantage. Their profit comes from selling things, as does that of the farmer, but, unlike the farmer, these people put their own prices upon what they sell, and they can make the prices cover all their losses and risks, their expenses and mistakes. They can even fix their own salaries and percentages, and make their prices cover them. The farmer cannot do so. He must accept prices made by others who take no account of his labor, his expenses, his losses or his risks. His business from beginning to end is a game of chance in which even the greatest skill and most persevering application, under present conditions, cannot definitely insure absolute results.

But our contemporary dismisses the subject with the following sage reflection:

At all events, the farmer can always get enough out of the ground to keep him and his family from starvation, which is more than many men in other callings are sure of for themselves.

"Can get enough out of the ground to keep him and his family from starvation!" Is that enough? Should any human being be satisfied with mere escape from starvation? The farmer is essentially a worker. Is it much encouragement to him to be assured that he can keep himself and family from starvation? The assertion that others have not that assurance is far fetched and is of little consolation to the farmer, for those who have not such assurance are either those who waste their substance in riotous living, who embark in doubtful ventures, or who do not work, to none of which classes the farmers belong.

But there is coming a time, and that speedily, when farmers will price their products, and reckon their losses and count their gains as other people do. They will then be willing to compare their percentages with those of other investors

A municipality is an organization by legal enactment or common consent for purposes of government, and every member of society is an integral part of it. A corporation is an artificial body, created by legal enactment of the municipality, or higher form of government to which the municipality may be subject.

It has been observed that in the case of corporations, the creature often becomes more powerful than the creator. Some obscure clause in the charter or contract, inserted by a shrewd attorney, and unnoticed or not duly considered by the granting or contracting power, may place the authority creating the corporation or making the contract at so great a disadvantage that the created power becomes superior to the power that created it. In other words, the corporation is enabled to assume powers that were never intended to be bestowed, and to defy society in many of its most sacred rights.

It has been broadly charged, and sometimes conclusively proven, that these hidden powers or obscure protecting clauses, have been secured by corrupting the powers that granted them; but whether they are the result of ignorance, of carelessness, or of corruption or connivance, the effect upon the public and the dangers to good government are the same.

In previous issues of Up-to-Date Farming we have shown the arrogance and monopolistic powers exercised by the stockyards corporations, and how the courts have sustained them under the plea of "vested rights." Hundreds of other instances readily suggest themselves to the minds of intelligent readers; but a case specially strong is that of the Indianapolis Water Company, a corporation created for the purpose of supplying the city with water. It developed after the great floods of last spring that the city water had become contaminated, and that it was seriously infested with disease germs. Typhoid

fever became alarmingly prevalent, and physicians urged the people to not use the water at all, not even for washing fruits and vegetables that were to be eaten without cooking, until it had been boiled. Complaint was made to the Board of Health, the Board of Health complained to the city authorities, and the city authorities protested to the Water Company, but that corporation sat back upon its dignity, flourished its contract in the faces of authorities and people, and continued to serve disease-breeding water to a helpless public. Thus has the war gone on all summer, and meanwhile people have sickened and died, and the health of all and the good name of our city have been endangered.

This but emphasizes the fact that nations, states and municipalities should consider long and well before they create powers that may become superior to their own, or that may defy them at critical junctures; and it forcibly brings up the question whether it would not be better for states and municipalities, and even for nations, to not delegate public functions to private or artificial bodies of any kind, but to retain those functions and discharge them themselves. It may also suggest a question more remedial in its nature, and which may well be considered by students and jurists. In a government where the final and supreme power rests in the people, all authorities receive their powers from the people to whom they are directly responsible for their acts, and they must at stated periods surrender whatever authority may have been delegated to them, and return to the common ranks of citizenship whence they came. Is it not a question whether persons clothed thus with only temporary power, in no sense superior to that of the people who conferred it, may create powers superior to their own, or extending beyond the time limit of their own authority? This question may some day be invoked to save society from the tyranny of corporations.

## The Government and the Farmer

## Prejudice or Patriotism

Up-to-Date Farming is entirely non-partisan. It does not take sides for or against any of the political parties, nor does it discuss party questions as such. But political questions we do discuss—questions bearing upon the general good and affecting the weal or woe of the people. We do not discuss them, however, in a party sense nor with a party bias, but from the broad standpoint of right and justice and the best interests of a common humanity. We may also say without boasting that we are intensely patriotic. We love our country, and believe it represents man's latest and best effort at just and equitable government, but it must be confessed that it has fallen far below what seems to have been the high ideal of its founders, or in many things it has departed from that ideal. It is because we love the country that we call attention to these lapses and short comings. In an autocracy the government is what the autocrat makes it. In a plutocracy it is what a small body of plutocrats, who arrogate to themselves the right to rule, make it. In a monarchy it is what the monarch and his immediate advisers, limited now in most cases by certain constitutional provisions, make it. In a republic it is what the PEOPLE make it.

Now, if the people, and by "the people" we do not mean the few in the various walks of life who direct things, but the masses of the citizenry in the homes—on the farms, in the shops and factories, at the marts of trade, and along the lines of transportation—if these people sit still and accept everything as a matter of course, awakening only once in four years to indulge in a quadrennial political yell, what influence have they in the shaping of the

government or the directing of its policy? The government itself needs, and those in temporary power should welcome, a calm consideration of events as they transpire, with an unbiased criticism and discussion of their leaning upon the welfare of the people. This is a right claimed and exercised by Up-to-Date Farming, and a few over prejudiced readers must not be too sensitive, nor judge us too harshly. We are not criticising their party nor anybody's party; nor are we attacking the government when we criticise official acts or policies. If anything is done inimical to the best interests of the people, the people whom we defined above, we propose to protest against it, and do our utmost to create a sentiment that shall hold every policy of the nation in line with the common good and general welfare.

Those of our readers who fear that such a course may injure their political party are over sensitive, and are in danger of reaching a point where prejudice may become stronger than patriotism. Rather let us make all parties so patriotic as to be unassailable, and every impulse of the government a love-throb for the whole people, where there shall be equal and exact justice for all and special privileges for none.

We do not aspire to be rated in the "class angelic;" we wish our merit placed up there, but we are only human, burdened with a share of the faults to which humanity is heir, but we believe it is the duty of every good citizen and friend of the human race to note and point out the faults, not of individuals, but of society, of "business," and of the nation, to the end that higher standards may be attained in all the walks of life.

To Up-to-Date Farming:

The government is the greatest competitor of the American farmer—beats all other governments in this line by giving millions of acres of land to alien immigrants who are coming over by tens of thousands, sometimes as many as 50,000 in one week, they say. A million came last year, and all got government land that wanted it.

While the government thus creates competition with the established farmers of the older States, it discriminates against them in the matter of protecting some classes and giving money to others—to non-producers, professionals, office holders, trust combinations and manipulators, allowing them to fix their own prices and take what they want. National banks get their currency circulation for almost nothing. They deposit a \$50,000 government bond in Washington, the safest place in the world to put it, and draw their interest upon it. The government returns to them \$50,000 in national bank notes on which to do a banking business. These are loaned to the people, and the bank, through the beneficence of the government, is worth \$100,000—\$50,000 in bonds and \$50,000 in currency or notes of its patrons, and is drawing interest at both ends. And, strange to say, the law that thus furnishes the money to the banks forbids them to loan it to farmers on real estate security! And both bonds and currency (while yet in the vaults of the bank) are exempt from taxation!

Last year the legislature of this State (Pennsylvania) raised the salaries of judges \$1,500 to \$2,000 by a single stroke of the pen, some now getting as much as \$12,000 a year, \$1,000 per month. A reasonably good farm can be bought in this section for \$1,000, of course farms remote from the cities. The price of these farms as a rule, both in New York and Pennsylvania, is fixed on the value of the buildings, the land being little considered. A \$12,000 salary means a farm a month, 12 farms a year, or 120 farms in the life of the office, ten years. Think of it. It takes a farmer a life time to pay for one farm.

Thus, while the one feeds and clothes all the people, the other gets the money,

and will soon get the land, giving little or nothing in return. But this is called brains—business. The Supreme Court of the United States has, for years, decided what the law is in its most important cases, by a vote of five to four. Brains! If nine machinists were to pull thus, five one way and four the other, what would happen to the machinery? Would it be brains?

Take another view. Besides the smaller coins, we have three kinds of money—national bank notes which cost the bankers almost nothing, silver containing 50 cents worth of metal to the dollar, and the gold dollar said to contain 100 cents' worth of gold. But who knows? Why is it worth 100 cents? It is simply 25.8 grains of gold worth 25.8 grains of gold, measured by itself.

But take all this for granted. We have a one-cent dollar, a 50-cent dollar, and a 100-cent dollar, all said to be as good as gold, and on a gold basis, though the national bank notes are so cheap that the government prints them and gives them to the banks at about the cost of the paper.

Now, the farmer is the only man that furnishes products on the gold standard basis—that is, he gives 100 cents' worth for every dollar he receives. Even the wage-earner, through constant and persistent effort and organization, is better paid. All the others have inflated prices fixed by themselves on their own peculiar products, including salaries and fees of non-producers, who make but little or no return for the money they receive, but the farmer, whose prices are fixed by those who use his stuff, is compelled to give the worth of the 100-cent gold dollar, and gets, as a rule, the inflated paper dollar that the bank gets free, or the dishonored 50-cent silver dollar. The others on inflated prices get the gold standard dollar. In other words, the calling that earns the gold dollar gets the cheap dollar, and those that earn comparatively nothing get the gold dollar. Under this system the burden is all on the farmer. What is the brother of the ox fit for any way, save to be taxed, while others price his goods and take them? How long will he continue to stand this unequal deal?

JOHN T. MARTIN.

Pittsfield, Pa.

# Prices On the Farm and Prices Elsewhere

[The statistical research and tables in this article are by Eugene Matrosow, D. C. L.]

It is a well known fact that a great difference exists between the prices of agricultural products on the farm and their prices at the primary markets or at the ports of export.

According to common belief unanimously shared by the American economists, statisticians and grain experts, so called, farm price of agricultural products constitutes the basis of all other prices. So that as soon as the products leave the farmer's hands their value rises immediately in somewhat mysterious manner and they continue to become more and more valuable all the way from the farm to the primary market and from the primary market to the port.

What are the additions to the value of agricultural products after they leave the farm and until they reach the primary market? What are the additions to the value of the products after they leave the primary market and until they reach the port? In other words, what specific items constitute the difference between the price on the farm and the price at the primary market, and again between the price at the primary market and the price at the port?

Thus far, by the American economists and statisticians, the problem presenting itself in the foregoing two questions was considered unsolvable. We will try, however, to solve it here, so far, at least, as the difference between farm prices and prices at the primary market is concerned.

The reports of the bureau of statistics of the United States Department of Agriculture give us average farm prices of all cereals on December 1st of each year for the last 38 years. As the average farm price of all grains on December 1st of each year, viz., in almost the middle of the cereal year, should be considered a typical one, its comparison with the average yearly price of the grains would be perfectly proper and scientifically unimpeachable. Taking the means between the lowest and highest prices for each month, as the average monthly prices, and the averages of the monthly prices as the yearly prices, we will thus have the comparative average yearly prices of leading cereals of the country on the farm and at a primary and the leading market (Chicago), presented in the following tabular statements:

## COMPARATIVE PRICES OF WHEAT FOR THE LAST TEN YEARS.

	Farm Price, Cts. per Bu.	Primary Market Price, Cts. per Bu.	Difference, Cts. per Bu.
1894	49.1	57 1-16	+7.96
1895	50.9	62 3-8	+11.47
1896	72.6	66 13-16	-5.80
1897	80.8	85 13-16	+5.00
1898	58.2	89 3-4	+31.50
1899	53.4	71 9-16	+13.10
1900	61.9	70 13-16	+8.90
1901	62.4	72	+9.60
1902	63.0	74 5-8	+11.60
1903	69.5	79 1-4	+9.70

It will be seen from the above that in the year 1896 the primary market price of wheat in the United States stood 5.8 cents per bushel lower than the farm price on the commodity, or the average lower price for 10 years is 0.53 cents. In nine years the primary market price stood higher. The total of the higher differences is \$108.33. This divided by 10, makes the average higher difference 10.83. Deduct from this the average lower price, and we have 10.30 cents (10.83-0.53c) as representing the difference between the farm price and the primary market price, in favor of the latter for the years considered.

The identical tabular statement in relation to the American rye will appear as follows:

	Farm Price, Cts. per Bu.	Primary Market Price, Cts. per Bu.	Difference, Cts. per Bu.
1894	50.1	46 9-16	-3.6
1895	44.0	43 5-8	-1.6
1896	40.9	35 9-16	-5.4
1897	44.7	40	-4.7
1898	46.3	49 1-2	+3.2
1899	51.0	55 1-16	+4.0
1900	51.2	52	+0.8
1901	55.7	53 1-4	-2.5
1902	50.8	54 5-16	+3.5
1903	54.5	51 5-8	-2.9

From the foregoing table it would be seen that in five years out of ten the market price of the American rye stood lower than its farm price and that the difference between the two prices fluctuated between minus 5.4 in 1896 and plus 4.6 in 1896. Taking the sum of the minus differences and dividing by 10, we have 1.91 cents. Taking the sum of the plus differences and dividing by 10, we have 1.61 cents. Or the primary market price of rye averaged 0.3 cents (1.91-1.61c) lower than the farm price for the ten years considered.

Turning now from the breadstuffs to the feeding stuffs, namely, to corn, we find that the ratio of farm prices of the commodity to its market price during

the last ten years was as presented in the following table:

	Farm Price, Cts. per Bu.	Primary Market Price, Cts. per Bu.	Difference, Cts. per Bu.
1894	45.7	43 1-16	-2.64
1895	25.3	40 1-8	+14.8
1896	21.5	25 5-6	+4.3
1897	26.3	25 9-16	-0.8
1898	28.7	31 5-8	+2.9
1899	30.3	33 7-16	+3.1
1900	35.7	38 1-4	+2.5
1901	60.5	50 1-12	-10.4
1902	40.3	59 15-16	+19.6
1903	42.5	46 1-8	+3.6

It will be seen from the foregoing table that in three years out of ten the primary market price of corn stood lower than the farm price of the commodity and that the difference between the two prices during the decade fluctuated between minus 10.4 in 1901, and plus 19.6 in 1902. Taking the sum of the minus differences and dividing by ten, we have 1.38 cents. Taking the sum of the plus differences and dividing by 10, we have 5.08. Or the primary market price of corn averaged 3.70 cents (5.08-1.38c) higher than the farm price for the ten years considered.

The identical table in relation to oats will appear as follows:

	Farm Price, Cts. per Bu.	Primary Market Price, Cts. per Bu.	Difference, Cts. per Bu.
1894	32.4	31 3-4	-0.7
1895	19.9	24 1-4	+4.3
1896	18.7	18 1-16	-0.7
1897	21.2	18 1-4	-3.0
1898	25.5	24 3-4	-0.8
1899	24.9	24 3-4	-0.6
1900	25.8	23 3-4	-3.1
1901	39.9	32	-7.9
1902	30.7	37 1-16	+6.3
1903	34.1	35 3-16	+1.0

It will be seen from the foregoing table that in seven years out of ten, average farm price of oats stood higher than the average yearly price of the commodity on the primary market. Such being the case the difference between the average farm price and the average market price fluctuated between minus 7.9 in 1901 and plus 6.3 in 1902. Taking the sum of the minus differences and dividing by 10, we have 1.68 cents. Taking the sum of the plus differences and dividing by 10, we have 1.16 cents. Or the primary market price of oats averaged 0.52 cents (1.67c-1.16c) lower than the farm price for the ten years considered.

At least the comparative prices of American barley on the farm and at the primary market (Chicago) during the last decade are presented in the following tabular statement:

	Farm Price, Cts. per Bu.	Primary Market Price, Cts. per Bu.	Difference, Cts. per Bu.
1894	44.2	....	....
1895	33.7	....	....
1896	32.3	....	....
1897	37.7	....	....
1898	41.3	....	....
1899	40.3	41.7	+1.4
1900	40.8	43.0	+2.2
1901	45.2	45.4	+0.2
1902	45.9	57.7	+11.8
1903	45.6	52.0	+6.4

It will be seen from the above that of all leading cereals of this country barley is the only one whose market price during the second half of the last decade stood invariably higher than its farm price.

This may be accounted for in part or in full by the fact that it is not a speculative grain in the same sense as corn, oats and wheat are. The malting trust is the principal buyer and sets the price. As regards uniformity of price, barley growers are to be congratulated that their prices have been fixed by a trust. See the tables of this and other grain.

The difference between the average farm price and the average market price of the grain fluctuated between plus 0.2 in 1901, and plus 8.8 in 1902. Taking the sum of the plus differences and dividing by 10, we have 1.9 cents. Or the primary market price of barley averaged 1.9 cents higher than the farm price for the years considered. (Between 1894 and 1898 no reports of the price of barley at Chicago are available.)

Proper understanding and correct interpretation of the foregoing five tabular statements composed with the specific purpose to show the difference between the farm and market prices of leading cereals of the country during the last ten years is of extreme importance, as it furnishes the key for the solution of the most important problem of agricultural economics of to-day. It will be seen from the tables that the primary market price has been lower than the farm price during the last ten years once in the case of wheat, five times in the case of rye, three times in the case of corn and seven times in the case of oats, barley being the only cereal whose market price during the last five years invariably exceeded that on the farm. It should be remembered that the primary market price in the foregoing tables is the average yearly price, while the farm price is the average price for the month of December, which, being thus taken for the middle of the cereal year, can properly be considered as the average or approximate average yearly price on the farm.

The question naturally arises: How could it happen that the average yearly wholesale cash price of the leading ce-

reals of the country has been so often lower than their cash price on the farm? Does this mean that wholesale dealers on the primary market, have suffered considerable losses during the last ten years: one year on wheat, three years on corn, five years on rye and seven years on oats? If so, what is the reason of such an economic anomaly?

In order to give a proper and logical answer to the question of such tremendous importance it is necessary to state and explain how actual prices on agricultural products are made. It is claimed by some that they are made by the law of supply and demand. Yet there is not the slightest doubt that the most intimate connection does exist between the actual values of farm products and speculation in "future" prices for the products, and that speculative variations invariably and inevitably cause variations in actual market values. As speculation in its broader sense of buying and selling for profit has been in existence for centuries, whenever we use the word speculation hereafter by it is meant buying and selling of "futures." Speculation in agricultural products undoubtedly tends to lower prices permanently. The professional short seller by his sales of fictitious grain creates a fictitious over-supply in the market, which is as depressing to prices just as much as would be an abnormally large supply of actual grain thrown on the market by the farmer. It is a well established fact that spot prices invariably move in sympathy with "future" prices, and that depression of "futures" inevitably leads to a fall in spot prices. The same quantity of a given grain which would have been sold but once by the farmer is actually offered first by the farmer to the local buyer, by the local buyer to the short seller, next by the short seller to the long buyer, and finally by the latter to somebody else.

Thus, in the case of futures, the grain which may not be in existence, but which they expect to be able to get from the farmers, if they are so unfortunate or fortunate to hold the last card, when the time comes, may be traded over several dozen times. The result is a swelling of the apparent supply of the grain to immense proportions, limited only by the boldness of the operations, and lowering prices most seriously. Particularly at a time following immediately the gathering of new crops this selling for future delivery keeps out of the market so many prospective buyers which would otherwise have to buy their supplies at once. This has been emphatically the case during 1903 and 1904 on wheat and flour. In this way a contraction of the actual immediate demand takes place equal to the amount of fictitious supply sold to legitimate dealers. These organized gangs of gamblers and cliques of speculators work day and night to depress prices of agricultural products, especially in the face of a rising market. In such cases of rising prices "bear rings," so called, which sold already in anticipation of a falling market, hoping that by bold manipulations they may create a panic for a time in the face of an opposite tendency of the market and get out before a reaction sets in, make most desperate attempts to beat down the prices. Even an official report says in this respect: "In fact, we find \*\*\* that uniformly sales of futures are made on every day at a lower price than the value of middling on that day." (Report of the Senate committee on agriculture, Fifty-third Congress, Vol. I, pp. 13 and 14.)

It should be understood in this connection that by the farm price is meant in this short discourse the price obtained by the farmer from the local buyer, either on the farm or at the first place of delivery. This cash price invariably differs greatly from the price on the primary market. Of course a part of the transactions on the latter is conducted on the cash basis, thus creating what we have called spot prices. While an intimate connection exists between the farm price and spot price on the primary market on one hand, the most intimate connection is naturally existing between the actual or spot price on the primary market and speculative or "future" price on the same market on the other. Therefore, the depression of the latter systematically produced by those "bear rings" inevitably and invariably lowers farm prices of agricultural products. If the relative proportion of speculative dealings to actual dealings, spot transactions, is not so large primary market prices are naturally higher than farm prices. When, however, the ratio of speculative dealings to actual dealings—transactions in "futures" to spot transactions—fictitious sales to actual sales—becomes too large primary market cash prices move invariably in sympathy with "future" prices and fall so greatly that at times they become averagely lower than average cash farm prices. This is the very reason why average yearly prices on primary market in the United States have been lower than the average farm prices—once, in the case of wheat; three times in the case of corn, five times in the case of rye, and seven times in the case of oats, over a period of ten years. The fact that nothing of the kind has ever happened to barley, because there is no speculation in this feeding and malting stuff in the United States, is a most significant one, and finally corroborates our conclusion as to the reasons of average primary market price being lower at times than average farm price. From the foregoing inferences it becomes self evident that the

wind grain, the gambling in agricultural products as established in modern times, constitutes an unstable, unnatural and simply criminal system of "business" which affects most injuriously not only the producer and the consumer but every legitimate dealer in agricultural products as well. Thus the criminal activity of organized gangs of the men who gamble in farm products without having a single dollar invested in the same, undermines and ultimately ruins not only the agricultural but every legitimate interest in the country also. It follows that for the abolition of this system of organized and legalized robbery of our times not only the farmer but the consumers and every business man of the country should work. The people who have invested their capital in agricultural produce, naturally and rightfully look for some profits from their legitimate investment.

## Argument Sustaining Cotton Bulletin

(Concluded from first page.)

—when they would receive their wages. Everything that went into the production of the crop had a fixed price set on it in advance, except their own wages. Now, in all fairness, are they not entitled to fair wages? If they set the price on cotton they will set it fairly to protect the first owners—the producers. If they let another set of men fix the prices, we are not so certain that they will consider all the hours of toil bestowed on the crop, the investments for seed, land, fertilizer, and machinery, and something for profit. These items are usually not considered worthy of attention when the buyer fixes the price. But these are the items that this society obligates itself to keep in mind when deciding values.

It is all up to the cotton growers themselves. This society recommends a fair and equitable price for the 1904 crop of cotton. You can get it if you really want it. All you need to do is to keep this price in mind, ask it and hold for it. The world will take your cotton at this price just as readily as at 8c or 10c, if it cannot get it for less. 12 cents for cotton is fair. It is equitable. Keep the price of cotton good and the portion of our country interested will enjoy a degree of prosperity scarcely dreamed of. The prosperity of the cotton growers will also be enjoyed by every other business.

Cotton growers, we urge you to do your duty. If you are made of the same kind of material as are your brother farmers in the north who grow wheat, you will put your price to the mark in a short time. You have only about two cents to raise. They had about 35 cents. Every cent you add to the price of cotton means 56 million dollars. Every bale you market below your price you throw away a good part of your profit. The price will come, and those who hold will get it. You will gain nothing by selling, and you will lose nothing by holding. Therefore wait a while and see.

The situation with cotton is very similar to that of wheat a year ago. From all over the cotton belt planters write us that they are holding. Dealers admit that the receipts are only a small fraction of what they expected. This was the way with wheat and the dollar price came. The same plan that raised wheat from 65 cents to over \$1.00 can and will raise the price of cotton to 12 cents at New York. The farm price will be 10 to 11 cents.

This bulletin will be sent to every newspaper in the cotton states. We want every person in the cotton states who receives the paper to give it the widest circulation possible. Clip out the bulletin and send it to your favorite paper, with request to print. Talk 12 cent cotton. Hold for it. It will come and those who hold will get the price or more.

## RUSSIA-JAPAN WAR ATLAS, 10 CENTS

Three fine colored maps, each 14x20; bound in convenient form for reference. The Eastern situation shown in detail, issued by The Chicago & North-Western R'y, mailed upon receipt of ten cents in stamps, by W. B. KNISKERN, P. T. M., 22 Fifth Ave. Chicago, Ill.

## Stories and Views of the West

Surprising as it may appear the big new ROCKY MOUNTAIN MAGAZINE, published monthly at Denver, Colorado, will be sent an entire year solely to introduce it for 10c. Clubs of six, 50c, 12 for \$1. Stamps taken. Western stories and fine views of scenery. Better than the high-price magazines. Address as above

Back numbers may be obtained by embracing special three months offer in this number for 10c. The book may be obtained complete at \$1.00 in handsome cloth binding, 50c in paper cover, 10c extra for postage. Send orders to the publisher of UP-TO-DATE FARMING.]

#### CHAPTER XIV.

In the daily papers a year ago was this interesting item:

"An increase of \$4,500,000 in the capital stock of Deere & Co. was announced here today. The present capital of the concern is \$1,500,000, and the stockholders have voted to increase this to \$6,000,000. The additional capital is to provide for the remarkable growth and expansion of the business during the past few years and the further increase that is assured. It has been subscribed by the present owners."

Of course this meant that the farmers will have to pay the dividends on this quadrupled stock in the price of agricultural implements made by this firm. And this brings to the front another one of the objects of the American Society of Equity, which is to enable the farmer to buy advantageously. It is a fact that the farmers frequently pay much more for their farm supplies than is necessary to insure a fair profit to the manufacturer and the merchant. As I write, a letter comes from a member in Oklahoma. He says: "I am paying 2 per cent. per month for money to meet current expenses so I can hold my wheat for \$1." Must such sacrifice and determination go unrewarded? Would any banker dare charge a farmer 24 per cent. a year if they were thoroughly organized? Besides, the margin of profit placed on goods sold to the farmers is often much greater than that added to goods sold to the people of the towns and cities. The reason is clear. In trading, the farmer is not an independent person. He does business as the merchant or manufacturer dictates. He is usually a debtor to the implement dealer and the storekeeper, whereas if he had cash to pay for his supplies he could buy more cheaply in any market in the country. Wherever the farmer turns to make his purchase he finds himself face to face with a trust or union. He is worsted in the encounter and loses some of the legitimate results of his work when he puts his unorganized skill and labor against the organized efforts of the union laborer. He loses again in the encounter with the organized miners who mine the steel—or, rather, the iron from which the steel is made—which enters into his implements. He loses when he meets the woodworkers, the wagonmakers, the furniture makers, the implement makers, the horseshoers, the threshermen, the milk handlers, the carpenters, the masons who build his buildings, the armies who manufacture the household articles, the clothing, the army of leather workers, and behind them the army of tanners, and the armies which run the railroads, and the armies which run the trains over the roads to haul to market the products of the farmer. The farmer does not drive a nail, use a pin, lift a hoe or spade, coil a rope, or turn a furrow but he pays tribute to some one of the numerous armies arrayed against him. Day and night, night and day, he is being taxed for the support of these armies, all because he is meeting them single-handed, cannot resist their encroachments, nor pass the tax along. Plainly he needs help to enable him to buy advantageously, which will be, largely again, in the interest of the consumer.

And this it is hoped to give him. Considering the great number of farmers who will be members of the American Society of Equity, and the fact that they will soon have a good cash balance as the result of selling at profitable prices, there can be no doubt that they will be able to purchase for cash and at the lowest prevailing prices. Even if the farmer buys his supplies with his own produce, his ability to put a price on it will enable him to turn it in at higher figure than is now possible. He will no longer be under the necessity of asking for long credit, and whatever credit he may need he will get on the same favorable terms that other business men receive. Mention has already been made of the combination among the threshing men, which enables them to charge seven cents a bushel for threshing. If a farmer were able to say to the thresher that he would pay five or four cents, and that no farmer in the United States would pay a cent more, and if this was an equitable price, he would get his threshing done for four or five cents. This is the position in which the American Society of Equity would place every farmer in the country with reference

to buying. Probably as much money is lost to the farmer by exorbitant prices which he has to pay as by the inadequate prices which he is compelled to take. He loses in both directions. It is time to stop the loss. The farmers can do it if they will, for they have the power, and their interest demands that they should use it. If they apply it properly, that is, through organization, the result cannot be doubtful.

In seeking to buy at fair prices the farmer, through the American Society of Equity, will help all the people. Economically the struggle of man is for cheapness. Men in trying to satisfy their wants always endeavor to do so as cheaply as possible. The call for cheapness by the farmer has, in the past, been of necessity, and this necessity has been of such a degree that they not only got cheapness but nastiness—low grade. Witness the volume of trade to some catalogue house, where the chief recommendation was cheapness. The success of the American Society of Equity will benefit the home dealer who will keep a high grade of goods and sell at equitable prices. We look for a turning from the cheap, low grades, to high grade goods at equitable prices.

We have seen how the price of farm products has been influenced by this tendency, and also how manufacturers combine to resist the tendency. Every new invention, every new process, every application of a newly discovered force, and every improved application of a well-known force, contribute to bring about cheapness. The old force of competition works toward the end. But recently we have had a great advance of prices with no effort to resist the advance.

The farmers propose to take the field in a campaign for lower prices on the things they buy where lower prices should prevail, and they are going to use a force the operation of which will be irresistible. It is not so much a high price or a low price, but an equitable price all around that is demanded. The entrance of the Third Power through the American Society of Equity into the economic problems of the world marks an epoch in the history of the race. Although the last of the great powers to be organized, it is yet the fundamental or first power or force which will dominate all others. The development of this society and the power it will represent and wield may be compared with the development of the force, electricity, which has revolutionized the industrial world. The awakening of the agricultural classes, the organization of them into a great national and international co-operative body, which is now being accomplished, will make possible the control by them of practically all the material that enters into the manufacturing and commerce of the world, and on which human and animal life depend. Such a revolution might appall us were it not for the fact that in working out this stupendous movement everything will be in the direction of improvement and better conditions for everybody and for every legitimate enterprise.

It will be so in the matter of prices. There will not be one price for the farmer and another for the working man and professional man. Whatever conquests the farmers win in this direction will be for the benefit of all. What the farmer gets, all will get. In fighting his own battle the farmer will fight the battle of every American citizen. It will be impossible to charge the farmer a fair price and to charge other classes an unfair price. So the American Society of Equity does not come to oppress or enslave any class, but to give liberty and independence to the greatest class of citizens, and through that to all others—not to destroy or cripple any institution, but to benefit and strengthen all institutions, including the government itself. Heretofore farmers thought when organizing they must fight every institution on earth to get their right. This is nature is human nature, but also is a relic of barbarism. There are too many such relics remaining. The farmers really have no fight against anybody or anything; all they need is equity, and this they can take, regardless of the disposition of other parties.

Many schemes have been devised, and many more suggested, for the regulation and control of trusts. The law does something, and more stringent legal enactment might do more. But no curb can be as effectual as an organization of American citizens greater and stronger than the trusts themselves. Through this and through this alone can trust extortion be prevented, and fair treatment be secured for all. The people can do it for them. And the trust magnates understand this. With the help of shrewd and unscrupulous attorneys they can usually find a way to evade the most formidable statute, and to organize so as to get within the letter of the law. But they could make little headway with the people organized against them, and when the farmers are organized the people will be organized. How could the cotton or woolen manufacturers get along without the farmer's cotton or wool, or the packers without his cattle?

This but indicates the power which the farmer could exert as a member of the American Society of Equity. He could oppose his trust—if you choose to call it so—to the manufacturing trusts, and in such a contest the farmer must, of necessity, win. This is a force—this new force, this Third Power—which the industrial trusts would understand and respect. Thus organized, the farmers could meet their enemies and oppressors on their own ground, and overthrow them, if necessary, for the common good. The trust problem would be solved, and solved in such a way as to benefit all. And the farmer, enabled both to buy and sell advantageously, would enjoy a prosperity and freedom such as he has never known, and that prosperity and freedom would be shared by all our people. The world has been waiting long for this Third Power. Now it is at hand.

#### CHAPTER XV.

Something has been said of the influence that the farmer can exert through organization on the politics of the country. One of the purposes of the American Society of Equity is to enable him to exert such influence. Here, again, it is not because the farmers, organized, need to look to politics for relief or strength on their account, but for the general welfare of humanity. The farmers, through their society, not only intend to do equity, but to get equity; not only to give equity, but to demand equity. It is not the object of the society to become a political party. But it is intended to secure, through already existing parties, laws in the interest of agriculture. Though legislation is not the first thing sought, nor the most important thing, legislation is nevertheless needed. The reason that it has not been secured is that the politicians, though prolific in promises, when seeking election, forget all about the farmers when they get to Washington. They quickly fall under other influences. Moreover, they know that the farmers are easily put off; that they do not persist in the pursuit of their aims, and that when election day comes around again they may be trusted to support the party, readily accepting excuses and trusting to new promises. Nor are the farmers adequately represented in Congress by men of their own class. Thus they are largely without influence in shaping legislation. Until they are in a position, through co-operation, to secure what they want, progress will be slow. With the American Society of Equity a success, all these things can be rapidly accomplished.

It is not necessary to set out here all that the country needs in the way of legislation. But some things may be mentioned. Possibly the first and most important thing is some lightening of the burden of taxation; and this also implies less extravagance with the people's money, less graft, rake-offs and boodle, or, in short, the money wisely and economically expended, when we will see greater results with less tax. The farmer is taxed on everything he buys, and yet is protected on scarcely anything he sells. This is an evil that must be righted, and it can be righted, but only by the combined efforts of the farmers. Until there are such efforts nothing will be done. As long as there are a few people who can control the taxing power of the government, and many people who are content to have that power so used, it is idle to hope for relief. The few will control as long as the many allow them to control—and not one moment longer. Even the slightest measure of relief is denied at the present time. Opportunities have long been presented for making reciprocal commercial treaties with foreign nations that would have had the effect of making a much larger market for farm products, but they have invariably been put aside at the dictation of selfish interests demanding protection. Treaty after treaty of this sort has been killed or allowed to die in the Senate, which has been indifferent to the welfare of the farmer if only the protected industries were allowed to have a monopoly of the home market. Rather than remove or lower the duty on one article manufactured in New England, our Congress has preferred to allow the farmer to get along as best he could—to find his own market. Yet when protection hurts a certain corporation, Congress is quick to grant a rebate of the tax on any product that goes into a manufactured article when that article is exported. But nothing is done for the farmer.

Yet there are many millions of foreigners who could be taught to consume the fine cereals and meats produced on our American farms, if an earnest and well-directed effort were made to open and cultivate foreign markets. Lower taxes and wider markets could thus both be secured by legislation, and the American Society of Equity will work for such legislation, bringing directly to bear on Congress the influence of over 10,000,000 American voters who now play little part in the business of lawmaking. This constant failure of the efforts to secure reciprocity has another bad effect on the farmer, for it provokes retaliation on the part of other countries from which the farmer even now suffers, and will suffer still more. Our fruits, cattle and meat products have been made the subjects of discriminating taxes and vexatious inspection imposed and resorted to by foreign governments in retaliation for exorbitant duties levied by our government on their exports to this country. There are threats of further retaliation, and

we even hear talk of a European combination to save the European markets from the so-called American invasion. Yet we go on in the same old way, and our manufacturers get even for the low prices for which they must sell abroad, by charging the home consumer greatly higher prices. Thus the farmers are kept out of foreign markets that they ought to have, simply that the manufacturers may plunder the home market.

Such arrangements as these are plainly not the work of the farmers or of the friends of the farmer. They were devised by men who understood perfectly that the agricultural class is docile, patient and most easily fleeced. The farmer is not interested in paying taxes for the benefit of people who never seek to benefit him, in narrowing the market for farm products, or in provoking retaliation from foreign governments. What he wants is freedom, equity, fair play to all, markets as wide as the world, low taxes—and not one of these things is his at the present time. With all these, and with the American Society of Equity at work in his behalf, he probably would need little else from the government. But whatever he needed, he would get. For the politicians, who now so quickly forget the farmer, would realize that it was dangerous to do so, if they found that they were dealing with a great organization acting as a unit—an organization that refused to accept promises as legal tender, but that insisted on a redemption of those promises in honesty and good faith. Thus may the farmers make their influence felt in the condition of affairs which is rightfully theirs. The Third Power can easily defeat the first, second or third house. The farmers will be ignored as long as it is safe to ignore them, and no longer. The thing to do is to make it unsafe. The American Society of Equity is the means to bring that result to pass.

#### CHAPTER XVI.

Manifestly it will be impossible for the farmers to co-operate unless they are kept thoroughly informed of what is going on in every part of the country, and indeed of the world. It would be foolish, to take a simple case, to attempt to fix and maintain a price on farm products unless each member knew what that price was. This information, at least, must be regularly furnished. It will be conveyed to the various members of the society through their official paper, which is a part of the plan. This official organ will be printed four times a month as soon as the society is sufficiently organized, and there can be little doubt that with this plan in operation the recommended price will be printed by all the other daily and weekly papers as regularly as the markets are reported now. The recommended price will have to be printed by all newspapers having a market department, for it will also be the market price.

With this knowledge, concert of action will be easy. For every member of the society will have the same price and the same advice about the same crop at the same time, and, feeling sure that purchasers cannot get those products from any one else for less than they can get them from him, he will be under no temptation to sell for less himself. Without this knowledge it would be wholly impossible to make the scheme work. But further than this, it is felt that the members of the society should have information that would convince them that prices agreed on are fair and reasonable—and attainable. So it is proposed, through the local unions or members, to carry on a system of crop reporting that will surpass anything ever before accomplished, or even attempted. Every member will be a crop reporter. The present system, or lack of system, of reporting crops is the source of great loss to the farmers. Take wheat, for instance: The harvest begins in Texas in May and ends in the Dakotas in September. Yet, as a matter of fact, crops are maturing and harvests are in progress in some part of the world every day in the year. From the beginning to the end of the harvest in this country, and more or less every day in the year, false crop reports are circulated, the yields are exaggerated, damage from weather, insects, etc., is emphasized, and all manner of frauds and deceptions are practiced. The result is that the market fluctuates every day, and often several times a day, until the poor bewildered farmer sells rather than holds against uncertainties. The government reports, from the very conditions under which they are obtained, cannot be more than reasonably good guesses, and consequently they are not held in good repute. So much discredit has sometimes been placed upon them that the market has been known to have acted in exactly the opposite way from that in which the reports should have influenced it.

So, the American Society of Equity will see to it that the farmers have full and accurate reports of conditions and crops. The size of the yield, and the character of the product; the nature of the season, whether favorable or unfavorable—all this will the members of the society get. Each member will be in a position to report the exact condition of growing crops on his own farm, and also yields and quantities on hand. He can also give a correct report of his neighbor's crop, if that neighbor does not belong to the society. These reports will be given to the secretary at each meeting, to be forwarded, or will be sent to headquarters, direct by mem-

# THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS  
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

This is the co-operative farmers' own department. It is the desire to make it the life and strength of the Local Union. Every member is a welcome contributor, and every communication will have courteous consideration. Address JOHN P. STELLER, care Up-to-Date Farming, Indianapolis.

More than politics should be the A. S. of E. to you. More than the voting place your Local Union. Here your troubles will end and your triumphs begin. All credit to the Local Unions. They are your forts—your strength. Stand by them as you would by your guns within the real fort to repel the enemy.

## Annual Meeting of A. S. of E.

It has been decided to hold the annual meeting for election of officers and transaction of business for the American Society of Equity on Thursday, December 8, 1904, at headquarters, Indianapolis, Ind. The meeting will cover more than one day if necessary.

Nominations of candidates for the various offices are now in order. The officers to be elected are president, secretary, treasurer, statistician, organizer, attorney, and seven directors. The board of directors shall consist of the president, secretary and four others. Candidates names must be published in the official paper at least six weeks before the election. This makes it compulsory that the names be proposed and received at headquarters by or before Oct. 20th, when the November 1st number will close.

It is desired that all the officers for the next year shall be men who can give as much of their time to the development of the society as necessary. Any member or local union can put a name in nomination and it should be accompanied by a statement showing the fitness of the party for the position, which will be published for the information of members.

Votes will be cast on blanks to be supplied for this purpose and which will be printed in the official paper in due time.

What do you think of \$1.20 wheat? Had doubt about \$1 wheat last year, but we got it. And now we are right at \$1.20. Farmers can do things whenever they will.

We are now in the field for cotton, and the wheat growers will stand side by side with cotton growers. They want the cotton growers to eat lots of wheat bread, and they don't want it to cost them any more than it did before, so they can consume more and more of it. Hence they must have better prices for their cotton. Here is where the mutuality of interest comes in. Now hurry and get together.

Hon. H. B. Sherman, Assistant National Organizer, is moving things in Kentucky. The tobacco growers are not slow in coming to the front. They hear the word and understand it; they see their opportunity and seize it. Other tobacco regions should close up the ranks.

Here is the situation of the A. S. of E. in a nutshell: Wheat is won, barley and beans are moving victoriously, the tobacco people are lining up, the cotton hosts are marshalling, broom corn is looking out, the great cornfields are pricking up their ears, and all other farm interests are awakening. Henceforth the farmers must be consulted as to price.

You would scarcely believe it, but the everlasting Yankee has caught it. The New England Farmer, of Aug. 27, declared: "The only way to keep the market steady to firm is by CONTROLLING—limiting—the supply." Two years ago you could not have pounded such declarations into an eastern paper with a trip hammer.

Kentucky and North Dakota are manifesting the greatest activity just now, with Michigan and Minnesota following vigorously. Skepticism as to the ability of farmers to do things is at a discount and growing beautifully less. Let it dwindle.

Joel Hopson, of Kentucky, is doing a splendid work for the tobacco growers. We take the following from a clipping he recently sent us:

The price of tobacco is, at least to a large degree, easily within the control of the producer. This is so firmly embedded in my mind and having viewed constantly the injury which the planter endures in the loss of money and time, as a result of inaction, and the ordinary thoughtfulness that is necessary to conduct any undertaking to a successful termination, I feel constrained to speak in the strongest language I can employ of the necessity for immediate action to combat the encroachment of the great combine.

Let me urge activity on the part of the local unions. They really represent the strength of the organization—they are the working force. No matter how active and efficient deputies and organizers may be, they can do no more than plant the seeds, the local unions must do the cultivating, and whenever an important work is to be done, the National Union at once turns to the locals. Be ye always ready.

What do you need to aid in making the local unions interesting, and to secure good attendance? The National Union will do anything in its power to aid you. Keep everlastingly at it. Everybody learn to speak, discuss questions, make figures, calculate how much five cents additional on corn, or cotton, or any other crop would be worth to you. Consider how the neighborhood may be improved—the roads made better, the farms trimmed up, the schools and churches sustained and improved. Keep at it. Have good times. Learn to be better and wiser people, and be happier and more prosperous. It is a fact that Our Up-to-Date People are different from all other people, and the difference is growing greater all the time.

Would you believe it? Uncle Threadbare joined a local union! But he didn't stay joined long. He couldn't go the pace. He says the A. S. of E.'s are too fast for him. He likes the last letter, though, but he wants it in the plural, thus, E's.

The F. M. B. A. lodges seldom fail to have good meetings. They are rapidly falling into line with Our Up-to-Date People; indeed, that is exactly where we class them. When they want anything they go after it, and it is a cold day if they don't get it. It is a pity they haven't more energetic national officers.

"Lest we forget." No we surely can't forget. Wheat opened at about 80 cents. Some sold, but Our Up-to-Date People didn't. Then it went to 85, and great tales were told of immense crops in the West. Up-to-Date said, "Hold on, boys, there's more wind than water." It went to 90 cents, and tales were told of floods of wheat coming down from the spring wheat regions of the Northwest. But the A. S. of E. had its weather eye out and saw big clouds of rust up there. Then came the Bulletin defying speculation and putting wheat at \$1.20! There was scrambling in the pits then. The "bulls" bellowed and the "bears" growled, and began to paw and scratch for wheat. No. 1 Northern (the highest grade) has already sold for \$1.23 in Minneapolis, and our common grade is within a few cents of the growers' price. No, we'll not forget.

Welton Winn, of Santa Anna, Coleman county, Texas, will go anywhere to instruct organizers and to organize the A. S. of E.

## IMPORTANT ANNOUNCEMENT!

### SPECIAL ISSUES OF UP-TO-DATE FARMING

Immediately following the SPECIAL EDUCATIONAL SERIES—six issues of UP-TO-DATE FARMING June 15 to September 1—we will commence the publication of six other special issues. These will begin September 15, and will be called THE AGRICULTURAL ECONOMICS SERIES. We will repeat our liberal offer of THREE MONTHS FOR TEN CENTS, covering this period, but old subscribers for three months, or for a longer period, cannot embrace this offer. They must be new subscribers.

These special issues and special prices are made to secure new subscribers. (We believe every person who reads UP-TO-DATE FARMING for three months will want to read it always, thus we hope each three months subscriber will become a yearly one.)

The leading articles in these numbers will be as follows:

1. September 15.—PRICES ON THE FARM AND PRICES OF FARM PRODUCTS ELSEWHERE. We prove that gambling in farm products has an astonishing effect in depressing prices. An exhaustive treatment of this vital subject.
2. October 1.—PROSPERITY OF THE NATION DEPENDS ON THE PRICES OF FARM PRODUCTS. We prove that low prices of farm products have been responsible for seasons of depression in business; that prosperity returned with the return of good prices, and incidentally we show that hard times and good prices for farm products cannot exist at the same time. An exhaustive treatment of this very important (to every true American) subject.
3. October 15.—THE UNITED STATES DEPARTMENT OF AGRICULTURE—What it is and What it Should Be. Contains many startling statements and important recommendations, which if carried out, will result in incalculable good to Agriculture.
4. FARMERS' INCOMES AND FARMERS' TAXATION. Shows how the politicians repay the farmers for their votes by saddling on them the bulk of taxation; with advice how to equalize the taxes.
5. November 15.—THE ELEMENTS OF EXPORT PRICES OF AGRICULTURAL PRODUCTS. Much light on a dark (to the farmers) subject.
6. December 1.—THE SO-CALLED COMPETITIVE PRICES FOR AGRICULTURAL PRODUCTS DO NOT EXIST. Proves that America has fixed the world's prices for staple farm products in the past and will for the future.

THESE ARTICLES will constitute a unique addition to American Agricultural literature, and at the same time they will possess a value from an educational standpoint never before approached. Never before in the history of this country has agriculture been favored with so many valuable literary and educational contributions as are now appearing through UP-TO-DATE FARMING. Farmers and others should interest themselves to help the publisher to give these special issues the widest circulation possible.

It is time now for the many thousand three months trial subscribers to renew for a year so the paper may go to them without interruption. Always state that you are a "trial subscriber."

One of the strongest weapons of organized labor is the union label. The organized workers have forced its use on almost every article produced by them to distinguish it from what they call "scab" produced articles, so that their friends may not be deceived into patronizing those unfriendly to organization.

Farmers have organized heretofore, but it has been in a desultory way, and no attempt has ever been made to use a label. Indeed, they have acted as though they felt themselves underlings, subject in their productions to the whims and speculations and peculations of others, with no right on their own part to claim distinction for what they grew, or to exercise any control over its quality or price.

But things are becoming different. Lessons are being learned and acted upon that were looked upon as almost treasonable two short years ago. It is a fact that farmers are coming to the front, and they are asserting their rights in a voice that is being heard from Maine to California, and from the wheat lands of the Northwest to the Carolinas.

Why not designate the product of union farmers by a label? The A. S. of E. provides one. It is seen at the head of this article, and we are sure that even its design must be admired. The monogram of the Society occupies the central position, around which appears the words, "The American Society of Equity." The band of fellowship encloses this in a protected field, bearing above the "National Union" and below "American Farmers," the "of" in the monogram completing the legend "National Union of American Farmers." Then on arms stretched out as to take in the world appears the words, "Union Label."

It is very sure that products thus marked, whether wheat, oats, hay, cotton, corn, fruit, butter, eggs or whatever,

ever, will attract the attention of union laborers in the cities, who are the leading consumers of our products, and receive their decided preference, creating a special demand for the products of union farmers. But this fact must be also borne in mind: This label must stand as a guarantee of honest goods. The package designated by it must be as it is represented to be, for the whole Society stands, tentatively, at least, as its guarantor. There is no question but the use of this label, with this proper and necessary restriction, would add materially to the demand in market, and to the price. The National Union will furnish them, beautifully printed on gummed paper like postage stamps, ready for sticking to any article, to members or local unions at 20 cents per hundred, or \$1 per 1,000.

To our brethren of the F. M. B. A., we can furnish this same label, except that the center will contain the beautiful emblem of their order, the Maltese Cross of Honor, with the letters of their Society upon it.

## 10 000 SETS OF THE EDUCATIONAL SERIES

We have ten thousand sets of the six issues comprising the educational series to sell at 10 cents each set. WHO DO YOU WANT TO HAVE THEM? Send some names and 10 cents each and they will be sent at once. Each set will make a convert to controlled marketing and bring the time nearer when farmers will come to the front.

"Up-to-Date Farming" is a 16-page paper, published semi-monthly at Indianapolis, Ind., at 50 cents a year, and of all the agricultural papers we have seen, it is the clearest and the strongest in urging the importance of united action on the part of farmers everywhere in controlling the produce markets. We are really anxious that our people shall have the benefit of its live and practical and sensible suggestions along these lines. The Farmers' Journal, Abilene, Texas.

## Presidential Vote Contest

Five Lion-Heads cut from Lion Coffee Packages and a 2-cent stamp entitle you (in addition to the regular free premiums) to one vote. The 2-cent stamp covers our acknowledgment to you that your estimate is recorded. You can send as many estimates as desired.

What will be the total popular vote cast for President (votes of all candidates combined) at the election November 8th, 1904?

In 1900 election, 12,953,553 people voted for President. For nearest correct estimate received in Woolson Spice Company's office, Toledo, O., on or before November 6, 1904, we will give first prize for the nearest correct estimate, second prize to the next nearest, etc., etc., as follows:

1 First Prize	\$2,500.00
1 Second Prize	1,000.00
2 Prizes—\$500.00 each	1,000.00
5 Prizes—200.00	1,000.00
10 Prizes—100.00	1,000.00
20 Prizes—50.00	1,000.00
50 Prizes—20.00	1,000.00
250 Prizes—10.00	2,500.00
1800 Prizes—5.00	9,000.00

2139 PRIZES, TOTAL, \$20,000.00

### Grand First Prize of \$5,000.00

Will be awarded to the one who is nearest correct on both our World's Fair and Presidential Vote Contests.

We also offer \$5,000.00 Special Cash Prizes to Grocers' Clerks. (Particulars in each case of Lion Coffee.)

### How Would Your Name Look on One of These Checks?

Everybody uses coffee. If you will use LION COFFEE long enough to get acquainted with it you will be suited and convinced there is no other of such value for the money. Then you will take no other—and that's why we advertise. And we are using our advertising money so that both of us—you as well as we—will get a profit. Hence for your Lion Heads

WE GIVE BOTH FREE PREMIUMS and CASH PRIZES Complete Detailed Particulars in Every Package of

## UP-TO-DATE FIFTY-NINE PRODUCING AND MARKETING

Autumn is hastening on.

Activity in winter wheat belt.

We presume the seed bed is ready. Is the seed? "Whatsoever a man soweth, that shall he also reap."

Indications are that there will be a largely increased acreage in the winter wheat belt.

It is our opinion that this is the year to sow winter wheat. A good wheat crop nearly always follows a wet season. Chinch bugs are not likely to be troublesome next year, and the market will be so bare that good prices must prevail if the growers exercise just a little bit of business sense.

Activity in the cotton fields is now on—not the activity of making the crop, but of harvesting it. The speculators are to make a strenuous effort to force the price down. The plan of campaign is to make it appear that the present is a bumper crop, and must over-supply the demand. This claim is not well sustained. Heavy damage is reported from many quarters, and the crop really does not promise to be an extra large one. Don't be frightened into selling hurriedly or cheaply.

Seedsmen report that clover seed is liable to be high next spring, and money may be saved by buying now and holding for next year's seeding.

Winter oats is a crop that is coming into favor, and is well worth trying as far north as Indianapolis, Ind.; Springfield, Ill., and Moberly, Mo., and its being well adapted to the clay soils of these regions is much in its favor. It should not be sown on rich, black lands.

Hurry the timothy seeding. The writer has always had his best success with fall seeding. Indeed, he has seldom failed with fall seeding when conditions were favorable. Work the ground well, cover lightly and pack. If the soil is not absolutely rich, apply fertilizer.

Storms during the latter part of August damaged the corn crop in some localities, but there is promise of a bumper crop.

The corn fodder is on the top rung of the question ladder now. It is good feed and ought to be saved; but feed is not going to be scarce next winter, and many may think, owing to the heavy corn, it may not pay to cut it for fodder. And they may be about right in most instances. If you don't cut the corn for fodder arrange to gather early so as to have the benefit of the pasture.

In clay land meadows we advise a mixture of timothy and clover. The hay may not be quite so valuable in the market, but the yield will generally be enough greater to make the value per acre as much or more. Then the clover crowds out the weeds, improves the ground, we think "holds" the timothy, and for farm use, makes more valuable feed.

Our Oklahoma correspondents are much interested in broom corn. In last issue we gave a brief history of that interesting crop, and urged the growers, though widely separated in locality, to get together in point of interest, and co-operate as to market. We still have no special data as to what will likely be the prevailing price, but we are informed that the crop in Illinois will be from 15 to 20 per cent. larger than an average. The acreage in Kansas and Nebraska is also reported increased. Oklahoma also has an increased acreage, but the yield, it is thought, will be a little below the average, but of fine quality. Of course growers understand that the quality of the corn is improved by shed-curing. We have as yet no reliable advices as to price.

The market outlook as reported from the East seems favorable to onion growers.

This country raises one-fifth of the world's corn, one-fourth of the world's oats, and four-fifths of the world's cotton.

### Grain Rusts

The great damage reported this year from the spring wheat region calls renewed attention to the grain rusts, of which there are several different varieties. For instance, the black stem rust, called Puccinia graminis tritici by the scientists, which was so destructive of the spring wheat in the Northwest, does not affect any other grain but barley. There is a rust which attacks oats alone, and one also which is peculiar to rye, and so on.

Rust is not a disease, but a plant growth, a fungus, that is propagated, not by seeds, but by spores, which are very small and light, and float freely in the air. Whenever one of them falls upon a plant of its kind, so to speak, it immediately takes root in the living plant, feeds upon the substance of that plant, and is very soon throwing off spores of its own to find lodgement elsewhere, until an entire field may become affected in a very short time. They absorb the strength of the plant, prevent its developing grain, or even may cause less, even after it is well advanced toward maturity.

No practical remedy has yet been discovered to the grain to shrivel and become worthless, and were it not for the fact that weather conditions must be just right to cause it to develop in ruinous strength, it could absolutely destroy the wheat crop and compel the world to look to some other source for bread. For rust to propagate injuriously there must be cool, damp weather at precisely the right time, not necessarily at the same time of the year, but at the right period in the development of the wheat. Happily precisely right conditions seldom come and remain without variation for a long enough time to enable this parasite growth to become destructive, therefore, we may still expect to have wheat bread.

AT this time of the year the farmers' crops are maturing and they are about to receive their wages for a SEASON'S work. Who will set the price for your labor. You paid the price set by others on everything you used in the production of the crops. Now will you let the same people price your crops and set your wages? Or will you join the American Society of EQUITY, build up the membership until every farmer in the land secures a profitable price on every crop he grows.

### CANCER BELOW THE EYE—CURED WITH SOOTHING, BALMY OILS

Claypool, Ind., June 30, 1904.

Dr. D. M. Bye Co., Indianapolis, Ind.

GENTLEMEN:—I will endeavor to write what the treatment of the Combination Oil Cure has done for my cancer. It was December when I first corresponded with you, and how hard it was to convince me, even after the literature had been sent, that cancer could be cured. I had been taught from my youth up that cancers could not be cured by man. I was induced to send for a month's treatment. At the time I began treatment, the cancer, which was located beneath my left eye, protruded to such an extent that I could not wear my glasses, and the sight of my left eye was impaired. It had been growing for about six years, beginning when I was 72 years old; am now 78. My father before me had a cancer that caused his death. After using your treatment as you instructed, my cancer was entirely eradicated, and today there is hardly a scar left, and the sight of the eye is nearly as strong as the other one, praise the Lord. My neighbors say that this cure is marvelous. I hope that your name will never die, and that your souls will forever find rest in Him. Your unworthy servant, healed and saved to the utmost.

JOSHUA REED.

All forms of cancer and tumor cured by soothing, balmy oils. Doctors, lawyers, and ministers endorse it. Write for free book to the Home Office, Dr. D. M. Bye Co., Drawer 505, Dept. 26, Indianapolis, Ind.

## When you think of seeds think of the best—O. K. SEEDS

Flower, Vegetable and Field Seeds.

J. A. Everitt, Seedsman, Inc. Indianapolis

## Sharple's Tubular SEPARATORS

**Only Bowl  
With  
Proper Bearing**

All "bucket bowl" separators have incorrect bearings. The bowl is set upon the spindle and held upright by rigid bearings. Such bowls are top heavy, inclined to wobble, sure to bind.

**Tubular bowls, only, are properly supported, being suspended from and turning upon a single ball bearing. A breath almost turns them. They cannot wobble or bind. Catalog L-136 tells all about them.**

The Sharple Co. Chicago, Ill.      P. M. Sharple West Chester, Pa.

## UP-TO-DATE LIVE STOCK RAISING AND MARKETING

Splendid pastures almost everywhere. Stock ought to be doing well and looking fine.

At this writing the butchers' strike is still on and the packers declare they have "nothing to arbitrate," and refuse to have any further conference with the strikers. A Chicago paper says "thousands upon thousands of cattle, hogs and sheep have been held back, and losses have reached into millions of dollars." Stock raisers may well dread the rush when the strike is finally settled. Would it not be a good time to declare the franchises, the "vested rights," of the packers forfeited?

A committee of the New York Mercantile Exchange has taken up the A. S. of E. plan, and declare what they call the official price of cheese, but they put it below instead of above the market price. We hold the producers need not accept any price but their own, and if a committee of merchants can make a price, a committee of farmers or dairymen can do the same, and by holding their goods till consumption demands it they can get a reasonable price.

The brood sow is an important element of the herd, and from the matured sow may be expected most vigorous offspring, yet, unless the sow possesses exceptionally good qualities it is not best to keep her too long. An old sow is liable to contract bad habits; and those of the larger breeds may become too large. Select from the early spring litters and have young sows coming on.

Everybody is liable sometime to be in a runaway. Sit still and firm, brace yourself, keep the lines well in hand, and keep quiet—neither scream nor yell. Don't jump except as a last extremity. If you can maintain your place in the vehicle, keep cool, hold a steady rein and speak calmly to the animal, in nine times out of ten you will bring him in without an accident.

A writer says that sheep may be used on a meadow in the spring to destroy the "white blossom," which they will eat in preference to the grass. He would turn them in when the weeds are three or four inches high, and leave them on only a few days. He says their presence will increase the yield of hay and clear it of weeds.

There is one lesson of the butchers' strike that may be turned to good account. It proves that stockmen can hold their stock off the market.

Late advices from the packing houses is to the effect that business is approaching normal condition, and it may be that a return to normal shipments may be such as to relieve the congested condition of the ranges and feed lots without serious disturbance of the market.

Reports from the cheese market are favorable to the producers; the demand is active and prices fair. Foreigners consume more cheese than our native citizens. Our people should be educated to an increased consumption of cheese.

### Questioning a Milk Diet

All living animals are subject to disease. That physical ailments affect the milk produced by the animal needs no other proof than the quickness and certainty with which the child of the nursing mother is affected when the latter is sick, the effect upon the babe even manifesting itself differently in case of different ailments of the mother. The effect upon the nursing babe is also shown, sometimes in a very marked degree, on a change of diet on the part of the mother, or after eating something which may apparently entirely agree with the mother but may produce unfavorable symptoms in the babe.

That the milk is affected by what the

animal eats may be clearly proven by feeding the cow upon onion tops, turnips or a great many other things which are readily detected in the milk. This is specially manifest where cows are pastured in fields grown up with rag weeds. The milk and butter become unusable.

We must conclude, therefore, that physical condition and feed affect the milk, and that an unhealthy cow, or one given unwholesome feed, can not produce milk fit for human food, that diseased milk may communicate disease to the human consuming it, and that milk evolved from bad food may do the same.

These facts are of striking importance to city milk users, for they know nothing of the source of supply. The animals may be healthy, or they may not; they may be well kept, or they may not; they may have wholesome feed and water, or they may not.

But the milk user on the farm may also take note of them. Every disease symptom in the cow should be carefully noted, and both feed and water should be known to be good. It is very questionable whether cows that run in rich bottom and overflowed lands where luxuriant vegetation is decaying and breeding disease germs, where malaria abounds, can give milk fit for human food. It may be all very well to talk of milk as perfect food, but the above facts should also be fully considered.

### Good Thoughts from Pennsylvania

To Up-to-Date Farming:

I believe I understand your plan. It seems very simple. I have read it over and over, and reflected upon it very much. You reason fairly, (mostly), and say many good things. And you have met fellows just like me before. I have helped try many plans to elevate the farmer. Am a Granger, joined the Alliance, helped the Institute, report crop conditions, keep up a meteorological station, take a dozen or more papers, growl and board and pay a hand, but do most of my work. And I can truthfully assert, without fear of successful contradiction, that my condition as a farmer, and that of all my neighbors around me, is worse to-day than I ever knew it. Intelligent and efficient farm help is not to be had for love nor money. Mere boys, worn out men, or shiftless, careless hands, are all we can get, and the condition is discouraging in the extreme.

I am not without hope, however. I believe in uniting and organizing, with a head center to direct, vested with discretionary power. But I cannot get myself to see and believe that to "farm more and fix prices" can ever be made a success with perishable products where the million must be consulted. [Up-to-Date Farming agrees that to prolong the market for perishable products, cold storage must be employed, in the absence of which crops should be curtailed rather than increased.—Ed.]

Like all the rest, I have my theory—if you can make it work among "the million." My plan is also very simple if you can get it worked out. I am sure it will bring the result and be a blessing to the farmer in many ways. Get the farmer to farm less—farm half a crop. Give himself, wife, son and daughter shorter hours. The smallest crop always brings the most money, involves the least work, and insures some rest. "Surplus" is the name of the speculator's club. The God of Nature took away the surplus of corn in 1901; of potatoes in 1903, and we got fair prices. It is the great West that floods the market. They put out all of the earth they can get hold of, and then they pray for harvest hands and pay them from three to four dollars a day. We in the East suffer with them.

Up-to-Date Farming is a very valuable paper, and I like it.

WELLINGTON SMITH.

Mifflintown, Pa.

[Such letters coming from such a source are highly prized as valuable indexes to the trend of advance thought, but Up-to-Date Farming has not yet seen the necessity for curtailed production, because production is still all consumed. There is no real surplus. The trouble, so far, is in unwise marketing—flooding the market with a crop in a few days after its maturity instead of letting it out only in quantities sufficient to meet the demands of consumption.—Editor.]

## BEST IN THE WORLD DE LAVAL CREAM SEPARATORS

THE DE LAVAL SEPARATOR CO  
74 CORTLANDT ST. NEW YORK.      RANDOLPH & CANAL ST. CHICAGO.

**\$19.90 Big Parlor Organ**

FOR \$19.90 we furnish this big hand-some solid golden oak Parlor Organ, stands 6 feet high, 4 feet long and 2 feet wide, latest style for 1904-5, guaranteed the equal of organs sold by others for nearly double the price. Shown by a large picture and fully described in our big free Organ Catalogue sent to any one for the asking. **AT \$25.95 to \$51.95** we sell other beautiful ORGANS, all made in our own organ factory and sold direct to you at only a little above actual manufacturing cost, at much lower prices than any dealer can buy. **WHY we can build and sell the best ORGANS in the United States for so much less money than all other manufacturers and dealers, is all explained in our new free Organ Catalogue. # UP-TO-DATE DOVIT-TO-DOV PRODUCING AND MARKETING

Are you satisfied with the poultry crop? The outlook for prices is pretty good.

We are quite sure eggs will be high. Go at it in a sensible way this time. Don't keep a flock of ten-year-old hens and surplus roosters. Yearling hens and spring pullets in comfortable quarters ought to pay a dividend.

Geese will bring good money before Christmas, but be sure to fatten them before marketing. Where they are bought by the dozen, of course, a "goose is a goose," and the seller may well say, "fat or lean, take him." In such case there is no inducement to fatten the fowls. Uncle Threadbare's geese sell for just as much as Neighbor Thrifty's. This system should be changed, however, so that Neighbor Thrifty may be rewarded for fattening his geese. Our Up-to-Date People should see to this.

The turkey raiser can now display just about the prettiest sight there is, especially if he raises the mammoth bronze. As they march with almost soldierly precision across a field, routing and devouring "the enemy," their plumage displaying a thousand shades of metallic luster in the sunlight, they are truly a sight to see. But we mustn't get too high for business. They sell by the pound. Fatten them.

Farmers can raise good poultry. A story is told of one who had a Plymouth Rock rooster that he thought was pretty good, and he was tempted to enter him at a State fair. But a fancier saw him, offered \$5 for him, and got him. That week he won first premium over all in his class and sold for \$100.

Sept. 15. This is a good time to clean out the poultry house and to scatter lime about it within and without.

Has the poultry house kept dry during the hard, beating rains of this summer? If not, be sure to repair it before "the north winds do blow, and we shall have snow," else what will the chickens do then, poor things?

Poultry raisers are nearly always good readers, and among other things they like to read about their business—not long, dull articles that tell nothing, but short reminders of what they already know and hints that awaken and put to practice ideas they have already had. This is why so many of them take Up-to-Date Farming.

Fowls have dyspepsia. You may not have thought so, but it is a fact—they suffer from indigestion; and this is often mistaken for cholera. An unusual quantity of rich foods, greasy slops, etc., are liable to bring it on. This unusual food ferments, causes looseness of the bowels, and a low condition of the fowl generally. Dry food in moderate quantities and clean fresh water is a good treatment. Crushed charcoal for the fowls to pick is an excellent corrective.

Try to arrange to have a supply of pea hay or clover so that a bunch of it may be thrown in the chicken house or adjacent yard every day all through the winter. It will pay better than almost any other feed. It mustn't take the place of feed, though; it is extra.

We shall ask you about the first of January how much you have made from your poultry during the year. Will you be prepared to report?

## GET LAMBERT'S

Death to lice—the kind that successful poultrymen have used for twenty years. It kills lice anywhere—just the thing for sitting hens. Never disappoints—always sure. Sample 10c. 100 ounces \$1.00. "Pocket Book Pointers" free. Dr. J. Lambert, Box 400, Apponaug, R. I.

## A. S. OF E. A PATRIOTIC NECES-SITY.

To Up-to-Date Farming:

Is it not time for the American people to consider the startling fact that seventy-five per cent. of the wealth of this country is already concentrated in the hands of 25,000 people? When we remember that this is nearing the condition that prevailed in all the greatest nations prior to their fall, it should rouse to action every patriotic American, and especially its soil owners. There is, however, a fact not previously recognized, that intrinsic value is in commodity, not in money. This is the leverage by which producers of commodities may save themselves and their country from the fate of other nations, and re-establish the proper poise between man and money, which is really the essence of all questions up for solution to-day. These questions are solved in the proposition of the A. S. of E. to secure equity and stability of price for the products of labor. If there is any other way to accomplish this result it has not yet been developed. Money thus distributed in equitable return for intrinsic value in commodities could not be again concentrated without an exchange for it of value received, thus securing an ever-expanding basis of national thrift and intelligence, the true measure of national greatness.

A. R. CARHART.

## WHEN VISITING THE WORLD'S FAIR, RIDE ON THE FERRIS WHEEL

The great expositions during the last fifteen years, have produced two marvelous examples of engineering skill; one the Eiffel Tower and the other the Ferris Wheel. Scores of attempts have been made to invent something more wonderful and attractive than these two, but all have failed, and now at the greatest show that the world has ever seen, the Ferris Wheel stands again, supreme as the most unique attraction.

The work of moving this great wheel from Chicago, in itself was a work of vast proportion, as it weighs complete 8,400,000 lbs., taking 175 cars to handle it. The spokes are 2 1/2 inches in diameter, 125 feet long, making the wheel 250 feet in diameter, standing 264 feet high. Its cars weighing eleven tons will carry sixty persons each. With every car filled the capacity is 2,160 persons. Two revolutions are given each passenger, the time consumed being twenty to thirty minutes.

Gradually as the majestic wheel rolls up higher and higher, a grand panorama unfolds itself. The cascades, the plateau of states, the big buildings, the Pike, the festival hall, the art building, the Philippine reservation, the air ship inclosure, in fact, the great fair in all its beauty and grandeur. Then comes into view St. Louis, the Mississippi river and the beautiful panorama of fields, rivers and forests for fifty miles around, making a sight in itself, of beauty and effectiveness, that is, not equaled by anything to be seen at the fair.

At night with its myriads of electric lights, one steps from the car with a feeling of fairy land; and speechless with the beauty and fascination of the ride, realizes that he has just passed through an experience which comes only once in a life time.

When you go to the fair, visit the Ferris Wheel.

## HOME SWEET HOME

One of the happiest of the many happy days that have been crowded into the history or experiences of the employees and firm of the Kitzelman Brothers, Muncie, Ind., manufacturers of woven wire fence, was that of Thursday, August 18, the occasion being the running of a special train of twelve coaches to the 16th annual Old Settlers' Meeting at Ridgeville, Indiana.

Ridgeville is the birthplace of the Kitzelman Brothers, as well as many of the employees who accompanied the plant on its removal to Muncie in 1900. For this reason the return of the firm and their employees was doubly significant. Free transportation was extended to all employees and their families, as well as to the employees and attaches of all the newspapers of Muncie.

The special was accompanied by Sneff's Lady Military Band, of Indianapolis, and the Indiana Band, of Muncie, and on the train's arrival, a procession was formed, and the visitors, numbering over 700, marched through the streets of the town headed by the bands playing "Home Sweet Home."

There is a quotation which reads, "Home—speak but the word, and the child that is your merry guest begins to weep," and this was all but literally demonstrated on this occasion.

## A LITTLE WONDER

The "Mend-A-Rip" advertised elsewhere in these columns, is proving to be a wonderful success in the hands of enterprising people who are selling it, because it "makes good." It pleases the buyer and helps sell others. Any reader who will write the maker, J. W. Foote, Foundry Co., at Fredericktown, Ohio, will receive full particulars and a special agent's price by return mail.

## A YEAR'S READING SELECTED BY UP-TO-DATE FARMING

### FOR THE FARMER—HIS WIFE AND CHILDREN

Up-to-Date Farming (Semi-monthly) \$ .50

"The Farm Paper with a Mission," "Advocating Profitable Prices for Every Crop You Grow," "Official Organ of The American Society of Equity."

### 5,000 WORKERS WANTED

#### APPLICATION TO ASSIST IN ORGANIZING

## The American Society of Equity of North America

To the National Organizer, Indianapolis, Ind.,

DEAR SIR:—The undersigned desires to become an organizer of Local Unions of THE AMERICAN SOCIETY OF EQUITY in the following preferred territory:

(If you want to organize your neighborhood only, write the town or towns comprised. If you want to do more, write the county or counties. On receipt of this application, terms and full particulars will be sent. The best season for this work has arrived. We can give profitable and pleasant employment to capable people. All organizers must be or must become members of the society.)

all in the State of \_\_\_\_\_

I refer you to the following named people as to my ability for the work contemplated, and to my character and standing in this community.

1 A Farmer's name and address \_\_\_\_\_

2 A Business man's name and address \_\_\_\_\_

3 A Banker's name and address \_\_\_\_\_

Date \_\_\_\_\_ Signed \_\_\_\_\_

R. F. D. No. \_\_\_\_\_ P. O. \_\_\_\_\_ State \_\_\_\_\_

#### APPLICATION FOR MEMBERSHIPS

## The American Society of Equity of N. A.

I, or we whose names are attached, desire to become members of the American Society of Equity, of North America, and accompany this application with the required fee of One Dollar

It is agreed that the payment of One Dollar herewith secures a membership in the National Union, with dues paid for one year from date, one members' manual emblem or badge, and one year's subscription to UP-TO-DATE FARMING, (the official paper) to each.

I, or we further agree to join a local union if one is in existence in my or our neighborhood. If none are now formed, I will do what I can to secure ten or more members and organize a local union, as soon as possible

# I Cure Women OF FEMALE DISEASE AND PILES

I Will Cure You So That You Should Stay Cured—Women No Longer Need Submit to Embarrassing Examinations and Big Doctor Bills.

To Show Good Faith and to Prove to You That I Can Cure You I Will Send Free a Package of My Remedy to Every Sufferer.

I hold the secret of a discovery which has seldom failed to cure women of piles or female weakness. Failing of the womb, painful menstrual periods, leucorrhoea, granulation, ulceration, etc., are very readily cured by my treatment.

I now offer this priceless secret to the women of America, believing that it will effect a cure in almost any case, no matter how long you have suffered or how many doctors have failed.

I do not ask any sufferer to take my unsupported word for this, so will send you some of the medicine free. If you will send me your name and address I will mail you a trial package absolutely free, which will show you that you can be cured. Do not suffer another day but just sit down and write me for it right now.

Mrs. Cora R. Miller, Box No.

Kokomo, Ind.

**EC-ZINE**

Is the first and only specific discovered that will absolutely cure Eczema and other skin diseases.

**Fifty Dollars Reward**

will be paid for a case of pimples, piles, itching skin, or eczema that can not be promptly cured by EC-ZINE.

Enclosed find P. O. Money Order for which send me 50c bottle of EC-ZINE. I consider the remedy good—have only tried sample bottle and soap but find it all that you recommend it to be. My hand is almost well and with a few more applications I believe it will need no further treatment. I am sorry I did not write you sooner. Kindly forward immediately.

(Signed) Mrs. C. V. LEONARD,  
Martinsburg, W. Va.

Doctors and other remedies have failed to cure you. FORGET THEIR FAILURE and send to-day for a free treatment of EC-ZINE, SUFFICIENT TO CURE ANY ORDINARY CASE. If your druggist doesn't handle EC-ZINE send direct to **BOYD CHEMICAL CO.** Rand-McNally Bldg., CHICAGO, ILL.

**To Women Who Dread Motherhood!**  
Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.

No woman need any longer dread the pains of child-birth; or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at child-birth may be entirely banished, and he will gladly tell you how it may be done absolutely free of charge. Send your name and address to Dr. J. H. Dye, 112 Lewis Block, Buffalo, N. Y., and he will send you, post-paid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also how to cure sterility. Do not delay but write to-day.

**CANCER** 30 years experience enables us to scientifically treat and effectually cure cancer and tumors without the knife. 75 page book sent free. Address **Drs. GKATIGNY & BUSH**, 7th & Elm Sts., Cincinnati, O.

**DEATH TO HEAVES** Guaranteed. **NEWTON'S** Heave, Cough, Utemper and Indigestion Cure. A veterinary specific for wind, throat and stomach troubles. Strongly recommended. \$1.00 per can. Dealers. Mailer Ex. paid. The Newton Remedy Co., Toledo, Ohio.

**ITCHING SKIN** DISEASES QUICKLY CURED. Send Six Cents for Trial Box. **W. BULLARD**, 349 Theodore St., Detroit, Mich.

**FITS** Permanently Cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. Send for **FREE** \$2.00 trial bottle and treatise. **DR. R. H. KLINE, Ltd.**, 931 Arch St., Philadelphia, Pa.

**100 CORN FARMS** for sale in North western Ohio. **MADDEN & MADDEN**, Cincinnati, Ohio.

**WE START YOU** in Mail Order Business. Particulars and samples free. **AMERICAN SPECIAL AGENCY (U.F.)** Milwaukee, Wis.

**8,000** acres land for sale, 200 in cultivation. Convenient to R. R. station in Wayne Co., Ga. Apply to **C. C. GRACE**, Screven P. O., Wayne Co., Ga.

**WEEKS SCALE WORKS** BUFFALO, N. Y. The leading scale at moderate price. Will outwear any other. **RELIABLE, LASTING, CONVENIENT.** Does away with all loose weights. Send for catalogue and prices.

**LEARN TELEGRAPHY** and R. E. accounting—\$50 to \$100 per month salary. Endorsed by all railroads. Write for catalogue. **MORSE SCHOOL OF TELEGRAPHY**, Cincinnati, O., Elmira, N. Y., La Crosse, Wis.

**GINSENG** American Ginseng at half its actual value. Write, S. LONG, Union, Ky.

**AGENTS WANTED**—Household necessities; every home opportunity for sale; every sale a day's work profit. Write **KOKOMO IRON CO.**, Kokomo, Ind.

## UP-TO-DATE ORCHARD AND SMALL FRUIT

It is a good time now to look through the orchards for the scale insects. There are several kinds, of which the San Jose scale is the worst. You may find them very thick on the branches and twigs. They look like little scabs sticking tight to the bark. The lime, sulphur and salt wash is the best remedy. Lime, 30 pounds; sulphur, 16 pounds; salt, 12 pounds; water, 50 gallons.

Don't let the wind falls go to waste. Dried fruit or vinegar.

Plant peach seeds in rows two feet apart, and three or four inches apart in the row. Seeds from seedlings are very apt to produce fruit true to the parent.

Louisville reports fair prices for apples.

I think it would be well to plan for stock pease or clover in the old orchards next year, and plan also to give the orchards a thorough dressing up between now and next spring.

It is a good plan to examine the young trees set last spring. It is probable that many of them are leaning too much to the north or northeast. They should be straightened up, and if anything, leaned a little to the southwest.

We want to repeat that the orchard trees must be fed. You must either have them in good pasture, or you must take the feed to them. Leguminous crops afford them pasture.

The fall and winter is the time to manure the garden. Barnyard manure, or well rotted chip manure is the best. If it is put on in the fall and well worked in before the ground freezes all the better.

There is some talk now of manufacturing sugar from sweet potatoes.

Another waste product is about to be utilized. It is the kernel of peach and

apricott pits. All right. The writer can remember when the idea of making oil from cotton seed was ridiculed. Now it is a leading industry.

### Pit the Apples

In the absence of cold storage, winter apples may be pitted and kept through the winter. When the writer was a boy we never thought of saving apples in any other way, and we seldom failed to have apples till late in the spring. Select a high, dry place, from which the ground slopes. Level a space as large as you wish the pit to be, say from four to six feet in diameter. Make a ridge of earth around it. Cover the bottom with straw. Pile the apples in the center, constantly building from the top. The apples will roll down and form a perfect cone. If they spread out too much at the bottom, pick up and throw in maintaining the cone shape of the pile. You may build up as high as the diameter of the base. Cover the entire pile with at least six inches of dry straw. Begin to cover at the bottom, working all around the pit, and make the cover at least six inches thick all the way up. Take the dirt from all around the pit, but never nearer than two feet from the edge. Leave a place open at the top for ventilation, merely throwing an old sack or something over it. Some put a ventilating pipe at the bottom, extending to the middle of the pit, but we have not found this necessary. If it should rain while there is still an opening in the top, it must be covered so as to exclude the water. Cover deeply before freezing weather—deep enough to exclude frost. Some put alternate layers of straw and earth, and this is not a bad plan where there is danger of heavy freezing. Finally close the ventilation and cover to a good depth on top. Drain the ditches from which the earth to cover the pit was taken.

## CROP REPORT BLANK

**NO MORE** BLINDNESS. For Specific Ophthalmia, Moon Blindness and other Blind Eyes, **BARRY CO.**, Iowa City, Iowa, have a sure cure.

# UP-TO-DATE HOME ON THE FARM

It is strange, but it seems true, that we do not appreciate our blessings until we have lost them.

"Make the brain save the feet and hands," is an excellent motto for housekeepers.

See to the closets and unfrequented corners. From time immemorial these places have been used unwisely to frighten children into being good; but it is a fact that real dangers lurk in them in the form of bad air, mildew, and other poisons.

The tidy housemaid that hastily spreads up the beds so soon as they are vacated may not be the best housekeeper. A thorough opening up and airing may tend to reduce the doctor's income.

Malaria means bad air. Keep it out of the home by careful and constant ventilation, particularly of the sleeping rooms.

The evenings are getting longer now, and the time for the family reading circle is approaching, if, indeed, it is not always present. Up-to-Date's selection of "A Year's Reading" can not easily be beaten. It does not cost much, and there is abundant there for every member of the family, something specially adapted to each grade.

We can always recognize the homes of Our Up-to-Date People by their neat and progressive appearance. Dollars per acre may be added to the value of a farm by keeping things in good order and new and fresh looking. A whole neighborhood kept thus is an attractive locality.

We are in earnest in this matter, and we want a constant increase of Our Up-to-Date People. Don't you believe your neighbors would be benefited by the regular visits of Up-to-Date? If you were to succeed in getting an extra good bargain from the store you would be sure to tell your neighbors about it, and put them in the way of getting the same. Up-to-Date is a good bargain, isn't it? Now, tell your neighbors about it. Yearly subscriptions are in order at any time, and ten cents will bring it for three months into homes where it is not already known, because we want to get acquainted. Please introduce us.

Apple jelly is the easiest of all the jellies to make, and it does not take quite so much sugar. And few jellies are better.

We need not tell any one how to make bread pudding, for everybody knows, but we may remind the housekeeper that it is an old-fashioned dish which always finds a market on the farm table, and it utilizes what might not be otherwise turned to so good an account.

But this reminds us of that pig that was to eat the kitchen scraps. It must be a pretty good-sized hog by this time, and no doubt begins to look like money. Say you wasn't provided with one? Well, the lord of your household ought to be held responsible for that, and he should allow you enough of that \$1.20 wheat to buy you a new washing machine at least.

Did you ever try a "chess" pie? I don't know why they call it that but here is how they make it: Four eggs, two cups sugar, one-third cup butter, one-half cup sweet milk, flavor with vanilla and bake like a custard.

Some of Our Up-to-Date People may like to try these two cakes. The same eight eggs make them both: 1. Yolk of eight eggs, one cup sugar, three-fourths cup butter, one-half cup sweet milk, one and one-half cups flour, and two heaping teaspoons baking powder. 2. Whites of eight eggs, two cups sugar, one-half cup butter, three-fourths cup sweet milk, three cups flour, two teaspoons baking powder. Flavor to taste.

## AN OFFER FOR A DISPLAY OF Skill and Ability

### AN ELEGANT PIN

# FREE

The figure within the above circles is a monogram containing three letters, which are the initials of three words, representing a condition or quality which we all like to have applied to ourselves. It also represents the name usually applied to what is doing more for the farmers than was ever before undertaken in the interest of agriculture.

We have also had that monogram reduced in size, made into a beautiful pin in blue and gold, in excellent taste, and suitable to be worn by any one. To the school boy or girl who will cut the three letters from the monograms (if no mistake be made the three can be cut from the two monograms) arrange them in the proper order and tell us what they stand for, accompanying their reply with ten cents, for one three months' trial subscription (their own or for some one else,) we will send them free, one of the monogram pins in blue and gold, for their success will clearly entitle them to wear it, and to be regarded as belonging to Our Up-to-Date People.

UP-TO-DATE FARMING,  
Indianapolis, Ind.

### NOT OPPOSED TO MIDDLEMEN.

The A. S. of E. is not opposed to middlemen. We consider them necessary in the commercial business of the country and when farmers are organized they will be recognized as a great convenience.

When farmers are getting good prices which they will be when they market gradually and systematically, they will have enough to do to produce the crops and they will make enough money from the sale of the crops at home. They will be glad to let the middle men ship them to distant markets. The farmer's fight will be against the speculator and gambler and against the unfair middleman who takes too large profit, thus reducing the consumption.

## THE AGRICULTURAL ECONOMICS SERIES

This is the first number of THE AGRICULTURAL ECONOMICS SERIES. There will be six numbers and the special subscription price is 10 cents for the six.

The first special article is entitled "PRICES ON THE FARM AND PRICES AT PRIMARY MARKETS."

This article should be read, carefully, studied and pondered by every farmer in America. It clearly reveals a condition that, if applied to any other industry would kill it, and which has been largely responsible for giving to agriculture the paralytic strokes, from which it frequently suffers.

Up-to-Date Farming is the only paper that is working to kill speculation in farm products. It has already accomplished wonders as evidenced by the fact that for more than a year the cash price has kept above the speculative price on important crops. This is unusual and proves that farmers united, are stronger than united buyers, represented by millers, elevator combines and speculators.

The balance of the Special Articles will follow in the order named in "Important Announcements," elsewhere. Read all of them.

### The Third Power

Continued from page 7

bers, and in this way more accurate results will be secured than could be obtained in any other way. The crop reports and market conditions will be sent to each member, and thus all will be able to co-operate in asking and obtaining uniform prices. This is not only one of the strongest features of the proposed plan—it is an absolutely essential feature. With such trustworthy information, prices can be adjusted in such a way as to be equitable to both producer and consumer. Without this information such adjustment would be impossible.

But other information of an educational sort will be furnished by the American Society of Equity. Reference has already been made to the work of agricultural schools and colleges, but valuable as this work is, it does not meet the requirements. The time has arrived when more intensive farming must be practiced, and conditions will soon be such that our farms must produce two or three times as much as they do now, if they are to supply the ever-increasing demands of the world. It is a fact that the average of our staple crops can be raised to three times the present average. This has been done in European countries, and what is done there can be duplicated here. Intensive farming implies more intelligent farming. To farm more intelligently, the people must be educated in the mysteries of the science. To educate them schools must be established and maintained. There are, at present, many agricultural schools and colleges, but they are not sufficient for the almost universal education of the young people from the farms which will be required when the American Society of Equity is in successful operation. Nor do they fully meet the requirements of the advanced agriculture that must be practiced in the near future. The schools and other institutions which it is proposed to establish should be the meeting-place of farmers within the neighborhood, and they should be looked to for enlightenment on the intricate matters related to seed, soil, fertilizers and cultivation. Each farm should be plotted; there should be a chart giving the analysis of the soil in each field, or parts of fields; and recommendations should be made regarding the plant food needed to produce 40 bushels of wheat, 80 bushels of oats, 10 bushels of corn and 250 bushels of potatoes, etc., to the acre. Such an institution could be of vast help in giving instruction concerning drainage, irrigation, breeding, stock, grain, fruits, vegetables; it could help in stamping out disease, fighting insects and blight, analyzing seeds for impurities, and guarding against and eradicating weeds. It could, and would, award prizes and medals for the best stock, the most successful crops, and in many ways it would guard and promote farmers' interests in the highest degree. The education which the sons and daughters of the farmer would get at these schools, at a merely nominal expense, would be of the greatest value, in that it would greatly increase their efficiency, and what is even more important, would give them a pride in and make them content with their lot in life. A membership of 5,000 for each such institution, and annual dues of \$5, would afford a revenue of \$25,000, from which enormous benefits would flow. And as agriculture is the foundation of our national prosperity, we should strive to promote the most intelligent conditions on the farms to the end that our maternal prosperity may be large and perpetual.

Yet the qualification that has already been made must not be forgotten. All this education, as far as it involves the raising of larger crops, would be calamitous unless the farmer also had the power to fix the price of his products. But with this power assured, and the American Society of Equity will assure it, the more education and the larger production there are, the better will it be for all. The two things hang together. The farmer must control the present supply before he devotes himself to the work of increasing it. And the greater his success in increasing it, the greater is the necessity that he should have the situation wholly within his own control.

Editor Herald, Howell, Mich.

## UP-TO-DATE WRITERS

LET IT GO TO \$2.

### To Up-to-Date Farming:

I shall let the chickens and pigs thresh my wheat, as it is no good. This means that I must buy flour for at least a year. But let the wheat go to \$2 per bushel. May be the wheat growers will then be able to buy some of my pork at a reasonable price, and thus help us all around.

Ackley, Iowa. DON M. LEACH.

### JOINT MEETING IN VIRGINIA.

### To Up-to-Date Farming:

Our local unions had a joint meeting in a grove near Burnett's school. We had a good attendance. Mr. C. Hays Taylor was on hand and gave us a very interesting talk. If we had more such workers as he is, we could soon accomplish great results. He has worked faithfully and with untiring energy to build up this great farmers' organization. Our county ought to organize more rapidly now, for we have two papers that are going to look after our interests—the Bedford Breeze and the Bedford Democrat. I think both deserve the hearty support of every farmer, especially the Bedford Breeze, edited by Mr. Taylor. I believe the local unions should have more joint meetings; they would be conducive to much good, as they would bring the farmers together, stir up more interest and awaken the people from the apathy that seems at present to exist. I think as soon as the crops are housed and the busy season is over the farmers will attend the meetings better, and take more interest in them. Now, brother farmers, let each one of us try to do our full duty. Let us try to do more in the future than we have done in the past—do all we can to bring this grand movement to success.

Cifax, Va. R. C. SAUNDERS.

### THERE IS NO OTHER WAY.

### To Up-to-Date Farming:

I have been so very busy that I have neglected to write you anything in regard to crops. We have had a drouth of three weeks (This letter was written Aug. 24), which has damaged the corn crop at least 30 per cent. The wheat crop is not over 20 per cent, and scarcely any of it will grade good No. 3. Hay crop about 80 per cent., and 30 per cent. of it of low grade. There is not enough oats to make an estimate on. Tobacco acreage is not over 20 per cent., and apples and potatoes not sufficient for home consumption.

I get a new convert occasionally. I can see no good reason why farmers are not tumbling over one another to get into the Society, as they have all to gain and nothing to lose by so doing. In no other way can they serve the best interests of their country, their families and future generations than by perpetuating the freedom handed down by the heroes of 1776, which the most stupid illiterate must see are slowly but surely passing down the line in the wake of the lost liberties of other proud and prosperous nations that have risen, flourished and fell under the merciless encroachments of the moneyed powers of the past.

Vicksburg, Ky.

[The above letter is from a very intelligent business farmer, and is highly appreciated, and is entitled to much consideration by our readers.—Ed.]

### GETTING LIVELY IN KENTUCKY.

### To Up-to-Date Farming:

Now victory is coming, and our farmers are on a tare, but before we finish we'll get Owensboro in a snare. For our A. S. of E. is progressing fine. We meet every two weeks at Wolf Branch, and new members join. The farmers in Old Daviess county are waking up fast since this union has gotten \$1 per bushel for their wheat. The Owensboroites have the money; the Wolf Branch Union? Oh, they are sorter weak, but all the same our union got a dollar for their wheat. The rest of you farmers, wake up from your sleep; pay more attention to your business, and get a dollar for your wheat—and good prices for all your other crops.

MRS. W. S. WETHINGTON.

Handyville, Ky.

### GOOD TIME IN OKLAHOMA.

### To Up-to-Date Farming:

We have here a local union of 40 good farmers, all of whom are loyal to the Society and good workers for the cause. Our local gave a picnic Aug. 11, which was attended by nearly every member, and it was a success not only in the good done in social lines, but in the impetus given the Society. We had good speaking, and as the result of our work, I send you five full memberships and 25 trial subscribers. We have also made arrangements to hold meetings in several other localities, and it is our intention to make Thomas local union No. 1 the strongest local in the or-

### COTTON GROWERS HOPEFUL.

### To Up-to-Date Farming:

The A. S. of E. is all the talk in this part of the country, but we need a good speaker to give us a lift. We are in the cotton belt, and anything we see in Up-to-Date about cotton interests us. Cotton is our main money crop, and we are interested in securing profitable prices. We believe, by having the farmers organized, and all working in harmony in regard to feeding the market through a longer period, better prices could be obtained. Cotton here is two weeks late, but it is having a desirable season to develop. Corn is made (Aug. 22), and is above the average. Wheat, none raised for market. Hoping that Equity will be the farmers' watchword.

Brink, Ark. E. N. PRIM.  
[The Society having won its second fight for wheat is now engaged in a vigorous fight for cotton, which will be crowned with victory before the present season closes, if the cotton growers rally as the wheat growers did.—Editor.]

### GREAT DAMAGE TO COTTON.

### To Up-to-Date Farming:

I think I have the ball started in earnest. I have only found two business men in our town who are opposed to our organization, and they have not given it any investigation. Mr. J. W. George, a druggist, after I explained to him our plan, said, "From what I can understand now, I wish there were a local organized at every school-house in the county." Mr. R. F. Sessions, also a druggist, is highly in favor of it, and was so from the first mention of the plan. I think we shall have a membership of 40 when we are fully organized.

The boll worm, rust, and other insects and fungus diseases have ruined cotton here. We thought two weeks ago when they first commenced their destruction, that bolls already grown would not be injured, but I find fully 25 per cent. of bolls are affected, with no signs of a let up; and reports of damage come from all quarters of the cotton country. It is a deplorable fact that such destruction of cotton was never known before in these parts. We had flattering prospects up to Aug. 5; but now no man can estimate the loss. If the growers do not get together and make a price sufficient to at least cover some of their losses they will wish before another crop that they had done so. Let the A. S. of E. combine forces with the F. E. and C. U. and all other farm organizations in the cotton districts, and compel results. Unless we can do this it is doubtful whether we can get what our cotton is worth.

Winthrop, Ark. J. T. BOLAND.  
[The A. S. of E. is now inaugurating a vigorous campaign in the cotton States, and if the growers do not receive a fair price for this year's crop it will be their own fault. The National Union is anxious to correspond at once with every cotton grower who is not already a member of the A. S. of E.—Editor.]

### COUNTY MEETING IN ARKANSAS.

### To Up-to-Date Farming:

The different unions in Logan county, Ark., met at Prairie View, Aug. 11, to organize a county convention. S. D. McKenzie presided and P. L. Cummins acted as secretary. Six locals were represented by about 300 members. The convention decided that 50 cents per hundred pounds of lint would be a fair price for ginning cotton, and that 25 cents per bushel would be a fair price for cotton seed. We believe that with our 600 members we can maintain these prices. W. D. Wilson was authorized to work the southern part of Logan county for the A. S. of E., and E. F. Walker the northern part. We elected delegates to meet with Johnson county locals to discuss the subject of organizing a State convention. Our next meeting will be with Chismville No. 3, on Thursday night before the first Sunday in October. P. L. CUMMINS.

### ALL RIGHT IN MISSOURI.

### To Up-to-Date Farming:

I am a member of the F. M. B. A., and I think if these two societies will only join hands and work together we may soon have the wheel to rolling rapidly. I am local organizer, and president of lodge 103, and I will do all in my power for the farmers' unions. I think I can send you a large list of subscribers soon.

Lake Spring, Mo. C. H. SELLERS.

### BROOM CORN IN OKLAHOMA.

### To Up-to-Date Farming:

Our main dependence for a living here was wheat. That failed us. A dry winter left our fields almost destitute of wheat—we had none to market. But we seeded our wheat fields to broom corn and have an immense crop. We look to this broom corn for deliverance. Can not the A. S. of E. aid us as it is aiding the wheat growers and cotton and tobacco raisers? We want some advice as to how to cope with the broom corn sharks. The buyers seem to be strongly organized against us. We need to work together and act on the defensive. We have sold only to find out afterwards that we had received about half the market price. So we are unable to obtain even the market price.

Haskew, Okla. J. E. ROPER.  
[An article containing much information regarding broom corn appeared Sept. 1 issue, and we give other news in this issue. If the growers were organized and co-operating together they could easily get a fair price. Our advice indicate a very large crop, and from \$60 to \$80 per ton will likely be the ruling price in Oklahoma, but we do not give this as official.—Editor.]

### TOOK KINDLY TO THE PLAN.

### To Up-to-Date Farming:

I went to the picnic and distributed the samples you sent me. Many of the farmers had not heard of our plan, but when I explained it to them all took very kindly to it, and I think much good will follow.

Canal, O. W. R. YARKEY.

### TO GET AT EXACT CROP.

### To Up-to-Date Farming:

We have taken this method of getting at the exact crop of tobacco now growing in this county. We will have a man at each polling place on election day, and as each voter returns from the booth he will report the amount of tobacco he is growing. These reports will be sent to the county seat for tabulation.

J. A. ALDRIDGE.

M. GRAYSON.

### A DOLLAR STRAIGHT.

To Up-to-Date Farming: Wheat is selling here at \$1 right from the thrasher. One man sold 700 bushels right from the machine at that price. Corn is selling at 60 cents. We have made fair success with our local union.

What is the best plan for us to get equitable prices for our tobacco? Gishton, Ky. O. T. KITTINGER.  
[Unite, stand together, ask the price fixed by the growers through the Society, sell when you can get it, hold when you can't get it.—Editor.]

### GREAT PICNIC IN MICHIGAN.

To Up-to-Date Farming: The farmers of Livingston and Washtenaw counties have had one of the greatest picnics of the season to-day, at Whitmore Lake. The weather is ideal, the location picturesque, and the gathering of people, 3,000 and over, of the brainiest and best in the State. A fine program of music and speaking has been rendered. Senator James Barlow, of Indiana, delivered the principal address. He treated at length on the necessity for co-operation among the bean growers, this being in the bean belt of the State. He also demonstrated the power farmers can wield in the nation under the plan of the A. S. of E.

Geo. G. Winans, who had charge of the picnic, had a headquarters tent on the grounds for the A. S. of E., and it was constantly crowded with people seeking information about the Society. New members were added to the list, and many were set to thinking in the right direction who will become members soon.

The A. S. of E. has grown to such proportions in this State that politicians are now sidling around, and wondering what it all means; but we tell them to "possess their souls in patience," as we are simply out for business, and the social and financial elevation of the farmer, and through him of all humanity. Everybody felt an uplift at this gathering, and many expressed themselves as convinced that the A. S. of E. will unify farmers and business men both in their social and business relations. Many also who have been saying, "It can't be done," went away convinced that the farmers are really coming to the front.

Lansing, Mich. MILO E. MARSH.

Up-to-Date Farming is the official organ of the American Society of Equity and for a clear insight into the farmer's needs and a strong, dignified, practical and sensible advocacy of their industrial rights, it is decidedly in advance of any publication we have seen devoted to agricultural interests.

THE FARMERS JOURNAL, Abilene, Tex.

Endorsed by all leading poultry men.

THE SHASTA MFG. CO. MILWAUKEE, WIS.

# The Queen of the Wheat Field

## FULTZO-MEDITERRANEAN WINTER WHEAT

**STILL VICTORIOUS** is this grand variety. To say "It is Better than the Best" does not overstate its good qualities. IT BEATS THEM ALL wherever tested in competition with other varieties as proven by the reports printed below. If you have not procured seed of the Fultzo Mediterranean wheat you don't want to put it off another year.

**The Great Hardy, Productive Wheat, Withstands Freezes, Floods, Drought, Rust, Fly, Bugs and Blight to a Remarkable Degree. Stiffest Straw Fine Quality. Farmers and Millers Wild for it. Where first grown always sells for seed at Fancy prices. Will you introduce it in your neighborhood?**

The Fultzo-Mediterranean wheat was originated by crossing Fultzo on the Hybrid Mediterranean. Hence the name. All experienced wheat growers must acknowledge the parents as being among the hardiest, most reliable, and most valuable varieties of wheat ever grown in this country. A beautiful variety in growth, straw, head and grain, even surpassing the expectations of those who grow it for the first time. The plant is a strong grower, with a corresponding large root development. If sown thin or damaged in winter it will stool out and usually produce 20 to 100 stalks from one grain. If damaged in winter it usually makes a good crop at harvest on account of its wonderful vigor and recuperative properties. This quality was conspicuously shown this year, 1904. Farmers, by all means sow such a wheat and you will have extra bushels and extra dollars when harvest comes. Read the reports.

The stalks are large, short and very stiff, and stand up where nearly all other kinds would fall. We recommend it as the best that can be selected for very rich ground. The heads are thick and broad, broader at the top than at the bottom, looking at them edgewise. The meshes are compact and contain from three to five grains. Chaff white, heads smooth or beardless; grains large, color red. The Fultzo-Mediterranean is extra early. This wheat appears to be without a peer today for standing hard winters, wet weather, drought, rust, bugs, fly, etc.; in making a vigorous growth and heavy yields. It easily yields 10 to 20 bushels per acre more than the old Fultzo, Mediterranean, Gold Dust, Velvet Chaff, Clawson and other old favorites that have lost their original vigor. If you don't get yields like reported in letters below, you want to get rid of the corpses this year and get this vigorous variety with young blood that will stand hardships and produce a good harvest in the end.

**If for any reason you were dissatisfied with your wheat crop this year, obtain seed of Fultzo-Mediterranean. We have made low prices for large lots. You can afford to buy for a field or your entire crop**

## READ THESE REPORTS

The Like of this Wheat was never Known Before

### OVER 50 BUSHELS PER ACRE

"Under separate cover I send you a copy of our county paper. In it you can read an account of my Fultzo-Mediterranean wheat. The two bushels my tenant obtained of you sown on 1 1/2 acres of ground and yielded 75 1/2 bushels. There is no mistake about this as the land was measured and the grain kept separate and weighed. Also I will say that a shower passed over the field just before threshing and I know much wheat was left in the straw.

Mrs. M. C., Mitchell Co., Kans.

### ONE BAG YIELDS 106 BUSHELS

We are well satisfied with your wheat. The sack had a hole in it and about a peck lost out. From the balance we raised 106 bushels; 2 1/4 bushels of seed.

B. H., St. Charles Co., Mo.

### 45 BUSHELS TO ACRE—HARDY AS RYE

This is my second year for Fultzo-Mediterranean having obtained a little of your seed two years ago. It has proved the hardest wheat I ever grew, and yielded last year at the rate of 45 bushels per acre, and this year will yield nearly or quite as much; winter proof; a great stooler; even grower; the field looking like a large level floor, heads large, broad and well filled.

J. L. M., Jennings Co., Ind.

### GOOD FOR 50 BUSHELS OR MORE

It was with some feeling of doubt that I sent you the order for Fultzo-Mediterranean wheat last fall, but I had had good success with other varieties of your introduction, that I thought I would try it. I am more than pleased now, and this is the finest variety of a 'l'. My 18 acre field is a grand sight, and good for 40 to 50 bushels per acre. Your delighted customer,

M. A. G., Mecosta Co., Mich.

### BEST FOR THREE YEARS

have raised Fultzo-Mediterranean wheat three years consecutively, and every time it has been the best wheat grown. This year it yielded 10 bu. per acre more than my other wheat. It is destined to become the most popular variety in this section.

J. C., Daviess Co., Ind.

### F.-M. 30 BU., OTHER WHEAT 11 BU.

The wheat crop in Sciota county is poor. Fultzo-Mediterranean obtained of you is by far the best in this section and will average 30 bushels per acre of excellent quality. The Fultzo-Mediterranean was a beautiful sight, while the next field adjoining, with only a wire fence between, only made nine bushels per acre. I am a friend of your seed.

J. S. V., Sciota Co., O.

### FARMERS COME EXPRESSLY TO SEE IT

I purchased of you last season two bushels of Fultzo-Mediterranean which I sowed on 134 rods of ground on the 25th day of September. I sowed with the wheat 200 pounds of wheat fertilizer. I do not think I lost one plant in wintering, although our farmers complain of severe winter killing. This wheat was in head May 24 and will be in bundle before July 1, (extremely early for New York) It challenges the curiosity of a wide section and many farmers have come expressly to examine it. I expect at threshing not less than 45 bushels per acre. Every kernel that I have to spare is spoken for and I want to buy more.

Rev. J. W. L., Onondago Co., N. Y.

### AVERAGED 41 BUSHELS PER ACRE

We raised 15 acres of Fultzo-Mediterranean wheat and threshed 615 bushels of beautiful wheat. This is an average of 41 bushels per acre. This is the finest wheat I ever grew.

N. B. W. & Son, Harrison Co., Ky.

NOTE:—We do not give full address of our customers as that would divert trade from our house. Usually our customers sell all their surplus wheat at a high price in their neighborhood. We would print many more testimonials if space permitted.

### REQUIRED FIVE HORSES IN BINDER

I bought seed of Fultzo-Mediterranean wheat to sow 16 acres last fall and now I am pleased to say it is the best wheat I ever saw. I usually grow good wheat, but this is the best ever grew. It is early stands up straight, and will surely yield 35 to 40 bushels per acre. It is unequalled in all this section I started in to cut it with three horses in my McCormick binder, but was obliged to put in five, and it kept four men jumping to shock it. It required 55 pounds of twine to bind the 16 acres.

J. M. F., Hancock Co., Ind.

### BETTER THAN FULTZ EVER WAS

Your Fultzo-Mediterranean wheat is giving entire satisfaction. I sold to a number of farmers and not one can pick a flaw in it. I consider this wheat better than the old Fultz ever was. It grows very vigorously; has a fine head in size, shape and structure, with very large grains. It will yield heavily. Will report when threshed.

A. R. S., Saline Co., Ill.

### A SIGHT TO SEE

My crop of Fultzo-Mediterranean is now in the shock and it is a sight to see how thick the shocks stand. I have 355 dozen, large bind, on 9 acres. In the balance of the 20-acre field I sowed Early Red Clawson, which averaged 15 dozen to the acre. I expect 40 bushels per acre of Fultzo-Mediterranean.

G. B. S., Montcalm Co., Mich.

### YIELD TWICE AS MUCH

Fultzo-Mediterranean wheat will yield twice as much as any other variety. It is not threshed yet, but it is the best wheat I ever raised. It is free from rust and fly.

O. C. HUTCHENS, Braxton Co., W. Va.

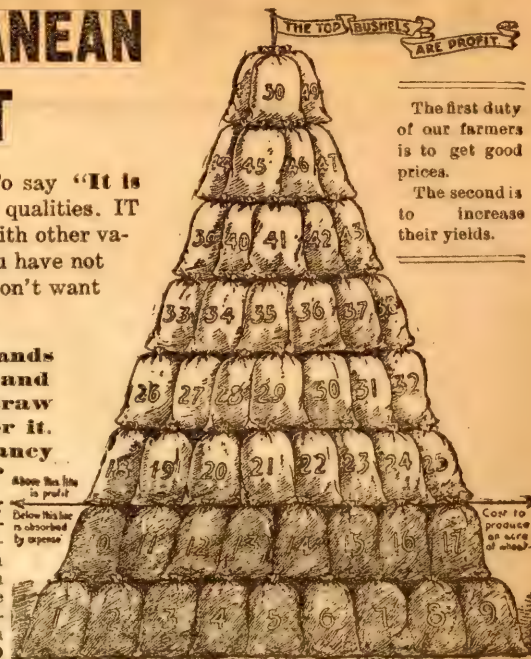

### 33 BUSHELS FROM 1

I threshed the crop from the bushel of Fultzo-Mediterranean wheat and had 33 bushels of fine wheat. Other wheat is about half crop. I am greatly pleased with it.

PARKS CAMPBELL, Daviess Co., Ind.

### DELIGHTED WITH F.-M.

From 2 1/2 bushels of Fultzo-Mediterranean wheat sowed I threshed 64 bushels of fine quality. It is the best crop of wheat in the community. It has a stiff straw, stands drought, fly and rust better than any other wheat I ever raised. I am delighted with Fultzo-Mediterranean.

**THE TOP BUSHELS ARE PROFIT**  
Farmers, strive for the top bushels. There are several bushels extra per acre for you by sowing the Fultzo-Mediterranean.

The average yield of wheat is 13 bushels per acre. If every farmer sowed Fultzo-Mediterranean it would be much higher at once.

The increase in yield will abundantly justify the extra price for seed, besides having seed for your future crops.

### STOOL OF FULTZO-MEDITERRANEAN WHEAT

There were 94 developed stalks with heads in this stool. This shows the vigor of the Fultzo-Mediterranean wheat. Vigor is of immense importance in wheat. It oftentimes brings success out of what looks like failure. The F.-M. is unequalled in recuperative powers.

**ONE YEAR AGO I PRINTED AS FOLLOWS:** "I believe the 1903 crop of wheat is the last one that will be priced for the farmers by the speculators and gamblers, I believe that before another crop of wheat is raised that farmers will be co-operating, and will fix the price on their crops before they leave the farm, I believe the next crop of wheat will make the farmers more money than any crop they have ever raised, and I don't know of any variety of wheat that can be recommended above Fultzo-Mediterranean for seed." Has not this prediction come true? Farmers put the price of wheat at \$1.00 a bushel and have held it there. The price came to late to benefit the majority of growers, but all will get the benefit in the 1904 crop. Readers of Up-to-Date Farming know how much credit is due me for the good price of wheat. This is another reason why we should have your orders.—J. A. EVERITT.

**Price of Fultzo-Mediterranean Wheat.** By mail post paid, 1 lb., 30c; 4 lbs., 75c. By freight or express, 1 bu. 75c; 1 bu. at \$1.75 per bu. Bags are supplied free. Purchaser pays freight. Price subject to change.

Every Person who Contemplates ordering Fultzo-Mediterranean Wheat at these prices SHOULD NOT DELAY

ADDRESS ALL ORDERS TO  
Seedsman, Inc., Indianapolis, Indiana.

# You Are to Be the Judge!

## A BARREL

of VITAE-ORE is NOT NECESSARY to convince you that it is the best remedy in, on or out the earth for ailing people, to PROVE TO YOU positively that it will CURE YOUR ILLS, as it has the ills of so many others.

ONE OUNCE OF THE ORE (one package) mixed with a quart of water. ONE MONTH'S TREATMENT, is all that you need for the TEST. all the EVIDENCE we want to submit, and we want to send it to you at OUR RISK. YOU ARE TO BE THE JUDGE! One month's treatment with the NATURAL REMEDY will do for you what six months' use of other advertised treatments cannot. If it does not, YOU TO DECIDE, we want NOTHING from you!

## READ OUR SPECIAL OFFER

TO THE READERS OF UP-TO-DATE FARMING

WE WILL SEND to every subscriber or reader who writes us, mentioning UP-TO-DATE FARMING a full-sized One Dollar package of VITAE-ORE, by mail, postpaid, sufficient for one month's treatment, to be paid for within one month's time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs or dopes of quacks or good doctors or patent medicines he or she has ever used. Read this over again carefully, and understand we ask our pay only when it has done you good and not before. We take all the risk; you have nothing to lose. If it does not benefit you, you pay us nothing. Vitae-Ore is a natural, hard, adamant, rock-like substance—mineral—Ore—mined from the ground like gold and silver, and requires about twenty years for oxidation. It contains free iron, free sulphur, and magnesium, and one package will equal in medicinal strength and curative value 800 gallons of the most powerful, efficacious mineral water, drunk fresh at the springs. It is a geological discovery, to which there is nothing added or taken from. It is the marvel of the century for curing such diseases as Rheumatism, Bright's Disease, Blood-Poisoning, Heart Trouble, Dropsy, Catarrh and Throat Affections, Liver, Kidney and Bladder Affections, Stomach and Female Disorders, La Grippe, Malarial Fever, Nervous Prostration and General Debility, as thousands testify, and as no one, answering this, writing for a package, will deny after using. Vitae-Ore has cured more chronic, obstinate, pronounced incurable cases than any other known medicine, and will reach such cases with a more rapid and powerful curative action than any medicine, combination of medicines, or doctor's prescription which it is possible to procure.

VITAE-ORE will do the same for you as it has for hundreds of readers of Up-to-Date Farming if you will give it a trial. Send for a \$1.00 package at our risk. You have nothing to lose but the stamp to answer this announcement. If the medicine does not benefit you, write us and there is no harm done. We want no one's money when Vitae-Ore cannot benefit. Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it, would hesitate to try VITAE-ORE on this liberal offer? One package is usually sufficient to cure ordinary cases; two or three for chronic, obstinate cases. We mean just what we say in this announcement, and will do just what we agree. Write today for a package at our risk and expense, giving your age and ailments, and mention Up-to-Date Farming, so that we may know that you are entitled to this liberal offer.

## YOU ARE TO BE THE JUDGE!

### DON'T EXPERIMENT!

Some experiments are necessary for the advancement of civilization; and although frequently lives are lost and much damage done, the ultimate results and benefits are the cause of much good to humanity. Others result in loss of life from no apparent cause other than the obstinacy of the experimenter, who will not heed the advice of friends, and refuses to see that his experiment is impossible or impracticable for the results aimed at or intended.

As all experiments are dangerous, so it is a dangerous thing to experiment with worthless patent medicines and nostrums of the kind that spring up in the night, and "none knows from whence they came" or what their origin. It is seeking after an impossible result to look for health in a bottle of alcohol and sarsaparilla, or a package of scum and straw; and such experiments are often disastrous to the experimenter.

Vitae-Ore, Nature's Remedy, is not an experiment, and the sick and suffering person who seeks its aid is not experimenting. It has stood the test of the American public, a critical judge, for a generation of time, and is growing in popularity and selling more rapidly from year to year, and has fully substantiated our claim to being the best thing in, on or out of the earth for afflicted people. Beware of experiments in medicine, and when you need a remedy let the experience of others be your guide. If you have been using other treatments without the results that were promised and that you anticipated, THROW THEM AWAY and begin with this natural healing and curing ORE. It will NOT FAIL YOU.

### A CERTAIN AND NEVER FAILING CURE FOR

Rheumatism	Nervous Prostration and Anaemia
Lumbago	Liver, Kidney and Bladder Troubles
Bright's Disease	Catarrh of any Part
Diabetes	Female Complaints
La Grippe	Stomach and
Blood Poisoning	Bowel Disorders
Dropsy	General Debility
Sores and Ulcers	
Malarial Fevers	

### MIDDLE-AGED AND ELDERLY PEOPLE SHOULD USE IT

As old age approaches the necessity for such a tonic as VITAE-ORE becomes each year more and more manifest. As is generally known, all through life there is a slow, steady accumulation of calcareous deposits in the system, marking the transition from the soft, gelatinous conditions of infancy to the hard, osseous condition of old age. These calcareous deposits naturally interfere with the functions of the VITAL ORGANS; and when they become excessive and resist expulsion, result in the dryness and stiffness of old age. In early life these deposits are thrown off, but age has not the power unless assisted by some outside stimulant. VITAE-ORE, apart from its powerful disease-curing, health-restoring action, is just the IDEAL STIMULANT for middle-aged, elderly people, in that it enters the blood, dissolves the hard, calcareous matter, and almost entirely eradicates the ossific deposits so much dreaded by old people. IT ENRICHES THE BLOOD with the necessary hematin properties, drives all foreign matter from the circulation and prolongs vigor and activity in both men and women to ripe old age.

## NATURE'S CREATIONS ARE SUPERIOR TO THOSE OF MAN.

So Testifies Levi Votaw, Who Has Good Reason to Know—A Wonderful Change and Improvement.

I ought to be able to consider myself quite an authority on advertised medicines as I have spent during my long period of ill-health many dollars for so-called restoratives, tonics, etc., but I have found nothing to equal the Vitae-Ore remedy. I believe this remedy to be a true and worthy example of the fact that Nature's creations are superior to those of man's. I

have at the present time used two packages of Vitae-Ore, including the 30-days' trial treatment and one other, and am now on the third package, all three packages having cost me but \$2.60. When I began using the trial treatment I could only work about four hours a day, being so fatigued from my weakness that I would be compelled to stop off short. After using this medicine for only two months' time I can work the full eight hours a day and feel no more fatigued than the ordinary healthy man does after a hard day's work. I was troubled with shortness of breath and was so terribly nervous at many times that I could scarcely write my name; in fact, was completely run-down. It is almost impossible to write the wonderful change and improvement in my condition so that any person who has not experienced a similar change would understand and appreciate it. I believe that Vitae-Ore will restore any man to full vigor and strength of manhood. I am now 63 years old. I went through the hardships and exposures of the war of the Rebellion, coming out badly shattered in health as did many of my comrades, and consider a medicine that will benefit any one in this condition a blessing to mankind.

LEVI VOTAW,  
Buna, Tex.

## AT THE AGE OF 70

CURED OF DROPSY AND RHEUMATISM AFTER TEN YEARS OF FRUITLESS AND HOPELESS DRUGGING.

When Vitae-Ore Completely Cures In Such Stubborn Cases, Where Extreme Age is Against the Cure, Is It Not Reasonable to Expect That

IT WILL CURE YOU EASILY.

Vitae-Ore Cured me entirely of Rheumatism and Dropsy and made me almost a new woman

in my 70th year. On the fifth night after beginning the use of Vitae-Ore I could sleep without pain and have not since lost any sleep on account of pain in my body. I used to walk with a cane, but now I can go to church 1 1/2 miles and back again and don't mind it at all. I used different kinds of drugs for ten years, and the doctors said I was worn out and that they could only patch me up a little, so I gave up all hopes of ever getting well. I read about V.-O. and thought perhaps it would help me as it had others, for at that time I was in great agony. It is wonderful what it did for me. I hope all people who suffer will try Vitae-Ore. Many of my neighbors are using it and all are getting well. People are surprised that I can now do all my own work, except washing. There are five in our family.

REBECCA S. GIBBY,  
Holts, Pa.

## YOUR DOCTOR

may tell you that your case is incurable, that medical science is unable to help you, that all you can expect is temporary or slight RELIEF. Well, let HIM think so. He is certainly entitled to HIS OPINION. You need not think so unless YOU WISH TO.

Many people whose testimony appears in books and pamphlets of the THEO. NOEL CO., were told that their cases were hopeless, helpless, impossible, incurable, past all recovery, yet—READ THEIR TESTIMONY. Many were told that they had but a few short years—some but months—to live, yet—READ THEIR TESTIMONY. There are more things in HEAVEN and EARTH than are dreamed of in the Doctor's philosophy, and Vitae-Ore is one of them.

## NOT A PENNY UNLESS BENEFITTED.

This offer will challenge the attention and consideration, and afterward the gratitude of every living person who desires better health or who suffers pains, ills and diseases which have defied the medical world and grown worse with age. We care not for your skepticism, but ask only your investigation, and at our expense, regardless of what ills you have, by sending to us for a package. ADDRESS

THEO. NOEL COMPANY UP-TO-DATE DEPT. VITAE-ORE BUILDING, CHICAGO

## THE FIRST OBJECT.

Every reader of this paper should fix in his mind the first object of the American Society of Equity, viz:

TO OBTAIN PROFITABLE PRICES FOR ALL FARM CROPS.

This should be the chief aim of every American farmer and of every organization or institution for farmers.

## HOW TO ACCOMPLISH THE FIRST OBJECT.

First. Through the farmers paper Up-to-Date Farming the profitable price will be known by every farmer in the country.

Second. Market when you can get the price. Hold when you cannot get the price.

These two things are all you need to know and do. Simple, isn't it.

To know the price, to get the advice and follow every move of the society you must have the official paper.. Farmers cannot co-operate without it.. It is the vital part of the whole movement.

This plan is based on the fact that the world uses all the staple crops you produce; and the fact that for many years no surplus has been produced; and the fact that population and consumption is increasing very rapidly; and the fact that the world cannot do without your goods; and the presumption that the world will consume practically as much at a fair and profitable price to you as at an unfairly low or unprofitable price. In other words, if the buyers and consumers cannot get your crops at their price, they must have them at some price, and this may as well be your price.. Remember, the world needs all your products not only a part of them.. It don't consume them in a few days, weeks, or months, but a whole year is required.. The vital question is: Will you control YOUR OWN GOODS so you will have them to supply when the demand seeks them?

If the market won't pay your price at once, don't be alarmed. Those who hold will represent such a portion of any crop as to affect the whole industrial system of our country and sooner or later it will be felt. Note how sensitive the markets are to damages by flood, drought, rust, boll weevil or other causes that may not affect the total crop more than 5 to 15 per cent. Organized farmers, holding their crops, will represent more than this per cent. In fact they will produce the same results as a short crop and cause the demand to seek the supply instead of the supply overwhelming the demand as heretofore.

All don't need to hold at any time.. If those hold all, who can hold, and those who cannot hold all, will hold what they can, then those who cannot hold any can sell and get the minimum price at the beginning of the season and all will get the price, or more during the year.

CONTROLLED MARKETING is everything, and this paper is the only one printed that teaches Controlled Marketing.

Let these statements sink into your mind and keep them there.

SUBSCRIPTION PRICE FIFTY CENTS A YEAR.  
Foreign Subscriptions \$1.00 a Year.  
Three Month's Trial Subscriptions will be Accepted for 10 Cents.  
ALL PAYABLE IN ADVANCE.

**Acknowledgement.** The date in connection with your address on wrapper, informs you of the time your subscription expires. Change of Date indicates that your renewal was received.  
Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."  
Always state if a renewal or new subscription. Don't neglect this.  
Your Address should always be written very plainly. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.  
**Renewals and Change of Address.** Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

## ADVERTISING RATES

will be quoted on application.  
Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurrence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write.

## TEN (10) CENTS PAYS FOR THREE MONTH'S TRIAL SUBSCRIPTION.

Good any time and all the time. If you want to convert your neighborhood to controlled marketing, co-operation and price making, now is your time. \$1.00 or more of your own money cannot be used for a better investment. But you don't need to use your own money. Any neighbor you ask for 10 cents will give it. After reading Up-to-Date Farming three months they will subscribe for a year and join the army of a million now forming.

## Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, below which farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. If those who can hold it will hold all, and those who cannot hold all will hold part, then those who cannot hold may market and all will get the price. This is the key to controlled marketing. The world must have your products at your price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, per bushel	- \$ 1.20
Hay, No. 1 timothy, " per ton	- 12.00
Oats, No. 2 white, " per bushel	- .40
Barley, No. 2 " per bushel	- .58
Barley, No. 3 " per bushel	- .52
Clover Seed, No. 2, Toledo, per bushel	- \$ 7.00
Cotton, New York, per pound	- .12
Broom Corn, Chicago, per ton	- \$75.00 to \$85.00

This list will be extended as crops mature.

## SUGGESTIVE PRICES.

Bulletins will be issued for these crops as they mature and reports are received. The below prices are suggestive of what they may be. Farmers should keep these suggested prices in mind for their guidance until the bulletins appear.

Corn, No. 2, Chicago, per bushel	- - - \$ .60
Hogs, " per cwt.	- - \$6.00 to 6.50
Cattle, " per cwt.	- - 6.00 to 7.50
Potatoes, " per bushel	- - - 75c

## The Third Power

## Unconsidered Views

### Farmers Are Asked to Help Hold the Millers Trade by Making Lower Prices

Mr. Herbert Bradley, traffic manager for the Millers' National Federation, if correctly reported in the press, is either very cunning or very inconsiderate. Represented as having recently returned from a trip that included all the flour importing centers of Europe, he is reported as having said in a report to the Indianapolis members of the federation:

"I found conditions favorable for a good export business, provided prices can be brought to a reasonable figure. Foreign stocks are light and crop conditions in other wheat producing sections—excepting Australia and India—very unfavorable. The continent has been subjected to a severe drought and the prospects are good for feed business in that section.

"Unless there are radical changes from the present market conditions at home and abroad, we will have a very small surplus for export. It will, however, take a long time to convince the European buyer that anything like the present prices are warranted and, although the quality of bread over there has deteriorated, I am afraid they will continue to avoid purchasing our product to the last extreme, rather than pay present prices.

"We can no doubt also secure the active support of farmers in holding our export business, as the price of American wheat will ultimately be lower if our export trade is cut off. American flour abroad has established the demand in that market for American wheat. Our price of wheat is always higher than other countries, and if the European millers do not have the American standard to compete against, they can lower their grades, using cheaper wheat from other producing sections, and thus remove the foreign demand for American wheat, which under normal conditions means a much lower level of prices in this country, and the farmer consequently suffers."

As a heading to the above report the publication from which we clip it, used the following unconsidered sentence:

"But prices must be brought to a reasonable basis—Farmers ought to help hold this trade."

The meaning of that declaration, taken in connection with the statements quoted before, is, that prices are not now reasonable, that they are unreasonably high, and that it is the duty of the farmer, benevolently and patriotically, to come to the rescue and voluntarily put down the price of his grain "to help hold this trade!"

The farmer is not the unthinking toiler he once was. He has learned to ask the reason why things are thus and so. In the first place, he would like to know what that export trade is worth to him. Last year he had a crop of about 638,000,000 bushels of wheat, for a good portion of which, through co-operative effort, he received \$1 per bushel. Of this crop he exported about one hundred million bushels, which was about half the export of the year preceding. Let us assume then, for argument sake, and only for argument sake, for the facts do not sustain it, that we lost 100,000,000 bushels of export trade on account of the higher price of wheat last year. Had the farmer come to the rescue of the millers last year, as he is requested to do now, and put the price of his wheat down to the so-called "export basis," he would have saved this foreign trade (if the position of our friends is correct)—saved a trade which he did not need, but he would have put the price of his whole six million bushels

down likewise at a loss of many times more dollars than the entire value of the grain he might have exported! If he had had that wheat to spare (which he had not) and could have made no sort of use of it, it would have been better for him, as a simple business proposition, to have burned it into ashes rather than to have purchased its export at such a price!

So of the crop of 1904. Mr. Bradley admits that "we will have a very small surplus for export," but argues that it would be better for the farmer to lower his prices to secure the export of this "small surplus." Better cut down the value of the whole of his crop, we may say rather, the wreck of his crop saved from the disasters of a peculiarly disastrous season—cut this down several hundred million dollars to hire foreigners to take "our very small surplus," which we have not got to spare any way.

But there is meaning in such reports. Mr. Bradley represents the Millers' National Federation. His federation is not interested in the wheat that goes to Europe, but in the wheat that stays at home. They are not exporters of wheat, but exporters of flour. If they can frighten the farmers to put down the price of wheat to "save this export trade," those same millers will be able to supply their mills with cheaper wheat, and thus secure for themselves a wider margin of profit on their export flour.

But sometimes even these wise men prove more than they intend to prove. They have all these years held as a scare crow before the farmers, that the farmers could not put a price upon their wheat, that all America could not do it, that the price of wheat was made in Europe, entirely independent of both buyers and sellers in America. "Liverpool makes the price of wheat." Every reader of this paper has heard it. Now, says Mr. Bradley, "it will, however, take a long time to convince the European buyer that anything like present prices are warranted." "I am afraid they will continue to avoid purchasing our product to the last extreme, rather than pay present prices," he continues.

What prices? Prices of wheat? Prices made in Liverpool? According to their own theory prices can be made no where else. What change has come over the spirit of their dream?

There is just one more fact in connection with the above quotation that we wish to notice, and then we shall turn the whole matter over to the farmers themselves. Such articles as we have quoted above are sent in lightning flashes all over the country by the associated press, and are taken up by the papers and published under scare heads and in double measure, while our bulletins and other articles warning the farmers of the tricks that are being played upon them by the speculative interests, are refused a place on their wires and in their columns. There must be a reason for this, and farmers are becoming a people who seek reasons, and they seldom fail to find them.

They may find a reason for the discrimination by the Associated press in complaints made by millers, because of higher prices they must pay for wheat to grind and because the farmer will no longer dance to THEIR music and protect THEIR markets to his own loss. But the leaven is spreading and we hope every farmer will see from this illustration the importance of doing his full duty to spread the movement.

# Capitalized Corporations No Relief to Farmers

## Shall Farmers Put Up Money at \$25.00 a Share to Buy the Crops They Already Own?

We do not like to see farmers exploited of their good money, and as we are constantly informed of efforts, small and great, in almost all portions of the country, to form stock corporations in which farmers must be the contributors, and in compliance with hundreds of requests for its republication, we have decided to republish the following article from the June 15, 1904, issue of this paper. The corporations specially referred to in the article we have not heard of for months, and we suppose they have quietly gone to sleep in the grave beside their numerous predecessors:

Up-to-Date Farming stands in glad support of whatever may serve well the best interests of agriculture, and of labor in general; but the mere claims of an institution, and the interestingly detailed results which, it is argued, must follow it, are not sufficient to warrant its support. Let everything come under the keen scrutiny of investigation, and what cannot stand the severest test of reason, may well be left alone.

A farm paper now lies before us which heralds the formation of what claims to be a giant corporation of farmers, with a capital stock of half a million, with the privilege of increasing it to five millions. This corporation is headed by reputed prominent people, and it proposes to knock out the farm machinery trust in the first round. Should it do so, who would probably be the gainer? The new combination would have to crowd out the old one before it could get the field, to do which it must become stronger than its antagonist, and, therefore, just as much of a monopoly. It would be crowded with salaried officers, managers and foremen, and perhaps be managed just as extravagantly and with just as little regard for the inner life and interests of general agriculture. Human selfishness is much the same the world over, and only awaits the opportunity to manifest itself. But this is only a suppositional view of the probable, we many say the natural, result of the corporation should it be successful.

Another view of the enterprise is a far more important one. A capitalized corporation is nothing without money. Capital stock is not money; it is something issued by the corporation presumably to represent an investment—is given out in exchange for money. This particular corporation invites farmers to take its stock at \$25 a share. The situation at present is this: The farmers have the money; the corporation has the stock. If the plans of the promoters be carried out, and they succeed in getting the stock taken by the farmers, the situation will be this: The corporation will have the money and the farmers will have the stock!

This is not saying the corporators are dishonest, or that they are inordinately selfish in their designs. They are men of business prominence. But this change of possession of money and stock must take place before a wheel of the corporation can move; then the future of the money and stock must depend upon the success or failure of the enterprise. Certain it is the money will never be swapped back for the stock, for it must be expended or absorbed before either success or failure can be reached.

We also have on our desk a circular outlining the formation of a corporation of tobacco growers and providing for a capital of \$5,000,000. It too has the names of prominent men at its head, not one of whom, however, so far as we know, is a tobacco grower. The money is to come from the same source as that of the former one, from the farmers, in this case the tobacco growers, and the same change in possession, the same change in relation to money and stock, must take place as outline in the case first recited.

Again we protest that we do not accuse these people of dishonesty, but their plan, if carried out, simply creates a rival to the tobacco trust, and involves the two in a fight to the finish. The new concern must take the money paid in by the tobacco growers as a fund with which to fight their antagonist on his own chosen ground. It is safe to conclude that the money would be thus absorbed, and the tobacco growers would be left where they began, minus some good money, plus a large amount of discouragement, and in the hands of a trust grown all the more arrogant because of its victory. "The man behind the gun" may be all right, we would not intimate that he is not; but it is the man in front of the gun, out in the field whence the money is to come, that is in danger. "We help farmers to help themselves," declare the promoters, but those same farmers are asked to "tote" the fuel—to furnish the money to buy their own tobacco, and to pay somebody a big price to show them how. They don't have to buy their own tobacco; it is theirs already. Why not simply hold it until some one else is ready to buy it at an equitable price? This is the plan of the A. S. of E., and it takes not a cent of capital stock. Besides, if the tobacco growers were able to put up five million dollars they would not need anybody to "help the farmers to help themselves"—they could help themselves without help even from "the man behind the gun."

A letter just received from a very intelligent gentleman writing from Kentucky, gives an account of the attempt to form a similar corporation among the growers of burley tobacco in that state. It was to be capitalized, it seems, at \$10,000,000. The tobacco growers were to furnish one-fourth of this, or \$2,500,000, and then capitalists were to furnish the remaining three-fourths, and the corporation was to buy up all the burley tobacco at 9 cents a pound, and after having been finally sold, net profits (profits after all expenses and salaries had been paid) were to be distributed as a dividend among the stock holders. Buying was to begin December 1. Nearly \$2,000,000 were subscribed by the farmers but fortunately none was paid in—it was not to be paid in until the whole scheme was completed, which proves that its promoters were sincere and honest.

The farmers held their tobacco until the time came for the company to commence buying; but the entire amount required to be taken had not been subscribed, and the big loan could not be secured. The time was put off three or four weeks, the farmers still holding their tobacco. Christmas came. Still the loan had not been secured, and still the farmers kept their tobacco off the market, still awaiting the success of their own effort. Along in January things began to happen. The market had run dry. The factories had no material to work upon, and could get none. The growers did not have to wait any longer; the country was full of buyers, and the growers named their price—better prices than they had received for years. Why?

Not because they had formed a corporation, for the corporation had absolutely done nothing, in fact was not completed. Not because they had subscribed for capital stock, for they had not paid in a cent. It was because they had held their tobacco off the market until the market had to have it, and then they made their price, or could have done so had they been organized to that end. Their corporation absolutely failed, but they scored a notable success on the plan of the A. S. of E. without knowing it.

And thus it goes. Great capital stock corporations never yet have brought relief to the farmers as a class. They must fight well drilled

armies that are already in the field; that have their batteries planted and masked, their gunners trained and masters of their parts, and victory in this way can only come to the farmers at the end of a struggle which shall annihilate these entrenched veterans. It never comes.

The West is being thickly sown with these mush-room corporations, and there are indications that a crop is being prepared for the South. Much effort may be thus wasted, and perhaps some good money lost, but no permanent good will ever be accomplished.

Now, we are entirely willing for the A. S. of E. to be measured by the same standard with which we have gauged these stock corporations, and the same arguments may be used where they will apply. We are incorporated to make us amenable ask no subscription to capital stock, because we need none; we have to fight no corporation, because we are arrayed against none; we are rivaling no business concern, because we are not in business in the sense that they are; we are not asking farmers to furnish money to buy tobacco or any other farm product, because they already own it all. We simply co-operate to hold what we have until the market calls for it at an equitable price—a price which compares justly with the prices of what we have to buy, and carries with it a reasonable profit. We court investigation, invite comparison, and challenge a denial of the efficiency of the plan.

## An Appeal that Touches the Heart

A postal card signed by "A Dependent," tells us that a paper sent to Ashland, Va., is sent wrong, but as that is all the information given us, it is impossible for us to make any correction. But the card says further:

"You are trying to run up the price of bread and dry goods, when all that many a poor woman has to get such things with is a little butter and eggs, and they so cheap! Butter scarcely sells for enough to feed the cow. I am glad of help to farmers, they need it, but I ask that you try to get better prices for butter, and thus not only help the farmer's wife, but also many a poor woman dependent on herself."

Such requests as the above appeal to us as few other things do. Even in our more prosperous communities there are many good women thrown upon their own resources, with whom life is a continual struggle. In less prosperous communities, more remote from market, or unfortunately situated as to market, this condition is intensified. And it is one difficult to relieve, and of sufficient importance to claim the tenderest sympathies and best efforts of lovers of equity for all humanity.

We protest, though, that the movement promoted by Up-to-Date Farming is not calculated to make the general supplies of the humblest consumer materially higher. If the profits now accumulated by the go-betweens, the tremendous corporations which compel these supplies to pass through their hands on the way from the producers to the consumers—if these could be cut out, and their tolls equitably divided between those who produce and those who consume, both of these deserving classes might be very greatly benefited.

Again: General prosperity among farmers must make general prosperity everywhere. Farmers are not hoarders of money, neither are they extravagant and reckless in expenditure, but they are builders and improvers. Increased ability with them means increased improvements and a constant upbuilding. Thus all classes around them must inevitably share their prosperity; local markets are bound to be improved, and the "dependents" themselves benefited.

We believe our correspondent will see in this a brighter outlook for such as she. Our very best reason teaches us so, and our fondest hopes center in such a consummation. "A dependent," should understand and keep in mind that the A. S. of E. does not stand for high prices on anything but fair prices for everything the producers from the soil have to sell. Neither to build any class up at the expense of another. Nor tear any down. BUT TO EQUALIZE OPPORTUNITIES BY EQUALIZING VALUES, SO ALL WILL BE ON AN EQUITABLE BASIS FOR REWARDS.

# The Distributive Side

## The American Farmer Has Bestowed all His Attention and Study on the Productive Side of Farming

It is gratifying to us to see so many farm papers and farm speakers take up the marketing side of the farmers' problem, but they seem to have such a vague idea of it as to be almost ridiculous. Their eyes, we presume, have only been once anointed, for they evidently "see men as trees walking."

For instance, in a recent issue of the Farmer's Call, we find the following very truthful paragraph:

"The American farmer has bestowed all his study on the productive side of farming. Our farmers' institutes, our farmers' clubs, our agricultural colleges, our agricultural fairs, have all been devoted to the productive side of farming. It has apparently been assumed that the only problem for the farmer is how to produce more and at least cost."

That is true certainly, but it might not be impertinent to ask, why has the American farmer thus bestowed all his attention and study? The American farmer has liberally patronized the agricultural press to which he has looked for guidance and counsel, and that press has never intimated to him that there was any way but to raise the largest possible crops and dump them upon the first open market at prices made without any regard to production and consumption, or the cost of production, and with positive knowledge that the crops thus dumped cannot be consumed. This is what the press—religious, secular and agricultural—and the institutes and colleges, have taught the farmers, and it is not to be wondered at that the teaching has been followed.

But the Call continues:

"The result is greatly increased production and therefore overproduction, for we have not endeavored to enlarge our markets as we enlarged our production. Our increased production has benefitted us little, because production increasing faster than the market capacity for absorption, has lowered prices."

That paragraph is as false and misleading as the other was truthful. There has been no greatly increased production. Take the statistics. The average production per acre has vacillated, but the general increase is imperceptible. So of the crops. Some years show greater, some smaller. BUT THERE HAS BEEN NO OVERPRODUCTION. Nor can there be until every man, woman and child in the world has had all he, she and it could use or consume. What is left after this point has been passed represents overproduction, and that point has never yet been reached. There has never been a crop that has not been consumed, hence, we repeat, there has been no overproduction. It follows, therefore, that the remainder of the paragraph is equally false. Besides what could enlarged markets avail, so long as producers dump the product of a year, which must supply the needs of a year, upon a two or three months' market?

But we still quote:

"Manufacturers have been wiser. They have been careful to see that they had enlarged markets as they produced more."

If manufacturers have been wiser it is because they have had wiser and more disinterested teachers. Not a trade journal in existence ever advised manufacturers to strain every nerve to get out the largest possible output, and then dump it all together upon a satiated market at the most inauspicious time of the whole year, and at prices fixed by other people. A trade paper that would do that would very soon find itself without a following. And yet that is exactly the instruction given by farm papers to the farmers.

But our neighbor concludes:

"It is high time that the farmers of this country studied the distributive side of farming."

To be sure. But in what light? Are the blind to still lead the blind into all sorts of inextricable paths? Or will the few simple propositions that

cover the entire field of successful farming, at last receive recognition and be taught by the agricultural press? to wit:

1. Produce as much as possible, as cheaply as possible, and of the best possible quality.
2. Through organization and co-operation fix upon those products an equitable price, fair to both producer and consumer, based upon the quantity measured by the normal annual consumption.
3. Sell when the price is offered and only then. Let the supply go on the market only as consumption requires it, keeping the amount not needed and the profits on the farm where they belong, and thus insure a year's market and steady prices, and guarantee agricultural prosperity. Have no fears of an unconsumable surplus. There has never been one; but if there should be, let it come at the windup of the season when the peculiar exigencies of the case may well take care of it. Up-to-Date Farming has fearlessly advocated all of these propositions, has proven that they are practical and demonstrated that they all can be done, because, under its teaching, THEY HAVE BEEN DONE.

### Can't Do It Without Organization

We have devoted considerable space in this issue of Up-to-Date Farming to urging Southern planters to hold their cotton for profitable prices, and to showing up the great possibilities of the South's immediate future.

But this cannot be accomplished without organization. With every industrial, financial and professional interest compactly organized, it is impossible for any unorganized interest to have a fair show in the solution of life's great problem. A fair reward for effort put forth.

Farm and other laborers constitute the masses, and the masses have always been regarded as the prey of the classes. With the classes organized and the masses unorganized the disparity of advantage is multiplied and intensified. The trade laborers were the first to note this great disadvantage, and they met it with counter organization, and are thus pretty well able to assert their rights and maintain them. But the farmers, conservative and slow, have struggled on with odds against them so great as to have crushed any other calling on earth. Until Up-to-Date Farming sounded the key note of Equity less than two years ago, there had been no definite proposition to organize the farmers for a specific purpose to regulate their own business and assert their position in the world of human effort.

Since then the wheat growers have come to the front and made their power felt in a way to compel its recognition even by those least inclined to recognize it. The tobacco growers also swung into line and won a notable victory, which they are following up for a more complete triumph this year. The bean growers of Michigan are lining up very rapidly, and in a short time will take their stand with the organized industries. So also are the broom corn growers, and other industries.

We are now appealing to the cotton growers. Their opportunity is at hand, and no people ever had a brighter prospect before them. The organized wheat growers, the organized tobacco growers, the organized bean growers and all the farm interests that are organized, stand in solid rank to support them, and organized union labor is extending a very friendly hand. This auspicious condition, and the very great interests immediately at stake in the South, ought to call forth the best and promptest effort of that people.

On the other hand, if it is true that the unorganized are the prey of the organized, and it cer-

tainly is, the South is almost standing alone now as the unorganized. Therefore, every feeling of self interest, as well as the stern demands of self-defense and self-protection, alike call upon the farmers of that section to spare no time in taking their place in the ranks of organized farmers.

The American Society of Equity certainly meets every rural necessity. It comes to each farmer's home with the assurance of steady and equitable markets, and it brings with it information which it is impossible to get from any other source, in the constant and always welcome visits of its official paper. It asks no buying of stock, requires no accumulation of capital, puts upon its members no burdensome obligation, and yet holds its great membership together by the unseverable ties of BENEFITS. Did ever a people have greater cause to organize, or were they ever offered a better opportunity? Do not lay this paper down until you have turned to the proper place and learned the simple conditions of membership and accepted them.

### Sunshine for the South

The future of the South is full of hope; indeed, we may say the outlook is bright. The cotton crop of last year, 1903, was 10,011,374 bales, and it sold for \$617,501,548, which is the largest sum ever before realized upon a cotton crop in the South. The crop of 1902 was larger than that of 1903, being put at 10,728,000 bales, but it sold for \$136,731,266 less than the smaller crop of 1903, another instance of "the smaller the crop the greater the value." The average value per bale of the crop of 1902 was \$44.52, that of 1903 was \$61.08. The crop of 1899 was the largest one ever produced, being 11,235,383 bales, but that crop, at the most liberal estimate, brought only \$460,650,703, falling more than a hundred and fifty million dollars below the smaller crop of last year. Need we any further argument to prove that price is of much greater importance to the grower than yield?

But our purpose in this article is to speak of the bright promise of the South's future. The cotton crop of the present year is estimated at 11,200,000 bales, and the price for middling cotton is put at 12 cents in New York, which should average not less than 11 cents in the South to the grower. Should the above estimate prove correct and the above price be reached, (of the latter we have not the slightest doubt as the price has already gone to 11.65 in N. Y.), the 1904 cotton crop should bring to the planters of the South not less than \$616,000,000. This latter, it is true, is not yet realized, but it cannot fail to be if the cotton growers rise equal to the emergency by being true to themselves and stand up in their own behalf.

But what of future crops and prospects? Bright, and bright only. When farmers once learn that their crops are their own, to be disposed of as other people dispose of their property, on their own terms, they can never again be brought to submit to the disastrous price making schemes of those who fill their coffers by gambling upon the results of honest toil. But aside from this the future of the cotton interest (and that is the future of the South) is bright.

While it is true there was not quite so great a consumption of cotton in 1904 as there was in 1903, present conditions of the mills and supply depots indicate that there is to be a rapid increase in consumption in the very near future. The world's consumption of American cotton last year was put at 10,198,000 bales, and the American consumption was 3,809,000 bales, which was about equally divided between the North and the South. This latter fact is highly encouraging to the South. In 1890 of the American consumption, the North took 76.7 per cent. and the South 23.3 per cent. Now the North gets 51.36 per cent. while the South takes 48.64 per cent. With the South raising fair crops of cotton upon which by simple business methods, growing out of co-operation, the growers may be assured of a fair price, and one-half of it taken by their own factories, thus saving the freight both on the raw material and the finished product, there need be no fears for the future prosperity of that section.

To make this assurance doubly sure, it is only necessary to bring the tobacco industry, the rice industry, the peanut industry, and the trucking and fruit interests under like happy conditions.

## Responsibility of the Agricultural Press

They Ignore the Important Matters of Crops, Prices, and Markets.

At the time this article is written, several days in advance of the publication of this issue of Up-to-Date Farming, a strenuous effort is being made to force down the price of wheat in the spring wheat region of the northwest. Farmers who are not advised of the wheat situation are made to believe that the recent high prices were the result of a speculative combination; that, while there may be a slight shortage in this country, there is an excessive supply abroad, and that prices must reach a lower level. This is but a desperate scheme of the speculative interests to drain the spring wheat region at the lowest possible price before the truth of the wheat situation may reach the growers. Our private advices gave us information of this scheme some days before it was sprung, and the National Union of the A. S. of E. made a prompt effort, employing the very best means in its power, to warn the wheat growers of what was to be attempted, and thus, if possible, save them loss and prevent the wrong that was to be done them. Circulars were sent to all the leading newspapers of the northwest, informing them of what was to be undertaken, and urging their co-operation in informing the public. A few published our appeal, but from many of them we have never heard.

A like attempt is being made to rob the broom corn growers, especially those in the outlying broom corn areas. With broom corn selling in Chicago at from \$75 to \$100 per ton, growers in Oklahoma and Nebraska have been offered from \$40 to 50 per ton, and those who did not know better, have been made to believe that said offer was the top price, and that the price was liable to go lower. Up-to-Date Farming, which, happily has an extensive circulation among the broom corn growers of Oklahoma, put them on their guard, and we believe saved them many thousand dollars, but other papers absolutely refused to join us in such warning.

A like attempt was made with the cotton growers of the South, but we caught on to that in time to get ahead of the speculators, and the A. S. of E., seconded by some powerful independent organizations in the cotton states, we believe has succeeded in heading off that movement before serious depression of the cotton market was accomplished. Little aid, however, was rendered by the general or agricultural press.

We revert to these things now to call attention to the fearful weight of responsibility which rests upon the press, especially upon the agricultural press, in this great matter. The farm papers, especially the farm papers of the North (a more kindly spirit was manifested by those of the South), have held aloof with an indifference or stubbornness which is simply amazing and which make them particeps criminis with the organized hordes of speculation that would thus wilfully and deceptively plunder their unsuspecting patrons.

Intelligent editors of agricultural papers must confess that farmers have been greatly wronged by manipulated markets, they must concede that our contentions in their behalf are just and reasonable, that the plans we propose are fair and efficient, that the arguments we have produced to sustain them are sound if not unanswerable. Why, then, do they so doggedly refuse to lend their aid to a movement fraught with such great possibi-

ties for good to those upon whom they depend for support of their publications? Continued refusal, it seems to us, would justify their patrons in merited retaliation.

## Farmers' Institutes

Farmers' institutes are now being held in all the States of the Union. The farmers are taking a lively interest in these meetings, and are seeking to be benefited by them. The practical and scientific ability of the nation is attending them and honestly endeavoring, let us say, to contribute to their usefulness, hoping to leave information and influences behind them which shall result in great good to the rural interests of the country.

Heretofore in the programs of all these institutes there has been an amazing absence of anything relating to the marketing of rural products. Sometimes the farmers are told how to fatten, or how to pack and how to ship, but never a word as to how to get prices. Let us urge program makers and institute speakers to give more attention to marketing. It is little use to raise fine products, it is little use to have a surplus, if there be no remunerative market. So long as prices are made months in advance of delivery, always depressed prices, current prices must likewise be depressed without cause, and the farmer can have no assurance of the results of his labor and little hope of the future. Those who set themselves up as teachers of the farmers, owe it to themselves and the farmers they would teach, to deal more with the question of marketing and price-making. Right here, this paper gives notice that farmers will demand that this great and vital question be discussed at the institutes. Enough has been published already to prove that it is a live issue and results have been obtained through the efforts of farmers to prove that price making by them is not a visionary unattainable desire.

As this paper will probably reach every community in the country where institutes will be held we advise farmers themselves to see to it that one of the subjects is "How to Control Marketing to Compel Profitable Prices for Farm Crops." If none of the professional speakers can handle this subject let it be taken by some reader of Up-to-Date Farming and member of the A. S. of E., or send to headquarters for a form of address.

## Irrigation in the Producing Regions

Reference has been made a few times in Up-to-Date Farming to irrigation in regions that are more or less productive without it, even in the great producing States of this country to which we look for the bulk of our agricultural products, and the suggestion was looked upon as unwise, and the thing itself as impracticable and unnecessary. People are so apt to scoff at things they do not understand.

Irrigation of any kind is comparatively new in this country, having been employed for the first time less than fifty years ago, and it is considered only a means of reclaiming arid or desert land; but Italy has practiced it more than 500 years, and on other than arid land.

Take, for instance, the valley of the Po river. The annual rainfall at Milan, the chief city of Lombardy, is more than forty inches, which exceeds the annual rainfall at Cincinnati, Ohio; or Omaha, Nebraska; both of which are situated in regions where irrigation is never thought of in connection with agriculture. The climate of Lombardy is not different from that of the Mississippi Valley, and the crops raised with few exceptions are the same. Notwithstanding this large rainfall, which enables crops to be raised as they are here without irrigation, the plains of Lombardy are a network of canals and drains. A single one of these canals cost \$6,000,000, a sum equal to \$37.50 for each acre of ground that can be served by it. It supplies water to 8,000 farmers, who pay from one to two dollars per acre per year for the

water. Some of this land supports as many as 800 people per square mile, and the land has increased in value since the building of the canal from \$100 per acre to \$200 per acre. One canal in this region uses the sewage from the city of Milan, and meadows irrigated from it yield an annual crop worth \$300 per acre. We make this statement on the authority of Dr. Edward Mead, of the United States Department of Agriculture, who passed a recent summer in Italy investigating these very things.

In Piedmont, a region which has an annual rainfall of about thirty inches, or about the same as has eastern Nebraska and Kansas, the Italian government has constructed an irrigation canal at a cost of \$20,000,000, and from which it receives an annual income of \$600,000. The farmers pay a water rate which sometimes reaches \$16 per acre, and it pays them to do it.

There is in Italy, says Dr. Mead, one co-operative organization of farmers with 14,000 members who operate 9,600 miles of ditches, have 266 miles of telegraph and telephone lines, supply water to 141,000 acres, and do an annual business of \$600,000. Lands thus watered are double the value of adjoining lands not so watered, and the yield is more than doubled, while the certainty of a crop is absolute. Bear in mind this is all in a region having as much rain as has most of the producing portions of the United States.

We write this article to show the possibilities of irrigation even in those portions of the United States already almost solidly devoted to farming. But our mission is to secure more equitable prices and steadier markets rather than heavily increased yields. When the better prices come, and markets which may be relied upon throughout the year, these other problems will promptly be solved. The increased wealth of agriculture, its freedom from the plundering power of speculative price-makers and produce-holders, and the independence growing out of that freedom, will quickly bring an answer to all these other questions. God speed its coming.

## Alarming New England

The certainty of the ability of the South to control the marketing and the price of cotton is alarming both the milling and the financial interests of New England. Heretofore the eastern banks have looked upon the South as their legitimate pasture ground, and upon the cotton crop as their own peculiar harvest. It took money to move, store and hold that great product, and the eastern banks have always planned to furnish the money and reap the reward. The New England mills have seconded the plans of the banks, and have taken their supplies leisurely and unconcernedly, thus prolonging the harvest reaped by the financial institutions.

These things are now changing, and the New England interests are beginning to realize it. Holding the crop in the South destroys the speculative prospects in the East, and relieves the South from the necessity of using eastern money, while the increase in southern manufactures, leading to such a marvelous increase of cotton consumption in the South, threatens even the manufacturing interests of New England.

But after all, this is being done largely with New England capital. Most of the largest mills in the South are owned by the strongest New England manufacturers. They saw the magnificent opportunities of the South and the advantages of mills in the center of the raw material supply; hence they are transferring their interests from the distant Northeast to the South. This is no relief to New England, however, but it rather intensifies her danger, as it shows she is not only losing her hold upon her southern harvest field, but that her own capital is being transferred to her rival. The South's opportunity is here. Will her million planters prove themselves equal to the emergency, hold their cotton for fair prices always and secure these greater things. Two words tell them what is necessary to enable them to do so, and we would be glad to whisper those words in the ear of every cotton planter—ORGANIZATION and CO-OPERATION.

*\$1.00 A Year*  
Beginning with 1905 this paper may be made a weekly and the subscription price advanced to \$1.00 a year. Much may be gained by advertising now.  
J. H. Curran, Pub.

## The Wheat Situation

This paper does not attempt to bull the market for wheat, or any other crop. It does, however, try to advise the farmers of the true conditions and show them what they should do about marketing prices, etc. With its broad and comprehensive view it can come nearer to forecasting what will occur than the individual farmer. Here again we want to make a little explanation. If farmers were sufficiently organized we would not need to predict for the future. Then it would only be necessary to announce a price and the market would go to it at once. Now we tell what appears inevitable and those farmers who act on our advice will profit.

The A.-S. of E. has recommended a minimum price of \$1.20 for No. 2 red winter wheat on the basis of the Chicago market. This grade of wheat has not quite reached the price, although No. 1 Northern has sold above it, and No. 2 red winter has sold at \$1.20 in St. Louis, and we have known of this price being paid by millers in interior points. This price was set in a bulletin issued before the spring wheat was harvested, and the society will not issue another even though the spring wheat crop is much below the early estimate. Through Up-to-Date Farming, however, we intend to advise farmers of the conditions as they develop and they can use their own judgment about holding for more than the minimum price. We will, however, say that the conditions are so unusual that we don't see how any set of men, artificial or natural conditions, can prevent wheat from going to extreme high prices. How high, we will not attempt to predict, but farmers may as well have the benefit as any set of people.

Here are a few points for all to consider:

The winter wheat crop is short about 100,000,000 bushels.

The spring wheat crop is short approximately 100,000,000 bushels.

There is so much low grade wheat that the short crop must be discounted 50,000,000 bushels or more to put it on a flour making basis.

DON'T THESE FIGURES INDICATE ALMOST A FAMINE CROP?

The 1903 crop sold for about 25 cents a bushel more the last six months of the crop year than the first six.

The market has advanced, this year, about 30 cents a bushel from the beginning of harvest to the end of harvest. Something that was never known before since records have been kept.

Europe has a short crop also and will need to import more wheat than for years.

DON'T THESE FACTS INDICATE ALMOST FAMINE PRICES?

Consumers will have bread if wheat sells for \$2.00 a bushel. At this price bread will be cheaper as food than almost anything else that goes on the table.

There is not enough wheat in the world to bread it at moderate prices. This means very high prices and no man or set of men can stand against the tide.

Somebody will have the wheat when the price settles at a point where consumption will be economized to equal the supply.

We want farmers—the growers—to have the wheat when the price settles on a production and consumption basis. We don't want it to be in the hands of speculators and elevators.

False reports that have been circulated and lack of reliable news bewilder farmers and keep them in the dark. Therefore we advise one and all who have wheat to wait a while until the market settles on a production and consumption basis. You will lose nothing by waiting. You will gain nothing by selling now.

\* \* \*

### BINNING WHEAT.

"In over seventeen years of close observation I have never seen such general binning of wheat by the farmers as there is this year in Kansas and Nebraska," says T. L. Ewan, of the W. T. Kemper Elevator Company of Kansas City. "Millers in those States have played upon the farmer's natural inclination to hold by assuring him that his wheat would be worth more money next spring. The miller does not want the wheat to leave the country. The belief is fast gaining ground that the crop or that section was underestimated. Kansas has a big crop and is getting good money for it. In far western counties of Kansas, where wheat ordinarily sells around 30 cents a bushel, the farmer is now getting about 90 cents."

Does not this prove our claim, as made when first giving publicity to the plan of the A. S. of E., viz., "If farmers will hold their crops there will be a constant stream of supplies flowing from the farms to the consumers instead of through large elevators and central markets, thus benefiting millers, merchants," etc.?

\* \* \*

### GRADE OF WHEAT.

Minneapolis reports: "Since this crop began to move the following is what it grades to date: Ten per cent., No. 1 Northern; 15 per cent., No. 2 and No. 3 Northern; balance, No. 4 and under."

Does this not confirm our claim that the wheat crop must be discounted 50,000,000 bushels to put it on a flour making basis? No. 4 grade is very poor wheat, and according to this report, it is a large part of the crop.

\* \* \*

### TO BREAK WHEAT PRICES.

The following from Chicago is significant, seeing that the spring wheat is now ready to market. The motive—considering the shortness of the crop—is clearly apparent. All we need say is, "Farmers, don't be stampeded."

Chicago, Sept. 30.—A combined effort, it is said, will be made to break the wheat market. Millers in the Northwest and the largest speculators here, as well as part of the cash handlers, are bearish. All markets are out of line, and an effort is under way to force an adjustment to a legitimate basis. The tip is distributed that prices will decline 10c from the present level. It is the most peculiar wheat situation ever known. Every market in the country is on its own basis, independent of others. The best low grades are selling up even with futures. Stocks are phenomenally low, and the markets have no balance wheat.

"Every market in the country is on its own basis." This is the natural result of no exportable surplus.

## Europe Needs a Share

"The United States must help to feed the densely inhabited districts of Central Europe, on account of crop failures there caused by the great drought." So says Consul General Mason, of Berlin. He further says that there is a great shortage of spring wheat, rye, barley, corn, oats, pasture, potatoes and root crops of all kinds, dairy products, fruits and meats.

Another report from Vice-Consul General Murphy, from Frankfort, says:

"The governments of Bulgaria and Roumania have issued decrees prohibiting the exportation of corn and other cattle feed. Servia and Austria-Hungary have also issued decrees prohibiting exportations of corn, hay and other foodstuff. The decree of the Austro-Hungarian government is most surprising, as it includes also bran, barley, potatoes, beans, clover and everything that can be used as food. As Hungary has been the principal source for corn and feed stuff for Western Europe these countries—Germany, Italy, France, Switzerland, Belgium, Holland and England—must depend principally on America."

Outside of wheat this country will be glad to share her abundance at profitable prices. As the foreign demand is not likely to come until their short crops are used up, our farmers will do well to not sacrifice their crops to the first buyers.

## Farmers Raise the Price of Hops

Readers should commit the statement of the first object of the A. S. of E. to memory. It is: To obtain a profitable price for every farm crop. Also the plan, which briefly is as follows: A known price and controlled marketing.

The trend of events is constantly proving that the object can be accomplished with every crop and that the plan is practicable. Not only are the chief staple crops amenable to this principle of price-making, but subordinate crops are as well, as shown by the following dispatch:

Portland, Ore., Sept. 30.—The Oregonian today says: "The farmers have sent the hop market up to 30 cents by their determination to hold their crops. When the growers withdrew from the market Wednesday 29 cents had been offered and 1,055 bales have been sold since then at prices ranging from 28½ cents to the top figure reported of 30 cents, this figure being paid for extra quality."

From the last census report we learn that in 1899 there were 55,613 acres devoted to hops. The yield was 49,209,704 pounds. The average yield per acre 885 pounds. The average price received for the crop was 8 cents per pound, and the total sum received \$4,059,697. New York is the first State in production; Oregon second; California third; Washington fourth. California produces the best yield per acre, 1,469 pounds; Washington second, 1,287 pounds; Oregon third, 951 pounds, and New York fourth, 630 pounds. In 1899 the United States produced 20.6 per cent. of the hops of the world.

The price of hops varies greatly from year to year. The average price of the 1879 crop was 37 cents per pound. From 1880 to 1885 the price ranged from 8 cents to \$1.13 per pound. The average price for 1889 was 10 cents. About 1895 the price went as low as 6 cents, and as stated above, the price in the census year, 1899, was 8 cents. Never until this year does it appear that there was any systematic attempt to regulate the price by controlling the marketing.

## The Corn Crop

Nature has favored the corn crop by withholding frosts to give the late fields a chance to mature. A large crop is now (Oct. 1st) insured. Attempts will be made by buyers of real corn and sellers of wind-fiction-corn to force the price to a lower level. Don't be stampeded. We believe this crop of corn is worth 60 cents a bushel on basis of the Chicago market. When our reports are in and the society issues its bulletin we believe this is the price that will be recommended. If corn growers everywhere were readers of Up-to-Date Farming there is not a particle of doubt that the price could be put to 60 cents at once and maintained; also that the crop would go into CONSUMPTION just as fast and as completely as it will at a lower price. Elevators, however, might not contain as much.

Corn is consumed or marketed quite differently from wheat. There is not the proportionate export demand, although this year there will be much more than usual because of the failure of crops in Central Europe. The price of corn is not so completely under the control of the Chicago market as wheat, and we often find other cities and even country district paying more than Chicago. In this respect each locality largely sets its own price, depending on the urgency of the demand for feed. Local unions of the A. S. of E. and members will do well to size up the crop in their section of the country and the possible home demand based on the amount of feeding that will be done.

Our readers should remember that consumption of all staple crops has increased and is increasing very rapidly, while production has reached about its limit, until through steadily maintained good prices more intensive farming will result.

## Co-Operative Buying

This paper has said very little about co-operative buying. The reason has frequently been given, but we will state it again:

When farmers are co-operating and are getting good prices for their own products, with the ability to push them up whenever necessary, they need not be particular about the prices they pay to their merchants for necessary supplies. Compare the benefits that will result from good prices on what you sell to a slight saving that might be made by co-operative buying and you will not want to beat down the price of the retail merchant.

Organize and co-operate in selling your own goods and let the other classes do the same. You can always be certain that at this game no other class will hold a stronger hand because your goods are the most desired.

# We Offer \$1,000

**For a Disease Germ That Liquozone Can't Kill. A 50c. Bottle Free**

Don't you know that a germ disease must end when the germ is killed? And that it cannot be cured until then? Then why use medicine for what medicine cannot do? Liquozone alone can kill germs. Will you let us buy you a 50c. bottle to try?

On every bottle of Liquozone we publish an offer of \$1,000 for a disease germ that it cannot kill. We do that to convince you that Liquozone does kill germs.

Think what that means. Every modern physician knows that nearly all sickness—the little ills and the big ones—are caused by germ attacks. They know that those germs must be destroyed before the sickness can end. And they know that drugs never kill inside germs.

Those modern physicians are now using Liquozone. And millions who were sick—like you, perhaps—are well to-day because of it. The cured ones are everywhere; some are your neighbors, your friends. Won't you ask them about Liquozone?

Don't cling to the old ways blindly, when your health is at stake. There is a new way to cure sickness, by destroying the cause. And we will gladly pay the cost while you try it.

## What Liquozone Is

Liquozone is not a medicine. It is not made by compounding acids or drugs, nor is there any alcohol in it. Its virtues are derived solely from gas—largely oxygen gas—by a process requiring immense apparatus and 14 days' time. Each cubic inch of Liquozone requires the use of 1,250 cubic inches of the gas.

Liquozone is the result of a process, which, for more than 20 years, has been the constant subject of scientific and chemical research. The main result is to get into a liquid, and thus into the blood, a powerful, yet harmless, germicide. Another result is to create a vitalizing tonic with which no other known product can compare.

## Acts Like Oxygen

The great value of Liquozone lies in the fact that it does what oxygen does. Oxygen is the vital part of air, the very source of vitality, the most essential element of life. It is the blood food, the nerve food, the

scavenger of the blood. It is oxygen that turns the blue blood to red in the lungs; that eliminates the waste tissue and builds up the new. Too little oxygen always causes lack of vitality. An excess of it gives strength to every function of Nature.

Oxygen is also a germicide. The reason is that germs are vegetables; and an excess of oxygen—the very life of an animal—is deadly to vegetable matter. Liquozone acts like oxygen. But it does more than oxygen, because it is stable. It carries its virtues into the blood to go wherever the blood goes. It is a remarkable tonic—the best thing in the world for you.

The discoverer of Liquozone has solved the great problem of killing germs in the body without killing the tissues, too. And there is no other way. Any drug that kills germs is a poison, and it cannot be taken internally. Liquozone is the only way that any man knows to end the cause of any germ disease.

## We Paid \$100,000

For the American rights of Liquozone, and the British Liquid Ozone Co. paid the same sum for the rights in Great Britain. That is the highest price ever paid for similar rights on any scientific discovery.

We tell you this fact because it best indicates the value of Liquozone. Claims are easily made, but men of our class don't pay a price like that save for a product of very great worth to humanity.

Before making this purchase, we tested Liquozone for two years through physicians and hospitals in this country and others. We tried it in all kinds of germ diseases, in thousands of the most difficult cases obtainable. We saw it cure hundreds of sick ones with whom everything else had failed. And we saw many a patient brought back from the verge of the grave by it.

We proved, to the satisfaction of the best physicians, that in germ

troubles Liquozone did what nothing else could accomplish. We proved it to be of more value to sick humanity than all the drugs in the world combined. Then we staked our fortunes and our reputations on it.

Every member of this company uses Liquozone daily in his family to prevent sickness, and millions of others are learning to do likewise. Liquozone is now employed by hospitals everywhere, and by the physicians of nearly every nation.

## One Million Dollars

Have been spent by us to give Liquozone away. Our offer to buy the first bottle has been accepted by 1,800,000 people. And we have spent this vast sum to publish the offer and to fulfill it.

The result is that millions now use it. These people have told others about it, and the others told others. Your own neighborhood, wherever you are, is full of Liquozone users. And half the people you meet know some one whom Liquozone has cured. Ask a few what they think of it—ask them what it does. If they say it is wonderful—that it does all we claim—then let us buy you a 50c bottle. Try it at our expense; see what it does for you. If you find it effective and needful, tell others about it, as we have told you.

## Germ Diseases

These are the known germ diseases; all due to germs, or the poisons which germs create. These are the diseases to which medicine does not apply, for drugs cannot kill inside germs.

All that medicine can do for these troubles is to act as a tonic, aiding Nature to overcome the germs. But those results are indirect and uncertain. They depend on the patient's condition. When drugs were prescribed for these troubles, nobody knew of germs. Now every good physician knows that they call for a germicide.

Liquozone alone can destroy the cause of these troubles. It goes wher-

ever the blood goes. No germ can escape it, and we have found no disease germ which can resist it. Diseases which have resisted medicine for years yield at once to Liquozone, and it cures diseases which medicine never cures. In any stage of any disease in this list, the results are so certain that we will gladly send to any patient who asks it an absolute guaranty.

Asthma	Hay Fever—Influenza
Abscess—Anaemia	Kidney Diseases
Bronchitis	LaGrippe
Blood Poison	Liver Troubles
Bright's Disease	Malaria—Neuralgia
Bowel Trouble	Many Heart Troubles
Coughs—Colds	Piles—Pneumonia
Consumption	Pleurisy—Quinsy
Colic—Croup	Rheumatism
Constipation	Scrofula—Syphilis
Catarrh—Cancer	Skin Diseases
Dysentery—Diarrhea	Stomach Troubles
Dandruff—Dropsy	Throat Troubles
Dyspepsia	Tuberculosis
Eczema—Erysipelas	Tumors—Ulcers
Fever—Gall Stones	Varicella
Goitre—Gout	

All diseases that begin with fever—all inflammation—all catarrh—all contagious diseases—all the results of impure or poisoned blood.

In nervous debility Liquozone acts as a vitalizer, accomplishing what no drugs can do.

## First Bottle Free.

If you need Liquozone, and have never used it, please send us the coupon below. We will then send you an order on a local druggist for a full-sized bottle—a 50c. bottle—and will pay the druggist ourselves for it. This applies only to the first bottle, of course—to those who have never used it.

The acceptance of this offer places you under no obligations. We simply wish to convince you, to let the product itself show you what it can do. Then you can judge by results as to whether you wish to continue.

This offer itself should convince you that Liquozone does as we claim. We would certainly not buy a bottle and give it to you, if there was any doubt of results. You want these results: you want to be well and to keep well. Then be fair enough to yourself to accept our offer to-day. Let us show you, at our expense, what this wonderful product means to you.

Liquozone costs 50c. and \$1.

## CUT OUT THIS COUPON

for this offer may not appear again. Fill out the blanks and mail it to the Liquid Ozone Co. 458-464 Wabash Ave., Chicago.

My disease is .....  
I have never tried Liquozone, but if you will supply me a 50c. bottle free, I will take it.

.....  
.....  
.....  
M 115 Give full address—write plainly

Any physician or hospital not yet using Liquozone will be gladly supplied for a test.

## Made Millions in Wheat

A dispatch from Chicago, Sept. 28th, explains how one board of trade operator—Adolph J. Lichstern—made \$2,500,000 in two deals. One deal, it is stated, was in May wheat and the other in September wheat.

Lichstern may have taken his cue from Up-to-Date Farming, because, early in the year he believed in high prices in May wheat, when nearly the whole speculative contingent was determined to break the prices that were prevailing. He took advantage of them and accumulated a line of five to eight million bushels. When the speculators wanted to buy Lichstern would sell them wheat that he had bought of them at lower prices until the market broke enough, then he would buy it back again. This was repeated several times in May and September, with the results as stated. It serves to show how the markets can be manipulated by a party who has the money or a large line of wind grain or produce to dump or withhold. This man never had as much real produce as the farmer with forty acres of land, yet he put the price of wheat up or down 10 cents a bushel at his will.

We urge every reader to turn to the exhaustive article in this number entitled, "Speculative 'Futures' and 'Options' and the Farmers' Welfare," and study it carefully.

## Hold Broom Corn

Secretary Thoburn of Oklahoma Board of Agriculture, Tells How the Speculators Manipulate the Market.

J. B. Thoburn is a good member of the A. S. of E., believes in its plan of marketing crops and urges growers of broom corn to not part with their holdings at present prices. He said in explanation of an article that has been going the rounds of the press as follows:

"I was asked recently for an estimate of the probable acreage of broom corn in Oklahoma, and within three days thereafter I was quoted as stating that the Oklahoma broom corn acreage probably amounted to 300,000 acres, and this gross misrepresentation, still credited to me, is being published in numerous papers throughout the West. The speculative interests are making a determined effort to force down the price, regardless of the cost of production and the natural relationship of supply and demand. There is an impression among these speculative inter-

ests that many Oklahoma farmers are in need of ready cash and that they are, therefore, forced to accept any price offered as soon as the crop is harvested. There is reason to believe that the broom corn crop if the United States is short this year and that, therefore, there is a splendid opportunity for the speculator to bear the market and buy up the bulk of the broom corn at a low price and then hold for an advance, which is certain to come a little later on. In view of the fact that the broom corn crop in all States outside of Oklahoma is estimated to be 35 per cent. short of what it was a year ago, the Oklahoma broom corn grower can well afford to hold his crop for a time."

## Boys Leaving the Farm

A question that has long troubled thinkers is the tendency of young people, especially boys, to leave the farm. One of our esteemed agricultural contemporaries sees a reversal of this tendency, and rejoices to believe that the trend is now from the city to the farm rather than from the farm to the city, as it has so long been. That editor ascribes this happy change to "the good profits in farming the past few years, the farm telephone and rural mail delivery."

We doubt if the trend over which our friend rejoices has yet set in from the fact that the attractiveness of farm life has not yet been brought to the point of satisfying aspiring youth, but we note with pleasure that we are moving in that direction.

The point which surprises us most, however, is that able papers devoted to the farm and its interests, and whose editors realize that farming must be made profitable if the brighter boys be kept in that business, still ignore the one vital element that is necessary to make it so—the element of price. We care not how many telephones nor how many rural deliveries the farmers may have, nor how good their crops, nor how easily grown, if his products are subject to be priced and taken, taken by the purchaser at the purchaser's price, the farmer cannot be independent, and his son cannot see an honorable and prosperous future before him on the farm. Give the farmer a right and ability, however, through organization as others do, to put a price upon his products, and then teach him to so put his stuff upon the market as to command the price, then add to this just and reasonable privilege, the telephone and rural mail, and the young man and young woman may well see in the farm's future a picture bright enough to win them from any other allurements.

## Bean Growers Organize

The bean growers of Michigan are taking the lead in organizing that industry for profitable prices. They have had numerous meetings and organized many unions recently. We have before us a booklet containing constitution and by-laws of the Livingston County Association, headquarters Howell, Mich. They start out with the following preamble:

Whereas, We, the bean growers of Livingston county, feel aggrieved at the prices set on our product by speculators and others who seem to have no regard as to the cost of production and amount of investment necessary to produce farm products; and,

Whereas, We believe that by organization and co-operation great good can be accomplished in securing a just reward for our toils and hardships;

We therefore resolve ourselves into an organization.

\* \* \*

From the by-laws we print as follows:

Article 1. Section 1—The name of the society shall be known and hailed as the Livingston County Bean Growers' Association of the American Society of Equity.

Article 2. The objects of this association shall be to enlist every farmer in the society for their mutual benefit.

To gather all data and crop reports possible and tabulate the same if necessary.

To place as far as possible an equitable price on our crop.

To ascertain the best markets and, if necessary, to ship our output to the best advantage and to aid as far as possible the organization of the State of Michigan and of the United States.

\* \* \*

From Section V we print as follows:

Article 1. The membership fee shall be \$1.25, which shall include membership in the American Society of Equity, with official paper and one year's dues in this association.

The balance of the by-laws is copied very closely after those governing plain local unions of the A. S. of E.

As an aid to others who want to organize for the same or a similar purpose complete copies of the constitution and by-laws can be obtained by sending a stamp to George G. Winans, State organizer, Lakeland, Mich., or the publisher of Up-to-Date Farming.

# Speculation in Futures and Options and Farmers Welfare

[This article is based on tables and statistical research by Eugene Matrosow, D. C. L. It may be considered a companion article to "Prices on the Farm and Prices of Farm Products Elsewhere," as printed in Sept 15th number.]

The influence of speculation in so-called futures and options on farm prices and farmers' welfare constitutes undoubtedly the most important and the most vexed problem of American agricultural economics of to-day. We say American agricultural economics because it is a well-known fact that the system of dealing in futures and options had been originally introduced in the United States, and afterwards adopted from this country by England and continental Europe.

We will attempt, however, to solve this problem of such tremendous importance as far as the limited space allowed for the subject will permit.

As wheat is undisputedly the genuine representative and best exponent of the grain trade as a whole, the statistical data relating to this grain will constitute a basis for our calculations, inferences, deductions and conclusions.

By farm prices is meant in this article the net values of farm products to the producer upon delivery at the local market. When the farmer is shipping to a distant market the net price is the price at destination, costs of shipping and other charges incident to placing his products on the said market being deducted therefrom. So farm prices are the lowest prices for farm products. Between the farmer and the wholesale market the local buyer usually intervenes. The price which the local buyer pays is regulated by the wholesale centers to which he ships his surplus. The local buyer bases his prices on the wholesale centers. The price to be paid the producer for a given day is determined by the price at the large receiving centers. The wholesale buyers, sometimes individually, but as a

rule collectively, in sending out their quotations to country buyers, stating the prices they will pay for products of the character in which they deal. Thus farm price constitutes simply a share of the cash price upon the primary markets, determined by the buyers on the latter. Usually farm prices, or in other words, the producers' share in terminal values, amounts to about 70 per cent. of the cash price on terminal or central markets. The relation between cash prices and future prices upon the primary markets is, therefore, clearly indicative of the influence of speculation in so-called futures and options on farm prices and the welfare of the farmer.

As Chicago is undoubtedly the most important and typical primary grain market of the country, the comparison between cash prices and future prices for wheat on this market for the same months of a series of years will constitute a safe basis for proper conclusions. Selecting for this purpose the decade of 1888-1897 we have to point out right here that a proper comparison of cash and future prices of any American grain has never been made heretofore. It should also be remembered in this connection that the future prices of grain are composed of the price of the grain and accruing commercial charges, as storage, insurance and others which dealers have to earn out of their sales of futures. Therefore, in order to define the variations in farm prices caused by speculation in so-called futures and options on wholesale markets of the country, cash prices should be compared, not with absolute future prices, but with the latter diminished by the amounts of the said accruing commercial charges. Thus in order to make a proper and correct comparison of the average monthly prices, spot cash and futures, of wheat in Chicago for the decade of 1888-1897, the following table has been prepared from the reports of the Chicago Board of Trade.

As storage charges alone amount, in Chicago, to 1.25 of a cent per bushel for a month, 2 cents for 2 months, 2.75 cents

for 3 months, and 4.25 for 5 months, we will take all the accruing commercial charges aforesaid into computation as equal to 1.50 cents per bushel for a month, 2.50 cents for 2 months, 3.50 cents for 3 months and 5.50 cents for 5 months. As the months of May, July, September and December are the months during which the trading in grain futures mostly takes place, we will compare the spot cash and future prices of wheat in Chicago for the said month, during the years 1888-1897, deducting from the latter, i. e., from the May bids for July delivery, July bids for September delivery, September bids for December delivery, and December bids for May delivery, 2.50, 2.50, 3.50 and 5.50 cents respectively. Thus our table will appear as follows:

Explanation: The top figures in future column are the future price and the charge to be deducted, giving net price under.

From the foregoing table it appears that if we exclude from the future prices the elements which do not enter at all

into cash prices and have nothing to do with the price of grain in the strict sense of the deals, or which would be operative if the dealer represented grain, out of which the producer receives his share as a farm price the cash prices in ALL seasons of the year are invariably higher than the future prices. For the decade referred to the average future prices have been lower than the average cash prices by 2.75, 2.51, 1.17 and 0.30 cents per bushel for the months of May, July, September and December, respectively, i. e., for July, September, December, and May deliveries respectively. It would be more instructive to show these differences in percentages.

The per cent. of differences between spot prices and future prices are obtained the best by subtracting the average cash price for a given month from the future average price for that month and dividing this difference by the future average. The differences are prefixed by a minus

Educate. Agitate.

I'm for the Farmers' Union.—Everybody.

Controlled marketing compels the price.

The masses must understand controlled marketing and price-making.

Wheat prices will be higher. Write this down where you will see it every month and see if we missed it.

This country has not grown a crop in many years that would not sell for a profitable price on the plan of the A. S. of E.

Read every word of this paper. It teaches what you can not get from any other paper or from any other source whatsoever in the country.

Beware of all farmers' capital stock corporations where farmers are expected to put up the money to buy the crops they already possess.

There will be an export demand for potatoes and potatoes will bring a good price. Remember last year, but don't expect such high prices as this spring.

Dollar wheat has come to be a watchword of prosperity. As wheat is not likely to sell for less than a dollar for a considerable length of time, does it portend uninterrupted prosperity in the future? We believe it does.

We urge all readers of this paper to mention Up-to-Date Farming when you write to our advertisers. If you are a member of the A. S. of E., please also say so. We tell you honestly that to do these things will do you good.

Spring wheat growers will do well to learn a lesson from the winter wheat growers. The former are warned in time by this paper; the latter sold much of their crop on the dollar basis before they heard of the \$1.20 equitable price.

Oh, how we wished we could have spoken to every spring wheat grower about the middle of September when they began to market their crop. We would have fixed them so they would have waited until the truth was known about the crop.

The size of India is about half that of the United States. The population is about 300,000,000. The world can not depend on much increase in exports of food products from that country. It would appear that they have enough to do to take care of their own population.

One dollar and twenty cents is the minimum price set for wheat. It is a profitable price for any person who has a crop to sell. But the price will be higher and no power can prevent. Therefore the person who has the wheat first may as well get the higher price. "Forewarned is," etc.

The A. S. of E. does not attempt to guess what future prices will be. It undertakes to name a fair price for a crop, based on production and consumption—a price that the crop ought to sell for. Whether the crop will sell for that price depends on the producers themselves.

The local union is the logical unit for the development of the A. S. of E. What are you planning to do? Are you increasing your membership? Is there a place where you can organize a new union? It's all with the farmers themselves whether they will complete their organization and how quickly.

Spring wheat growers be warned. The price will be put down while you are threshing, to frighten you into selling. Wait a while until the truth is known and the market settles. You will lose nothing by waiting; you will gain nothing by selling. But if you hold your crops you can force your price.

Are you reading The Third Power? One more instalment and Part One will be finished. If you have preserved the back numbers you should take them all up and read it through again. This book is worth a careful study.

The week September 12th to 17th, opened with the wheat market advancing by leaps and bounds of 3 to 4 cents a day and closed with losses of 3 to 5 cents a day. Did supply and demand regulate the price in either case. Let the advocates of the "Invariable and absolute law of supply and demand" theory answer.

If Liverpool makes wheat prices for this country, how does it come that when the price goes up in our markets one day Liverpool prices advance the next day, and when prices go down here Liverpool prices go down the next day? Don't this look like Liverpool following the markets in this country? Will some of the millers or speculators explain?

Every new member to the A. S. of E. receives a booklet giving the plan, objects and constitution and by-laws of the A. S. of E. in full. Also other important information and advice. These things together with the semi-monthly visits of the official paper will soon make any farmer understand agriculture in a truer light and see new attractions and possibilities in the business.

If in doubt about crops hold until the truth is known. Since consumption has overtaken and gone ahead of production, the latter end of the crops is likely to bring the best price. This is being proven in the case of cattle. Those feeders who refused to market and take their loss when prices were extremely low are getting the best price that prevailed for months, and we predict better prices will come later.

One dollar and twenty cents wheat—30 cents rise while harvesting was going on in this country. A parallel case was never known. What does it mean? Interpreted it means three things: First, it means the crop is short. Second, it means buyers are anxious to get the first run when the poor farmer or the unenlightened farmer sells, just as we predicted they would be. Third, it means that a large number of growers are holding.

The prosperity that has come to farming through better prices is being felt in the East, where many farms were operated at a loss or abandoned while the fertile farms of the West were producing crops so cheaply. These abandoned farms are being taken up again and are paying, not only operating expenses, but a profit. This is one of the innumerable benefits that come to the nation through fair prices for farm products.

Four hundred fifty farm papers, aided by many colleges and experiment stations and supplemented by almost innumerable farmers' institutes, to teach farmers how to raise crops, but only one paper to teach them how to get a good price for what they raise. This is about the size of the matter at the present time. The 450 papers have not succeeded in increasing the yields one iota, but the one paper has increased the farmers' earnings hundreds of millions of dollars. Take your choice.

A certain farmer in southern Indiana had about 800 bushels of wheat. Dealers offered him 85 cents a bushel when he threshed and told him this was the top of the market for the season, but that they would soon put the price down to 75 cents. He was finally persuaded to sell.

About four weeks later he attended a meeting of the A. S. of E. near his home. The price then was \$1.08 and the society had stated the minimum price at \$1.20. He joined the society and was looking for something else. When asked what he was looking for he replied, "I want to buy a jackass to kick me for the next twelve months so I won't make a d—n fool of myself again."

## Can Act as a Unit

Farmers can act as a unit through a central head and with the aid of a medium of communication. This is the idea and plan of the American Society of Equity. Simple, isn't it? The chief value of the local union arises in local matters. You need it for local business and social reasons, and a local union should be organized in every community. In the meantime and until ten or more can be got together, roll up the members to the National Union and subscriptions to the official paper which will do the work.

## Change of Order for Special Issues

Because we have added one more feature article to our list for special issues, we will postpone the great article, "The United States Department of Agriculture: What It Is and What It Should Be," until November 15th.

In its place, November 1st, will be printed a full official report of the proposal of the Russian government to maintain profitable prices, for farmers, on the chief farm crops, with the proposed plan. This publication will come on the eighth anniversary of the proposal, and will be the first publication of the important document.

## \$7.00 Clover Seed

Farmers who have clover seed to sell are cautioned to not let go of it except at a good price. Seven dollars per bushel has stood in our "Suggestive Prices" list for several weeks and we will transfer it to the "Minimum Prices" list with this issue.

There is bound to be a large export demand to Europe because of their great drought. While farmers' clover rarely grades "Prime" without good recleaning, yet there is oftentimes too much difference made by the buyers at this season of the year. We think nothing will be lost by asking, and if necessary holding, for a good price.

## Hold Potatoes for a Good Price

We see by one of our Pennsylvania country exchanges that potatoes are selling in that part of the State at 25 cents per bushel. This is quite unnecessary. There is not a place in the country where potatoes need to sell so low. We predict all the potatoes grown will go into consumption at 75 cents a bushel on leading markets, and for export to central Europe, where the drought ruined the crop. This will mean from 60 cents to 75 cents to the grower, depending on his location. Don't dump your crop. Don't squander your legitimate profit. There is not a particle of doubt of the price going to the mark if a fair proportion of growers subscribed to this paper, when they would do what is necessary.

## Disgruntled Farmers

We believe the subscribers to Up-to-Date Farming are the best, most progressive and most intelligent people in any community. The proposition that this paper takes to its readers requires intelligence to understand and the person who will undertake to rise above the bad environments that have surrounded him for decades can not be accused of being non-progressive. We make this statement because an individual has accused us of catering to the "disgruntled" farmers. If "disgruntled" is allowed to mean dissatisfied, we plead guilty, and as we estimate over 90 per cent. of farmers have cause to be dissatisfied with the way the world goes with them sometimes, we would rather cater to this class than the other 10 per cent. As our mission is to do good, it is mete that we should offer our service to those people who need us. Yet we will maintain that our readers are among the best, most progressive and most intelligent in any community.

Honest now, who would you rather be; the man who has the wheat or the man who sold it?

## Mr. Ward's Policy on the Cheap-Goods Question

During the hard times period of 1894-95, when nine persons out of ten were finding it difficult to make both ends meet, many manufacturers of different articles began to produce cheap, worthless goods of the most disgraceful quality, which were put upon the market by not over particular merchants at glittering prices,—prices so low and tempting that fortunes were soon made from the sale of such goods. The theory was, that if a person only had \$15.00 to spare for a kitchen range it was useless for a merchant to try to sell one for \$20.00, so a special range was built to sell for \$14.99; \$10.00 bicycles were produced for those who could not afford to pay \$18.00 or \$25.00; \$7.00 sewing machines appeared in countless numbers. Even top buggies were offered at \$26.00.

Needless to say that such goods are worthless and dear at any price. They are built only to sell at a low price, and nobody but the unfortunate purchaser ever dreams that

they will give satisfaction. A \$26.00 buggy with a paper top—any sensible person might know that it is worthless. The cheap-goods bugbear still inflicts the country, but Montgomery Ward & Co. still adhere to the policy laid down by Mr. Ward when the pest first appeared.

The Policy of Mr. Ward—"When the quality of any article is sacrificed to the point where it will not satisfy its purchaser it becomes worthless, and no matter how low the price, the purchaser is justified in harboring a grievance against the merchant who made the sale. If a person, through either ignorance or poor judgment, desires to invest in shoddy, second rate merchandise, it becomes the duty of my firm to protect him (or her). We have enjoyed the confidence of our customers for 27 years (this was in 1898), and I will not take advantage of them now by selling them anything that I know will not prove a profitable investment. Undoubt-

edly many persons know the risk they assume and are satisfied to make the experiment, but I cannot sanction my firm catering to their trade, and much as I dislike to lose a customer, I know that in the end they will see the folly of their

## Your New Stove

Don't buy a stove or heater until you have seen our new 48-page Stove Catalogue—a fine book with large, clear illustrations, detailed, reliable descriptions of the lowest prices obtainable anywhere for honestly built stoves, ranges and heaters.

Our Windsor and Lakeside stoves are the products of our own factories and represent the best types of stove construction.

Write at once for our stove catalogue. Send also address of any neighbor who you think will like to receive our money saving stove proposition. They will welcome the attractive catalogue we intend to send them. Our stove catalogue is entirely free. Merely send a postal. Cold weather is coming; better write at once.

Montgomery Ward & Co.

Michigan Ave., Madison and Washington Sts.

Chicago

methods, and in time will restore their patronage to my firm."

This far-sighted policy has not been in the least influenced by the cheap goods epidemic so much in evidence during the past seven years. The ever growing trade we enjoy proves that, after all, the people of the country are not such fools as some merchants and manufacturers seem to think they are. Our buyers are instructed to get the quality first, and then think about the price. We want your confidence and respect—we also want your trade, and we believe that our well known reputation for honest goods at honest prices should appeal to you more than a glittering something for nothing proposition. Remember all is not gold that glitters.

P. S.—We shall continue in the future as in the past to handle only the better grades of merchandise—the kind that will please you even if it does appear at first glance to cost a trifle more. You can render us a great favor by explaining our policy to any of your friends or neighbors with whom you discuss our business.

**Write for FREE Sample Book**

See our samples of cloth and prices before buying your winter suit. We have an enormous trade in Men's and Boys' Clothing and are prepared to serve you as no other firm can. We sell only good, serviceable suits and quote prices that will surprise you when you see the quality we put in all our garments. Our clothing is made in clean, well aired and lighted workshops. When you buy from us you get the very best. Ask for Sample Book W2 and we will send you 75 pieces of cloth for your inspection. If you want a suit cut to your special order ask for Sample Book V21 and we will send 28 pieces of cloth, also a tape measure and instructions for taking measurements. Either Book W2 or V21 of made-to-order samples—write to-day.

## The Greatest of all Catalogues

# 6 lbs.

Too heavy to send by mail, too big to send by express cheaply. Almost twice as large as other catalogues, ten times better. Our new Catalogue No. 73, Edition de Luxe, now being distributed, is the most remarkable catalogue ever published and is being received with enthusiasm by those who have already seen our big catalogue No. 73, and to enable you to secure a copy we invite you to send us an order selected from your free catalogue and we will ship you a better grade of goods and pack with the shipment a copy of our handsome catalogue No. 73 (Edition de Luxe, 6 lbs.).

Handling as we do over 110,000 different articles, we can usually supply goods as selected from other catalogues without difficulty and at the same time send a better quality. If you would like a copy of our big 6-lb. catalogue take advantage of this offer at once. On your order say what catalogue you are using and ask us to pack with our compliments one of our latest No. 73 Catalogues (Edition de Luxe).

### Regular Standard Edition

Printed from the same plates that are used for the edition de luxe, every page exactly the same, but printed on a lighter weight paper in order to make the Catalogue available. The standard edition is the same as we have issued in previous years but of course entirely new for the season of 1904-05.

This valuable Catalogue will be sent to any address upon receipt of 15 cents in stamps or coin as an evidence of good faith. Write your name and address in coupon below and mail at once.

Remember, the contents of the standard edition are the same as in the edition de luxe.

Don't use a free catalogue just because it's free. Such catalogues are not reliable. Thousands upon thousands are wasted upon children and curious people who never buy a cent's worth of goods; and, to recover the money thrown away in free catalogues, prices are either boosted or inferior goods shipped. Requiring as we do a slight evidence of good faith (15 cents) from each applicant, we always place our catalogues in good hands and very seldom waste one. As every catalogue brings orders we have no losses to make up, and can give our customers the highest grade of merchandise at the lowest prices. Don't waste your time or your money on a free catalogue. Get one that you can depend upon, one that is complete and quotes only goods of honest quality at bottom prices.

If you already have a free catalogue, if you were tempted to send for one just because it was free; we want you to see our big No. 73 (Edition de Luxe), a free catalogue, G. I. one that you can depend upon, one that is complete and quotes only goods of honest quality at bottom prices.

### How to get a 6-lb.

Catalogue—As our famous Edition de Luxe is too heavy to go by mail we are sending it by freight, packed with other goods, and offer you your choice of the three Lots below, each Lot at cost, a catalogue with every Lot. As our object is to distribute catalogues, we offer the Lots at bargain figures and will keep our offers open until November 15th, 1904.

Your choice of Lots A9, A1 or A1½—with a 6-pound catalogue packed with each Lot. Only one Lot allowed to one person.

**Lot A1 \$2.40** A fine freight shipment. A 6-pound Catalogue packed in each box.

**Lot A9 \$5.00** Including a 6-lb. Catalogue No. 73. A good, large basket sent Reed Rocker, shellac finish. Has an extra high back and larve seat, well braced. It also has solid roll around frame, making it exceedingly strong and durable. Retail price about \$5.00. Weight, complete, packed with one of our de Luxe edition No. 73 Catalogues, about 30 lbs.

**Lot A1½ \$1.95** Reed Rocker \$1.95

25 lbs. Best Granulated Sugar.....\$1.00  
25 lbs. White Pearl Japan XXX Grade Rice, 1.00  
10 bars Hannah Cobbs' Pure Laundry Soap......40  
1 Catalogue No. 73, Edition de Luxe.....No Charge  
Packed in box for shipment by freight until Nov. 15, 1904.....\$2.40

Cut Out this Coupon and mail to us at once. The Edition de Luxe is too heavy to mail. Can only be sent with Lots A9, A1, or A1½.

Edition de Luxe—Put a mark (X) in front of the lot you want, sign your name and address and send to us with correct amount of money.

.....Lot A9 — Price \$1.95  
.....Lot A1 — Price \$2.40  
.....Lot A1½ — Price \$2.68

Standard Edition—I enclose 15 cents, for which please send by mail, all charges paid, a copy of your Standard Edition Catalogue No. 73.

## \$43.75 CREAM SEPARATOR.

FOR \$43.75 we furnish the highest grade hand cream separator made. A big separator with a capacity of 300 pounds or 140 quarts per hour, ample for any dairy of ten cows or less. Larger sizes of 400 or 500 pounds per hour capacity for large dairies, only slightly higher in price. Guaranteed the closest skimmer, easiest running, strongest, most convenient, easiest cleaned, greatest capacity and least liable to get out of order of any cream separator made.

**20-YEAR GUARANTEE.** Every separator is covered by our 20-year written binding guarantee. **GUARANTEEING EVERY PIECE AND PART OF THE MACHINE.**

**PROVED BY COMPETITIVE TESTS,** conceded by experts and dairy authorities everywhere, and declared by thousands of users to be in every way superior to any other separator made. Guaranteed to save the 25 per cent. 30 per cent. cream that you now lose in the skimmed milk by the old style of skimming from the pan and besides you have the sweet skimmed milk for your calves; saves all the cream, all the sweet milk; makes more and better butter. With this separator you will get \$10.00 to \$20.00 per year more from every cow, you will get more income from seven cows than you are now getting from ten, and all with one-half the labor. Our \$43.75 Separator is needed by every farmer, whether you milk two cows or ten. You will save the cost of the separator in a few months.

**A BOY CAN HANDLE IT.** So simple that anyone can operate it, no experience necessary; if you have never seen a separator, no matter how big, you can handle and run it, the ideal machine for boy, girl, woman or man to run, none of the complicated, hard to handle parts found in other machines. Combines all the good qualities of all other high grade separators with the defects of none.

**30 DAYS' FREE TRIAL.** We send our SEPARATOR TO ANY ADDRESS on 30 days' trial, to convince you it is the BEST SEPARATOR MADE IN THE WORLD.

**OUR FREE OFFER AND FREE CATALOGUE.** Cut this ad. out and send it to us and we will send you, free by return mail, postpaid, our Free Separator Catalogue with large illustrations (pictures), of all our separators, parts, etc., full description, special inside prices. We will send you our 30 Days' Free Trial Offer. We will explain our Guarantee, our Quality Challenge. We will explain why our machine is the best. You will get our latest and most marvellously liberal Cream Separator Offer, an offer and prices never before known. Don't buy a separator of any make, at any price, on time, on installment or for cash until you cut this ad. out and send to us and get all we will send you by return mail, POSTPAID, FREE. # The Tobacco Growers at Guthrie, Ky.

## Four Thousand Refuse to Follow Politicians and Want the Real Co-Operation of the A. S. of E.

The meeting on the fair grounds at Guthrie, Ky., on Sept. 24, to consider the tobacco price question from the growers' standpoint, exceeding in attendance anything before seen in that part of the country.

The meeting had been given much publicity, the demand for action on the important question and the need of a remedy against evils that had existed in the past were so widespread that the people began to pour into the town from all directions in vehicles and every train brought great crowds. Estimates vary and are from 4,000 to 6,000.

From the conversation among the people and the look on their faces it was evident that they had come for a purpose and were determined to accomplish it if a way was offered.

In this last fond hope, however, they were almost doomed to disappointment as it became apparent when the program was announced and as it was carried out. The people had come together, not to hear their troubles rehearsed, but to find a way out of them. This was a thing, however, that the prime movers had not given much thought to, and it has been the rock on which so many movements for the farmers' welfare has been wrecked. We will, however, defer further comment and give the reports as sent by representatives of the A. S. of E. on the ground.

Report by Hon. H. B. Sherman, assistant national organizer of the American Society of Equity:

Guthrie, Ky., Sept. 24, 1904.

Dear Mr. Everitt:

I came to Guthrie, I saw, I was not recognized by the powers behind this movement, but we have conquered. The prime movers for this meeting ignored me; refused me an interview; or to be interviewed and refused to let me address the meeting. It was a cut-out affair and the meeting must fit the pattern that was prepared in advance.

As soon as I saw there was to be no co-operation with us, I set to work with Mr. Hamill and Mr. McCowan and other members of our own society. We circulated copies of Up-to-Date Farming and literature, exhibited the map of Kentucky showing the organization of our society in the State and urged them to stay for a noon meeting. By the time an ex-Governor, three Congressmen and other ex-moguls had spoke their pieces and retired from the platform for dinner we had a crowd of 2,000 anxious to hear the true way to co-operate for profitable prices for their tobacco.

I made them a speech and exhibited the map showing the wonderful growth of the A. S. of E. in the tobacco districts, and told them if this new organization proposed to take matters all into their own hands they would first have to sweep us off of the earth or organize on top of us, for we had the field practically covered and organized already. I let the people assembled know that we came to this meeting to co-operate with tobacco growers in any and every way that had for its object the securing of a fair price for their crop, and to oppose all plans that, from our large experience, were impossible and impracticable. I showed them how our society could accomplish what they needed and that it had already largely accomplished it.

By this time the great moguls were returning, so I retired in good order. But from the moment I left the platform I was besieged by crowds of tobacco growers who were deeply interested. They asked questions about the A. S. of E. and showed the most intense interest in all that I told them to the neglect of the general proceedings on the ground. Finally I concluded to leave the fair grounds and return to town, when, wonders to relate, a vast crowd followed me like you would imagine the people on a former occasion followed Moses out of the wilderness.

Everybody was talking about my speech and there was a great clamor for another speech, so a great crowd followed me over in a grove across from the hotel. Here I gave them a talk for their business, their freedom and life.

It was a great day for the farmers of Kentucky and Tennessee as well as for our great and beloved society. The promoters of the new association are left flat on their backs, where they ought to be, because they offered nothing that would bring relief to the farmers. Their meeting was a political gimmick, while I convinced the people that ours had no politics in it and there was no chance for any to get in.

Organizers Hamill and McCowan have worked like Trojans all day. Also our members, and there were many here, lent yeoman service. The people all over this section are stirred to the quick. The people are in earnest and nothing but the plan of the A. S. of E. will ever satisfy them.

Report by D. T. Hamill, Deputy President of the A. S. of E.:  
J. A. Everitt, President:

Dear Sir:—The meeting of tobacco growers at Guthrie, Ky., was gotten up and managed by people from Robertson county, Tenn., Montgomery county, Tenn., and Todd county, Ky., had nothing to do with it in its inception. The promoters wanted an independent association and were opposed to joining in a national movement.

During the noon adjournment Mr. Sherman got a chance to speak a short time to a large and attentive audience.

The result of the meeting was that they organized, or at least they thought they did, and adopted a constitution but not one in fifty heard one-tenth of it. The speakers were all politicians. Ex-Governor McMillin, Ollie James and others, all distinguished and eloquent orators. They knew how to define a trust, but could not tell the people how to compel a trust to pay a fair price for tobacco. They told them how badly they were treated, but presented no remedy. They were men who are not personally interested in farming or growing tobacco and never were, and had not given this subject the study it deserves before they can lead the farmers.

The plan of the independent organization (if one was launched) is to have a commission to supervise the sale of tobacco, grade it, etc. It is proposed to offer some advancement to farmers until sold, but there don't appear to be any way to raise capital for this advancement. Perhaps the farmers will be asked to contribute it. No salaries are to be paid to officers, but expert graders and inspectors would be paid. This expense to be borne by the members. Nothing was to become operative or binding until 70 per cent. of the tobacco was secured. This, in my opinion, will prevent it from ever becoming operative.

There was a large crowd in attendance.

I must now tell you about the A. S. of E. aftermath. When Mr. Sherman left the fair ground a large crowd left also and when he got down to town he was called upon for a speech. As one of the hearers expressed it, "He tore everything wide open." He made a great speech and a mighty impression on the people in favor of our plan of co-operation. The people got then what they came for and what they failed to get on the fair grounds—a remedy.

This meeting, although it was not intended to let our society in, will do our society great good. The people see that in the A. S. of E. only will they find the remedy for their troubles.

The map you sent was an eye-opener and it did a great deal of good. It was an object lesson that could hardly have been taught by words alone. I am in this work to win for the A. S. of E., and we have certainly heated the iron to a white heat in this part of Kentucky and adjoining territory of Tennessee. Yours for to bring farmers to the front.

D. T. HAMILL.  
Guthrie, Tenn.

Address, **SEARS, ROEBUCK & CO., Chicago**

## Speculation in Futures

Continued from Page Nine

sign (—) because the average future prices are less than the average spot prices for the same month. Thus the per cent. of differences between the average spot and future prices for the decade referred to is the following:

May ..... -3.7 September ..... -1.4  
July ..... -3.5 December ..... -0.4

As the demand for cereal surpluses in the United States is directly affected by the procession of the world's cereal harvests and the latter reach their climax during the months of June and July, it would be extremely important as well as instructive to compare prices of wheat in this country in the said months before and after the advent of modern speculation, i. e., speculation in "futures" and "options." For this purpose two tabular statements have been prepared. The first one compiled from the Reports of the Secretary of the Treasury for 1863, gives average prices of wheat at New York on the first day of each month for a period of twenty years before the advent of modern speculation (1840-1859), while the second one, composed from the Reports of the Chicago Board of Trade, gives the average monthly prices of cash wheat in Chicago for a period of fourteen years after the advent of "futures" and "options." Although the average prices on the first day of each month are not the monthly averages, these, as obtained on a uniform plan for the whole of the period of twenty years, can safely be used as average monthly prices for each of the respective 240 months. As the 1897-1898 cereal year was one of exceptionally high prices for wheat, it is excluded from the whole of the period of 1885-1900, thus making the latter 14 years. Having pre-

lation in "futures" and "options" depresses prices to the producer.

Such a wild confusion exists not only in the minds of ordinary mortals, but even of so-called experts, in regard to the nature and essential features of "futures" and "options" that we feel it necessary to give here a proper definition of both these dealings in agricultural products.

"Option," as established and developed by the common practice of the American boards of trade and "bucket shops," is any contract or agreement whereby a party contracts or agrees to sell and deliver to another a certain amount of agricultural product at a future time or within a designated period, but is not thereby obligated to make such delivery, the right thus acquired by the seller being merely optional with himself.

"Future," as established and developed by the same practice is any contract or agreement whereby a party contracts or agrees to sell and deliver to another at a future time or within a designated period a certain quantity of an agricultural product, of which the seller at the time of making such contract or agreement is not the owner or the right to the future possession of which has not theretofore been acquired by purchase from the owner therof.

From a "future," as defined above or a speculative "future," a regular "future" must be distinguished, which is any contract or agreement whereby a party contracts or agrees to sell and deliver to another at a future time or within a designated period a certain quantity of an agricultural product of which the seller at the time of making such contract or agreement is the owner or the right to the future possession of which he has theretofore acquired by purchase from the owner therof.

From the foregoing definitions of "fu-

tures" and "options," as they have been established and developed by the common practice of the American boards of trade and "bucket shops," it appears that they are absolutely fictitious dealings in agricultural products. They have nothing to do with the right to buy property of any kind for future delivery and to sell it again before or after delivery. They represent the buying and the selling of mere fictions. Legitimate trading is the selling of that which one owns not that which one does not own. In other words, of

ings on the boards of trade in the United States are such fictitious dealings in agricultural products; legitimate trade in the products is almost extinguished by such transactions in agricultural fictions. They certainly do compete with legitimate transactions in the most vigorous manner. As they outnumber the latter at the ratio of one hundred to one, as there is no competition among them so far as actual consumption of agricultural products is concerned, the 100 bushels of "wind" grain competes with one bushel of actual grain in regulating the market price of the article. As furthermore, these fictitious offerings keep the market uninterruptedly overburdened with an apparent oversupply and to the same extent as if it were an actual product; these offerings of "wind" agricultural products, which might be and usually are illimitable, inevitably and fatally depress the prices to the agricultural producer. We say inevitably and fatally, for while such selling of "wind" farm products naturally depresses the prices of real and substantial ones; buying them back constitutes an essential feature of established gaming and gambling in the products in this country can not enhance these prices to the producer to any extent whatsoever, as such fictitious buying has no relation whatsoever to the actual consumption of the real products.

It was always considered a well established law of political economy that, an increase in production of any product, with consumption unchanged, resulted in a diminution of price of the product in proportion to the square of the increase in the amount of product per capita. As the consumption of agricultural products increases so slowly, that it remains nearly constant; even a seemingly insignificant excess in production causes a great diminution in prices. Therefore as the excessive offerings of illimitable quantities of agricultural products on boards of trade, etc., in their effect on prices are absolutely identical with an excess in production, they lower the prices of the products to the producer in a positively tremendous degree, which is practically proportionate to the square of the whole amount of such fictitious sales of the product. To realize what this amount is it is enough to state an illustration in New York. Domestic requirements of wheat in 1892 amounted to about 3,250,000 bushels, and exports to 4,250,000 bushels, the short sales so called, or fictitious sales of wheat amounted to nearly 84,000,000 bushels. It over ten times exceeded the amount of actual grain received at that metropolis of the United States for both domestic consumption and export. The amount of the cereals sold on the American exchanges is practically aggregating ten times the amount of production of the whole world, which shows undoubtedly that an overwhelming majority of such sales are purely fictitious and constitute in fact mere gaming and gambling transactions. Meanwhile such mere gaming and gambling transactions on the American exchanges where no more than one-tenth of the grain annually produced in the United States is marketed, are determining prices for the entire product and usually months in advance of the requirement by consumers.

By the foregoing showing it is self-evident that the economic law of supply and demand, or using broader and more corresponding terms, of production and consumption, at present has nothing to do with determining prices of agricultural products in the United States, of such agricultural staples at least as come within certain grades. The "short seller," i. e. fictitious seller, goes into the market with millions of bushels of his agricultural fictions and fixes prices before any one knows what the supply will be. In this way the organized army of these pirates of commerce forestall the market and turn off the buyer before he meets the producer, thus robbing the latter of his natural right to the whole buying capacity of the country and depriving the farmer and planter of that voice in fixing the price to be received for his product, which is accorded to every other producer. By the pernicious and criminal system of fictitious selling, more money is tied up in margins than would pay for the entire supply of the cereals. All this immense amount of money is thus being withdrawn out of the legitimate channels of American commerce.

This is the way in which absolutely abnormal conditions have been created for agricultural products on American exchanges and have artificially kept on during several decades already. These conditions defeat entirely the economical law of production and consumption commonly known under the name of the law of supply and demand. This economic law would be perfectly operative under normal conditions of the market. This law, as far as agricultural products are concerned, is dead and inoperative in the United States. Meanwhile the legion of professional gamblers, or more properly speaking of professional swindlers, in American produce, grain, cotton and live stock exchanges, have the impudence to try to hide themselves behind that very law for the purpose of justifying their fictitious and economically (though not legally as yet) criminal transactions, thus reckoning upon the presumed ignorance of the American people in regard to economic matters and problems.

While the seller of an actual product has no interest in the lowering of the price after his sale, a fictitious seller's interest lies in depressing prices after he has sold, for that is the very way he makes his gain. The actual seller of an agricultural product tries to sell on the

top of the market, while the seller of an agricultural fiction tries to sell when the market is the weakest, thus systematically depressing prices of agricultural products. In this country during the time gambling has been permitted the dealers in agricultural fictions have robbed the United States, or more correctly speaking, the farmers of the United States of hundreds of millions of dollars per annum.

Though the foregoing statistical tables are quite sufficient to support and to prove all the assertions advanced in this short article on the subject of such tremendous importance to the farmers of the United States, as well as to the country as a whole, and of such extremely complex nature we will add however to them a little more statistical data.

Though no records of "short sales" so called are kept in Chicago, they are kept in New York. The records show that the short sales of wheat in the metropolis of the United States exceed the whole amount of wheat which reaches the city for both local consumption and export to foreign countries by ten times.

As the period of 1893-1897 was one of the most remarkable for agricultural and general depression ever known to this country, it will be extremely interesting as well as instructive to know the figures relating to production and consumption of wheat in the world during the decade preceding the said terrible depression. It appears that while the wheat crop of the world increased during the decade preceding only at the rate of 4 per cent. and the population of the globe increased at the rate of fully 27 per cent. the price of the staple decreased at the rate of fully 32 per cent. It proves that it is not the so much abused law of production and consumption that regulates and fixes prices, but some other arbitrary force. It is needless to say that "short selling," so called—fictitious selling of agricultural products—dealing in agricultural fictions, swindling in farm products, is that force, and it will continue to control until Congress kills gambling in agricultural products by making it a penitentiary offense to sell something that is not possessed by the seller, or until farmers themselves control their marketing to correspond with the legitimate demand, i. e., market their crops over a year to meet a year's demand, thus keeping the supply out of large elevators, warehouses, etc. The farmers can do the work and they will be wise to not depend on Congress.

### Epithelioma on the Nose Yields to the Combination Oil Cure.

Packerton, Ind., May 30, 1904.

Dr. D. M. Bye Co., Indianapolis, Ind.  
I am very glad to say the treatment has had the desired effect, the cancer has healed up and shows no signs of returning. Yours most truly, with high esteem,  
JOEL F. THOMPSON.

All forms of cancer and tumor, internal and external, cured by soothing, balmy oil, and without pain or disfigurement. No experiment, but successfully used ten years. Write to the Home Office of the Originator for free book. Dr. D. M. Bye Co., Drawer 505, Dept. 26, Indianapolis, Ind.

### 20th CENTURY WAGON BOX

A Wagon Box, Stock Rack, and Hay Ladder, instantly converted from one to the other without removal of parts. Made from selected stock, strongly bolted, and well painted. Sold direct to the farmer, freight prepaid. Write for free Catalogue and price. Address, MODEL MFG. CO., Box 18, Muncie, Ind.

FEED COOKER, Galvanized Steel Tanks for stock & storage, Tank Heater. Lowest Prices, Highest Quality, 800 Sizes Tanks. Any size made to order. 2 Styles Cookers, 2 Styles Heaters.

A postal will bring Cat. of entire line. E. F. Freedland Sons Co., Box 170, Sturgis, Mich.

### SAWS

ANY WOOD ON ANY POSITION 4 into 5 ft. Through 1 Man Sawing Machine Beats 2 MEN with a Cross-cut Saw. 5 to 8 cords daily is the usual average for one man.

Our 1904 Model Machine saws faster, runs easier and will last longer than ever. Adjusted in a minute to suit a 14-year-old boy or the strongest man. Send for catalog showing latest improvements. First order gets agency.

Felding Sawing Mach. Co., 16 So. Clinton St., Chicago, Ill.

### One Operation

is all it takes to break, crush and grind, either fine or coarse, all grains for all feed purposes, when you use the

KELLY DUPLEX Grinding Mills. They are the fastest, easiest running, strongest and most durable mills made. New double cutters; force feed; never choke. Four sizes, any power.

Annual average, \$1.3358.

sented to the reader these necessary explanations. We produce now the tables themselves. The first, or non-speculative period, shows as follows:

It will be seen from the above that while the annual average for the whole of the period of twenty years was \$1.3358 per bushel, the average price for the months of June and July for the same period was \$1.3495 per bushel. In other words, the average price for the two months aforesaid (harvest months) exceeded the annual average for the whole

YEAR.	Jan.	Feb.	March	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.

1895	61.31	66.62	65.44	66.12	62.38	60.31	58.25	58.06	62.50	73.38	82.69	83.88
1896	77.00	74.50	73.50	71.50	72.38	70.00	....	....	....	....	....	....
1897	....	....	....	....	....	....	76.88	70.25	65.38	66.12	67.00	66.38
1898	71.25	72.12	70.25	73.06	73.94	75.25	72.00	71.75	72.75	71.56	65.69	63.75
1899	62.70	65.34	63.88	63.96	62.25	78.90	....	....	....	....	....	....
Av'ge	74.96	75.77	74.99	76.27	77.12	75.89	74.45	74.45	73.48	76.72	76.55	75.82

Annual average, 75.57 cents.

of the period by 1.37 cents, or by 1.01 per cent. The table for the second or speculative period shows as follows:

It will be seen from the above that while the annual average for the whole of the period of fourteen years was 75.57 cents per bushel, the average price for the months of June and July was 75.17 cents per bushel. In other words, the average price for the two months aforesaid was lower than the annual average for the whole of the period by 0.40 cents, or by 0.5 per cent.

The three foregoing tables, compiled from official sources, show quite conclusively and beyond any dispute that:

Firstly, before the advent of modern speculation in grain, fluctuations of prices in the United States never were so frequent as since such advent.

Secondly, during the period when the world's cereal harvests reach their climax, i. e., the months of June and July, prices of American wheat under the modern speculative system are lower as compared with prices at other seasons of the year, and also much lower than in earlier years when "futures" and "options" were unknown, which means that modern speculation decidedly depresses prices to the producer; and,

Thirdly, future prices of the American grain are invariably lower than spot prices for the same months, which shows again that the modern system of specu-

that which exists, not that which does not exist. The party who sells a thing before he acquires it is, in fact, a swindler in that transaction. In such sales no deliveries are made or are even contemplated. The settlement of the differences is the only purpose of such dealings. If the market advances the fictitious seller is required to deposit the amount of the advance of the stipulated quantity of his fictions. But if the market goes down, the fictitious buyer must make the deposit amounting to a decrease in value of the stipulated quantity of his fictions. Thus the fictitious contracts are kept margined up or down until they reach their maturity, and one of the two parties to the fictitious transaction is swindled out of an amount of good and genuine money. A man who fails to carry out his fictitious "contracts" on the boards of trade, etc., is expelled.

It should be understood that when such a fictitious seller, or as they usually are called, "short seller," offers for sale a fancied quantity of an agricultural product there is nothing tangible or detectable either in the manner of his offering or in the sale itself to suggest even to an actual and legitimate buyer that the thing offered is not in actual existence and that the party thus pretending to sell what he does not own is simply attempting to collect the money under false pretenses. Over 90 per cent. of all deal-

The book may be obtained complete at \$1.00 in handsome cloth binding, 50c in paper cover, 10c extra for postage. Send orders to the publisher of UP-TO-DATE FARMING.]

It is, of course, quite impossible to consider this question apart from politics. Few questions in this country can be considered in this detached way. In this case it happens that there is a very direct and intimate connection between the reform proposed and politics—not party politics, but politics in the larger and more scientific sense. The abuses, injustices and oppressions incident to the business of government in this country are dwelt on with much emphasis. All know that corruption abounds on every hand, that graft is almost the law of our political life, that extravagance is the rule, that favoritism is prevalent, and that those with the strongest "pull" get the greatest consideration. There is discrimination everywhere, and it is in favor of the strong and against the weak. The law itself is too often the mere agent of the rich and powerful for carrying out their doubtful schemes.

Why is all this true in a country in which the people are supposed to govern? None of us can be made to believe that the people are corrupt or that they deliberately prefer bad to good government. The people are not corrupt, and so far from preferring bad government it is they who chiefly suffer from it. The trouble is that the people do not govern. Nominally a democracy, this government is the oligarchy controlled by a comparatively small class in its own interest. The people simply take what is given to them. Thus we have turned our system upside down and are false to the fundamental law of our political being. When a scoundrel in the postoffice department is caught with money in his hands that does not belong there we all know that it is the people's money that he has stolen. When a rascally law is enacted taxing the people for the benefit of a few greedy and grasping individuals, it is not the people who are guilty of the oppression, for it is they that are oppressed. Divided into parties, the respectable and decent men of our cities are powerless to checkmate the rogues who prey on all alike, no matter what party they may belong to. The combination between men in office and corporations seeking franchises and favors is a combination in the interest of the politicians and the corporations and against the interest of the people. The people everywhere suffer, not because they govern, but because they are governed, and really without their consent. Pulls, influence, money, party trickery, corporate corruption in politics practiced by our leading citizens—these are our rulers. And to this perversion of our government from its true aim and purpose are due all the ills from which we suffer.

And it is only those who make something out of government who have any constant and effective influence in public affairs. President Hadley, of Yale University, writes:

"Except in those grave crises when a wave of patriotism sweeps over the community the support on which a democratic government relies is spasmodic and accidental. No man except the professional politician feels that the government is being run in his particular interest. On none, therefore, except the professional politician can it rely for continuous activity in giving effect to its decrees."

We all understand this perfectly well. Who are the men directly and keenly and continuously interested in politics if not those who work simply that they may get something out of the game? The men who speak in political campaigns are, as a rule, men who, if not paid outright for their services, expect to get appointments if their side wins. Year after year you see the same men hanging around the polls, and hoping through their connection with the organization, to be "taken care of." Gradually the government has been wrested from the hands of the people, and more and more—and as a consequence—the people have lost interest in it and influence with it.

Now the proposition is to restore to the people that supremacy which is rightfully theirs, and which they must have if this is ever again to be a government of the people. As this is even yet pre-eminently an agricultural country, the farmers are the people. With the millions of men directly interested in furthering their own interests, which are those of the people, and bound together in an organization, the usurpation of the politicians and corporations would be broken, and the real rulers would govern. Considered in this light the American Society of Equity—the Third Power—is an instrument for the restoration of true democratic government in the United States, regardless of name or party. No administration would dare to disregard such an influence, or would think of tying itself up to the politicians and those who now use them. Under such a system nothing would or could be done without the freely expressed will of the people. If they governed themselves badly, they would still govern themselves, and would be responsible for all mistakes and crimes. With this power and influence the people would regain their old interest in public affairs, and the government would no longer be forced to rely on the professional politician "for continuous activity in giving effect to its decrees." In a word, it is proposed to broaden the base of government and to put the power and responsibility in and on the people. Favors enjoyed by all are not favors, but rights. A favor is something enjoyed by one at the expense of others. If we can secure the granting of justice to all and the withdrawal of privileges enjoyed only by the few, we shall destroy the "pull" and the whole system based on it. So this is a movement for democratic government—government for all and by all, in which all shall participate. With this secured most of the evils from which we are now suffering would disappear. The pull would not work when there is nothing to be gained by it. The people would not be interested in stealing from themselves. If there was nothing for corruption to win there would be no corruption. In brief, the remedy is to be sought in a simple adherence to what is the true American system, from which we have so widely departed, and in a loyal adherence to the old American ideals.

One other point is made by President Hadley that bears directly on this discussion. He calls attention to the fact that business and politics are now both regarded as games, and he says:

"A wider discretionary power for good or ill is placed in the hands of those by whom the public affairs of the city or state are conducted. These affairs will not be safe while politics is regarded as a game. \* \* \* Under an imperialistic policy our government can not remain what it is. It must grow either worse or better. It can not remain a game in which the struggle for success is as far as possible dissociated from the moral sense of the participants. It will involve either a direct breach of trust or a direct acceptance of trust."

How widely this "game" theory of politics is held we all know, or if we do not we can easily learn by a few minutes' talk with a ward worker. Perhaps we ourselves have held to the theory. However this may be, the the-

# THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS  
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

## THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

### The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

### The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shaped the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where co-operation may be facilitated and strengthened thereby

### County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

### The Emblem

of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

### The Membership Fee

Is \$1.00, and each member is entitled to receive a certificate and manual, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, one year, paid for by the National Union.

### The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc.

It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. They are supplied on gummed paper and on tags.

### How to Organize a Local Union.

We assume a meeting is assembled for the purpose of organization. Some one will call the meeting to order and move that another person be chosen temporary chairman. This motion will be seconded and put to vote. The person elected will take the chair. On assuming the chair, he may speak, explaining the object of the meeting, or may at once declare that the choice of a temporary secretary is in order, whereupon one should be chosen as above. It will now be in order for those present to discuss the object of the meeting, and to choose permanent officers as soon as possible. The by-laws provide for officers to be filled. Elections may be made by ballot or by acclamation, that is by aye and no votes.

It would then be in order to call upon some one to speak. This may be done by a motion and a second, or by merely calling the proposed speaker's name. If desired, several may be so called upon in turn. It is not best, however, at this stage of the proceedings, to take up too much time in discussion, for we assume that those present are already convinced of the necessity of forming a local union, and that they have met for that purpose.

A motion to choose permanent officers, a president, treasurer and secretary, or a president, vice-president, secretary and treasurer, would now be in order. This may be done by taking up each office separately and calling for nominations therefor. Should only one nomination be made, election may be had by acclamation.

This completes the organization of the union. It is now in order to adopt a name (see directions in by-laws) and fix the time and place of subsequent meetings, and any other action may be taken which may be deemed of special interest to the union. The organization must be reported to the National Union by the organizer or secretary. Members may be admitted at any meeting and reported by the organizer in charge of district or the secretary. Reports must be clear and explicit, giving name and number of union, name and address of members. If complimentary, write comp. in space for fee. The membership fee is \$1.00. Study the by-laws carefully.

### How to Conduct a Meeting—Order of Business.

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness or distress in the neighborhood that needs special attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood?
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting?
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

## Annual Meeting of A. S. of E.

The annual meeting for the election of officers and transaction of business for the American Society of Equity, will be held on Thursday, December 8, 1904, at headquarters, Indianapolis, Ind. The meeting will cover more than one day if necessary.

Nominations of candidates for the various offices are now in order. The officers to be elected are President, Secretary, Treasurer, statistician, organizer, attorney and seven directors. The board of directors shall consist of the President, Secretary and four others. Candidates' names must be published in the official paper at least six weeks before the election. This makes it compulsory that the names be proposed and received at headquarters by or before October 20, when the November 1 number will close.

It is desired that all the officers for the next year shall be men who can give as much of their time to the development of the Society as necessary. Salaries commensurate with the services performed and the time devoted to the Society will be paid. Any member or local union can put names in nomination, and the nomination should be accompanied by a statement showing the fitness of the party for the position.

Votes will be cast on blanks to be supplied for this purpose, and which will be printed in the official paper in due time. Nominations may be made on the below blank:

For President .....

For Secretary .....

For Treasurer .....

For Statistician .....

For National Organizer .....

For Attorney .....

For Directors .....

Above nominations were made by .....

(Member or local union.)

Address .....

Date .....

## Local Price Making

Johnson county, Ark., has about 25 local unions of the American Society of Equity, and these in joint convention have made prices on almost every conceivable agricultural product. We are glad to have their price list to print, which we do below as a sample of the possibilities of local farm organization and co-operation:

Article.	Price.
Cotton, per lb .....	15
Watermelons, per lb .....	01
Muskmelons, per lb .....	01
Cabbage, per lb .....	03
Butter, per lb .....	20
Chickens, weighing 1½ lb., per lb. ....	07
Geese, per lb .....	07
Beef by the quarter, per lb .....	4 and 05
Beef cut in small chunks, per lb. ....	3 to 10
Pork, per lb .....	7 to 10
Bacon, per lb .....	8 to 12
Sage, per lb .....	75
Table peas, per lb .....	03 1/2
Grapes, per lb .....	04
Mutton, per lb .....	8 and 09
Dried apples, per lb .....	06
Squashes, each .....	02
Cantaloupes .....	5c each or 5 for 20
Corn, per bu .....	65
Wheat, per bu .....	1.00
Oats, per bu .....	50
Cotton seed, per bu .....	33 1-3
Apples, per bu .....	50c to 1.00
Peaches, per bu .....	50c to 1.00
Sweet potatoes, per bu .....	50c to 1.00
Sweet in winter yams, per bu. ....	50c to 1.00
Irish potatoes, per bu .....	60c to 70
Tomatoes, green, per bu .....	75
Onions, per bu .....	1.00

Milk, per gal .....	10c and 20
Roasting ears, per doz .....	1
Eggs, per doz .....	15
Tomatoes, ripe, per doz .....	10
Cucumbers, per doz .....	10

We assume that local price making will always be undertaken with a great deal of care and consideration for equity for the consumers. Prices should be made reasonable, always keeping a fair profit to the first owner in mind. It will be well to confer with the local merchants and if possible and agreeable have them to co-operate in making the prices. You will then be sure of no antagonism when attempting to enforce them, but will have reasonable certainty of ability to maintain them.

## The Local at the Crossing

We have been having meetings all summer at the Crossing, but we have not taken time to report them. Our last meeting struck us just about solid and I can't hold back any longer. The President of our local sounded the keynote when he said:

"Gentlemen, I have been watching the farm papers all summer, and I notice they have nothing to say about controlling markets and prices. I notice they begin to edge around the question of keeping products longer on the farm, but not a word against city price-making nor in favor of farm price-making. They remind me of an old gray rat that thinks age has made him wise and cunning. They see something that looks attractive, something they'd like to get between their teeth, but they are not quite sure there may not be some poison wrapped up in it somewhere. So they sneak up towards it and then jump back. Sometimes I think somebody may have a string tied to them, and every time they get near those great questions they are jerked back."

Joe Riley couldn't sit still any longer. He was on his feet almost before the

## Life Size Doll FREE

2½ FEET HIGH.

Girls, here is a Great Big Doll big enough to wear your outgrown baby dresses, which you can put on and off, button and unbutton, to your heart's desire. It is the most popular doll made. Dollie has an indestructible head, golden hair, rosy cheeks, brown eyes, kid colored body, red stockings, black shoes, and will stand alone. It is an exact reproduction of a hand printed French Doll, beautifully painted on desirable material to be stuffed, and will live in your memory long after childhood days have passed. We will give this beautiful doll absolutely free as a premium for selling only four boxes of our Great Cold and Headache Tablets at 25 cents a box. Write to-day and we will send Tablets by mail postpaid. When sold send us the money (\$1.00) and we will send you this Life Size Doll which is 2½ feet high, and can wear baby's clothes.

### EXTRA PREMIUMS.

If you send us the money within one week after receiving the Tablets, we will send with the doll, 2 smaller dolls as described above, as extra premiums for prompt work. We take back all goods not sold. Address,

NATIONAL MEDICINE CO.  
38 White Street,

Doll Dept. K, 139 New York, N. Y.

## MOST POPULAR DOLL MADE

The satisfaction you get in many ways from good seeds makes them worth more than the common kind. O. K. SEEDS satisfy.

Garden, Field and Flower Seeds.

24th year.

J. A. Everitt, Seedsman Inc., Indianapolis

**WANTED, AN HONEST MAN** To manage a branch factory for the manufacture and sale of Poultry Mixture. A big money maker and honest. \$100.00 a month sure and a lot to a hustler. Investigate this, reference exchanged.

E. C. SINGERS, East St. Louis

## PATENTS "KNODIG" PENDING

### OUR LATEST PATENT PITLESS SCALE

possesses every quality to commend them to the Farmer and Stock Raiser.

### FROM \$30 TO \$50 SAVED

the purchaser at the start; there is no pit to be dug, and no expense for bricking up or planking the same. THE "KNODIG" portable Scale; it can be taken to and set up near the work, thus saving hauling. Working parts of the "Knodig" are ALWAYS ABOVE GROUND and always accessible; cannot be clogged with ice in winter; no wooden parts to rot with water. Made of the best steel and iron obtainable; 8 inches over all; steel frame. GUARANTEED FOR ACCURACY AND RELIABILITY. With the exception of floor planks, Scale is complete when it leaves the factory. We carry in stock a full line of Boulton Stock Rack Irons. Our illustrated catalogue, with prices, mailed free on request. Address

NATIONAL PITLESS SCALE CO., 2130 Wyandotte St., Kansas City, Mo.

President had done talking, and said: "Mr. President, that's just it. There are two strings tied to them. One is the string of popularity among the big bugs, and the other is the financial string. They are afraid if they take the farmers' side in this matter the gamblers and speculators, the bulls and bears, the stock exchanges, would give it to them about the fifth rib. This is the first string. Then they are afraid if they should offend these high muck-a-mucks of speculation, the big financial institutions and corporations would give it to them where the hatchet kissed the chicken, and they'd lose some financial prestige. This is string No. 2. Yes, sir, there's strings to 'em, and these silken strings are stronger in their estimation than the common tow lines that connect them with their farmer subscribers."

Jim Denny, who always has a peculiar drawl and never does anything in a hurry, slowly unfolded himself until his head and feet had attained their greatest distance apart, and said:

"Mr. — President, — if — that — is — so, — I — am — in — favor — of — cutting — the — tow — line, — and — let — the — other — two — strings — jerk — 'em — clear — off — the — farm."

It took more than one rap of the gavel to stop the laugh that followed, but Jim Denny was in earnest. What he meant was that if the fear of gambling concerns and corporations, and their devotion to a system that had held rural life in thrall for centuries, was stronger in the old-line papers than was their concern for the farmer's welfare, the farmer might lose nothing by cutting loose from them and thus save them the pangs of divided love. And so thought we all. There is a strong disposition in this local to patronize our known friends, and to do it more abundantly. We really have nothing to lavish on those of doubtful uniform.

#### NATIONAL CONVENTION OF TOBACCO GROWERS.

At Lynchburg, Va., Nov. 10 and 11, 1904.

Tobacco growers, associations and local unions of associations are requested to make arrangements to attend this convention or to send delegates.

So that adequate arrangements may be made to care for the people it is desirable that a report be sent to us as soon as possible. Use the blank below or write a letter.

We hope nothing will prevent a large attendance at this meeting. At that time of the year work will be slack, hence time will not be an object. While the good each individual can do will be considerable and collectively will be incalculable.

Remember, this convention is not for any one society or association, but for all that have for their chief object "profitable prices," and for every individual grower who wants profitable prices to prevail.

We hope to announce special railroad rates in next issue, and will send full particulars to all who will send in the report blank below.

To the American Society of Equity, Indianapolis, Ind.:

Gentlemen:—There will be an attendance at Lynchburg convention from our district, comprising .....

(write the town or towns) of .....  
(write the number who will attend)  
and as many more as can be influenced  
to go before the date of convention.  
You may send full particulars to .....

(name and address).

We want the name and location of every tobacco growers' society in the

#### REQUEST OF EDITOR.

We would like every reader of this paper, to write and say if he or she could make use of any of the following named articles. A Buggy, Sewing Machine, Organ, Piano, Stove, Carpet, Cream Separator, Furniture, Set of Dishes, Gun or Watch. On a postal card or in a letter say which one of the above named articles you could make use of and you will receive by return mail the most astonishingly liberal offer ever heard of. You will get a special new catalogue describing the goods you mention, you will get a Free Trial Offer and a most surprisingly new and fair proposition, will all go to you by return mail, free, postpaid. Say which one of these articles you might possibly find use for, MENTION THIS REQUEST, and address your postal card or letter to

SEARS, ROEBUCK & CO., Chicago, Ill.

country at once, with address of president or secretary. We have some, but there may be more. Send all that you know and we will cut out the duplicates.

#### BROOM CORN BUYERS.

Our members and subscribers in the broom corn areas, especially in the outlying ones like Oklahoma and Nebraska, report so many attempts to get their product at unfair prices that we are prompted to give them the ad-

resses of the leading factories of the United States that use broom corn, in the hope that they may thus find direct and more advantageous markets: Tell them that you are a member of the A. S. of E. and stick a union label on your letter if you have them.

"36 YEARS A STANDARD PIANO"

# The Wing Piano

A Wing style—45 other styles to select from.

**You need this book** IF YOU INTEND TO BUY A PIANO, A Book—not a catalogue—that gives you all the information possessed by experts. It makes the selection of a Piano easy. If read carefully it will make you a judge of tone, action, workmanship and finish; will tell you how to know good from bad. It describes the materials used; gives pictures of all the different parts, and tells how they should be made and put together. It is the only book of its kind ever published. It contains 116 large pages, and is named "THE BOOK OF COMPLETE INFORMATION ABOUT PIANOS." We send it free to any one wishing to buy a Piano. Write for it.

**SAVE FROM \$100 to \$200** We make the WING PIANO and sell it ourselves. It goes direct from our factory to your home. We do not employ any agents or salesmen. When you buy the WING PIANO you pay the actual cost of construction and our wholesale profit. This profit is small because we sell thousands of pianos yearly. Most retail stores sell no more than twelve to twenty pianos yearly, and must charge from \$100 to \$200 profit on each. They can't help it.

## This Piano

is a representative Wing style, being our concert grand, with longest strings, largest size sound-board and most powerful action, giving the greatest volume and power of tone. It has  $7\frac{1}{2}$  octaves, with over-trung scale, copper-wound bass strings; three strings in the middle and treble registers; "built-up" wrest plank, "dove-tailed" top and bottom frame, "built-up" end case construction; extra heavy metal plate; solid maple frame; Canadian spruce sound-board; noiseless pedal action; ivory and ebony keys, highly polished; hammers treated by our special tone-regulating device, making them elastic and very durable; grand revolving fall-board; full duet music desk.

Case is made in Circassian walnut, figured mahogany, genuine quartered oak, and ebonized; ornamented with handsome carved top mouldings and handcarving on the music desk, trusses, pillars and bottom frame.

## In 35 Years 36,000 Pianos

We refer to over 36,000 satisfied purchasers in every part of the United States. WING PIANOS are guaranteed for 12 years against any defect in tone, action, workmanship or material.

## WING ORGANS

are just as carefully made as Wing Pianos. They have a sweet, powerful, lasting tone, easy action, very handsome appearance, need no tuning. WING ORGANS are sold direct from the factory, sent on trial; are sold on easy monthly payments.

For catalogue and prices write to us.

## SENT ON TRIAL.

**We Pay Freight No Money in Advance**

We will send any WING PIANO to any part of the United States on trial. We pay freight in advance and do not ask any advance payment or deposit. If the piano is not satisfactory *after twenty days' trial in your home, we take it back entirely at our expense.* You pay us nothing unless you keep the piano. There is absolutely no risk or expense to you.

Old instruments taken in exchange.

**EASY MONTHLY PAYMENTS**

## Instrumental Attachments

A special feature of the Wing Piano; it imitates perfectly the tone of the mandolin, guitar, harp, zither and banjo. Music written for these instruments, with and without piano accompaniment, can be played just as perfectly by a single player on the piano as though rendered by an entire orchestra. The original instrumental attachment has been patented by us, and cannot be had in any other piano, although there are several imitations of it.

YORK

## THE THIRD POWER

(Continued from Page 14.)

ory is wholly pernicious. For what is a "game" except something at which some one must win and some other one lose? It is the risk of losing, the hazard, that gives the game all its charm. There would be no betting on horse races if it were positively certain that every one would win. If success were sure for all, our gambling laws would enforce themselves—for there would be no gambling. What, therefore, are we to think of a political system administered by, or in the name of, a free people, which is avowedly based on the theory that some of the people must win at the expense of others of the people? Yet that is the present situation. It should be ended. An honest government is one under which every citizen, even the humblest, would win—that is, it is not a game. It is a business, and a business conducted for the benefit of all. And that is the sort of government that is advocated by the American Society of Equity. Politicians do not struggle, and plot, and bribe in order that they may secure justice and equity; what they seek is privilege. They play the game, and they play it for rich stakes. So it is proposed to uproot this game theory, for, as President Hadley truthfully says, our "affairs will not be safe while politics is regarded as a game." If we make it impossible, as we intend to do, for one man to win at the expense of another, we shall end the game business and destroy the interest in politics now shown by men who ought to be banished from politics. With the people in power, and with the government, which is now a great gambling affair, turned into an honorable business enterprise, corruption, bribery and extravagance will disappear, and elections, instead of being fierce and degrading struggles for spoil, will be, as they ought to be, sober consultations regarding questions of principle and policy in which all will have a legitimate interest.

(To Be Continued.)

## Sharples Tubular SEPARATORS

WILL you buy a separator because the agent is a "good fellow?" Some people do. We hope such will read this. The Tubular talks for itself and is bought for itself.

If You Have a Brand New Separator not a Tubular, put it in the garret.

We will sell you a Sharples Tubular, guaranteed to make enough more butter than the other from the same milk to pay 25 per cent yearly dividend on the whole cost of the machine. You test them side by side.

Pierpont Morgan is hunting a place to put money at 6 per cent; here is a guaranteed 25 per cent to you. While this dividend pays your bills the Tubular makes your life more pleasant by pleasing your wife. A waist low milk vat saves your back. Simple bowl—easy to wash—the only one that is so. Automatic oiling; the only one that has. Easier to turn than others and safer. Catalog A-136 explains better.

Sharples Co.

## LOCAL UNIONS OF THE AMERICAN SOCIETY OF EQUITY.

Below is a partial list of local unions of the A. S. of E. Further installments will be printed each issue until the entire list is published. Then we will print lists of new unions as organized.

Our reason for printing these is to give members and non-members some idea of the developments of this farmers' movement with the hope that this showing will encourage organizations in localities not now supplied.

Understand, this is only a small part of the unions in any State. If these partial lists are preserved a complete list can be had and maintained. If members or local unions want to correspond with each other the addresses will be supplied from headquarters. Send a return card or stamp.

Besides the local unions there are many thousand members of the National Union not belonging to locals yet. These members should see that a local is organized at once. Much good in many ways comes from the local unions.

If any of these local unions have not been meeting during the busy summer time we urge them all to become active at once. Let each member take it upon himself to demand and secure activity.

The list follows:  
Arta L. U. No. 1, Arta, Ala.  
Grannis L. U. No. 1, Grannis, Ark.  
Chismville, L. U. 1, Chismville, Ark.  
Crystal Springs L. U. No. 1, Crystal Springs, Ark.

### New Cure for Kidney and Bladder Diseases, Rheumatism, etc.

Our readers will be glad to know that the new botanical discovery, Alkavis, has proved a certain cure for all diseases caused by Uric acid in the blood, or by disordered action of the kidneys or urinary organs. It is a wonderful discovery, with a record of 1200 hospital cures in 30 days. It acts directly upon the blood, kidneys, and is a true specific, just as quinine is in malaria.

Among the many testimonials received is one from the Rev. W. B. Moore, D.D. of Washington, testifies in the *New York Christian Witness* that Alkavis completely cured him of Rheumatism and Kidney and Bladder disease of many years' standing. Many ladies also testify to curative powers in disorders peculiar to women.

So far the Church Kidney Cure Company, New York, are the only importers of this new remedy, and they are so anxious to prove its value that for the sake of introduction they will send a free sample by mail to every reader of *UP-TO-DATE FARMING* who is a sufferer from any form of Kidney or Bladder disorder, Bright's Disease, Rheumatism, Dropsy, Gavel, Diabetes, Pain in back, difficult or too frequent passing water, or other affliction due to improper action of Kidneys or Urinary Organs. We advise all sufferers to send their names and address to the company, and receive the Alkavis entirely free. Address Church Kidney Cure Co., No. 401 Fourth Avenue, New York.

### A CHAT WITH OUR READERS.

By the Advertising Man.

I once had the most pleasant experience of a visit to the International Correspondence Schools, Box 875, Scranton, Pa. I wish I had the time to write and you to read all about it. Suffice it to say that you have at your very door, through their system of teaching by mail, the most thorough and practical education in any line you might desire. Let them send you a booklet the reading of it, in which they tell you what they have accomplished, if nothing more comes of it, will afford you the keenest enjoyment. Tell them you saw it in *Up-to-Date*.

As we farmers advance in knowledge in our chosen line, as all other occupations and professions advance in theirs, we get more and more to believe in the value of cooked-food for stock of all kinds. It may seem expensive at first thought, but the added market value, when we come to sell, the saving by making of all of our stock first class, will amply repay the outlay. Let E. F. Freeland Sons Co., Box 170, Sturgis, Mich., tell you about it in their booklet. Send postal and mention *Up-to-Date*.

When you come to think of it you have often wished you had some kind of a scheme to open and shut that gate without having to climb out of your wagon, lead the horse through, shut the gate after you and climb back in again. The actual time lost in such a transaction in a period of a few months would more than pay for one of those Thorpe gates—to say nothing of relief from temptation to say bad words. I have been there. Address Thorpe Broom Co., Wapella, Ill.

I don't care who the man is, he likes something good to eat when the bell rings for meals. Ask your wife what contributes as much as anything to the smoking-hot, palatable dinner. If she don't say the stove, I'll buy. Maybe some days, tho', the dinner, in spite of her skill, is a failure—you need a new stove! The practical stove and range man, Chester D. Clapp, 204 Lynn street, Toledo, is making an offer in our advertising columns on which you can't lose. Mention *Up-to-Date*.

## I Cure Women OF FEMALE DISEASE AND PILES

I Will Cure You So That You Should Stay Cured—Women No Longer Need Submit to Embarrassing Examinations and Big Doctor Bills.

To Show Good Faith and to Prove to You That I Can Cure You I Will Send Free a Package of My Remedy to Every Sufferer.

I hold the secret of a discovery which has seldom failed to cure women of piles or female weakness. Failing of the womb, painful menstrual periods, leucorrhoea, granulation, ulceration, etc., are very readily cured by my treatment.

I now offer this priceless secret to the women of America, believing that it will effect a cure in almost any case, no matter how long you have suffered or how many doctors have failed.

I do not ask any sufferer to take my unsupported word for this, so will send you some of the medicine free. If you will send me your name and address I will mail you a trial package absolutely free, which will show you that you can be cured. Do not suffer another day but just sit down and write me for it right now.

Mrs. Cora B. Miller, Box No. 137 Kokomo, Ind.

Mention this paper. SEND FOR CATALOGUE. **THE TEMPLE PUMP CO., Mfrs., Meagher & 15th Sts., Chicago.** THIS IS OUR FIFTY-FIFTH YEAR.

## WHAT IS CATARRH?

If You Have Any of the Following Symptoms, Send Your Name and Address To-day

Is your breath foul? Is your voice husky? Is your nose stopped? Do you snore at night? Do you sneeze a great deal? Do you have frequent

pains in the forehead? Do you have pains across the eyes? Are you losing your sense of smell? Is there a dropping in the throat? Are you losing your sense of taste? Are you gradually getting deaf? Do you hear buzzing sounds? Do you have ringing in the ears? Do you suffer with nausea of the stomach? Is there a constant bad taste in the mouth? Do you have a hacking cough? Do you cough at night? Do you take cold easily? If so, you have catarrh.

Catarrh is not only dangerous in this way, but it causes ulcerations, death and decay of bones, loss of thinking and reasoning power, loss of ambition and energy, often causes loss of appetite, indigestion, dyspepsia, raw throat and reaches to general debility, idiocy and insanity. It needs

attention at once. Cure it with Gauss' Catarrh Cure. It is a quick, radical, permanent cure because it rids the system of the poison germs that cause catarrh.

In order to prove to all who are suffering from this dangerous and loathsome disease that Gauss' Catarrh Cure will actually cure any case of catarrh quickly, I will send a trial package by mail free of all cost. Send us your name and a dress to-day and the treatment will be sent you by return mail. Try it. It will positively cure so that you will be welcomed instead of shunned by your friends. Write to-day, you may forget it tomorrow.

C. E. GAUSS, 2520 Main St., Marshall, Mich.

# Oh! the Beautiful Flowers

## DO YOU LOVE FLOWERS?

There will be no failure if grown from our bulbs. They are easier to grow than potatoes, as they are not affected by drought, insects, etc. Simply stick them in the ground and in Spring you will have the most Beautiful Flowers. Or plant in pots, and they will bloom in the winter. We send directions with each order.

**MAY BE PLANTED ANY TIME BEFORE THE GROUND CLOSES UP FOR WINTER**

We deliver in lots of 1 doz. or less at prices quoted. 1/2 doz. at doz. rates. 50 at 100 rates.

### DUTCH HYACINTHS.

For house or open ground. They are the rage with flower lovers. Sure to succeed. As easily grown as potatoes.

**Ixias**—For blooming in the house. Beautiful flower, brilliant colors. 3 for 5c, doz. 15c, 100 75c.

**For \$1.25** we will send 100 Bulbs as follows: 2 Mammoth Bulbs Chinese Sacred Lilly, 5 Dutch Hyacinths (separate varieties and colors) 12 Tulips (separate varieties and colors), 3 Roman Hyacinths, 12 Crocus, 12 Jonquils, 12 Iris, 15 Oxalis, 3 Narcissus, 3 Campanelle, 3 Ranunculus, 3 Ixias, 3 Allium, 6 Grape Hyacinths, 3 Sparaxias, 3 Freesias. Total, 100 Bulbs. All Collections Sent Postpaid.

**Chinese Sacred Lilly or Oriental Narcissus.** All orders should include these bulbs, as they have become most popular through their own merits. Flowering in water and gravel in 5 to 8 weeks from the time of planting. They grow well in pots of soil, but the most popular way of blooming them is the Chinese method, as follows: Put about one inch of sand in a shallow bowl, or some similar vessel, about four inches deep; place the bulb on this, and pack it firmly with small pebbles or pieces of rocks; then fill it with water to the top of the pebbles, and place in a warm, sunny window. The bulb will at once commence a rapid growth, and bloom in five or eight weeks. Add fresh water as often as necessary. For a window ornament they are unexcelled, and lend to an interior a cheerful aspect when all outside is frost-bound and dreary. The effect is heightened when several are put in a large dish. They can be planted at different times, and have a succession of flowers all winter. Flowers often double and single from the same bulb. Large bulbs, 15c each, 3 for 35c, postpaid. \$1.00 per dozen, by ex. rates, not prepaid.

# ASIN AND ASHAME

## IF YOU

### Your Family Doctor

may tell you that your case is incurable, that medical science is unable to help you, that all you can expect is temporary or slight RELIEF. Well let HIM think so. He is certainly entitled to HIS OPINION. You need not think so unless YOU WISH TO.

Many people whose testimony appears in the books and pamphlets of the THEO. NOEL CO., were told that their cases were hopeless, helpless, impossible, incurable, past all recovery, yet—READ THEIR TESTIMONY. Many were told that they had but a few short years—some but months—to live, yet—READ THEIR TESTIMONY. There are more things in HEAVEN and EARTH than are dreamed of in the Doctor's philosophy, and Vitae-Ore is one of them.

Need it and do not send for it, it is actually a sin and a shame. It is OFFERED TO YOU FREELY, unreservedly, genuinely; YOU HAVE BUT TO ASK for it. There are no strings tied to the offer, no questions to answer, no documents to sign, no references of past history to give. Getting it is as simple as A B C. You just SAY THAT YOU WANT IT, that you need it, that you will use it, AND IT IS SENT TO YOU. It must be good, or it could not be sent out in this way. YOU KNOW IT MUST BE GOOD; that it IS GOOD. You have seen it advertised too often, seen it endorsed too many times, heard it highly spoken of too frequently, not to know that it IS GOOD, that it IS SENT OUT FREELY as it is advertised, that it does what is aimed for it. Now if you need it, WHY DON'T YOU SEND FOR IT TODAY? With this knowledge before you, how can you delay, wait or refuse? What is your excuse? YOU ARE TO BE THE JUDGE. It is a SIN AND A SHAME if you need it and don't send for it. Do it to-day. Read our special offer.

### AS A BEACON LIGHT

VITAE-ORE points the way for storm-tossed sufferers to a haven of Health and Comfort. If you have been drifting in a sea of sickness and disease, towards the rocks and shoals of Chronic Invalidism. Port your helm ere it be too late, take heed of the message of hope and safety which it flashes to you; STOP DRIFTING about in a helpless, undecided manner; first of one course and then another, but begin the proper treatment immediately and reach the goal you are seeking by the route SO MANY HAVE TRAVELED WITH SUCCESS.

Every person who has used Vitae-Ore is willing to act as a Pilot for you, each knows the way from having followed it; attend their advice. FOLLOW THE LIGHT and be cured with Nature's Remedy as they have been.

## WE WILL SEND TO ALL

Subscribers or readers of UP-TO-DATE FARMING, a full sized \$1.00 package of VITAE-ORE by mail, POSTPAID, sufficient for one month's treatment, to be paid for within one month's time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs and doses of quacks or good doctors or patent medicines he or she has ever used. Read this over carefully, and understand that we ask our pay only when it has done you good, and not before. If not, no money is wanted! We take all the risk, you have nothing to lose. If it does not benefit you, you pay us nothing. We give you thirty day's time to try the medicine, thirty days to see results before you need pay us one cent, and you do not pay the one cent unless you do see the results. You are to be the judge! We know Vitae-Ore and

## WE ARE WILLING TO TAKE THE RISK!

### A MESSAGE FOR EVERY WOMAN

Read What Mrs. Walker Tells of Her Terrible Sufferings. Cured Sound and Hale in Three Weeks' Time.

When I sent for a trial package of Vitae-Ore I was suffering almost death. One doctor told me it was old age approaching, although I am only thirty-nine years old; another said it was caused by a fall which I experienced some time ago, and still another pronounced it female weakness. I suffered terribly for months with pains in my bowels and limbs, and menstruation was very profuse and irregular. At one period I could not sleep for three nights in succession, and had to sit up in bed on account of the terrible pain. I do not see now how I endured the misery. I began to take Vitae-Ore one morning, and at night, after taking but three doses, I rested much more than usual and slept some. When I had taken it for three days my pain and misery were all gone. Now, after three weeks' use of the medicine I feel as well as I ever did in my life. I can pick cotton and ride about on the roads, feeling better every day. I wish I could tell every suffering woman what Vitae-Ore has done for me. I thank the Lord every day that I can live and feel well, so that I can tell others what they can do to cure their suffering.

Mrs. LAURA N. WALKER,  
Arlington, Okla.  
P. O. Box 21.

### FROM THE EARTH'S VEINS TO YOUR VEINS

#### WHAT VITAE-ORE IS

Vitae-Ore is a natural, hard, adamantine, rock-like substance—ORE—mined from the ground like gold and silver in the neighborhood of a once powerful but now extinct mineral spring. It requires twenty years for oxidation by exposure to the air, when it slacks down like lime and is then of medicinal value. It contains free iron, free sulphur and free magnesium, three properties which are most essential for the retention of health in the human system, and one package—one ounce—of the ORE, when mixed with a quart of water, will equal in medicinal strength and curative value 800 gallons of the most powerful mineral water drunk fresh from the springs. It is a geological discovery, in which there is nothing added or taken from. It is the marvel of the century for curing such diseases as

Rheumatism, Bright's Disease, Blood Poisoning, Heart Trouble, Dropsy, Catarrh, and Throat Affections, Liver, Kidney, and Bladder Ailments, Stomach and Female Disorders, La Grippe, Malarial Fever, Nervous Prostration, and General Debility.

as thousands testify, and as no one, answering this, writing for package, will deny after using. VITAE-ORE has cured more chronic, obstinate, pronounced incurable cases than any other known medicine and will reach such cases with a more rapid and powerful curative action than any medicine, combination of medicines, or doctor's prescription which it is possible to procure.

Vitae-Ore will do the same for you as it has done for hundreds of readers of UP-TO-DATE FARMING if you will give it a trial. Send for a \$1.00 package at our risk. You have nothing to lose but the stamp to answer this announcement. We want no one's money whom Vitae-Ore cannot benefit. You are to be the judge! Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it, would hesitate to try Vitae-Ore on this liberal offer? One package is usually sufficient to cure ordinary cases; two or three for chronic, obstinate cases. We mean just what we say in this announcement, and will do just as we agree. Write to-day for a package at our risk and expense, giving age and ailments, and mention UP-TO-DATE FARMING, so we may know that you are entitled to this liberal offer.

Throw Physics to the Dogs and Give Nature and Her Remedy a Chance to CURE YOU.

### BEST DOCTORS FAIL

Had Kidney Trouble for 30 Years, Dropsy 20 Years, and Rheumatism 12 Years. Vitae-Ore Triumphs Astonishingly After All These Long Years of Sickness.

In 1867 I was taken with Kidney Trouble and could not do any farm work. I continued in this condition for so long, although I tried many remedies, that it developed into Dropsy, and I have been more or less in a dropsical state for the past twenty years, at times most alarmingly so. To add to my already heavy burden, I was attacked with rheumatism some 11 or 12 years ago, and this has been with me almost continuously since that time. I had the best doctors in the country, having continually searched and expended money to bring about a cure if such a thing were possible, but all to no avail. I also tried my share of all the advertised treatments, as I suppose every sick person does and must, with the same results. When I first learned of Vitae-Ore I had tried so long and so fruitlessly that I laughed at the claims set forth, but as I investigated further and found that it was not a man-made compound, but a natural mineral ore, mined from a deposit, I grew interested in it and decided to at least give it a trial. I commenced taking Vitae-Ore three months ago still take it, and am now as well and free from all these troubles as I ever expected to be and more. Vitae-Ore is certainly a powerful remedy and I only wish that I had learned of it when it was first placed upon the market. It almost makes me heart-sick to think of all the great suffering, pain and illness I could have saved, and the ability I could have had to do all I wanted to do. No ailing person should pass by the opportunity to try it when it is offered to them.

D. L. STRAIN, Shannon City, Iowa.

## NOT A PENNY UNLESS BENEFITED!

This offer will challenge the attention and consideration, and afterward the gratitude of every living person who desires better health or who suffers pains, ills and diseases which have defied the medical world and grown worse with age. We care not for your skepticism, but ask only your investigation, at our expense, regardless of what ills you have, by sending to us for a package. ADDRESS,

THEO. NOEL CO., Up-To-Date Dept., Vitae-Ore Building, CHICAGO, ILL.

## A Catalogue for Unmarried Men Free to Any Address

SOMETHING NEW. UNMARRIED MEN READ.

A new catalogue containing everything you can possibly need if you are not a family man.

Almost 700 pages devoted to illustrating, describing, and pricing the goods that interest men who are not supporting a household. What does an unmarried man care about curtains, dress goods, millinery, or lace? As an unmarried man, does sewing silk, cut glass, or linen interest you? We have gone through our famous catalogue and buyer's guide No. 73—the catalogue we advertise so extensively for home owners—and omitted everything of no interest to single men. The revised book which we call the Men's Abridged Edition, contains everything for men. Almost 700 pages of reliable, low-priced merchandise. No matter what your occupation is or where you live, you will find just what you need in the Men's Abridged Edition, if you are not a married man. Tools of all kinds, hardware, game traps, bicycles, guns, sporting and athletic goods, camping out-fits, harness, photo-goods, electrical supplies, telephones, band instruments, musical goods, books, watches, and jewelry for men, men's wearing apparel of every description, including shoes, fur ulsters, hats, gloves, umbrellas, etc.—about 60,000 different articles in all.

Simply send a postal and ask for our Men's Abridged Edition and we will send it with our compliments, all charges paid. We want every unmarried man in this country to have a copy of the Men's Abridged Edition. We want every single man everywhere to have one. It will pay you to keep a copy for reference. We have everything you use; the prices are so much lower than those you are accustomed to paying, that you will be surprised. Don't buy tools of any kind, harness, hardware, clothing, or in fact, anything until you have seen the Men's Abridged Edition. Simply send a postal. Ask for the Men's Abridged Edition—we will send it the moment your request is received.

## Wholesale Prices on 125,000 Different Articles

Everything You Eat, Wear or Use—over 125,000 different articles, fully described, clearly illustrated, and plainly priced in our famous Catalogue and Buyers' Guide No. 73.

Fill out the coupon below and let us send you, all charges paid, one of these valuable catalogues, the only complete one published anywhere, the only one that quotes everything you are liable to want, the only one quoting only reliable and honestly made goods, the only one with low prices all through. The third edition is now being printed and can be obtained postpaid by simply filling out the coupon and sending to us with 15 cents as a guarantee of good faith. The book itself costs almost \$1.00 to print and distribute, but we will send it to you with our compliments if you will show us that you mean business by sending 15 cents with your application.

Many firms give their catalogues away free, but such catalogues are not reliable. Thousands are wasted upon children, who simply want to look at the pictures, thousands are sent to persons who are merely curious and have no intention of buying, thousands are thrown away upon persons who refuse to buy because the catalogue is not complete and the prices don't look right. The waste is enormous and low prices cannot be maintained with such terrible losses except by shipping inferior goods. Requiring 15 cents as we do with every application, we place our catalogue only with prospective buyers and avoid the enormous loss due to waste of catalogues. Almost every catalogue brings an order. We have no losses to cover up and can give the highest grade of goods at prices that other firms cannot meet. The 15 cents proves to us that you really want our catalogue and we will gladly send it, paying the necessary 24 cents postage ourselves, and give you a bigger, better and more desirable catalogue than you can obtain from any other firm.

**Ten Thousand Applications Daily**

have been pouring in ever since we announced the publication of Catalogue No. 73 last month. The first edition of our six big rotary presses can print them. We want everybody to have a copy; if you have not already sent us an application, do it now. Get your catalogue in time for the winter buying. Remember our catalogue is the only complete one—no sending for special catalogues; everything you can possibly want is included in the big book.

We have been in business in Chicago for almost 83 years, and now conduct the largest business of its kind in the world. Our daily shipments are enormous, and are only exceeded in this country by several of the larger jobbing houses. We owe our success to our policy of treating all customers honestly, and giving them goods of real merit. We have always avoided cheap trashy goods because we consider it dishonest to sell anything worthless. Over two million customers buy regularly from us because they know we supply honest, dependable goods, treat everybody fairly and make prices that average far lower than those of any other firm. If you have never tried us we respectfully solicit a trial. The way to begin is to fill out this coupon and send to us at once. When you have our Catalogue No. 73 in your possession you will find buying of us both pleasant and profitable.

Co-Operating Farmers of America

PUBLISHED SEMI-MONTHLY  
At 227 West Washington Street

Entered at the Indianapolis  
Post-Office as Second-Class Matter

Volume VII

INDIANAPOLIS, NOVEMBER 1, 1904

Number 21

## UP-TO-DATE FARMING

PUBLISHED TWICE A MONTH

J. A. EVERITT, Editor and Publisher  
JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE FIFTY CENTS A YEAR  
Foreign Subscriptions \$1.00 a Year.  
Three Month's Trial Subscriptions will be Accepted for 10 Cents.  
ALL PAYABLE IN ADVANCE

**Acknowledgement.** The date in connection with your address on wrapper, informs you of the time your subscription expires. **Change of Date** indicates that your renewal was received.

Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."

**Always state if a renewal or new subscription. Don't Neglect This.**

Your Address should always be written very plainly. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R.

**Renewals and Change of Address.** Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

### ADVERTISING RATES

will be quoted on application.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurrence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write.

### TEN (10) CENTS PAYS FOR THREE MONTH'S TRIAL SUBSCRIPTION

Good any time and all the time. If you want to convert your neighborhood to controlled marketing, co-operation and price making, now is your time. \$1.00 or more of your own money cannot be used for a better investment. But you don't need to use your own money. Any neighbor you ask for 10 cents will give it. After reading Up-to-Date Farming three months they will subscribe for a year and join the army of a million now forming.

### Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, below which farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. If those who can hold will hold all, and those who cannot hold all will hold part, then those who cannot hold may market and all will get the price. This is the key to controlled marketing. The world must have your products at your price if it cannot get them at prices made by some other people.

Wheat, No. 2 red, Chicago, per bushel	- \$ 1.20
Corn, No. 2	" "
Until January 1st, 1905,	-.50
From Jan. 1 to Apr. 1, 1905,	-.55
" April 1 to next crop	-.65
Hay, No. 1 timothy, " per ton	- 12.00
Oats, No. 2 white, " per bushel	-.40
Barley, No. 2 " per bushel	-.58
Barley, No. 3 " per bushel	-.52
Potatoes—Chicago, per bushel,	
Until January 1st, 1905,	-.55
After January 1st, 1905,	-.65
Beans, No. 1, Hand-picked, Detroit, per bu.	2.00
Clover Seed, No. 2, Toledo, per bushel	- \$ 7.00
Cotton, New York, per pound	-.12
Broom Corn, Chicago, per ton	- \$75.00 to \$85.00
Hogs, " per cwt.	- 6.00 to 6.50
Cattle, " per cwt.	- 6.00 to 7.50

### SOME PRICES OCT. 22, 1904

Cash Wheat, Chicago,	- \$1.20 to \$1.22 bushel
" Corn, old, " "	-.52½ to .53½ "
" Oats, " "	-.29½ to .30 "
" Barley, " "	-.36½ to .51 "
" Potatoes, " "	-.50 to .55 "
" Cotton, New York,	- \$10.05 to \$10.30 cwt.
" Broom Corn, Chicago,	- 80.00 to 95.00 ton
" Cattle, Chicago,	- 4.50 to 6.20 cwt.
" Hogs, " "	- 4.60 to 5.40 "

Prices for farm products average higher now—the size of the crops considered—than they probably ever did in this country before. This paper claims much of the credit, because it has taught, and urged farmers to control marketing and regulate it to meet only the demand.

## BULLETIN

### The Corn Crop of 1904

National Union of the American Society of Equity

Indianapolis, Ind., Oct. 20, 1904

TO THE CORN GROWERS OF AMERICA:

From many reports received from the members of the American Society of Equity and non-member farmers, and from information gathered from other sources, this society does estimate and proclaim that the total corn yield of the United States for the year 1904 is

**TWO BILLION BUSHEL**  
(2,000,000,000 bushels)

Also this society recommends minimum prices on the basis of the Chicago market for cash corn as follows:

UNTIL JANUARY 1ST, 1905, 50 CENTS A BUSHEL

FROM JANUARY 1 TO APRIL 1ST, 1905, 55 CENTS A BUSHEL

FROM APRIL 1 TO NEXT CROP, 1905, 60 CENTS A BUSHEL

M. W. TUBBS, Act. Sec.

J. A. EVERITT, Pres.

## BULLETIN

### The Potato Crop of 1904

National Union of the American Society of Equity

Indianapolis, Ind., Oct. 20, 1904

TO THE POTATO GROWERS OF AMERICA:

This society, from numerous reports from members, and information from every available source, estimates the potato crop of the United States for the year 1904 at

**TWO HUNDRED EIGHTY MILLION BUSHEL**  
(280,000,000 bushels)

Also this society recommends minimum prices on the basis of the Chicago market as follows:

UNTIL JANUARY 1, 1905, 55 CENTS A BUSHEL

AFTER JANUARY 1, 1905, 65 " " "

M. W. TUBBS, Act. Sec.

J. A. EVERITT, Pres.

# CORN BULLETIN

## Argument to Sustain It

In estimating a crop like corn we admit the impossibility of arriving at correct figures. The figures given by any estimator can be only closely approximate. Then there is the ever present, but uncertain factor of quality and possibility of damage by weather before the crop is harvested and placed in store or market. This autumn has been extremely favorable for the maturing of what was a very late crop. Growers and consumers may congratulate themselves on this condition. Yet on this date there is enough corn not fully matured to represent quite a percentage of the whole crop as soft corn. If hard freezes come soon it will catch this portion, but it is not a quantity so large but that it can easily be fed out on the farms. Also if hard freezes come in a month much corn will be ruined for seed.

The size of the crop, so far as the farmer is concerned, *should not* be of so great concern. A large crop represents very little more outlay in labor and investment than a small crop. One should bring to him practically the same returns as the other, because in either case the amount received for the crop represents his wages for the summer work, returns on his investment, etc. This should be reasonably uniform, season after season. But it has not been so.

By referring to the table below, taken from the year book of the Department of Agriculture, we see that the highest average returns per acre of corn in sixteen years was \$10.96 in 1891, and the lowest return was \$6.06 in 1896. Therefore the farmer who cultivated fifty acres received \$245.00 less for the same effort in 1896 than he did in 1891, while the crops were nearly the same size. To emphasize the contrast, refer to the table again, and you will see that the one crop brought to the farmers \$836,439,000, while the other crop, which was really over 200,000,000 bushels larger, brought them only \$491,006,000, not much more than half as much.

YEAR.	Yield, bu.	Av. price in Chicago	Farm value per acre	Total Farm value.
1903	2,244,000,000	25.5	47	\$ 952,863,000
1902	2,523,000,000	26.8	60	1,017,017,000
1901	1,522,000,000	16.7	50	921,555,000
1900	2,105,000,000	25.3	38	751,220,000
1899	2,078,000,000	25.3	33	629,210,000
1898	1,924,000,000	24.8	32	552,023,000
1897	1,901,000,000	23.8	25	501,072,000
1896	2,238,575,000	22.2	26	491,006,000
1895	2,151,132,000	26.2	40	544,985,000
1894	1,212,770,000	19.4	43	554,719,000
1893	1,619,496,000	22.5	40	581,625,000
1892	1,628,461,000	23.1	41	642,146,000
1891	2,060,154,000	27.0	59	836,439,000
1890	1,489,970,000	20.7	39	754,433,000
1889	2,112,892,000	27.0	34	597,918,000
1888	1,987,790,000	26.3	47	677,561,000

There are many interesting things in this table, and we want farmers to study it. For instance, notice that the smallest crop of corn the country ever raised except one, was in 1901, and that it sold for more money than any crop up to that time. That the largest crop the country ever produced was in 1902, which was one billion bushels more than the 1901 crop, yet it brought the growers only \$96,000,000 more than the short crop. (In considering the figures in the table remember that the total farm value is based on price Dec. 1st, while the average price in Chicago is the average of the year.)

Also notice that 1888 and 1889 were big crop years, 1890 was small, 1891 large, 1892 and 1893 only moderate, 1894 very small, 1895, 1896, 1897, 1898, 1899, 1900 were large, 1901 small, 1902, 1903 and 1904, the present year, large. It is altogether likely, since we have had three wet seasons and three large corn crops in succession, that next year will be smaller, but the consumption has increased to such a great extent that a crop of two billion bushels now is no larger relatively than one billion, six hundred millions was ten years ago. Three crops in succession around two billions of bushels does not in any sense represent an over-production, and every bushel of the pres-

ent crop will be consumed at a fair price if farmers will hold for it.

Corn is peculiarly an American product and of American consumption. We find that our greatest export was 212,000,000 bushels in 1897. We look for a greater export demand this year, however, because of the great drought in Europe and consequent short crops.

We urge farmers not to let their 1904 crop of corn go except at fair prices. The minimum prices set by the A. S. of E. are fair and equitable. If they err in any way it is in being too low. What other class of people would expend the amount of labor the farmer does to produce an acre of corn for such a small money return? They are few. True, there are a great many farmers who raise near 100 bushels per acre. But the average farmers are in the majority, and they represent the average yields. Hence, when we work for the good of any people, we must look at them on the plane of the average. This movement is to give the average corn grower, the average farmer, a fair show.

Corn growers everywhere are urged to keep the prices in mind and to communicate them to their neighbors, and write of them to their distant friends and relatives. We cannot do too much for the farmers. They cannot be too prosperous, as is the degree of their prosperity, so also other classes will prosper. Members of the A. S. of E. and readers of Up-to-Date Farming should not be alarmed if the price should go below the minimum prices at the start as there will be a great many corn growers who will not hear of the price. But remember, those who hold will get the prices.

It is in the air—controlled marketing.

Up-to-Date is showing the people how to get there.

Price first; yield second. That is the proper order.

So certainly have farmers shown that a falling market is the one most patronized by them, that whenever large packing houses wish to stock up, they start the prices downward, and in comes the stock. In all other lines of business you have to put up the price to get the commodities. But farmers will learn.

Farmers are in greater need of education in how and when to market than in any other lines. Whenever the market takes a downward turn every farmer wants to rush his stuff in. What could be more suicidal from a profit standpoint? The worst of all markets to sell on is a falling market, and yet that is the market that gets the stuff.

Out in the field cutting corn, you could not get a single stalk to stand, could you? But when you put several together and braced them one with the other, you soon had a shock that stood firmly. It is just so with the farmers themselves. One standing alone is very weak and tottering, but many of them together, standing by and supporting each other, form a union invincible.

We have recently been out among the F. M. B. A. That is a great organization, capable of doing wonderful good among such farmers as desire a secret society, but somehow it has got into ruts, and fails to reach out after the world of unorganized farmers. It is made up of good people, splendid, progressive people, but, narrowed down to a few counties, they are powerless to achieve great results. Any movement to succeed nationally must have broad-minded, capable persons to direct it—persons who know how to reach out into the nation and achieve national results. This we sincerely hope they may have.

## Explanatory

Through inability to prepare the article announced in Oct. 15th number, viz., "The Proposal by the Russian Government to Maintain Profitable Prices on the Chief Farm Crops," it does not appear in this issue, but will appear later.

## On to Lynchburg, Va.

Readers, and tobacco growers in particular, must not forget the convention at Lynchburg, Va., Nov. 10th and 11th. Members should conclude to attend on their own account, while local union should appoint delegates at once if not already appointed. The object is to agree on prices for the 1904 crop of tobacco.

For a single paper to revolutionize the thought of a nation in any one line, is something of an achievement certainly. Up-to-Date has done that so far as marketing farm products is concerned.

"The market is largely in Armour's control at present." So says a recent letter referring to the wheat market. Armour controlling the wheat market? We thought the knowing ones said supply and demand controls the market. A-r-m-o-u-r is a queer way to spell supply and demand.

There are now three great tobacco manufacturing companies, and these, it is said, are to combine to stop competition. What's the difference so far as the grower's market is concerned? He don't have to sell until he gets his price, and then it don't make any difference to him whether he sells to one company or a dozen.

Don't you believe it is your duty to get subscribers for Up-to-Date Farming? We can write, and the printers can print, but unless we can get it in the hands of the people so they can read it, what good will it all do? Our work costs a heap of money (people must be paid for their labor), while yours costs only a few words and a short letter. We must do ours whether you do yours or not, but will not you do yours also, and give this cause a great boom?

Persons of no great experience may easily imagine that it is no great matter to get up a newspaper, and we have known persons who could scarcely write a postal card think they could edit a paper to beat the London Times or New York Tribune. It costs just as much to get a paper that has neither ability nor influence as it does to get one that speaks in words of wisdom and tones of command to half a million people. This brings up a question which ought to be very easy to decide.

You can't boil the water in a kettle by building a fire upon the top of it. Neither can you bring about a great reform by beginning among the "big bugs" who think they have already reached the top. This was exemplified at the recent meeting of tobacco growers at Guthrie, Ky. There were the ex-governors and the ex-other people, who refused to hear the simple story of controlled marketing, the gospel of the farmer's industrial salvation, but as in the days of Christ, the "common people heard it gladly."

Speculators are trying hard to force down the price of wheat by claiming that all other crops are bumper crops. But farmers were not brought up in the fields to be scared at the screech of an owl. The other crops are not all bumper crops; some of them are not even large crops. But what if they were? That is no reason why the wheat grower should not be properly paid for his grain. It is not the purpose to take advantage of the situation and make extortionate prices on any commodity, but if the farmer does not hold on to his wheat, his cotton, his corn, potatoes and other crops until he gets reasonable prices for them, he is living below his privileges, and should never grumble if he be called upon to travel stony paths.

# National Crop Conventions

## How Prices May Be Intelligently Made and Positively Maintained

The closing year has been prolific of important lessons. Price-making and marketing have been studied by the rural population as they never were before, and it has been proven that the producers of farm products can control the market and make and maintain prices. The remaining lesson to learn is the best way to do it. The American Society of Equity is not a stickler for methods. It set out to prove that the farmer need not trail along after all other classes, that he need not look from his toil-worn fields to see everybody else putting prices upon the work of his hands while he alone must toil on, aimlessly, almost hopelessly, and accept for his products whatever the buyer chose to offer. We have accomplished that purpose. We have proven that the farmer, though a toiler, is abreast of other toilers, that he possesses every right that belongs to others, and that from the very nature of his products, food and raiment for the race, his is the vocation which makes all other vocations possible, and without which none of the others could be. We have demonstrated that, by a simple act of ordinary business, he can secure these rights which he has so long waived in the interest of others, and for himself make and secure profitable prices upon whatever he produces that may be needed by his fellows or their domestic dependents. It only remains, as we have said, to determine the best way to do this.

The methods adopted for other great purposes, and the successes achieved, point to a national convention—a convention of wheat growers, of corn raisers, of cotton planters, of tobacco raisers, of fruit growers, of live stock men—of every great agricultural interest. Assembled thus we may pattern after the political conventions, and act through committees. Not only supply, demand, market and price may be considered, but other questions affecting the industry may be discussed, making the convention an annual summing up of the lessons and experiences of the years, and of suggested advancements for the year to come.

Who can calculate the benefits that would result from such conventions, and who would be better qualified to make equitable prices upon the various products than such a convention of the producers of them, acting primarily through a committee of the most intelligent, most conservative, and most judicious of them all? Such action ratified by the convention, would go to the country with a force, and be received with a confidence that no other action could claim, unless it were the action of the government itself, and it is questionable whether even that would carry with it so great a weight of confidence.

But would such action be accepted by the masses of the various lines of production? We may reason from analogy, and say emphatically YES. And this is a good year in which to say so, because the proof is so near at hand.

The national conventions of the political parties but recently met. They adopted platforms that had never been considered for a moment by the masses, and in most instances named candidates that had not previously been spoken of. In only one case was the candidate a reasonable certainty, in another he had been mentioned and discussed, but he was followed to the convention by the fiercest opposition. In all the other cases the candidate was absolutely unknown and unthought of. Yet the wires had scarcely cooled from the flash that told the news, when the respective party masses accepted the result as their own act—the platforms as being the embodiment of their most sacred principles and profoundest convictions, and the candidates as being the ones of all others whom they most delighted to honor. Can it be said that people so intelligent as those of America

than they are to their political parties, which, laud them as you may, are but ephemeral aggregations gathered around some fancied purposes, and whose principal if not only beneficiaries are the few that may obtain office? We do not believe it. Give the American people a chance to rally around the standard of their own prosperity—the foundation of their homes, the welfare of the families, the success of their calling—and they will do it with an enthusiasm and unanimity that will put every doubter to the blush and every enemy to flight.

What of a penalty? No penalty will be needed but the penalty of privileges abused, opportunities neglected, and wilful loss. What incentive? The incentive of benefits, of just reward for toil, of an honorable place among men, of a home established and a family provided for—the incentive of honest and honorable prosperity. The voter that ignores his party action is a "bolter," the laborer that refuses to recognize the union is a "scab," the farmer that would not accept the work of a convention of his kind would be—the future must coin the word. The lessons and successes of this year point to a full accomplishment of these great purposes next year.

### Blind Teachers of the Blind

There is a revolution in the agricultural thought of the country, and the agricultural press must change front, as must also the agricultural schools and colleges, if they meet the new requirement. "Raise more and cheaper crops," will no longer be accepted as the keynote of agricultural education, and teaching that shall bring the farmer more nearly abreast with twentieth century conditions must be substituted for it. Papers that are to meet a welcome in the farmers' homes must teach better marketing as well as better production—must show farmers how to get remunerative prices rather than how to secure increased yields; and the schools that satisfy rural aspirations must teach how to dispose of crops at a profit as well as how to grow them.

Farmers will no longer plow and plant and harvest in blindness, nor will they longer follow those who lead them as they have been led so long, into the snares of the despoiler. A press that has for a hundred years taught how to grow things only to increase the gains of those who produce nothing but arrogance and insolence, must turn their attention to better things or find themselves without rural support. And the same thing may be said of the school. Henceforth farmers will accept only that line of thought and teaching which points to better and steadier markets—to profits as well as production.

### Size of Crop Not a Factor

Farmers do their best to raise large crops, and yet as a favorable season advances and they see their hopes realized, they begin to have misgivings and deprecate their own success. "There will be so much raised it won't be worth anything!" "Yes, we are having a good crop, but it won't bring anything!" Such expressions are common among farmers during good crop years. All have heard them, and many have used them. Farmers actually dread the thing they most earnestly seek. This makes farm life a constant period of doubt, if not of depression. When farmers plant they fear an unfavorable yield. This fear removed by promising conditions, they dread an excessive crop and unprofitable prices. Hence the farmer lives a life of struggles, of fears, and of contradictions.

But this is made so by the old system of marketing, the system that gives into the hands of others not only the making of the prices, but the farmer's life, his hope, his fate. Under the true system of marketing, the system that makes the farmer an independent factor in the great field of human effort, and guarantees to him the stability and certainty that alone makes other callings possible, the size of the crop is not a factor in determining the price except when the yield, on account of untoward conditions, is driven below the normal. Then the lack of supply justifies an increase of price to compensate the farmer for misfortunes and losses for which he is in no way responsible—enables him to divide those losses with a world he feeds and clothes.

But an excessive crop need no longer be dreaded as "too great a blessing," for controlled marketing maintains the price, and insures the farmer remuneration for his toil, at the same time giving to the world "each day its daily bread" at prices no greater than it is accustomed to pay. Under this system, the system which right and justice and fair dealing approve, the farmer may sow in hope, reap in confidence and sell in the assurance of just reward. Under the present or old system, the system of speculation, gambling and option swindling, the system that has prevailed so long, he sows in doubt, reaps in uncertainty, and too often sells in despair. Choose ye this day which ye will have.

### Planters Holding Cotton

A recent dispatch from Jackson, Miss., entirely independent of the information we get from A. S. of E. sources, declares that "the movement among the farmers of Mississippi to hold back their cotton until they can get 10 cents per pound or better has become so general that the merchants at many interior points are complaining of the dullness of trade caused by the movement. The farmers, they assert, are not spending money with the freedom usual at this season of the year, and as a result their sales show a sharp decline. The movement seems to be rapidly spreading among the cotton growers in the State, and receipts at interior market points are daily growing less, despite the fact that the crop is being rapidly harvested. Much cotton is being hauled to town, but it is not offered for sale, being stored in warehouses, while the farmer borrows enough money from the bank to mete his pressing needs, if it happens that he has no supply of ready cash. Many of them, however, are independent of the banks, having cash deposits sufficient to meet their obligations."

That is confirmatory of the information which reaches us from our own official sources, and shows how effectively the cotton market is being controlled by the planters, and how deeply the doctrines of the A. S. of E. and Up-to-Date Farming have already taken root throughout the country. There is no question as to the efficiency of this method of making and maintaining prices, nor of its importance to agriculture.

No development in the cotton situation has yet led to any doubt as to the justness of the minimum price of 12 cents per pound for middling cotton at New York, fixed by the National Union, A. S. of E., in the official Cotton Bulletin. Twelve cents in New York ought to mean not much less than 11 cents in any of the local markets of the South, and not a pound of good middling cotton should leave the farms at a price lower than that. This is truly the time for the planter to step to the front and stand firmly upon his rights.

Wheat has already reached \$1.20, cotton has been within a few points of 12 cents, and all the other crops are pointing toward the minimum prices. The organized farmers may well congratulate themselves, and the unorganized ones should hasten to become organized. Self-interest (not necessarily selfishness) is a justifying motive.

**[THE THIRD POWER, (Farmers to the Front)]** is a book of 275 pages, by J. A. EVERITT, President of the American Society of Equity. It began in June 15th issue and will continue until completed. Back numbers may be obtained by embracing the special three months offer in this number for 10c. The book may be obtained complete at \$1.00 in handsome cloth binding, 50c in paper cover, 10c extra for postage. Send orders to the publisher of UP-TO-DATE FARMING.]

## CHAPTER XXI.

Much is said about the dangers of a strong government. But surely no one will deny that the government ought, at least, to be stronger than any citizen or combination of citizens. The power of all must be stronger than the power of less than all. Otherwise we shall have the rule of the many by the few, which is abhorrent to American ideas. So we shall have a government strong enough to prevent one man from injuring another. And it will make no difference how rich and powerful the would-be injurer is. In no other way than this can justice and equity be secured. The government must first itself be just, and then it must, standing above and outside of all classes and cliques, impose absolute justice upon all. We all know that weak governments can not do this. A feeble ruler is always, and of necessity must be, an unjust and oppressive ruler. In order to maintain himself he is forced to seek the support of the rich and powerful or of certain classes of the rich and powerful, and to win their support he must favor them at the expense of the rest of the community. A study of the history of the South and Central American republics will show that this is true. To be just, a government must be great and strong, owing no favors to any one, and granting none to any one.

To this extent, then, we intend to have a strong government in this country. Putting the case in the other way, surely no one will say that it should be less strong than even the most powerful citizen, or combination of citizens. We want all the people—and not some of the people—to rule all the people. And this, and this only, is self-government. We may then start with the certainty that the success of the American Society of Equity and the triumph of the Third Power will mark the end of class rule and of the favoritism that has grown out of it. Thus we shall have justice and the destruction of all motives that lead men in power to be guilty of injustice. Surely that will be a great gain. Of course it would be foolish to attempt to say what such a government might do, for it could do whatever it pleased to do. What it pleased to do would depend wholly on the will of the people. It is conceivable that the new system might develop along socialistic lines, and that the central authority might interfere more than it does now with what we call private business. Yet there is no tendency to the confiscation of property nor anything that will check enterprise, nor limit ambition or kill incentive to efforts. But if two classes of citizens got into a controversy causing inconvenience and loss to the whole community, it is very probable that all the people, acting through their government, would intervene to protect themselves and to end the quarrel. The Interstate Commerce Commission even now may say that a certain railroad rate is unreasonable, though it may not fix a reasonable rate. Under the new order the nation might do the latter thing—and it would be no very great extension of power. If it were found that the butchers were charging prices for meat out of all proportion to the cost of the cattle that they bought—as they have been known to do—the government, in the interest of all, would almost certainly order the

price to be reduced. The coal strike of 1902-3 could have been ended before the evil effects of it were felt outside of the neighborhood where it started; and who will claim that immeasurable suffering, inconvenience and financial loss all over the country should be endured just because a few miners and operators disagree? If a government is not for this purpose, pray, what is it for? In the controversy, which it has been suggested might arise between the farmers and the consumers as to the price of farm products, the government would impose its just will on both parties to the quarrel and see that a fair and reasonable price was established. In a word, it would instantly ally itself with all the people as against any class that was seeking to win for itself an unfair advantage at the expense of society. As it is now it allies itself with a given class against the whole body of the people. Thus that situation would be entirely reversed.

But, it will be asked, could such a government be trusted? Certainly it could be if the people can be trusted to govern themselves, as we all pretend to believe. And when we say that we believe in the principle of self-government we do not mean that we think that the people are infallible, and so incapable of making mistakes. What we do mean is that the people are honest, intelligent, swayed by good purposes, and are much better fit to govern themselves than any man is to govern them. We mean further that they will be much more patient under their own mistakes than they could be under the mistakes of any one else. They would recognize that the hurt came from themselves, so as there would be no one to punish there would be no basis for discontent or revolution.

It would, to be sure, still be necessary to decide questions of policy by a majority vote, and the danger of a tyranny by majority would not be wholly removed; but it would be greatly lessened. For we should have in government something of that co-operation which it is designed to introduce in the business of production. The government would be more directly by the people and less by the delegated agents than is now the case. And the overwhelming preponderance of the farmers would strengthen and broaden the foundation of government and would give many more people an interest in it.

Thus the American Society of Equity, merely by calling attention very sharply to the grievances of the farmers, who constitute the largest class in the country, and without having anything directly to do with politics, may be expected to transform our government by restoring it to its first and highest estate.

What does it matter if mistakes are made? They are made now. The people are quite as wise as the politicians and ringsters who now bear rule. And surely the politicians ought to be willing to admit that people wise enough to put them in power are very wise indeed. To hear the defenders of the present system talk you would think that presidents and congresses were never corrupt or wicked or incompetent or foolish. They compare the new scheme with an ideal system, and because it does not measure up to it they condemn it, forgetting that neither does the old system measure up to the ideal. Yet it must ever be borne in mind that we do not advocate any new system—no patent device or trick. What is advocated is old enough, namely, a government which shall be controlled by the people and not by the agents and servants of the people—a strong government, that will protect its citizens and afford that protection quickly—an equitable government, that secures justice for all. This is the true American theory from which, however, we have widely departed.

One thing which it is desired to secure is new in human governments, and that is justice. If that can be gained all will have been gained. Is it beyond our reach? For ages men

have longed for it and struggled for it, but it has always gleamed just ahead of them, and they have never been able to reach it. Is it now at hand? Not ideally or in its fullness, perhaps, for this is an imperfect world of imperfect men, and selfishness is hard to kill. But substantially it can be secured. It can be secured, but only in one way—by enlisting selfishness (self-interest) in the struggle for it. If we can make a large majority of men see that it pays to be just, that they cannot have justice themselves unless they are prepared to concede it to others, they will be as zealous fighters against injustice as are the most unselfish and idealistic of people. Men have in the past tried to eliminate selfishness. Now the purpose is to use it on the side of righteousness. The appeal must be made to the intelligence and self-interest of men as well as to their conscience. It ought not be difficult to make sensible men understand that they would win more by freely yielding to every other man his rights than they could ever hope to win in a fierce scramble for unfair advantages in which they are as likely to be hurt as they are to hurt their brother. The farmer's cause will not be promoted—the Third Power will not rise—on the ruin of other enterprises, but by building up alongside of them will strengthen every other legitimate business and institution.

A great economic writer has given us an allegory showing the wastefulness of a foolish and unenlightened selfishness. He once saw a cage of monkeys being fed. A plate full of food was placed before each monkey, but each one of them, instead of eating from the plate before him, widely grabbed for the portion of his neighbor. And in the scramble much of the food was lost. What is suggested here is that each man should eat off his own plate and leave his neighbor to consume his meal in peace. Thus all would get enough, and the decencies would be maintained. Society at the present time is very like the cage of monkeys. In both cases there is selfishness, but it is of the silly kind. Surely we can order things better. If we cannot, we might as well confess that self-government is a failure, nay, that men are not fit to live together in organized society.

## CHAPTER XXII.

Such is the argument in favor of the proposed society. For further details as to methods of organization, and rules for government of the society, I refer to the appendix in which the constitution, by-laws, regulations and other details are set forth explicitly. And these have to do directly with another exceedingly important question. Some farmers may say that such a combination would be very desirable, that it would accomplish all the things I have said it would accomplish, and that in every way it would be a good thing for the farmers and the people. But they may ask: Is the plan practicable? This is the great question which reformers always have to answer, and, of course, it is right that they should be required to answer it, for it is to the test of practicability that everything must be brought. A flying machine would be most useful—if it would work. But unless a device of this sort will work there is no sense in paying any attention to it. Always there is this terrible test. Can the American Society of Equity stand it?

I have not, in what has been said, passed over this question. For it has been shown that organization is the law of industrial progress; that other industries are organized; that all the forces of our civilization are tending toward a closer unity among men; that the farmers have combined successfully already (witness the Grange, Alliance, Farmers' Mutual Association and others), and that every change for the better that has taken place in the farmer's condition—his greater intelligence, his growing sense of dependence on others in the same line, his closer association with others through the medium of frequent mails, telephones, trolley lines, the growth of cities and towns in the rural regions, and his greater use of machinery—all point the way to organization, and make it necessary, easy and inevitable. The American Society of Equity is thus working along natural lines and in co-operation with natural forces. So the argument in favor of the possibilities of organizing by this plan is reasonably strong as it now stands. As to its practicability and durability, these depend on the benefits it gives. But a little closer and

more detailed examination of it may serve to allay the doubts of the more timorous and conservative. Of course, the great objection is that the scheme is too large and involves too many men. Organization, it is said, is easy when only a few people are concerned, but it is exceedingly difficult when it becomes necessary to take in millions of people, living in widely separated sections of the country, but this objection is based, not on the impracticability of the plan, but on the difficulty without conceding its impossibility. It will undoubtedly be harder to organize the farmers in such a way as to secure united action from them than it is for two men in the same city to form a commercial partnership; but the one is no more impossible than the other.

Surely the farmers in a certain neighborhood can organize without much trouble, and they can agree to abide by certain rules. They have done so and are doing this every day. So of the farmers in another and adjoining sections. Thus far the case is plain enough. If, therefore, the farmers in any given county have organized in the American Society of Equity—and they have in many—does it not follow that they can organize in other counties until a state is organized? If one State can organize another can. In fact, all the States can. If the farmers in the United States can organize (and they have more than once, but on very poor plans), the farmers in Canada can organize, where the needs are as urgent and the conditions are very similar. Now if the farmers in American can organize on this new plan of the American Society of Equity, and for the beautiful and meritorious objects for which it stands, does it not follow that the farmers of Europe can organize, particularly since they need organization even more? I do not admit the necessity of organizing the farmers of Europe to accomplish all the objects of the American Society of Equity in this country, but organization there will follow. It will be a spontaneous lifting up or following in the lead of the American farmers until they are on the same level. There is not a step in the process which may not be easily taken. Indeed, the work has already been begun and is now going forward with great rapidity. It would not be too much to say that the organization has already been effected. The problem is not one of the creation, but of the extension of the organization. That the organization can be formed has already been demonstrated. But there is another question which may give trouble to some people, and that is, Will the organization work? Unless there is good reason to believe that it will not, we are almost justified in asserting, even in the absence of affirmative proof, that it will, since the presumption is so strongly in its favor. At any rate we may say that the only way to find out positively whether or not it will work, unless it can be absolutely demonstrated that it will not work, is to try it. The man who builds a flying machine does not hesitate to put it to the test. Many men were sure that no ship could ever cross the ocean under steam. Yet when the trial was made it was found that the doubter was mistaken. So it is here. There is, as I believe, a great, new machine. That it can be built has already been proved. Now we want to know whether it will operate. The machine is being built for benefits. We will leave you to judge if the plan as explained does not provide for every needed timber, all the wheels, levers and cranks; is there a nut, screw, bolt, rivet or nail lacking? Don't it look that all that is needed is the co-operative help of one million American freemen to man it, when it will start and continue forever to supply the needs of the entire agricultural needs of this greatest of countries? In order to be sure either that it will or will not work we must give it a trial.

We have seen what it would accomplish, assuming that it will work. Are not these objects worth taking some risk—especially when the risk is so slight to secure? If the machine breaks down the loss to each individual will be inappreciable; if it moves, his gain will be tremendous. You risk infinitely more on every crop you put out or every head of live stock you put in the stall, not knowing whether you will get your money back or not. If the machine works, it will insure you a liberal return for every dollar invested, or every hour employed in all future time. But why should it not

(Continued on Page 19.)

# Nine Nations

**Now Use Liquozone. Won't You Try It—Free?**

Liquozone is now used almost the world over. Peoples half-the-world away from you are curing their ills by it. And so are people next door to you—your neighbors, your friends. Won't you ask some of them what Liquozone is doing? Then ask us for a bottle to try?

Liquozone is so new that few people realize how many millions are using it. One year ago it was almost unknown in America. Now nearly half the people you meet—wherever you are—know some one who Liquozone has cured.

Don't you realize that a product which has spread like this must have remarkable merit? We have never asked a soul to buy Liquozone. We have published no testimonials, no evidence of cures. We have only asked the sick to let us buy the first bottle—to let the product itself show what it could do. Those sick ones told others, and the others told others. That is how it has spread.

Won't you do as those millions have done? If you are still using medicine for what medicine cannot cure, won't you learn what others know about Liquozone? Won't you let us pay the cost of your test?

## Not Medicine

Liquozone is not a medicine. It is not made by compounding acids or drugs, nor is there any alcohol in it. Its virtues are derived solely from gas—largely oxygen gas—by a process requiring immense apparatus and 14 days' time. Each cubic inch of Liquozone requires the use of 1,250 cubic inches of the gas.

Liquozone is the result of a process, which, for more than 20 years, has been the constant subject of scientific and chemical research. The main result is to get into a liquid, and thus into the blood, a powerful, yet harmless, germicide. Another result is to create a vitalizing tonic with which no other known product can compare.

## Acts Like Oxygen

The great value of Liquozone lies in the fact that it does what oxygen does. Oxygen is the vital part of air, the very source of vitality, the most essential element of life. It is the blood food, the nerve food, the scavenger of the blood. It is oxygen that turns the blue blood to red in the lungs; that eliminates the waste tissue and builds up the new. Too little oxygen always causes lack of vi-

talidity. An excess of it gives strength to every function of Nature.

Oxygen is also a germicide. The reason is that germs are vegetables; and an excess of oxygen—the very life of an animal—is deadly to vegetable matter.

Liquozone acts like oxygen. But it does more than oxygen, because it is stable. It carries its virtues into the blood to go wherever the blood goes. It is a remarkable tonic—the best thing in the world for you. Yet it is a germicide so certain that we publish on every bottle an offer of \$1,000 for a disease germ that it cannot kill.

The discoverer of Liquozone has solved the great problem of killing germs in the body, without killing the tissues, too. And there is no other way. Any drug that kills germs is a poison, and it cannot be taken internally. Liquozone is the only way that any man knows to end the cause of any germ disease.

## We Paid \$100,000

For the American rights to Liquozone; and the British rights sold for a like sum. That is the highest price ever paid for similar rights on any scientific discovery.

We tell you this fact because it best indicates the value of Liquozone. Claims are easily made, but men of our class don't pay a price like that save for a product of very great worth to humanity.

Before making this purchase, we tested Liquozone for two years through physicians and hospitals in this country and others. We tried it in all kinds of germ diseases, in thousands of the most difficult cases obtainable. We saw it cure hundreds of sick ones with whom everything else had failed. And we saw many a patient brought back from the verge of the grave by it.

We proved, to the satisfaction of the best physicians, that in germ troubles Liquozone did what nothing else could accomplish. We proved it to be of more value to sick humanity than all the drugs in the world combined. Then we staked our fortunes and our reputations on it.

Every member of this Company

uses Liquozone daily in his family to prevent sickness, and millions of others are learning to do likewise. Liquozone is employed by hospitals everywhere, and by hospitals everywhere, and by the physicians of nearly every nation.

Now Liquozone is more widely employed than any medicine ever was. And no one can doubt that it is doing more for sick humanity than all the drugs in use combined.

## Germ Diseases

These are the known germ diseases; all due to germs, or the poisons which germs create. These are the diseases to which medicine does not apply, for drugs cannot kill inside germs.

All that medicine can do for these troubles is to act as a tonic, aiding Nature to overcome the germs. But those results are indirect and uncertain. They depend on the patient's condition. When drugs were prescribed for these troubles, nobody knew of germs. Now every good physician knows that they call for a germicide.

Liquozone alone can destroy the cause of these troubles. It goes

wherever the blood goes. No germ can escape it, and we have found no disease germ which can resist it. Diseases which have resisted medicine for years yield at once to Liquozone, and it cures diseases which medicine never cures. In any stage of any disease in this list, the results are so certain that we will gladly send to any patient who asks it an absolute guaranty:

Asthma	Hay Fever—Influenza
Abscess—Anæmia	Leucorrhœa
Bronchitis	Kidney Diseases
Blood Poison	LaGrippe
Bright's Disease	Liver Troubles
Bowel Trouble	Malaria—Neuralgia
Coughs—Colds	Many Heart Troubles
Consumption	Piles—Pneumonia
Colic—Croup	Pleurisy—Quinsy
Constipation	Rheumatism
Catarrh—Cancer	Scrofula—Syphilis
Dysentery—Diarrhea	Skin Diseases
Dandruff—Dropsy	Stomach Troubles
Dyspepsia	Throat Troubles
Eczema—Erysipelas	Tuberculosis
Fevers—Gall Stones	Tumors—Ulcers
Goitre—Gout	Varicocele
Gonorrhœa—Gleet	Women's Diseases

All diseases that begin with fever—all inflammation—all catarrh—all contagious diseases—all the results of impure or poisoned blood.

In nervous debility Liquozone acts as a vitalizer, accomplishing what no drugs can do.

## One Full-Size Bottle Free

If you need Liquozone, and have never tried it, we ask you to send us the coupon below. We will then send you an order on a local druggist for a 50c bottle, and will pay the druggist ourselves for it.

We have already done this with 1,800,000 people and it has cost us over one million dollars to announce and fulfill the offer. Don't you realize that a product must have wonderful merit when we spend \$1,000,000 just to let the sick try it?

That is our only method of making Liquozone known. We publish no testimonials; we tell you of none it has cured; we use no physician's endorsement. We prefer to ask you to try it, at our expense. Then judge for yourself what it does.

If you have already used Liquozone, this offer, of course, does not apply to you. But if you have not used it—if you don't know its results—please

send us this coupon to-day. Do that in justice to yourself. The acceptance of this offer places you under no obligations; and it will introduce to you a product better than anything else in the world for you.

### CUT OUT THIS COUPON

For this offer may not appear again. Fill out the blanks and mail it to the Liquid Ozone Co. 458-464 Wabash Ave., Chicago.

My disease is .....  
I have never tried Liquozone, but if you will supply me a 50c. bottle free, I will take it.

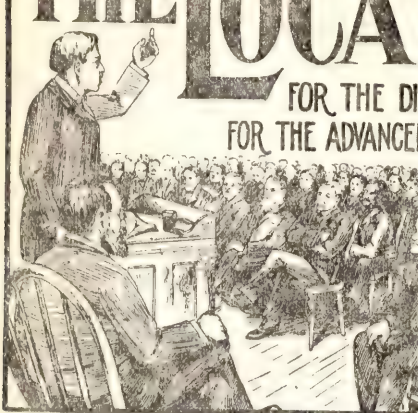

M 115 Give full address—write plainly

Any physician or hospital not yet using Liquozone will be gladly supplied for a test.

# THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS  
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

## THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

### The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

### The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shaped the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where co-operation may be facilitated and strengthened thereby

### County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

### The Emblem

of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

### The Membership Fee

Is \$1.00, and each member is entitled to receive a certificate and manual, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, one year, paid for by the National Union.

### The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc.

It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. They are supplied on gummed paper and on tags.

## NOMINATIONS

The following named persons have been placed in nomination for the offices named in the National Union of the American Society of Equity. The requirements, as published, that all the officers should be in a position to give their time to the affairs of the Society operated against a large number of nominations being made. Also delay in mailing October number containing blank for nominations had an effect. The delay was caused by an accident to our new press. The election will be held at headquarters in Indianapolis, December 8, 1904. A ballot will be printed in Nov. 15 and Dec. 1 issues of this paper, which can be voted by an individual or by a local union. If by a local union the number of members voting must be indicated.

### FOR PRESIDENT.

J. A. Everitt, of Indianapolis, Ind., present officer.

### FOR SECRETARY.

M. W. Tubbs, Indianapolis, Ind. Mr. Tubbs has been acting Secretary of the Society for a year because the elected Secretary resided in Illinois, and it was impossible for him to leave his home and business.

J. H. Harpster, Millersburg, O. Mr. Harpster has been a deputy president for a number of months. He has done good service for the Society. He is also a publisher of a newspaper.

### FOR TREASURER.

Andrew Smith, Indianapolis, Ind. Mr. Smith is Vice-President of the Capital National Bank of Indianapolis, and eminently qualified for the position. He is an energetic man and can be of much service in directing the affairs of the Society. The former Treasurer, Mr. Miller, does not seek a reelection on account of numerous business enterprises that prevent him giving the time necessary for the Society.

### FOR NATIONAL ORGANIZER.

Hon. H. B. Sherman, Greensburg, Ind. Mr. Sherman is known to a great many of the members. He has been active in the work of the Society from the time of its organization. He has visited several States and addressed meetings but his greatest efforts and most notable victories are in evidence in the tobacco districts.

George G. Winans, Lakeland, Mich. Mr. Winans is and has been State Organizer for Michigan. His name has appeared in this paper frequently, and he scarcely needs an introduction. Suffice it to say that if it is the will of the members of the A. S. of E. to elect him National Organizer, he is sure to fill the office with credit.

### FOR GENERAL COUNSEL.

Mark P. Turner, of Indianapolis. Mr. Turner is present counsel.

### FOR VICE-PRESIDENTS.

The following active workers in the cause of Equity have been placed in nomination for Vice-Presidents to represent their respective States. They all come well recommended, and the records in the office of the National Union show results entitling them to the honor. They are all farmers or are very closely identified with farming, and have the interests of the Society deeply at heart. Nearly all of them have had experience in organizing local unions and will work untiringly to build up the Society. The nominations follow:

Alabama—John W. Green, Clarence.  
Arkansas—J. R. Johnson, Crossett;  
C. C. Simpson, Russellville.  
California—J. W. Bultett, Bishop.  
Colorado—Jacob Gilstrak, Lansing.  
Florida—A. R. Carhart, Bartow.  
Georgia—W. E. Johns, Tifton.  
Idaho—W. F. Ringer, New Plymouth; W. H. Light, Moscow.  
Illinois—C. O. Drayton, Greenville;  
H. C. Potthast, Hookdale.  
Indiana—H. B. Sherman, Greensburg; G. W. White, Boonville.  
Indian Territory—Sam J. Hampton, Durant; W. H. Winters, Wister.  
Iowa—Walter Newby, Woodward;  
Don M. Leach, Ackley.  
Kansas—A. S. Cook, Chitapa; J. W. Stinson, Beaver.  
Kentucky—Hon. D. T. Hamill, Guthrie; F. B. McCann, Kirkmansville; Jas. W. Lee, Morganfield.  
Louisiana—J. C. Williams, Walker.  
Maryland—Chas. C. Willson, Queens-town.  
Michigan—Milo E. Marsh, Lansing;  
A. J. Andrews, Schoolcraft.  
Minnesota—W. C. Webber, Rochester.

Mississippi—T. J. Wash, O'Neals.  
Missouri—C. E. Dothe, Argo.  
Montana—M. H. Poole, Geyser.  
Nebraska—D. Phillips, Pool Siding;  
John Kutsch, Sr., Pool Siding.  
New Hampshire—Wm. E. Smallcon, West Rochester.  
New Jersey—S. W. K. Sexton, Wrightstown.  
New York—A. T. White, Macedon.  
North Carolina—J. B. Lutz, Newton.  
North Dakota—Chas. H. Olive, Reno;  
Mrs. A. V. Dennis, Lansing; Ole Oakland, Balton.  
Oklahoma—R. H. Molden, O'Kenne;  
A. Wood, Sayre.  
Ohio—Chas. H. Newton, Amanda;  
Wm. Borchers, Amanda.  
Oregon—C. S. Hammond, Newberg.  
Pennsylvania—J. C. Everitt, Watson-town; John J. Erford, Carlisle.  
South Carolina—J. Lewis Lee, Conway.  
South Dakota—Walter H. Engle, Windom.

Tennessee—A. L. Morris, Sattilo.  
Texas—B. M. Thompson, Freeland;  
Dr. C. W. Bowman, Caddo Mills; Welton Winn, Santa Anna.  
Virginia—E. E. Gay, Vulton's Creek;  
C. Hayes Taylor, Gillaspie.  
Washington—Karl Meyers, Ritzville.  
West Virginia—Riley Pritt, Beverly.  
Wisconsin—N. C. Crawley, Baraboo.  
Wyoming—E. F. Hurdle, Guernsey.

Note.—It will be noticed that in some States where the development of the Society is quite great more than one nomination has been received. As it is only desired to have one Vice-President for each State write the name of the nominee representing your choice in the blank space provided in ballot. It is expected that only members in any State will vote for the Vice-President to represent that State.

### FOR DIRECTORS.

No names will be presented, but the board of directors will be elected at the annual meeting after the officers are selected.

We saw the other day in the office of the National Union a map of Western Kentucky with a bright brass-headed tack driven at every postoffice where there is a local union. I tell you it was a sight! These are the enterprising tobacco people, who are bright enough to know that conditions were not right and wise enough to embrace an opportunity to make them right.

With meager stocks in the retail stores, scant supplies in the jobbers' houses, empty shelves in the wholesalers' establishments, and no cotton in the warehouses of the mills, it matters not how large a crop of cotton may be gathered in the South, it will bring a fair price if the planters do not fool it away.

The official label may be a mighty weapon in the hands of union farmers to thrash non-union farmers into the ranks. Will you use it?

# \$16 For 1c

"I spent one cent for a postal card and saved \$16 by buying a Kalamazoo Range." Will you spend one cent to investigate our special factory offer on

## Kalamazoo Stoves and Ranges

We ship direct to you from our own factory, freight prepaid, on

360 Days Approval

and save you from 25% to 40% in the purchase price. You can't find a better at any price; if not perfectly satisfactory return it at our expense. We can do this better because we are the only stove manufacturers in the world who are selling their entire product direct from the factory to the user. We save you all jobbers', dealers' and middlemen's profits—therefore, do not be influenced by dealers' prejudice; investigate for yourself. We have a most extraordinary bargain price on our **Oak Stove**—the price will surely astonish you—don't buy until you learn all about the Kalamazoo Oak.

SEND FOR NEW FREE CATALOGUE and compare our prices and quality with those of local dealers. That will tell the story. The catalogue is the most complete ever issued by any manufacturer selling direct to the user. Describes our full line, including:

KALAMAZOO STEEL RANGES.  
KALAMAZOO STEEL COOK STOVES.  
KALAMAZOO OAK HEATERS at special factory prices.  
A HIGH GRADE LINE OF CAST COOK STOVES for wood or wood and coal.  
A NEW CAST RANGE for hard coal exclusively, made especially for the eastern and city trade—a great money saver.  
A NEW SELF FEEDING BASE BURNER—handily nickled—the equal of any high grade parlor stove in the world—a great bargain.  
KALAMAZOO HOT BLAST STOVE for soft coal.  
A NEW CAST COTTAGE HEATING STOVE for wood, etc., etc.

Don't fail to acquaint yourself with the many good qualities and superior advantages of our Grand Range. Made exclusively for hard coal or wood—it's the kind the New England, New York and Pennsylvania housewives use—the price will surprise you because of its reasonableness.

All Kalamazoo Cook Stoves and Ranges are equipped with new Patent Oven Thermostat—great fuel saver—makes baking and roasting easy.

Highest grade patent blue polished steel plates used in all Kalamazoo steel ranges at no additional cost. All Kalamazoos blacked and polished ready for use. Anyone can set them up.

PLEASE REMEMBER we are real manufacturers—not simply dealers; we guarantee our product under a \$50.00 bank bond; we pay all freight charges; if you are not perfectly satisfied we don't want you to keep the purchase; we give you a 360 day approval test. The Kalamazoo is not excelled by any stove or range in the world, and we certainly do save you money. Send for free catalogue No. 260; read our offer; compare our prices and then let us ship you a Kalamazoo.

Kalamazoo Stove Co., Mfrs., Kalamazoo, Mich. We refer to any bank in Kalamazoo, any Commercial Agency, or to the Editors of this Publication.

## DOUBLE POWER

# \$1,000 Reward

for its equal. Wind power doubled. Two 14 ft. wheels work on same pinion; second wheel gives more power than first.

A Governor that Governs small winds. Develops 10 full h. p. in 25 mile wind. All power needed for farm, shop machinery, pumping, irrigating, etc. for \$1 a month. Ask for booklet 48. Ask about Armsaver Husker.

DOUBLE POWER MILL CO.  
Ansonia, Wis.

## GRIND FINE OR COARSE

all feeds, ear corn, with or without husks, all grains, with the

## KELLY DUPLEX Grinding Mills

They are the speediest, easiest running, strongest and most durable mill made. Four sizes, any power. New double cutters, force feed, no choking. It is true economy to buy a Kelly Mill.

THE O. S. KELLY CO., 161 N. Lime St., Springfield, Ohio

CARDS Send 2c stamp for New SAMPLE BOOK of all the FINEST styles in Gold Beveled Edge, Hidden Name, Silk Fringe Envelope and Calling Cards for 1906. We sell GENUINE CARDS, Not Traces. UNION CARD CO., 218 Columbus, Ohio.

## Buckskin Brand

(Not Made by a Trust)

### Rubber Boots and Shoes

Is the rubber wear that lasts, because they are all new rubber without shoddy or weakening substitutes. Rubber substitutes give dealers more profit, but give you less wear. **Insist on the Genuine.** Buckskin trademark on every pair. Look for it. Price is right. We sell retailers only by catalogue. Usual jobbers' and traveling men's expenses we put into quality. Try a pair and note the wear. If your dealer doesn't handle Buckskin brand write us. To introduce it in any locality we have a special offer for the first one who writes. Write today.

**Banner Rubber Co.**  
550 Bittner St.,  
ST. LOUIS, MO.

## Raise Your Own Salary

You can easily raise your own salary any amount up to \$50 per week, as hundreds of young men are doing who create a demand for their services, and demand larger pay. You can do so by becoming a Show Card Writer, Advertisement Writer, Newspaper Illustrator, Mechanical Draughtsman, Surveyor, Stenographer or Book-keeper. If you can read and write and will study as we direct, we will guarantee to qualify you for a good paying position. We have successful students in your neighborhood to whom we can refer you. Write for "1001 Stories of Success," stating what you want to become.

## The Local at the Crossing Gives an Entertainment

The Local at the Crossing gave an entertainment. It was a "daisy." Everybody was there. And so was his wife and all the children. They said they were glad they were. There was no baby show. We think the babies are too precious to class them with the calves and pigs. There was no pretty girl contest. The girls are all pretty. At least they think they are, and so do some of the boys. It would be wicked to dispel the harmless hallucination. But there was a good time, and a ten-strike was made for Equity.

The opening talk by the President set us off. Enthusiasm began to tingle in our fingers and toes by the time he had got fairly started, and when he finished we were so full that we just had to spit out a few big yells, and the air was so full of electricity that our hands went together in some resounding slaps in spite of ourselves. By this time the whole crowd was in tune, and what could we sing better than that lively church song, "Hold the Fort?" Here is how we sang it:

Come, ye farmers, long you've labored  
For but little pay;  
You have made an honest living,  
But from day to day.  
Cheer ye now for we are moving,  
Equity is here;  
Let your shouts resound forever,  
Equity is here!

Stand as stood the noble Spartans,  
Justice on your side;  
Of his hire the workman's worthy—  
Teach it far and wide.  
Cheer ye, then, for vict'ry's banner,  
Waves above the soil,  
And the fruits that God may give you  
Shall reward your toil.

What you grow is yours for certain,  
Keep it as your own;  
Boards of trade no more control it,  
For it is your own.  
Cheer ye, then, as we are moving,  
Equity is here;  
Let your shouts resound forever,  
Cheer, ye farmers, cheer!

May be we didn't cheer, but I have an impression that something of that kind was doing. And so thought the people in the village just beyond the Crossing. Do you know, farmers can everlastingly "holler" when they get properly wound up to that point? They've not "called" — hogs — allers — for — nothin' — as Jim Denny put it.

We didn't have any big, long speeches. We didn't want 'em. Lots of the candidates would have been glad to tell us how good we were and how glad they were, and "would we please come out and vote for 'em 'lection day?" But we had "other fish on our string" at that entertainment.

George Bowers gave us fifteen minutes of solid chunks of truth that made us feel like "whoopin'" some more, but we held in, and little Billy Lambert, no more than six, I think, was stood upon the Secretary's table, and told us his papa was

### A RUSHER MAN

My papa is a rusher man,  
But he doesn't "rush the growler;"  
He rushes 'round the farm all day,  
But he's no calamity howler.

He says we ought to do our best,  
Where'er we undertake it,  
But he don't believe the other folks  
Should price our stuff and take it.

He rushes out among the stock,  
That's fine as he can make it,  
But he says the other folks  
Shan't make the price and take it.

He's wheat, and corn, and oats, and hay,  
And fruit—he won't forsake it,—  
But he'll be—be—be—if the other folks  
Shall make the price and take it!

We went off again. Just couldn't help it. That's our way at the Crossing. And yet we think we are civil people, and great on decorum. But we believe there are some great truths floating around the country, and they are soaking into the farmers, giving them hopes they never had be-

### LOTS OF CANDIDATES

Several more good speeches were made, and then we went home, feeling certain there are to be brighter days on the farm. But some inconsiderate people kept poking fun at me and Sue.

Interest now centers in the cotton belt.

Can't you get a few more trial subscribers? Let's try to get the farmers to reading Up-to-Date Farming to make them wise.

The reading farmer is safe if he reads the right kind of stuff. Our proposition is so plain that those who read cannot fail to understand.

We thank our Up-to-Date People for the splendid letters they write. We do not believe another paper exists that gets so many as good letters as Up-to-Date gets.

The wheat growers of the Northwest—many of them—lost much good money that was justly theirs, because they were not taking Up-to-Date Farming, and because their local papers refused to publish facts about the wheat situation that the National Union asked them to publish.

There never before was a farm organization on earth whose members wrote of financial benefits as the members of the A. S. of E. do. We give the full name and address. If any one does not believe the letters are genuine write the parties, enclosing a stamp, and you'll get a reply and some advice.

The young people are getting lively on our monogram puzzle. We have had answers from as distant points almost as the flag flies over. And every answer puts Up-to-Date Farming in one more reader's hands, and is almost sure to make another soldier to fight for right. Besides getting a beautiful pin that they deserve to wear with pride, they are doing a better work than they know.

## A necessity for right shaving—Williams' Shaving Soap.

Sold everywhere. Free trial sample for 2-cent stamp to pay postage. Write for booklet "How to Shave."

## IMPERIAL STEEL RANGES—\$13.00 and up.

**SOLD FOR CASH OR ON MONTHLY PAYMENTS.** Buy direct from the factory, saving the dealers' profit. We guarantee the IMPERIAL to be the best range ever made for the money. If not perfectly satisfactory after six months' trial, Imperial Ranges may be returned, and we will refund money.

# FARMERS - GARDENERS - TRUCKERS

Take time by the forelock and secure Seed this Fall for early planting of the famous

## Improved Early Six-Weeks Market Potato

Not one season in all our experience have we had enough of this famous potato to supply the demand in the spring. Also by waiting for spring shipping they frequently arrive late and defeat your plans for very early table potatoes or markets.

You can be sure of getting them and having them to plant early by ordering now. Also the price is less than it will be in the Spring. This potato keeps almost like the old peachblow, therefore all you need to do is to keep them from frost.

If you want to beat all your neighbors with new potatoes to eat or market, plant the **Six Weeks Market**. If a market gardener you cannot plant anything that will make you more money than this potato.

This potato does beat all other kinds and produce fine tubers in 6 weeks from planting, with favorable weather. If you know this is a fact would you not want some of them. Read the testimonials.

The Six-Weeks Market potato is nearly white—(a little pink), shape like illustration, grow fine size, cooks mealy as soon as large enough, which is two weeks or more ahead of any other sort under same conditions. It is wonderfully productive also having yielded 400 bu. and 600 bu. per acre. It is so productive and such a good keeper that many people grow them for early and main crop.

**JUST THINK** of one variety of potatoes combining such extreme earliness, good table qualities, good keeping qualities, fine size and shape, and great productiveness. This is the **Improved Early Six-Weeks Market Potato**.

From the time you receive the seed we send you until the crop comes on the table or goes to market you will be surprised, delighted and profited by your investment in this potato.

**The most remarkable Potato since the Early Rose was introduced.**

**WE** named and introduced the Early Six-Weeks Market Potato several years ago. We have sold them to thousands of customers but there are tens of thousands of people who have not got them. Every family that grows potatoes for their own use should plant this variety. Every

farmer, gardener or trucker who grows for market loses money every season he does without them. There is no other variety that can take their place.

This season we are proud to be able to offer the

### Improved SIX WEEKS MARKET POTATO

propagated from seed obtained from Mr. De Vore, the originator of the variety. Mr. De Vore has been carefully growing the potato in a small way and improving it from the time we bought his original stock. He has cared for it as carefully and guarded it as jealously as a dear child. He has had yields as follows: One year 420 bu. per acre, next year 380 bu. per acre, and two years later 600 bu. per acre. The **Improved Early Six-Weeks Market** that we now offer is better than the original. Therefore all our old customers should get new seed, and every person who takes pleasure in seeing what good crops, what large yields and how early they can grow potatoes should get seed. They will admit that they never saw, raised, eat or marketed finer or better potatoes than the **Improved Early Six-Weeks**.

**CAUTION** Since we introduced our renowned Early Six-Weeks Market Potatoes some other parties has offered Potatoes under various names, "Early Market," "Five-Weeks Potatoes," "45-Day Potato," etc., or attached their name to it. Some of them use our description of Early Six-Weeks, others claim their potato is as good as our "Six-Weeks." We wish it distinctly understood that we named and introduced this unequalled variety, and are headquarters for the genuine seed.

**SHIPPING** The prices here quoted are expected to hold for orders received until January 1st 1905. After that date the prices in our Annual Catalogue will apply. We can ship any month in the winter to southern points as we load in warmed cars. We advise early orders however and fall shipments unless you don't see this offer in time.

### PRICE

of Improved Early Six-Weeks Market Potato

Small lots by Mail Post-Paid.	
1 lb.	25c
4 lbs.	75c
Large lots by freight or express	
1/4 bu.	75c
1 bu.	\$2.00
1 bbl (2 1/2 bu.)	\$4.00
2 bbls. (5 1/2 bu.)	\$7.00
4 bbls (11 bu.)	\$13.00
10 barrels or more at the rate of	\$1.00 per bushel.

We have 7,000 bushels of these potatoes now in stock or contracted and growers will consult their interest by embracing this opportunity to secure them at the favorable prices here quoted.

A CROP SIX WEEKS FROM PLANTING.

Read extracts from testimonials. We have received tens of thousands of reports like these

I have grown them of size for table in six weeks and matured in 72 days. I consider them the earliest potato in the world, the finest table variety and a cropper. J. W. SHANKS, Athens, Co., O.

I raised at the rate of 395 bu. per acre of the nicest potatoes I ever saw. They are ready to use in six weeks and mature in 72 days. They come so soon the bugs have no chance. ELIZABETH WASHBURN, Athens Co., O.

From 1 pound I raised 147 lbs. They are fine, sound, smooth. Ripened in 75 days and were marketable size in 6 weeks. They are the most valuable potato ever introduced.

R. TAYLOR, Ashland Co., Wis.

First class in every respect.

E. Hartman, Sutton Co., W. Va.

They did fine. I could sell a carload for seed if I had them.

John B. Cochran, Jefferson Co., O.

You have got it this time. I mean the earliest and best early potato in existence. We had them for table use in six weeks from planting. They also out-yield all others.

August Brochner, Allegan Co., Mich.

Ten dollars per bu. would not buy my six weeks market potatoes if I could not replace them. They are the earliest of all and very heavy yielders. They should be universally grown by market gardeners. JAC. R. STILSON, Onondaga Co., N.Y.

Are as early as represented. Sound, smooth, best quality, heavy yielder. They are very valuable.

C. E. Ward, Sullivan Co., Ind.

Best yielder and earliest potato I ever had.

N. Nyedon, Marlon Co., Ind.

Planted May 3rd, we dug new potatoes from them and used June 20th. They are the earliest we ever saw.

Daniel Donovan, Carroll Co., Tenn.

They are the earliest to make market size and earliest to mature that I ever saw.

My crop could not be bought for any price. John Gilbert, Meek Co., Va.

Twenty hills of six weeks potatoes yielded a heaped bushel. They bear out your claims for earliness, quality and productiveness.

Emil Laurance, Worcester Co., Mass.

The early six weeks potato can be put on the market two weeks ahead of any other sort which means hundreds of dollars profit to a large grower.

W. H. Morris, Cuyahoga Co., O.

It is now six weeks and five days since I planted the six weeks market potatoes. They did not sprout very quickly but they have nice large tubers on them. They are the earliest potato for this climate I ever saw.

C. L. Rice, Armstrong Co., Pa.

The best table potato and yield abundantly.

Benj. Gemberling, Licking Co., O.

This picture is made from a photograph of a crop from 40 eyes grown in 43 days. The letter accompanying the photograph is as follows:

Mr. J. A. Everitt, Dear sir—I send you to-day by freight the product of forty eyes of Six-Weeks Potatoes. They were dug last night and this morning and grew in forty-three days. They were grown from one-eye seed. I have just begun farming on my own land, and am not fixed yet for pushing a crop of early potatoes. They were covered with a breaking plow and given very ordinary treatment. Think I can beat it next season. Several people who saw them were astonished. I expect to exhibit at our county fair.

JOHN L. SAUM, Paulding Co., O.

ADDRESS ALL  
ORDERS TO

**J. A. EVERITT, Seedsman, Inc., Indianapolis, Ind.**

## UP-TO-DATE Field Crops

PRODUCTION AND MARKETING

Spring is the seed time and Autumn the harvest.

Summer the season of toil and strife; Thus is the farm and its planting and reaping.

An eloquent picture of each human life. —J. P. S.

The thoughtful and industrial farmer still finds plenty to do.

In most portions of the Ohio and Mississippi valleys rain is in excess of the needs.

Stock or cow peas have made a wonderful growth, but the frequent rains make the harvesting a doubtful operation.

Corn still promises a bountiful crop, but it is doubtful if it meets the excessive estimates that are being made of it.

We still feel it a duty to urge farmers to make haste slowly in putting their money into joint stock companies. They will never solve the problem of agricultural prosperity.

Looking back over the work accomplished during the past summer by this paper and the society it represents, we feel that we have good reason to be proud, and that we are justified in urging our friends, and the friends of agricultural progress, to help us get the ear that we may win the hearts of many more to the idea of farm price-making. We do believe that, with just a little effort, every reader of Up-to-Date could send us ten trial subscribers. My! what a boom that would make, and it would be worth more to each of the new subscribers than to the publisher. There is no mistake about that.

An intelligent and wealthy farmer of Lawrence county, Ill., told us the other day that the best way to destroy meadow sorrel (*Rumex acetosella*) is to smother out with old straw or anything like that. Of course this is practical only at the beginning, where but few bunches have appeared. Our informant had kept it off his farm in that way, while some of his neighbors had been overrun by it.

The great central valley States are still determined to grow alfalfa. It is a good crop, and patience and perseverance may succeed with it in many localities, but it will be by persons whom disappointments do not discourage.

If all of our farm readers could view the market and exchange pits at short range as we see them, they would behold the most demoralized set of gamblers and guessers the world ever saw. And it is all because of six common, old-fashioned letters, A. S. of E. and U. T. D. These have taught farmers to control their products and attend to their own business.

Uncle Threadbare is getting a little shaky these days. As he sits around the village stores, whittling pine boxes, he is surprised to see the merchants go out and ask the farmers what they will take for this or that product they have brought to town. It is something new, that's a fact.

In these days of final harvest we think of the glorious crop of boys and girls that the farm is producing. Instead of the cultivator coming to them to prevent weeds from growing up to impede the growth and diminish the value of the crop, they themselves go to the scene of cultivation, the school room. Happy be the country of weeds and evil growth be kept down there with the same vigilance that mark their destruction in the fields.

The boys and girls that belong in the families of Our Up-to-Date People all want one of those beautiful monogram pins, and they want to live it as well as to wear it. It is easy to get one, and do a good deed besides. What would you think of having such a pin with the name of your school on it as well as the monogram? Even such

a thing as that is possible. Write and we'll tell you how.

The American Society of Equity's estimate July 25, of 550,000,000 bushels for the wheat crop of 1904, was ridiculed by the "wise ones," as the vaporings of a "crank." Every day more and more impresses us with the fact that without cranks much of this world's machinery would be worthless. That sober old personality known as Uncle Sam now estimates the crop at 523,000,000 bushels. Somebody has climbed down off of a mighty high horse. Let's figure a little more. The per capita consumption of wheat in the United States is 5.25 bushels. We now have not less than 80,000,000 of people, and at the average rate of consumption they will eat 420,000,000 bushels. About the annual need for seed is 75,000,000 bushels, making a total actual need in this country, without any further damage or loss or waste, of 495,000,000 bushels, leaving an apparent excess on the government estimate of only 28,000,000 bushels! It is conceded that there will be a greater amount than usual used for seed this fall and next spring, and away goes that little bit of excess. First thing you know Uncle Sam will be sending to some of his neighbors for wheat. And his neighbors are just about as scant as he is. Our Up-to-Date People are not selling any of their wheat for less than \$1.20. A few of the other fellows are doing so, but they wouldn't join the A. S. of E. until they "saw how it came out." Well, they have seen, and it came out of their own pockets, and it went into pockets that never felt the pressure of a labor-hardened hand. That school taught by Old Experience is still "keepin'"; there are quite a number that have to get their education there.

### VALUE OF CLOVER CHAFF.

A writer on this subject declares that the chaff or haulm of clover is the most valuable by-product of the farm. However that may be, it is too valuable to permit a handful of it to go to waste. We have known it hauled off and burned as fast as it came from the huller. This is an absolutely wicked waste, and one which no farmer should permit.

In the first place, every particle of it will be greedily and profitably eaten by cattle or sheep, much of it will be eaten by hogs, and the poultry will revel in it, and make big returns in eggs. Horses will eat it; but we do not recommend it for them on account of the dust in it. To be used as feed it must be kept in the dry and fed during winter. But this is one of its least important uses.

There is no better way at all to get a stand of clover than by sowing the chaff. Most writers recommend that for this purpose the chaff be carefully stored under shelter, and scattered broadcast in the spring. But we believe as good, or perhaps a better way is to haul out and scatter during the winter. Or, if preferred, we believe it may be scattered with good results directly from the machine. Scattered thus on fallow land grown up in weeds we would not hesitate to guarantee a stand. Should any of the seeds germinate the weeds and chaff will protect them during the winter, and they will be ready to make a vigorous growth in the following spring. Seeds that do not germinate will sink into the soil during the freezing and thawing of winter, and come as soon as the warmth of the returning season calls them forth. This, after all, is Nature's way of seeding.

Do not scatter too thickly either in fall, winter or spring—more thickly, of course, than if merely seeding, but not so thickly as one would scatter a top dressing of manure—about midway between the two. Thus scattered there is always seed enough in the chaff to seed the ground, and there is something in the chaff or haulm which almost invariably secures a catch and a vigorous growth—surer and better than any other kind of manure or fertilizer. If you may not wish to seed any additional land, it pays abundantly to scatter this chaff on land already seeded.

## UP-TO-DATE Orchard and Small Fruits

PRODUCTION AND MARKETING

In the orchard as I walked,  
I met Ben Davis riding free;  
Near by I saw a Maiden Blush,  
And a real Rome Beauty smiled at me.  
And Mr. Baldwin there I saw;  
He seemed a little jealous, too;  
I "shook" him as I passed along,  
And, gentle reader, wouldn't you?  
—J. P. S.

Nov. 1. What price are you getting for the best winter apples? Our Up-to-Date People, being organized, have advantages over those who are not organized, and if they are shipping in barrels, boxes or baskets, the Farmers' Union Label will give them still further advantage.

It is to the interest of orchardists to encourage the consumption of fruit. Uniform selection and honest packing will do that. If orchardists were so organized as to sell direct to the consumers at prices that would enable the humblest wage earner to indulge in them, consumption could be easily doubled, and yet the orchardists get better paid and the consumers get cheaper fruit.

With all the productive interests organized in one compact body, as the A. S. of E. proposes, an agency could be established in each great market center to which fruits of all kinds could be consigned and from that agency distributed to the remotest point of consumption, the profits now absorbed by the jobbers being divided between consumer and producer, to the great benefit of both.

A paper that educates the people up to this point and secures it, would be the greatest benefactor the fruit interests ever had, would it? Up-to-Date Farming is just that paper, and every fruit grower should read it. The best thing for the fruit growers to do, those who are not already members, is to join the A. S. of E., and then they will get Up-to-Date Farming free. If they are unwilling to do that, the next best thing is to subscribe for Up-to-Date Farming for a year at 50 cents, and read the only paper that is strenuously fighting for better prices for all farm products, and that teaches clearly how to obtain them. You will read facts that were never printed in any paper before. If you do not feel just ready to take that step, then subscribe for three months at only 10 cents. Before the three months are out you will admit that that was the best investment of 10 cents you ever made.

### Borers in the Orchard

A correspondent wishes to know if there is any wash that may be relied upon to destroy the tree borers, or to prevent their depredations in the orchard. We cannot say that there is, though there are several that are recommended, and that may be more or less efficient. Simple whitewash applied early in June, and worked well down into the ground may prevent the insect from depositing its eggs in the bark of the tree; but this must be regarded as a preventive rather than a remedy, for once the larva finds a lodgment in the tree, a wash need not be depended upon to disturb it.

Another wash still more highly recommended, consists of whale oil soap, or soft lye soap, made in the proportion of two pounds of soap to one gallon of water, to which is to be added a pint of crude carbolic acid. This is more efficient as a repellent than the common whitewash. The soap wash is a valuable application even without any reference to the borer. When the insect has obtained a lodgment, about the only remedy is to gouge it out or pierce it with a sharp wire.

We want the local unions to get very busy now. Fill up the ranks. The United States never before presented so interesting a situation. A gigantic step forward is being made in agriculture, and those who have denied it so long are beginning to confess that farmers may control the marketing of their products, and secure fair prices.

### Garden & Flowers

Plant patience in the garden of thy soul!  
The roots are bitter but the fruits are sweet  
And when at last it stands—a tree complete—  
Beneath its tender shade the burning heat  
And burden of the day shall lose control;  
Plant patience in the garden of thy soul!  
—Selected.

A few beds of these choice bulbs give early brightness to the home grounds as nothing else can, and at so small a cost and with such little trouble.

The first requisite to success with fall bulbs is to have good and sound bulbs, and this fact advises the purchaser to patronize only reliable houses.

The garden or home grounds that can make the first display of flowers is the one that attracts the most attention, and out of which may be gathered the most enjoyment. This calls for fall bulbs.

In this connection, the young folks will not allow us to forget the modest little snowdrops and crocuses that peep up and open their bright eyes as if to see what has become of the last bunches of snow that are slipping away as if to hide behind the northern slopes.

The tulips first suggest themselves when we think of fall bulbs for early spring blooming. Of these there are many beautiful varieties, both double and single. I think circular beds are most attractive and the tulips should be planted in rings, the colors so chosen and intermingled as to make the most striking effect when in bloom.

The hyacinths may next appeal to us, and here, too, there are many varieties to choose from, also double and single. We scarcely need mention the favorites of years ago—the narcissuses, jonquils, daffodils, etc., that were the pride of our grandmothers' gardens. They may still have an honored place in our beds of early flowers.

Fall bulbs require a light, sandy loam, well enriched by rotted manure. In preparing the bed, it is good to get mellow soil from the woods, if accessible. That from around old stumps of trees or where logs have rotted, is the very best. To this may be added some well rotted stable or barnyard manure, or manure from the poultry house. Let these all be well worked in with the natural earth where the bed is to be made. Since the bulbs are to be planted in the fall, and are to remain out all winter, the place chosen for the bed should be well drained. Plant the bulbs about six inches apart and cover with about six inches of soil. A light mulch on the bed through the winter will be an advantage.

All the plants we have named may be grown in pots through the winter if properly handled. Discarded fruit cans may be made to answer very well for pots. If of tin they should be perforated at the bottom for drainage purposes; if of glass, put an inch or two of trash in the bottom, which will answer for drainage. Fill nearly full of good, rich garden soil. Make a cavity a little larger than the bulb, put a spoonful of sand in the bottom, set the bulb on that, and press the soil around the bulb, just covering the top. After potting thus, water thoroughly and set in a cool dark cellar, or other place of like character, covering so as to protect from mice or rats. It may be necessary to moisten occasionally. Let the bulbs remain thus until a vigorous top growth begins, which may require several weeks, then bring to the light and warmth. A vigorous growth will follow, and flowers will appear in due time.

National Convention Tobacco Growers, Lynchburg, Va., Nov. 10 and 11...

# DON'T POUR OIL ON THE FIRE

## IT'S JUST AS FOOLISH

to attempt to quench the fires of disease, to check its onward spread, by using a stimulant, a medicine, preparation, tonic or treatment that depends for its effects upon an artificial stimulation either from alcohol or other drugs, as it is foolish and fool-hardy to pour coal oil upon a fire to quench the flames. You wouldn't be so foolish—you would laugh at a person who would—would say the man or woman was crazy, yet that is just what you and thousands of others are doing every day that you pour into your stomachs, that you put into your system, the drugs, tonics, tablets, powders and compounds, made to sell, and to sell only. They only serve to feed the fires, not to quench them.

Vitae-Ore, Nature's own remedy, offered on thirty days' trial to all readers of this publication, is not a compound, not a drug, not a stimulant! It is manufactured in a laboratory man neither controls nor directs—Nature's laboratory—under the supervision of THE MASTER CHEMIST—Nature. It was and is intended by her for the stomachs of men, to cure all the ills of mankind. It does not depend for its power upon a stimulating ingredient—does not build up temporarily, and then, when its effects are worn out

and off, leave the system worse off, more a-fire than before. It builds up a permanent cure by first laying a permanent foundation, and then adding to it, building upon it, stone after stone, layer upon layer, until the structure is complete and the body is delivered over to the owner's possession—firm, sound and hearty in every muscle, vein and fiber. It's the way all permanent structures are built; it is the only right way. Produced by the same immutable, unchangeable, natural law that produced the human organism itself, it supplies to that organism those elements which in poor health are lacking, elements that must be placed and retained in the system if permanent good health is to be enjoyed, and Vitae-Ore, and Vitae-Ore only can put and retain them there. If you are sick and ailing, if you are all run down, if your organs, your blood, your stomach, your heart, your kidneys, are not working right, if you are sick and do not know what is the matter with you, if the doctors cannot and do not tell you, cannot and do not help you, you ought to give this wonderful, natural, mineral remedy a trial and the chance it needs to prove all this to you. It won't cost you a penny! The owners take all the risk! What doctor, what hospital, what sanitarium, has ever offered to treat you in this way?

What other medicine has ever been so offered? You are to be both judge and jury, to pass upon it. You have the entire say-so. If it helps you, you pay for it—if it does not help you, you do not pay for it. One package, ENOUGH for a month's trial, is all that is necessary to convince you. How can you refuse? If you need it and do not send for it, what is your excuse? You are to be the judge! Read our special offer.

## You Are to Be the Judge

### We Will Send to All

#### A SERIOUS COMPLICATION

Was Bedfast for 17 Weeks.

NOW CURED!

Vitae-Ore was the means of saving my life and rescued me from an existence that was almost unbearable. I had been suffering for a long time with Nervous Dyspepsia and Prostration and Palpitation of the Heart and Smothering Spells, Female Weakness, Catarrh of the Head, Throat and Stomach, Kidney and Bladder Troubles. In fact, I do not believe I had a sound organ

In my body. I was bedfast for seventeen weeks, when I was induced by reading the 30-day trial offer to give V.-O. a trial. I think it was a God-send, as all my diseases began to yield immediately, and I am now cured. Can do all my housework with pleasure and sleep like a child and have a very good appetite. I have taken V.-O. only two months and have gained 18 pounds. I hope every poor sufferer will try this remedy and be cured as I have.

MRS. J. O. PURBAUGH, Wallace, Neb.

Subscribers or readers of this paper a full-sized \$1.00 package of VITAE-ORE by mail, postpaid, sufficient for one month's treatment, to be paid for within one month's time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs and doses of quacks or good doctors or patent medicines he or she has ever used. Read this over again carefully, and understand that we ask our pay only when it has done you good, and not before. If not, no money is wanted! We take all the risk, you have nothing to lose. If it does not benefit you, you pay us nothing. We give you thirty days' time to try the medicine, thirty days to see results before you pay us one cent, and you do not pay the one cent unless you do see the results. You are to be the judge! We know Vitae-Ore and are willing to take the risk. We have done it in thousands of cases and are not sorry.

Vitae-Ore is a natural, hard, adamantine, rock-like substance—mineral—ORE—mined from the ground like gold and silver in the neighborhood of a once powerful, but now extinct mineral spring. It requires twenty years for oxidation by exposure to the air, when it slacks down like lime and is then of medicinal value. It contains free iron, free sulphur and free magnesium, three properties which are most essential for the retention of health in the human system, and one package—one ounce of the ORE, when mixed with a quart of water, will equal in medicinal strength and curative value 800 gallons of the most powerful mineral water found on the globe, drank fresh at the springs. It is a geological discovery, to which nothing is added and from which nothing is taken. It is the marvel of the century for curing such diseases as

Rheumatism, Bright's Disease, Blood Poisoning, Heart Trouble, Dropsy, Catarrh and Throat Affections, Liver, Kidney and Bladder Ailments, Stomach and Female Disorders, La Grippe, Malarial Fever, Nervous Prostration, and General Debility,

as thousands testify, and as no one, answering this, writing for a package, will deny after using. VITAE-ORE has cured more chronic, obstinate, pronounced incurable cases than any other known medicine and will reach such cases with a more rapid and powerful curative action than any medicine, combination of medicines, or doctor's prescription which it is possible to procure. If yours is such a case, do not doubt, do not fear, do not hesitate, but send for it!

Vitae-Ore will do the same for you as it has done for hundreds of readers of this paper if you will give it a trial. Send for a \$1.00 package at our risk. You have nothing to lose but the stamp to answer this announcement. We want no one's money whom Vitae-Ore cannot benefit. You are to be the judge! Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it, would hesitate to try Vitae-Ore on this liberal offer! One package is usually sufficient to cure ordinary cases; two or three for chronic, obstinate cases. We mean just what we say in this announcement, and will do just as we agree. Write to-day for a package at our risk and expense, giving your age and ailments, and mention this paper, so we may know that you are entitled to this liberal offer.

### Glad Tidings for Every Woman!

Though woman is the most perfect piece of mechanism, if the expression may be permitted, in all God's creation, she is, from the nature of her organism, the most delicate. Like a watch, her system is made of many integral parts, each a perfect piece of mechanism in itself, but powerless when separated from the rest. Damage a part of a watch ever so slightly, and it immediately is deranged, its running powers and usefulness impaired. If the damage be great it stops entirely; if slight it runs in a half-hearted way, losing a minute here and there, out of joint with itself, as it were. It may run correctly for a time, then erratically. So it is with a woman. If one of the vital organs becomes ever so slightly deranged the working of the entire system is impaired, is "out of joint." If the trouble be slight, like the watch, it may not be noticeable at times, if great it stops "running" after a time and death is the result. To keep each separate organ in its normal condition, to keep the body sound and healthy, all functions active, all conditions regular, is a

duty that every woman owes not only to herself, but to her family, future generations and to the world at large. To those suffering from any of the numerous forms of female complaints, brought about by one cause or another, Vitae-Ore comes with glad tidings and the promise of an almost new life, a healthier, happier existence, if used as thousands of long suffering women, now well, have used it. An ideal treatment, of a nature allowing it to be used locally (and local treatment is an absolute necessity) as well as constitutionally, its use offers to every woman most speedy relief, and an absolute permanent cure from the many diseased conditions which unfit women for the full enjoyment of life and its duties. If you need it, if you are sick and suffering, or just weak and tired, send for it, try it, without any risk to you. It cures in these special cases where costly treatments, advertised for such uses exclusively, fail even to benefit. Hundreds of readers of this paper know it to be true, as you will after you try this remedy.

## PAIN WAS UNBEARABLE

So Writes Vincent J. Harrington, One of the Thousands Whom Vitae-Ore Has Cured of

### SERIOUS KIDNEY TROUBLES

Thousands of people have pain in the back and wonder why; it's there, but they don't know what causes it and rub the back with liniments and apply porous plasters, but it's still there and keeps there until the sufferer awakes to the fact that the trouble is in the kidneys and uses the right medicine for such trouble, as did Mr. Harrington. The doctors have many ways of telling if the patient's kidneys are working right and normally; they can prove by analysis, by examination of sediment, whether or not there is any irregularity. It does not need this, however, to tell to a sufferer that the fault's in the kidneys. The dull, aching pain in the small of the back, the sharp, terrible sensation when arising from a stooping posture, the heavy, dragged-down feeling when standing long in one position, are all signs that read plainly and point surely to trouble in these organs, a trouble that must be treated promptly and effectively. That Vitae-Ore provides such a treatment the following letter from Mr. Harrington will demonstrate beyond the shadow of doubt or any possible denial.

Read What He Says:

Words fail me to tell how I have suffered and what Vitae-Ore has done for me. It has cured me of Kidney Trouble after being a sufferer for several years. My back and kidneys were so sore that if I were to work five minutes in a stooping posture it would take me three minutes to straighten up again, and the pain was almost unbearable. I am now as strong in the back and vigorous and full of vim as I was at 16 years, and I give thanks to Vitae-Ore for the great change.

VINCENT J. HARRINGTON, Egmont Bay, Can.

If your kidneys are causing you any uneasiness, if you fear trouble in these organs or in any organ or part of the body, do not delay, but begin treatment immediately with this natural curing and healing Ore. It is Nature's specific for all irregularities of the vital organs, for every trouble in the physical forces, a specific which works in a rational, prompt and efficient manner that no other medicine or combination of medicines can duplicate.

## NOT A PENNY UNLESS BENEFITED

This offer will challenge the attention and consideration, and afterward the gratitude of every living person who desires better health or who suffers pains, ills, and diseases which have defied the medical world and grown worse with age. We care not for your skepticism, but ask only your investigation, and at our expense, regardless of what ills you have, by sending to us for a package. ADDRESS

## Big Success With Hogs

SOME farmers are more successful with hogs than others. The man that only gets 8 lbs. of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 17 lbs. The American Swineherd is a specialist and the best authority on the hog industry. Prof. Henry says that success is only obtained by concentrating all effort upon one line. A two years' course in hog raising: Teaching how to be successful; How to secure the greatest profits; How to cheapen the grain ration; How to get 17 lbs. of pork out of a bushel of corn fed to hogs; How to feed to double the growth and gain over usual methods; only healthy hogs profitable; How to keep your hogs healthy; How to utilize, without other expense than the subscription to this paper, the costly experience and gathered wisdom of the most capable and successful feeders. Prof. Kennedy of the Iowa Agricultural College says "Your paper is a leader in its line on feeding." Every owner of hogs should take advantage of this special offer: Send us \$1 for 2 years' subscription to the American Swineherd and it will entitle you to a free copy of the Hand Book on "Hog Hygiene," with trade secrets, receipts, valuable information, etc. 24 LESSONS IN SCIENTIFIC HOG RAISING.

This equips you for a successful hog business.

## UP-TO-DATE Live Stock and Dairying PRODUCTION AND MARKETING

Our glossy treasures, long our pride,  
No more will have our patient care;  
For sordid dross we turn them o'er,  
For city folks a bill of fare.

—J. P. S.

Charcoal, or screenings or slack from coal mines is good for hogs.

The auto may have frightened the horse, but it has not driven him out of business.

1904 may be known in many portions of the United States as the year of good pastures.

Draft horses are in good demand, and will continue to be. The same may be said of light harness teams.

Don't plan to keep too many hogs through the winter; they scatter too many corn cobs about the place.

A wet season is not a good one for sheep. High, dry land yields the most mutton to the acre.

A bunch of hogs alike in color, alike in size, and alike in condition, will always strain the market up a notch or two.

The two-year-old ought to be as gentle as a dog by this time, and it is well to be handling the weanlings and the yearlings.

The farmer that makes his pork by helping out his corn with pumpkins and other "side dishes" will find more stuff in his pocket book.

What do you think of the high-class, high-priced thoroughbreds that follow the fairs like the lawyers used to follow the courts? Fine, surely; but it is the high-class grades that fill the butchers' stalls.

Clover bloat or hoven is more common among cattle in wet seasons than in dry. The cow that has had some dry hay and salt immediately before being turned on the clover is not likely to have bloat.

I still believe the orchard is a good place to feed the hogs in. The hogs may get an extra mouthful that is clear gain, and they will prepare for the trees many a good meal for next Spring and Summer.

Don't let October and November pass without a thorough cleaning up of the stables, barn and banyard. Every shovelfull of manure is worth money if you get it to the right place—garden, orchard or meadow.

The yearlings may be wintered much more cheaply, and make a great deal better growth if comfortably housed. Pigs to be kept over should, by all means, have dry, comfortable quarters. Now is the time to make them ready.

It may do to market grass cattle from the ranges, but grass cattle should never go to the market from the farm—the farmer cannot afford it. No matter how good the pastures, grain enough should be fed to give solidity and weight.

The live stock industry is one that is not at all likely to be overdone, but the market is much more fastidious than it was several years ago, and demands a better grade of stock better finished. Don't think of breeding from any but high class males.

Letting well enough alone is no doubt a good and conservative rule, but it is scarcely applicable to the farm. A constant aim for something better should be the rule there. It is a bad plan to worry; there is no profit in worrying, but we are never afraid of discontent—the discontent that leads to better things. The farmer that settles down contented and satisfied is as high up the ladder as he will get.

The organization that live stockmen need is not the organization that puts large sums of money in the hands of a few with which to control the market, but the organization that puts the

stock growers in such close touch with each other that they can control the market by controlling the supply while yet in first hands. This is the simple plan of nature, business and Equity—the plan that benefits the grower without harming the eater.

The growing of live stock is an extended business; that is, it takes time. Each individual must be on hand from one to four years. Do you suppose that any mechanic would undertake the manufacture of an implement that would take from one to four years to complete, knowing that, when completed, he must sell it at an unknown and unknowable price to be fixed by some other person, that other person's interest being in the lowest possible price? The growers of live stock need organization as bad or worse than any other class.

This is a proposition in which all live stock men should be vitally interested, and it is one of which they should be anxious to read and learn more and more. The method of effecting such an organization is as simple as the plan. The whole expense is \$1 as a membership fee, and to each member is sent from headquarters the official paper that keeps him informed of all the market developments and movements of the society. Or the paper itself may be had for 50 cents. Or, if the person belongs to the class who always "wants to know more about it before he joins," he can get the paper a trial trip of three months for ten cents. We don't know what further excuse any one can offer for staying out of the band wagon, do you?

Isn't it strange that somebody did not long ago see the folly of marketing our crops all in a bulk when nobody wanted a thousandth part of them? They see it now, and as soon as the better plan is universally understood that folly will never be repeated.

Mr. President, let's have something lively at this meeting. Bill Jones has had a brand new thought, Sam Jenkins is full of good ideas, Joe Brown knows where some new members may be obtained, Tom Martin has heard where a local union may be organized. There's lots of stuff in this meeting for an interesting time. Out with it all. There is no room for dullness in an A. S. of E. local at this time of the year.

There are three things we want local unions to direct their special attention to: 1. To get everybody to join that it is possible to secure. 2. If there are any who cannot be induced to join, get them to subscribe for Up-to-Date Farming. 3. Any that you cannot induce to become a yearly subscriber, secure for a three months' trial at the small sum of ten cents. We wish to bring the whole world of agriculture within the influence and teaching of Equity and Up-to-Date Farming is the medium.

The benefits our members and subscribers receive though they amount to large sums, are very simple after all. The A. S. of E. is a strong and compact organization now, and the National Union is in touch with all the important markets, as well as with the sources of supply and consumption. It therefore knows just what prices ought to be and when it is best to sell. These facts are made known to Our Up-to-Date People, who act upon the information given, and the benefits or profits come. It is all very simple.

If any other paper on earth could publish letters testifying that their subscribers had received direct benefits of from \$25 to \$600 in a single year by reading the paper, as we do, the whole world would go crazy over it. With Up-to-Date Farming it seems to be regarded as a mere matter of course, and little attention is paid to it. Well, those who get the benefits realize it, and they are telling it, not only through the columns of the paper, but they are telling it to their neighbors, and others are flocking to the source for the same benefits.

## UP-TO-DATE Poultry and Bees PRODUCTION AND MARKETING

The beauty of their plumage,  
And the sweetness of their song,  
Make us gladly look and listen  
To the birds that pass along;  
But when it comes to business,  
Nothing cheers us quite as when  
We listen to the cackle  
Of the plain old laying hen.

—J. P. S.

Nov. 1. Good time to clean out the poultry house.

Don't bother about the floor of the poultry house. There is nothing better than earth. But it must be kept dry.

It won't be long now until green feed for the poultry will be scarce. Clover and pea hay are the very best of substitutes all through the winter.

If you intend to go into the poultry business next year get your fowls now. You stand a better chance to get good ones, and for less money.

It is all right for the women folks to have the profits of the poultry yard, but the men should provide all the conveniences and assist in the care of the fowls.

The same frosts that make the green feed scarce, make the insects scarce also. Ground bone, or crushed shells and meat scraps become all the more necessary.

Broken windows and open cracks in the poultry house are a sign of rump after a while when the cold winds blow and the beating, chilly rains come, and the snows drift along the lanes.

The poultry man or woman that throws the feed down in a pile and hurries away, is not the one that will get the most eggs. The one that scatters the grain fed in litter—dry, clean litter or chaff, will get the eggs.

If the miner didn't dig he wouldn't get gold; if the farmer didn't plow he wouldn't have corn; if the poultryman doesn't take proper care of his fowls he won't have eggs. Nor will the bee man have honey unless he cares for his bees.

A barrel full of dry dust is a good thing to put in the poultry house. It will be needed all through the winter to afford the fowls a dust bath. Have a box for them to take their bath and renew the dust in the box a few days.

The bees are now getting their winter quarters. How are they? If not housed for the winter they should be storm-proof, they should not be in exposed positions, placed so that they are protected from the storms.

Finely chopped pumpkins make an excellent feed for poultry during the winter. A pound of pumpkin and put in the feed will be nothing but a good thing. Bees are easily kept in place that

We should to-date winter will take that the them be them clean haps, by

If the from the be spent tobacco seen worse the eggs take as tobacco for shown to

The che the farm bees of his dustrious

ing for their labor, and they seldom go on a strike; but they must have comfortable and suitable quarters, and they must have raw material to work upon. If nature does not provide this, the keeper must.

Of course it isn't wisdom to count the chicks before they're hatched, nor to be too sure about them 'til they've hustled out and scratched. Nor is it well to estimate the eggs before they are laid, no more than pay for sugar 'til you have seen it weighed. But 'tis our own opinion thus publicly expressed, that eggs will be a cheerful price betime they're in the nest, and the hen that lays the most of them will serve her country best.

Quit the wasteful practice of sending lean fowls to market. Put them up in clean, dry quarters, give them plenty of clean, fresh water, give them all they will eat of corn meal or other ground grain dough once or twice a day (if mixed with milk instead of water, all the better); as soon as they are done eating take out all that is left. Keep shelled corn or other grain before them in boxes, not in the dirt all the time. In about ten days you may have fowls of almost double the weight of those which simply run with the floor and consequently of twice the value.

Wouldn't it be a pleasant surprise to our Up-to-Date People? Not one of them, but well be proud of found to be a neighborhood

Natic  
Lync

### ANCIENT WISDOM.

We find the following as the first editorial expression (and we suppose the wisest) in a recent issue of one of our agricultural exchanges:

The crop experts of the government forecast the 1904 crop of corn at 2,500,000,000 bushels, the wheat crop at 620,000,000 bushels and the cotton crop at 11,500,000 bales. At 40 cents a bushel for corn, 70 cents for the wheat and \$40 a bale for the cotton there is added to the wealth of the country \$1,644,000,000 from these three crops alone.—Farmers' Guide.

As a bit of ancient wisdom that agraph deserves to "take the course" Of course we would pay no attention to such things, but for the evidence of them, the intention unduly being to lull the farmers and make them think, in spite of immediate surroundings, that lovely and the goose hang. Those estimates are all authorities are making the prices! Wheat has been doing a "ghost" \$1.10 and \$1.18, corn has 50 cents for many months at this writing is worth at the gins in Texas. ures, brother; revise even your readers you think.

Home on the Farm

KEEP IT BRIGHT, HAPPY AND CHEERFUL

Here. The home may then be as tidy as when the children depart for school immediately after their return as any other time of the day, and the children themselves will learn lessons that will be more valuable to them than any of the lessons they learn at school. And—mother may not be so tired!

Out Yawning

is not considered a very pleasant thing, and I think it should be avoided in all seemingly places; but Health Authorities consider it an important effort to rest and otherwise. The writer is of opinion that if practiced too much it may be cultivated to the trouble some than the publication referred to. You feel like yawning? Don't try to suppress it. It is impolite to do so, but let the yawning show where you are. This is a relaxing

STEVENS

The name—on a rifle or shotgun—that guarantees perfection in accuracy, reliability and safety. It would require many columns of this publication to tell all about "Stevens" famous guns. We want you to know about them, and we make it worth your while to learn about them.

**OUR FREE OFFER** If you will send us your name and address, enclosing two 2-cent stamps to cover postage, we will send you our great book of outdoor sports, containing 140 pages of interesting and useful information on hunting, camping and wood craft, the proper care of a firearm, notes on sights and ammunition, as well as full descriptions of the famous "Stevens" Guns—the book every lover of outdoor life should have. Our clever Rifle Puzzle sent free, postpaid.

J. STEVENS ARMS AND TOOL CO., 365 Pine Street, Chicopee Falls, Mass., U. S. A.

VIEW OF THE BACK OF THIS BEAUTIFUL WATCH.

Mention whether Ladies' or Gent's size is desired.

Our watch is the new 1904 thin model, 16 size. Beautifully finished in 14-karat Gold, United States Mint standard. It has a celebrated American lever jeweled movement. Each movement is carefully adjusted, according to the latest principles, by which the best results can be achieved. Contains a reliable gauge balance with new flush regulator. The hair spring is hardened and tempered in form. The dial is of rich enamel, and the hands fine blue steel. There are hour, minute and second indicators. The main-spring is back action, patented safety. Every part of the movement in this watch is tested by experienced workmen. Easily earned without costing you a cent. The watch described above will equal in time a \$50.00 Gold Watch. A marvel of ingenuity, the acme of American mechanical skill. We will send you by mail, postpaid, upon your request, 20 fast-selling articles of merchandise that sell because of their merit. Send them for 10 cents each, return us the \$2.00 and we guarantee to send at once the watch, as described. The goods sell at sight. We propose to give away these watches simply to advertise our business. No catch-words in this advertisement. We mean just what we say. You require no capital while working for us. There is no misrepresentation or humbug about this. N. B.—We send your watch immediately when you send us the \$2.00 for the goods. Mention whether you want Ladies' or Gent's size. \$1000 REWARD is hereby offered to any person who can prove that we have not given a Free Beautiful Gold finished Watch for selling 20 of our Free Articles at 10 cents each. You probably know some one who have sold something to earn a watch, which received, was not as promised; but they were forced to. You don't have to keep our watch; if not satisfied, return it and get \$2.00, all the money paid and no questions will be asked. Address to-day without delay. POSIT WATCH CO., 19 Warren St., New York.

Securely packed and sent prepaid for only \$2.50. DON'T DELAY—SEND TO-DAY TO HOME DRESSMAKER 527 Rand-McNally Bldg. CHICAGO

## Just a Hint or Two

All canned fruit should be kept in a cool, dark place.

A little sugar put in the cooking turnips improves them wonderfully.

A stone jar with a close cover is a safe match safe. Keep it out of the reach of the children.

Gum arabic and gum tragacanth, in equal parts, dissolved in hot water, makes an excellent mucilage, always handy and ready for use.

Mush for frying should not be so thoroughly cooked as that which is to be eaten without frying. Pour into a deep pan when cooked sufficiently, and when cool, slice and dip the slices in beaten egg; they will then fry crisp.

To brighten the isinglass in a stove, rub briskly with a rag dipped in vinegar and water.

Old newspapers are better than cloths to rub off the stove with.

A cloth wrung out of warm skimmed milk and water is good to clean fly specks from varnished woodwork or furniture. It not only removes the dirt more easily, but it makes the varnish look fresher.

Carpets well sprinkled with salt and then wiped with cloth squeezed out of warm water containing a spoonful of spirits of turpentine to every quart, will look bright and new and will not be troubled with moths.

## AN OFFER

FOR A Display of Skill and Ability

AN ELEGANT PIN FREE

The figure within the above circles is a monogram containing three letters, which are the initials of three words, representing a condition or quality which we all like to have applied to ourselves. It also represents the name usually applied to what is doing more for the farmers than was ever before undertaken in the interest of agriculture.

We have also had that monogram reduced in size, made into a beautiful pin in blue and gold, in excellent taste, and suitable to be worn by any one. To the school boy or girl who will cut the three letters from the monograms (if no mistake be made the three can be cut from the two monograms) arrange them in the proper order and tell us what they stand for, accompanying their reply with ten cents, for one three months' trial subscription (their own or for some one else), we will send them free, one of the monogram pins in blue and gold, for their success will clearly entitle them to wear it, and to be regarded as belonging to Our Up-to-Date People.

UP-TO-DATE FARMING, Indianapolis, Ind.

**WEEKS SCALE WORKS** BUFFALO, N. Y. The leading scale at moderate price. Will outwear any other. RELIABLE, LASTING, CONVENIENT. Does away with all loose weights. Send for catalogue and prices.

**BEAN GROWERS, ATTENTION!** The Smith Patent Roller Bean Separator is the only Roller Bean Separator manufactured in the world; will lessen the work of picking Beans 75 per cent. over any other machine manufactured. Will more than save its cost in a single season. Send for illustrated catalogue. SMITH MFG. CO., VALOIS, NEW YORK.

A Remarkable Reproduction by Photo-Color Process of Our \$1,000 OIL PAINTING \$1,000 The "Wild Fur-Bearing Animals of North America" and 40-PAGE BOOKLET "HOW TO TRAP WILD ANIMALS"

Also prices paid by us for raw Furs, Hides, etc. With this we send photo-engraving of skins and complete key naming and describing each animal and skin; also pictorial supplement giving Valuable Information for hunters and trappers; also gun, knife and trap catalogue.

**ALL FOR 10c IN STAMPS** OR SILVER

This reproduction is pronounced by professors of natural history the most beautiful and instructive picture of our wild fur-bearing animals ever produced. This generous offer is made to advertise our business NORTHWESTERN HIDE & FUR CO. ADVERTISING DEPT. R. MINNEAPOLIS, MINN.

**MUSIC LESSONS FREE** at your home. We will give, free, for advertising purposes, course of 48 music lessons for beginners or advanced pupils on Piano, Organ, Banjo, Guitar, Cornet, Violin, or Mandoline, (your expense will only be the cost of postage and the music you use, which is small). We teach by mail only and guarantee success. Hundreds write: "Wish I had known of your school before." For booklet, testimonials and FREE tuition contract, address, U. S. SCHOOL OF MUSIC, Box 4-B, 19 Union Square, New York, N. Y.

**A STUDY IN GOVERNMENT AND POLITICS.**

**\$50,000.00**

The above sum has been set aside by THE CINCINNATI COMMERCIAL TRIBUNE, to be distributed as awards to the subscribers of THE COMMERCIAL TRIBUNE or THE CINCINNATI WEEKLY GAZETTE who estimate the total vote cast in the State of Ohio for President of the United States, at the election to be held Nov. 8, 1904.

**HERE IS WHAT WE OFFER** To Our Subscribers Who Engage in This Gigantic Intellectual Contest.

To one making nearest correct estimate of exact total of vote ..... \$5,000  
To Second Nearest ..... 2,500  
To Third Nearest ..... 1,000  
To Fourth Nearest ..... 500  
To Fifth Nearest ..... 300  
To Sixth Nearest ..... 200  
To Seventh Nearest ..... 100  
To Eighth Nearest ..... 50  
To Ninth Nearest ..... 25  
To Tenth Nearest ..... 10  
To Next 300 Nearest (\$10 Each) ..... 3,000  
To Next 400 Nearest (\$5 Each) ..... 2,325

In all 775 Awards, amounting to \$40,000. If any subscriber should, before Oct. 1, 1904, estimate the exact total vote, there will be paid an additional amount of 10,000.

A Grand Total of \$50,000. The award for exact estimate between Oct. 1 and Nov. 8 is withdrawn and added to the first award for the nearest estimate, making a total of \$25,000.00.

But if the exact estimate is submitted prior to Oct. 1 a special award of \$10,000 is offered, making a total of \$35,000.

**THE VOTE AT PREVIOUS PRESIDENTIAL ELECTIONS** To better enable the readers of The Commercial Tribune and The Weekly Gazette to have the figures of previous years before them, the following figures are given to show total vote in Ohio for President of the United States for the years from 1888 to the last Presidential election: 1888—841,941. 1892—861,625. 1896—1,020,107. 1900—1,049,121. 1904—?

subscribers estimating and not of The Commercial Tribune.

These conditions constitute the entire contract, and are subject to no modification whatsoever, and every subscriber competing in this contest assents thereby to these conditions.

The Official Certificate of the Secretary of the State of Ohio shall be conclusive as to the total number of votes cast.

After the receipt of the Official Certificate an impartial committee, selected by The Commercial Tribune, will determine the winners, and its award will be published in The Commercial Tribune for three days, after which time, in the absence of objection, the awards will be distributed, and this distribution shall be final and absolute and binding on all participants in the contest.

For subscription blanks and further information, address the Manager of THE COMMERCIAL TRIBUNE AWARD BUREAU, P. O. BOX 817, CINCINNATI, O.

**FARMS** For rich farming, and fruit growing, Write J. D. S. HANSON, Hart, Mich.

# DO THIS NOW

## And I Will Give You a Pair of my Handsome Gold Spectacles

Just send me five names of spectacle wearers and I will do this:—First, I will mail you my Perfect Home Eye Tester, free. Then (after you have sent me your test), I will mail you a

perfect-fitting five dollar family set of Spectacles for only \$1, which will include a pair of my handsome Rolled Gold Spectacles, absolutely free of charge. This set will last a family a lifetime. I have never sold this family set for less than \$5 and you could not buy spectacles anywhere near as good as these, even for \$10 a pair. I am really charging you nothing for them now, as the dollar I will ask you to send with your test is only to help pay for this announcement. This very remarkable but honest offer (to send a five dollar set of spectacles for only \$1) is open to everyone (my old customers also), but only for a short time, as I am just doing this to prove to every spectacle wearer in the world the following two very important facts: First, that my Perfect Home Eye Tester is positively accurate and reliable and with it you will be able to give your own eyes a perfect test in your own home and thereby I fit you with absolutely perfect fitting spectacles by mail, which could not be improved on even if you had undergone a personal examination in any oculist's office, at a cost of \$10 or more. Second, and most important of all, that on account of my latest improvements, my spectacles have become known the world over as the "Dr. Haux Famous Perfect Vision Reading and Sewing Spectacles" and they are now greatly superior to all others on the market. With them you will be able to thread the finest needle and read the smallest print, day and night, with perfect ease and comfort, just as you did in your younger days, and this, even if your eyes are so very weak now that you cannot read the largest print in this paper. In fact the large number of physicians who have for years and years used and recommended my spectacles to their weak-eyed patients will tell you that they are the most perfect fitting, clearest and best in the world today, and I will give you your dollar back and let you keep the five dollar set of spectacles also, if you yourself don't find them to be the finest, clearest and best you have ever bought anywhere at any price. I can only send one set to a family at this price, and this only for a short time, so write me right now for my free Perfect Home Eye Tester, and address my company as follows:—

**DR. HAUX SPECTACLE CO.,**  
Haux Building, ST. LOUIS, MO.  
**I WANT AGENTS ALSO** And any man or woman (also storekeepers), without any previous experience whatever, can fit the weakest eyes with my Perfect Home Eye Tester, which is so simple that any one can work it and easily earn from \$25 to \$100 weekly selling my famous spectacles, either in their own homes, travelling or in stores. My agents need no license anywhere as I furnish the necessary documents with the Agent's Outfit.  
**NOTE:**—The above is the largest mail spectacle house in the United States and perfectly reliable.

# THIS IS YOURS FREE

We are giving away Gold Watches, Jewelry, and other valuable premiums to those who help us introduce our remedies. Send us your name and address and we will mail you four boxes of Dr. Ripley's Compound Iron Pills; sell them at 25 cents a box and remit us the \$1.00 received and we will promptly forward you without extra expense or work, the handsome Chatelaine and Pendant shown here, simulating a \$20. **SOLID GOLD WATCH**, American made, and guaranteed for ten years. This is the biggest offer ever made and you will be delighted. We are an old and reliable concern and will present \$1000. IN CASH to anyone who can prove that we do not do as we say. Our Pills are good sellers and we are anxious to introduce them in every home no matter what it costs us.  
**RIPLEY DRUG CO.,**  
Dept. 262, New Haven, Conn.

**CANCER** 30 years experience enables us to scientifically treat and effectually cure cancer and tumors without the knife. 75 page book sent free. Address **DRS. GRATIGNY & BUSH**, 7 Odd Fellows Temple, 7th & Elm Sts., Cincinnati, O.

# LETTER FROM DAVID DOBETTER

Number 46

Near Williamsport, Ind., Oct. 20, 1904.  
Dear Mr. Everitt:

Don't know as I ever told you the story of the little chap whose father was a candidate for some office, just what the boy did not really know, but who, when he learned that father had been elected, ran up and down the road, jumping and kicking up his heels, shouting at the top of his voice, "Pa's it! Pa's it!"

Well, as the little chap said, I am IT, so far as being a candidate is concerned. The caucus came along in due time, and when the votes were counted it turned out that I had the highest number by some sixty-five. It was quite a tussle, though, and I suppose there were some that thought I would not get within forty rows of apple trees of the nomination. But they didn't hit it where they missed it before. They forgot to reckon with the better part of the farmers of the township, and they simply shot over the mark.

After getting your letter, I took your advice and spent a few days looking up the sentiment of the people of the township, and I found that there really was a deep and widespread feeling that we have been kept under the thumb of a few men that would like to be bosses forever for a great many years. These men have been in the habit of getting together in some back room, fixing up a call for the caucus to suit themselves and sticking one or two of them up on the backside of some old barn where nobody ever would think of looking for them, and then when the day came for the meeting, nobody would be out except a handful of men that knew what the secret was; so they would have everything their own way. They supposed they were going to keep right on that way this fall; but it made their eyes stick out when the time for the caucus rolled round and they saw the room just packed and jammed to the door with men that were not there to follow any man's lead but had blood in their eyes and their fist doubled up, ready to do business for themselves.

The machine trotted out its candidate, but he never made a single lap. He was simply snowed under, and your humble servant, David Dobetter, was nominated for Township Trustee. Tell you, it made them mad. And they are not going to let the matter drop there. When they saw that they were defeated, they set the bigger wheels of the machine to rolling and they rolled themselves into the caucus of the other party, which was held a few days after that which nominated me, and helped to put up a man they thought would do as they wanted him to if elected. We will have a lively time of it; but we have got our dander up now and we will be right at the polls on election day and match those fellows on their own ground. I never was quite so much interested over anything as I am over this election. Not that I care so much about the money or the honor of the thing; that is not it; but there is a principle behind the movement. The way those ringsters did proves just what the party loyalty they tell so much about amounts to. It is the loaves and fishes they are after, and not the good of the people. And they have been living so long on the fat of the land that they hate to quit. I don't believe I am sour or narrow-minded in what I say. I never did have a pair of green glasses to my name, and at my time of life I don't mean to invest in any; but I tell you, things are not what they should be in the public affairs of our country. Beginning clear down in the township and running right up through, crooked men have had the upper hands for years and years. They are the fellows that make a business of politics, and the common folks have been contented to sit back and let them run things as they pleased. There has been so much going on on the farms, things that have kept us busy at home, that we have not been taking much part in the affairs of our country as we should, and as I hope to take hereafter. I see now where we have made a great mistake.

The boys are tremendously stirred up over this matter. They say they will both come home and do all they can to see father through. I have no money to spend in getting votes. If I had a million dollars I would not spend it in that way. If I can't make a good, clean canvass and come out of it with clean hands, I will go back home and wait till another year and tackle them

again!—But I don't believe that will be the way it will come out. I have faith in the hearts of the people. They are not going to be put down always. And I think the time is about here when they will stand up and be counted for right or for wrong.

But there has been a good deal besides politics going on at Four Leaf Clover Farm since I last wrote you, and it has been in a line that I enjoy more than I do fighting with the ballot. We have been getting the fall work straightened up splendidly. Everything is in good shape for winter. I guess wife was a little fearful at first that I might give too much time and attention to running around, so that winter would come on and find us with a lot of work on hand to do after the winds begin to blow; but when she found out that I kept things moving, she said:

"That's right, David; you're all right. Let the election run itself. The folks of this township are going to take care of you. It is our business to look after the crops the Lord has given us. He wouldn't have made them grow if He had supposed we were going to let them go to waste."

And we are not. She is right. The hands have all worked like men all the fall. We had a splendid crop of corn. It is not all husked yet; but we have done enough at it to show that we will have more than ever before. Our farm lying in such a warm corner of the country the corn ripened up some days ahead of our neighbors. It does make quite a difference. Then, too, the river kept the frost off. When it was down to freezing on the higher lands, we had a good fog that protected us. We have kept two teams busy drawing potatoes to the city since we began digging the late ones. The market has been a little slow for a few days, though, and we will put the balance of the crop in the cellar for better figures. We have splendid line of seed potatoes that we hope to market at good prices before spring. They never were better, it seems to me, than this year.

We went around the young orchard a couple of weeks ago and took off all the papers we wrapped about the trunks in May to keep out the borers. The Department of Agriculture never did a better thing in that line than when it recommended that way of protecting little trees. We did not find more than two or three trees that had been affected at all by borers, and those were where the papers had been torn up a little at the bottom so that the moth found her way in. We plan now to go over the trees along in February or March and trim them up good. It looks now as if some of the trees might bear a little next year. We look forward with pleasure to the time when we will have a good big bearing orchard. That will mean thousands of dollars' worth of fruit for us.

But everybody is in bed but me. I must stop and crawl in, too. With very best wishes, I am, yours truly,  
**DAVID DOBETTER.**

[Mr. Dobetter is not a politician, nor does he look at these things from a partisan standpoint. He views them simply as a good government proposition.—Editor.]

# The Tobacco Interest

Report from a Single Shipping Point.

The outside world scarcely realizes the magnitude of the tobacco crop. The following shipping record of Mayfield, Ky., may serve to give some idea of it: The season began here about March 1st and during that time 889 loads of tobacco have been shipped from here. Each car will average fifteen hogsheads, which make a total of 13,335 hogsheads that have been shipped. Each hogshead is estimated will average \$200, which makes the amount up to date \$2,667,000. About 1,400 hogsheads will be shipped out of here before the season is ended. It is thought that the entire total in dollars that has been shipped from Mayfield will reach \$2,947,000.

I wish we could have the ear of every cotton grower just now. There never was a more auspicious time for them to hold their cotton and secure a fair price. But how shall they know it? Will every reader of Up-to-Date in the South please see everybody else in their reach and tell them about it? Get them to read Up-to-Date.

# Catarrh, Foul Breath

If You Continually K'hawk and Spit and There is a Constant Dripping from the Nose into the Throat, If You Have Foul, Sickening Breath, that is Catarrh

Large Trial Package Free—Quickly Cures

Any person having catarrh always has a bad breath. The sense of smell and taste are nearly always totally destroyed in time so that the person who has catarrh does not realize how loathsome their disease is. They continue their K'awking-K'hawking and spitting and spitting about promiscuously until they are shunned by everyone, and the sight of them is enough to make a well person sick.

In order to prove to all who are suffering from this dangerous and loathsome disease that Gauss' Catarrh Cure will actually cure any case of catarrh quickly, I will send a trial package by mail free of all cost. Send us your name and address today and the treatment will be sent you by return mail. Try it. It will positively cure so that you will be welcomed instead of shunned by your friends. Write today.

C. E. GAUSS, 2567 Main St., Marshall, Mich.

# HOW IS YOUR STOMACH?

I CAN CURE YOU

I am a druggist of more than 20 years' experience. If I were offered \$1,000 I could not prepare a better prescription for a stomach remedy than my stomach tablets. I offer to send to all afflicted one month's treatment on trial. You pay when satisfied. My stomach tablets cure dyspepsia, indigestion, gas on the stomach, heart-burn, palpitation of the heart and ills caused by poor digestion. They assist the stomach to digest food. They create new life and energy by strengthening the stomach. Write for month's treatment. It will be sent by return mail.  
**JOHN MORROW, Chemist,**  
138 Forest Bldg., Springfield, O.

# FITS CURED.

Why suffer when Dr. Blakeley's Epileptic Prescription No. 357 will permanently cure you. J. C. Moulton, 5 Osborne St., Salem, Mass., writes: "Your medicine has done what you said it would for my son, he has not had any Fits or Headache since using, he is growing quite stout, you would not believe he was the same boy." If you know of any person who suffers from Epileptic Fits, Falling Sickness, St. Vitus' Dance, or Kindred Nervous Disorders, it would be a charity to call their attention to our offer of a **FREE TRIAL TREATMENT**. We are so certain that Dr. Blakeley's Prescription will effect a permanent cure, that we will send you a **TRIAL TREATMENT FREE** in a plain sealed package, if you will merely send your name and address. Send no money, but write at once to Dr. Blakeley Remedy Co., Dept. T 40 Dearborn St., Chicago.

# Fits Cured

## Deafness Can Be Cured

I Have Made the Most Marvelous Discovery for the Positive Cure of Deafness and Head Noises and I Give the Secret Free

With this Wonderful, Mysterious Power I Have Made People Deaf for Years Hear the Tick of a Watch in a Few Minutes

Send Me No Money—Simply Write Me About Your Case and I Will Give You the Secret by Return Mail Absolutely Free

After years of research along the lines of the deeper scientific mysteries of the occult and invisible of Nature-forces I have found the cause and cure of deafness and head noises, and I have been enabled by this same mysterious knowledge and power to give to many unfortunate and suffering persons perfect hearing again; and I say to those

I Have Demonstrated that Deafness Can Be Cured—Dr. Guy Clifford Powell

who have thrown away their money on cheap apparatus, salves, air pumps, washers, douches and the list of innumerable trash that is offered the public through flaming advertisements, I can and will cure you and cure you to stay cured. I ask no money. My treatment method is one that is so simple it can be used in your own home. You can investigate fully, absolutely free and you pay for it only after you are thoroughly convinced that it will cure you, as it has thousands of others. It seems to make no difference with this marvelous new method how long you have been deaf nor what caused your deafness, this new treatment will rest your hearing quickly and permanently. No matter how many remedies have failed you—no matter how many doctors have pronounced your case hopeless, this new magic method of treatment will cure you. I prove this to your entire satisfaction before you pay a cent for it. Write today and I will send you full information absolutely free by return mail. Address Dr. Guy Clifford Powell, 1233 Auditorium Building, Peoria, Ill. Remember, send no money—simply your name and address. You will receive an immediate answer and full information by return mail.

Order 20 pieces send us the \$2, and we will positively send you both the watch and ring, and a chain.

ERIE MFG. CO. Dept. 26, CHICAGO

## THE THIRD POWER

(Continued from page 7)

work? It all depends on the farmers. If they come into the organization, are loyal to its rules, are true to one another, and co-operate faithfully and intelligently for the general good, there can be no possible doubt of the success of the plan. No, I will not expect this. All do not need to be loyal, considering the great number of farmers, and the fact that only a small portion of any crop needs to be controlled at any time. If we admit that the great majority of farmers are stubborn, in fact rebellious, yet they cannot affect the accurate working results of this machine. There will still be enough loyal ones left at any time to insure success. In this respect the great number of farmers which, in the past, was considered the great element of weakness in a farmers' organization will be its greatest strength, when working on the plan of the American Society of Equity. Give us a number equal to what were in some former farmers' organizations and the definite results will work out almost without an effort on the part of the individual farmer. Farmers should remember that they are not to be ruled from the outside. When the voice of the American Society of Equity is heard, it will be the voice of the farmers themselves.

So what we are to learn is not whether the organization can succeed, but whether the American farmers honestly want it to succeed; therefore, to doubt the practicability of the plan is to doubt the farmers themselves; after the organization has been effected the farmers can kill it if they wish to, but so can a man rob his partner. Railroads combine successfully, and yet how often do we hear of secret cutting of rates in direct violation of the agreement between the roads. So I admit that some of the farmers might play the traitor to the organization, and yet I hold that the organization would win in spite of their treachery. But there would be few such men among the American farmers; having once decided to give the American Society of Equity a trial they would see to it that it had a fair trial. The only people incapable of working together in organizations are savages, idiots and the insane. Among these a perverse individualism prevails. Are we to class the farmers in either of these categories? Organization is the great weapon of civilized and enlightened men, and so it is peculiarly the weapon of the American farmer. In his "Notes on Virginia," Thomas Jefferson wrote:

"Those who labor in the earth are the chosen people of God, if He ever had a chosen people, whose breasts He has made His peculiar deposit for substantial and genuine virtue. It is the focus in which He keeps alive that sacred fire, which otherwise might escape from the earth. Corruption of morals in the mass of cultivators is a phenomenon of which no age or nation has furnished an example."

And writing to John Jay, in 1785, Jefferson said:

"Cultivators of the earth are the most valuable citizens. They are the most vigorous, the most independent, the most virtuous, and they are tied to their country and wedded to its liberty by the most lasting bonds."

What they were in Jefferson's day they are now. Yet it is of such men that we are asked to believe that they, like the insane and savage, are incapable of organization. The farmers are as intelligent as the mechanics, who combine without difficulty and make their combinations effective. They are even as intelligent as the so-called captains of industry, who, through their organizations, control both the business and the politics of the American people. What the mechanics and capitalists do, the farmers can and will do. To say that they cannot organize effectively is to put them in a class by themselves and to rank them infinitely below all other classes. And that is absurd.

One objection remains to be considered: There are those who say that the scheme is too great—that it is beyond the power of men to achieve. This is but another way of stating an objection already considered. But what are men put in this world for, if not to achieve great things? The very greatness of this enterprise, instead of being an objection to it, ought to be one of its chief recommendations. Further, if it has been shown that it is practicable, what matters it how great it is? The greater the better, one would think; besides, system is the servant of the twentieth century business man, and great enterprises frequently work out more definitely than small ones. It is a stupendous campaign in which the farmers are asked to enlist. But that very fact ought to stir their ambition and inflame their zeal. Instead of saying that the plan cannot be put in operation, we ought to set ourselves to a consideration of those qualities that are necessary in those who would make it work. Ralph Waldo Emerson—an American prophet who was never staggered by the great or impossible—has said that "nothing great was ever achieved without enthusiasm." It is so. Therefore, our duty is, not to pick flaws in the proposed scheme; not to make up our minds beforehand that it cannot win, but to kindle our enthusiasm to such a point as to make failure absolutely impossible. The cause is worthy; the weapon is at hand and effective; the only weakness, if there is weakness, is our own doubting spirit. The appeal is for men to fight in the cause and to wield the weapon. With them—and they will be had—the Machine of Co-operation will be built. The Third Power will be a real power; the grand American Society of Equity will be a triumphant success, and agriculture will be lifted to the plane where it rightfully belongs.

(To be Continued.)

Note.—In the next issue we will finish Part One of The Third Power, or The Third Power proper. The numbers comprising this work are June 15th to November 1st. The ten numbers will be sent for 20 cents.

### Have You Asthma In Any Form?

Medical Science at last reports a positive cure for Asthma in every form in the wonderful Kola Plant a new botanical discovery found on the Congo River, West Africa. Its cures are really marvelous, therefore this remedy is of the most vital interest to Asthmatic sufferers.

Mr. Thos. Phillips, No. 267 Middle St., Pawtucket, R. I., writes May 9th. I thank God and the Kola Importing Co. for my cure of Asthma after I had given up hopes of getting cured. Mrs. Maggie Gardner, of Ackworth, Iowa, writes May 6th, suffered for several years with Asthma and could get no relief, but the Kola Compound permanently cured me. Mr. C. J. Case, Johnsonville, N. Y., writes May 5th, the Kola Compound proved a God-send to me, as it cured me of Asthma in the worst form, and I had suffered with it from childhood. Mr. E. Aldrich, 391 Mill St., Poughkeepsie, N. Y., a prominent citizen, writes, my son suffered with Asthma for seven years. Doctors could do nothing for him, and to save his life advised me to take him to Denver, Colo. A friend advised me to try Himalaya and it completely cured him. Hundreds of similar letters have been received by the Importers, copies of which they will be glad to send you.

To prove beyond a doubt its wonderful curative power the Kola Importing Co., No. 1164 Broadway, New York, will send a large case of the Kola Compound free by mail to every reader of Up-to-Date Farming who suffers from any form of Asthma. This is very fair, and we advise sufferers to send for a case. It costs you nothing and you should surely try it.

**WATCH AGENTS OUTFIT A \$10 SAMPLE WATCH FREE** Write Now for Free \$10.00 Sample Watch and Outfit. OGDEN JEWELRY CO., Dept. 162 CHICAGO.

**\$25,000 FROM 1/2 ACRE OF GINSENG PROFIT** One man made that large sum. Others have done as well. Any farmer can make a handsome profit growing this valuable root. It is a fact that the supply is decreasing while the demand is increasing. There is money in Ginseng growing for you if you want it. Circulars and particulars free. Root and seed for sale. J. A. EVERITT, Seedsman, Indianapolis, Ind.

## I Cure Women OF FEMALE DISEASE AND PILES

I Will Cure You So That You Should Stay Cured—Women No Longer Need Submit to Embarrassing Examinations and Big Doctor Bills.

To Show Good Faith and to Prove to You That I Can Cure You I Will Send Free a Package of My Remedy to Every Sufferer.

I hold the secret of a discovery which has seldom failed to cure women of piles or female weakness. Falling of the womb, painful menstrual periods, leucorrhea, granulation, ulceration, etc., are very readily cured by my treatment.

I now offer this priceless secret to the women of America, believing that it will effect a cure in almost any case, no matter how long you have suffered or how many doctors have failed.

I do not ask any sufferer to take my unsupported word for this, so will send you some of the medicine free. If you will send me your name and address I will mail you a trial package absolutely free, which will show you that you can be cured. Do not suffer another day but just sit down and write me for it right now.

Mrs. Cora B. Miller, Box No. 137 Kokomo, Ind.

### Free Hair Grower.

A trial package of a new and wonderful remedy mailed free to convince people it actually grows hair, stops hair falling out, removes dandruff and quickly restores luxuriant growth to shining scalp, eyebrows and eyelashes. # The Power of \$10

I BELIEVE if everybody fully realized the value or power of \$10. and the wonderful accumulative growth of small sums wisely invested, many people would be independently wealthy.

\$10. will buy lots of agreeable things, but if you want to share in the most remarkable money making opportunity ever offered, let me show where \$10. a month will become the most productive, safe investment you ever made.

If you can save \$10. a month, which is only 33 cents a day, I would like to send you particulars about an investment I know will interest you—that may prove the foundation of your fortune.

Nearly two years ago I undertook the sale of \$500,000 worth of industrial stock in a plant which was doing upwards of \$800,000 worth of business a year. The stock was then selling at par and paid a nominal interest. I saw that there was practically no limit to the business this aggressive management could do with a little more capital.

In recommending it to my clients, I told them candidly what I thought it ought to pay in dividends, under the most adverse conditions. To-day the stock in this Company is selling at \$25. above par. The Company is doing a business of \$1,700,000 annually and is paying those who bought stock on my recommendation 17 per cent. interest. Of course, every one who bought this stock is satisfied and a living testimonial for my Investment Department.

## SUCCESS--GREAT SUCCESS

The phenomenal success of the industrial enterprise above mentioned induced me to seek out others equally promising, with the result that I can now offer you, as a reader of Up-to-Date Farming an opportunity to invest in a business I am convinced will be one of the most profitable industries in the country—even more profitable than anything I have heretofore offered.

## A COMMONPLACE PRODUCT

While the plans of operation and the marketing of the goods of this plant indicate unusual profit-earning possibilities the product itself is a most common place one.

- 1st—It is an article of every day need.
- 2nd—It is inexpensive and used by eight out of every ten women.
- 3rd—It is as much a necessity to a woman as a razor is to a man, and since women constitute 95 per cent. of the retail buyers, its success is assured.
- 4th—It is manufactured under eight exclusive patents and is therefore, not subject to uncertain competition.
- 5th—The business is established. The largest department stores, jobbing houses, mail order concerns and hundreds of small dealers throughout the United States are already selling it.
- 6th—The sales for the first year it was placed on the market were upward of \$75,000. They will be nearly double that amount this year.
- 7th—The profits are very large, because the raw material is converted directly into finished goods at first cost, by the Company.

## MY PERSONAL OBLIGATION

It is an investment that I can recommend to my best friend or nearest relative. There is nothing vague or uncertain about it.

I have myself taken \$100,000 worth of the stock. This, not only shows my confidence in the investment, but gives me a voice in the management, so that I can protect my clients interest ten years from now just as I do to-day. As I am personally interested I would naturally insist on capable management. I know that this is not customary with most stock brokers, but it retains the continued confidence of my clients, which is the most valuable asset of my business.

## ABSOLUTE SAFETY

Your savings invested in this manner will be perfectly safe because the business is a staple one. In fact, I would not recommend investment in a business of luxury or novelties, for which the demand is fickle or uncertain, any more than I would recommend mining, oil, air ships or similar risky investments.

The business in which you would have an interest is one whose product is in constant demand 365 days a year.

Is used by millions of people, and the demand is still increasing.

Its sale is not in the least effected by style, season or hard times.

There are many interesting facts and figures I should like to tell you about. I should like you to know, for instance, what the Company is doing, who sells their product, also a number of letters from dealers and users throughout the United States.

## ACT TO-DAY

Fill out and mail the attached coupon to-day and I will write and tell you all about this industry. Then you can investigate it thoroughly and decide if you want to become a shareholder or not. Do it now. Fill out the coupon before you turn this page. This advertisement will be read by over a million people and there are only two thousand shares for sale. Better write at once before this opportunity escapes you.

### URGED TO FORGE AHEAD

Your questions of September 1 are sensible and to the point; you deserve some expression from your readers. This work is in its infancy yet, and you cannot be fully answered, because the fruits of your efforts on the slow growth of the farmers' minds must be taken into account, and considerable patience must be exercised for us as a class. We have been a long while in this rut. You are almost alone trying to pry us out, and a powerful and successful enemy opposing every step. I would encourage you to forge ahead, faithfully and honestly, for I am sure the cause is a just one, and all just causes must succeed in the end. My heart is with you in your efforts.

I never came so near failing to make a success of anything as I have of farming. I manufactured shoes in Philadelphia for 12 years, and there made what I possess in a worldly sense. I have succeeded in holding what I started with on the farm for 30 years and am now 64 years of age. I give farming more credit than any other man when I say we have everything except profits; and I suppose if we had the profits everybody would be farmers. I again urge you to forge ahead, and help save the American farmer from being squeezed to death.

FRANCIS W. HICKS.

Avondale, Pa.

### MADE 910 DOLLARS

I want to thank Up-to-Date farming for what it has done for me. Last year I raised 4,100 bushels of wheat and 1,700 bushels of oats. I had to sell 1,500 bushels of wheat to meet expenses, but I held the balance as advised by you, and made \$910 by doing so. I also got 40 cents a bushel for my oats, though my neighbors sold for much less.

## A Catalogue for Unmarried Men Free to Any Address

SOMETHING NEW. UNMARRIED MEN READ.

A new catalogue containing everything you can possibly need if you are not a family man.

Almost 700 pages devoted to illustrating, describing, and pricing the goods that interest men who are not supporting a household. What does an unmarried man care about curtains, dress goods, millinery, or lace? As an unmarried man, does sewing silk, cut glass, or linen interest you? We have gone through our famous catalogue and buyer's guide No. 73—the catalogue we advertise so extensively for home owners—and omitted everything of no interest to single men. The revised book which we call the Men's Abridged Edition, contains everything for men. Almost 700 pages of reliable, low-priced merchandise. No matter what your occupation is or where you live, you will find just what you need in the Men's Abridged Edition, if you are not a married man. Tools of all kinds, hardware, game traps, bicycles, guns, sporting and athletic goods, camping out-fits, harness, photo-goods, electrical supplies, telephones, band instruments, musical goods, books, watches, and jewelry for men, men's wearing apparel of every description, including shoes, fur ulsters, hats, gloves, umbrellas, etc.—about 60,000 different articles in all.

The Men's Abridged Edition is Free. Simply send a postal and ask for our Men's Abridged Edition and we will send it with our compliments, all charges paid. We want every unmarried man in this country to have a copy of the Men's Abridged Edition. We want every single man everywhere to have one. It will pay you to keep a copy for reference. We have everything you use; the prices are so much lower than those you are accustomed to paying, that you will be surprised. Don't buy tools of any kind, harness, hardware, clothing, or in fact, anything until you have seen the Men's Abridged Edition. Simply send a postal. Ask for the Men's Abridged Edition—we will send it the moment your request is received.

## Wholesale Prices on 125,000 Different Articles

Everything You Eat, Wear or Use—over 125,000 different articles, fully described, clearly illustrated, and plainly priced in our famous Catalogue and Buyers' Guide No. 73.

Fill out the coupon below and let us send you, all charges paid, one of these valuable catalogues, the only complete one published anywhere, the only one that quotes everything you are liable to want, the only one quoting only reliable and honestly made goods, the only one with low prices all through. The third edition is now being printed and can be obtained postpaid by simply filling out the coupon and sending to us with 15 cents as a guarantee of good faith. The book itself costs almost \$1.00 to print and distribute, but we will send it to you with our compliments if you will show us that you mean business by sending 15 cents with your application.

Many firms give their catalogues away free, but such catalogues are not reliable. Thousands are wasted upon children, who simply want to look at the pictures, thousands are sent to persons who are merely curious and have no intention of buying, thousands are thrown away upon persons who refuse to buy because the catalogue is not complete and the prices don't look right. The waste is enormous and low prices cannot be maintained with such terrific losses except by shipping inferior goods. Requiring 15 cents as we do with every application, we place our catalogue only with prospective buyers and avoid the enormous loss due to waste of catalogues. Almost every catalogue brings an order. We have no losses to cover up and can give the highest grade of goods at prices that other firms cannot meet. The 15 cents proves to us that you really want our catalogue and we will gladly send it, paying the necessary 24 cents postage ourselves, and give you a bigger, better and more desirable catalogue than you can obtain from any other firm.

**Ten Thousand Applications Daily** have been pouring in ever since we announced the publication of Catalogue No. 73 last month. The first edition

lasted only a week, the second edition went just as fast, the third edition is now being issued as fast as our six big rotary presses can print them. We want everybody to have a copy; if you have not already sent us an application, do it now. Get your catalogue in time for the winter buying. Remember our catalogue is the only complete one—no sending for special catalogues; everything you can possibly want is included in the big book.

We have been in business in Chicago for almost 33 years, and now conduct the largest business of its kind in the world. Our daily shipments are enormous, and are only exceeded in this country by several of the larger jobbing houses. We owe our success to our policy of treating all customers honestly, and giving them goods of real merit. We have always avoided cheap trashy goods because we consider it dishonest to sell anything worthless. Over two million customers buy regularly from us because they know we supply honest, dependable goods, treat everybody fairly and make prices that average far lower than those of any other firm. If you have never tried us we respectfully solicit a trial. The way to begin is to fill out this coupon and send to us at once. When you have our Catalogue No. 73 in your possession you will find buying of us both pleasant and profitable.

### USE THIS COUPON

Montgomery Ward & Co., Chicago:  
Gentlemen—I enclose 15 cents, and will ask you to send your Catalogue and Buyers' Guide No. 73, as advertised in \_\_\_\_\_ to the following address, all charges paid: A CD 234

# Up-to-Date Farming

Representing the Union or  
Co-Operating Farmers of America

PUBLISHED SEMI-MONTHLY  
At 227 West Washington Street

Entered at the Indianapolis  
Post-Office as Second-Class Matter

Volume VII

INDIANAPOLIS, NOVEMBER 15, 1904

Number 22

## UP-TO-DATE FARMING

PUBLISHED TWICE A MONTH

J. A. EVERITT, Editor and Publisher  
JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE FIFTY CENTS A YEAR  
Foreign Subscriptions \$1.00 a Year.  
Three Month's Trial Subscriptions will be Accepted for 10 Cents.  
ALL PAYABLE IN ADVANCE

**Acknowledgement.** The date in connection with your address on wrapper, informs you of the time your subscription expires. **Change of Date** indicates that your renewal was received.

Many club raisers fail to indicate their names separate from the club. We want to know who our workers are, therefore always write: "This club was sent by (name)."

Always state if a renewal or new subscription. **Don't Neglect This.**

Your Address should always be written very plainly. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural mail route use the letters R. R. **Renewals and Change of Address.** Give the same name as before. If a change from one member of the family, so state. If you change your postoffice, give old office as well as new.

### ADVERTISING RATES

will be quoted on application.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with our subscribers. However, should any advertiser in Up-to-Date fail to keep his promise as advertised and not give a subscriber an honest deal, we will make good the amount of the loss, provided you were induced to deal with the party through his announcement in Up-to-Date only, and providing such transactions occur within a month of the publication of the paper, and that it is reported to us within a month of its occurrence. It is understood that this offer is not binding on the publisher unless you mention Up-to-Date Farming when you write.

**WHEN WRITING to UP-TO-DATE FARMING or THE AMERICAN SOCIETY OF EQUITY it will help us materially if you will give the NAME OF YOUR COUNTY as well as your postoffice address :**

### Minimum Prices

Below are the prices recommended by the American Society of Equity. They are the minimum prices, below which farmers should not sell, but any person may sell at higher prices. They are all based on some central market, and the farm price will be enough less to equal freight and a legitimate profit to the handlers. Farmers should control their marketing so as to keep the market hungry and the demand seeking the supply, when they can make their own prices—control marketing so your crops go off of the farms over the period of a year instead of in a few months. If those who can hold will hold all, and those who cannot hold will hold part, then those who cannot hold may market and all will get the price. This is the key to controlled marketing. The world must have your products at your price if it cannot get them at prices made by some other people.

" Cattle, Chicago, " " "	4.50 to 6.20 cwt.
" Hogs, " " "	4.60 to 5.40 "

Prices for farm products average higher now—the size of the crops considered—than they probably ever did in this country before. This paper claims much of the credit, because it has taught, and urged farmers to control marketing and regulate it to meet only the demand.

Don't forget.

Controlled marketing.

You've as good a right to a profit as other people have.

The farmers' campaign is now on; let it be prosecuted with vigor.

The campaign liar has retired, but the crop liar has taken his place.

Don't be afraid. There never yet has been a crop that has not all been bought.

Don't you know that while you own the stuff nobody can put a price on it but you?

Except what has been stolen. Considerable of it has been stolen in the name of being bought.

"What's the matter with the farmer?" "He's all right," when he stands for Equity as Gibraltar stands by the sea.

"We shall hold until the bagging rots," say the planters of Texas. What say the planters of the other cotton States?

The next struggle is with the corn growers. The corn liar is already loading up, but if the farmers don't sell until they get their price they will get it; that is all there is to it.

The doctrines of Up-to-Date Farming are spreading like the waves of the sea. We ought to have a million subscribers, and we look to Our Up-to-Date People to help us get them.

Those Texas planters that hauled their 1,500 bales of cotton home because they were not offered their price, don't feel the need of any joint stock companies to help them hold their cotton.

"The sellers are controlling the market." So say the leading market reports. Such expressions never came from that source before. A great many things are happening in the commercial world that never happened before, especially where farm produce is affected. The farmers are controlling the market. But, while that is true, no farmer should get "easy" and wait for others to do it. Let each one feel that he must do it himself.

Up-to-Date Farming has never proposed a thing for farmers to do that they can not do, nor that is not entirely proper for them to do, and we have made it so plain that all who read Up-to-Date understand it. Now what would be the result if a million people were constantly reading Up-to-Date? Don't you know the powers of speculation and spoliation would be routed, "horse, foot and dragon?" Let's have the million. If every enlightened farmer would try as hard as we are trying we would have them before Christmas.

We are pushing this thing less for our sake than for the sake of the cause, which is essentially the cause of the farmer. Any intelligent man could get one subscriber in half a day, couldn't he? Our readers are all intelligent people. There are 150,000 of them. In one half a day each could get a new subscriber—300,000 before next issue! Now, this is a reasonable proposition, and see what it does for controlled marketing and fair prices. To every one who will do his (or her) part of this work we will send free a memento that will be gladly kept as a souvenir of this great struggle for Equity.

## FARMERS AND MANIPULATORS

### In a Struggle for Supremacy

Farmers scarcely realize the market situation of their crops, and the long and continued silence of the farm papers on this subject is little less than criminal.

The grain dealers' associations in the various cities are iron-clad in their organization, and they are determined to keep the grain trade in their own hands for purposes of manipulation. Heretofore they have controlled even the commission merchants by a system of boycotting which enforced obedience—that is, compelled them to handle grain that came through the grain trust only. In the same way they have managed the more local dealers so as to virtually shut the farmers out from any market except that controlled by the trust.

The farmers have at last revolted against this market trust, the direct cause of the revolt being about this: The trust, composed of elevator owners in several States, planned to make more profits in the purchase of grain, all of which profits must, of course, come from the farmers. To do this a "pool" was formed, and the price offered the farmer was made uniform throughout the States. Committees of the pool met each week and agreed what margin they would maintain between the price they would pay the farmer and the regular market. In some cases this was put as much as five cents below what the farmers should have received. To induce the local markets to accept these prices sham bids were sent out on postal cards from various points to show that the prices offered were the ruling prices.

Then the farmers rebelled, and companies were formed to erect independent elevators. Here the power of the trust again displayed itself. The railroad companies were induced to refuse to recognize the independent movement, and to deny convenient sites for elevators. The Legislatures of Illinois and Iowa then took the matter up and forced the railroads to give all dealers like treatment, and the boycotted commission men propose to ask the courts for relief from the trust. In Iowa there are now seventy companies doing business independent of the trust, and in Kansas the question of the rights of independent companies is already in the courts. In Ohio the Toledo board of trade at least has decided to recognize all legitimate trade, whether of the trust or not.

And so the war goes bravely on with victory evidently coming towards the farmer. But there is a shorter road to victory than that above pursued. If farmers could only realize that so long as their products are in their own hands they are "not subject to manipulation, neither indeed can be," that they are wholly beyond the reach of any trust or combination, and that they will be gradually called for at an equitable price. Know the price and hold for it. When you get it it doesn't matter to whom you sell. This is the shortest road to victory over the market trusts.

The Third Power closes in this issue. We are sure its reading has introduced a new line of thought in many intelligent minds.

# GOOD COUNTRY ROADS

## Without Bonds or Taxation

As the season of bad roads approaches, the discussion of good roads will again be taken up, and many, many methods will be proposed for making them. We have not yet seen a good roads bill that has been before any of our legislative bodies which was not seriously objectionable in many of its features, not even the much discussed Brownlow bill, which has been before the National Congress and may become a law during the approaching winter. These proposed acts all create more or less official machinery, some of them, notably a measure not long since before the Illinois Legislature, take local control almost entirely away from the people, and place it despotically in the hands of the official machine the bill creates, about the only thing left the people being the privilege of paying the debts made. Even the laws now in operation in States that already have them, are not without such objections.

So far as our knowledge extends, every one of these measures, or proposed measures, provides for an issue of bonds to raise funds to pay for building the roads, still further mortgaging the future resources of the country. This plan naturally meets the favor and has the support of that class of capitalists who prefer to invest in this kind of securities rather than in industrial or developing enterprises; but every investment of this character adds to the concentration of wealth, for, though it puts money temporarily in circulation, the money goes out with a string tied to it, if such an expression may be used, and by the time it gets back there is much more than went out—it is a constant drain upon the profits of the masses of the people in the shape of State, county or municipal taxation.

But the country needs good roads, and the farmers, perhaps, beyond all others, would be benefited by them, and should therefore support good roads movements, but not indiscriminately. Because a measure may be labeled "Good Roads" is not enough to warrant its support. The farmer is endowed with the power to think, a power which, in late years, has been made much more active than formerly, and this power should be given lively exercise in all propositions affecting his weal or woe. The good roads proposition is one of these, and should have the most careful consideration.

But good roads can not be built without labor, and labor must be remunerated. That takes money. But does it require bonds, which are simply a long-time debt, and a constant drain upon the earnings of the people? We think not.

The general proposition is that the National government assume at least a portion of the cost of the road-making, and that, for such purpose, an appropriation be made from the National treasury and distributed among the States on certain specified conditions, the States and counties benefited to meet the remainder of the expenditure.

Why not the government meet *all* the expense? Don't lose your breath until we talk about this a little. Your first thought is that it would make necessary increased National taxation, and require a National revenue which it would be impracticable to raise. No, it wouldn't. Good roads may be built gradually by the government without ONE CENT OF ADDITIONAL TAXATION, and at the same time give to the country a prosperity it never before dreamed of, and result in such a development as no country ever had before.

How? Learn a lesson from the war—the late rebellion. In that terrible contingency the government found itself in need of the services of men. It had no money with which to pay for those services, and the people to whom it must look for revenue were as poor as itself. Therefore in lieu of money or as money, United States notes were issued. The best men of the Nation, the best men in the world, gave their services and

jeopardized their lives, receiving in payment without a murmur, those treasury notes. Generals, subordinates and privates alike accepted them, and sent them back home, where they supported the families of the men in the field, and made a prosperous North in spite of the calamities of war, and brought victory to the army supported by them. Not only were these notes thus received, but the Supreme Court of the United States decided that the government had a right to issue them.

Now, if the government may issue treasury notes to hire men to kill people, may it not issue notes to hire men to build good roads? And if men would accept such notes for services in the field, for the toils of the march, for the hardships of the camp, for the dangers of the battle field, would they not accept them for the peaceful ordinary labor of road making? And if those notes went out among the people in the rear of the army and compelled prosperity amid the clatter and roar and blood and tears of war, would they not much more bring prosperity and unusual development among a people engaged in the vocations of peace?

"But those notes would not be money," says the usual objector. Would they be any less money than the bank notes that figure so largely in the business transactions of to-day? Was not the bullet just as deadly propelled by powder bought with a greenback? And would not a stone be just as lasting, a macadam just as firm, and a road just as permanent though paid for with treasury notes? And would not the laborer be just as certainly remunerated? The worker does not want money for the metal there is in it, but for the comforts it brings himself and family, and road-making National notes would be just as good for all exchange or commercial purposes as the dollar in gold.

And again. The United States maintains an army that costs more than \$8,000,000 for food alone. Some of these soldiers are on duty in the Philippines, a few are in Porto Rico, and at other distant posts, but most of them are on guard and garrison duty in the United States. All honor to them wherever they are, but in time of peace they are only men who may well earn their living and wage by useful employment. In most cases (we refer to those at home) the only duty now devolving upon them is to care for their quarters, attend the various drills, and find other means of healthful exercise.

In the army are some of the most skillful engineers in the world. The government has made them so. A part of our army's necessary duty, especially in time of war, is erecting fortifications, digging trenches and BUILDING ROADS. Skill in these important matters, to be available in time of war, must be acquired in time of peace. Why could not details be made from the army to take charge of road-building in the United States, thus using skilled men and engineers already in government employ, in work very much in their own line? Supplement these details with men and teams employed along the various roads that may be in course of construction. Do all with military precision and pay for all with properly limited and carefully guarded issues of treasury notes, equitably distributed among the States, which notes, after filling their mission of improvement, development and prosperity, will return to the National treasury in revenues collected, but leaving behind them improvements as permanent as though paid for with gold. To thus employ the army in time of peace has been advocated by some in highest military circles, and it would open up immense possibilities in road-making, endearing the government to the people, make the most prosperous nation on earth, and without adding a mite to public or private indebtedness.

Controlled marketing solves the price problem.

## How the South Has Blindly Suffered

More than fifty years ago the British Board of Trade concluded that the lower they could force down the price of cotton the more the American planter would be compelled to raise to make a living, that the increased production would furnish increased supplies for their mills, and that it would afford additional leverage to be used in making the price still lower. This policy was agreed upon, and has been adopted by all the Cotton Exchanges of the world, and it has been steadily and relentlessly pursued ever since, with various results, of course, as season conditions have favored or thwarted their purpose, but always to the loss of the planters, not in absolutely lower prices, perhaps, but in prices below what conditions warranted.

This selfish and cruel, and, we may say mistaken, policy, has cost the cotton growers immense sums of money, or, rather, has prevented them from realizing vast sums they have honestly earned, and to which they were justly entitled. So great a difference has this made in the business of cotton growing that many good, industrious and economical people who ought now to be in independent circumstances, or, at least, well to do, find themselves and their families with a scant living, in many cases short of the common comforts of life.

Until very recently the results of this miserable policy have been accepted by the cotton planters as a decree of fate, as the best they could expect, and something entirely beyond their control. But a different teaching has lately found its way into the South, and there has been a wonderful awakening, a revolution in sentiment, and an absolutely different system of marketing. The farmer has learned his power, and he now knows that, as the first owner of the things he produces, he is the logical price-maker, and that no one can get them from him without his consent. He will no longer suffer the wrongs to which he has so long patiently submitted. Instead of the cotton crop of the present year going blindly on to the market as heretofore, it is going into storage rooms, there to remain until the demand calls for it at prices that mean reasonable profits to the grower, but, in no sense, excessive to the mills. Indeed, as we have argued so many times, and, we think, conclusively, the mills may get their supplies cheaper than under former methods, for the prices will be steady, free from corners and manipulation, and they will come direct from first hands instead of from the hellish pits of speculation. Two simple words have brought about this great change in sentiment and marketing—organization and cooperation, and it is not at all out of place to say that Up-to-Date Farming set that wave of thought in motion, and the A. S. of E. crystalized it into action.

## Cotton Ten Cents and Above

Mr. R. R. Poole, President of the Cotton Association, in an address not long ago, placed the cotton crop proper at 10,500,000 bales, and that of Sea Island at 78,638 bales, the total aggregating a value of \$418,358,366.

But Mr. Poole assumes that, owing to the lightness of cotton stocks on hand, the supply will not equal the demand. He declares the planter is now independent, and can safely make cotton his money crop, that he can grow as much cotton as he chooses and hold it for a fair price. He thinks the present year's crop should not be sold below ten cents, and expects it to go beyond that figure.

Mr. Poole is not afraid of large crops, as no crop is larger than the quantity put on the market at any one time. It is astonishing how this idea has taken root since Up-to-Date Farming began to teach it. We scarcely receive a paper from the South but declares the farmers are holding their cotton.

# THE FARMER AND HIS POWERFUL FRIENDS

## Now Rated as Antagonists

Not less than two billion dollars are invested in plants for the manufacture of cotton goods, besides the great sums invested in the manufacture of by-products of cotton, such as cotton seed oil, etc. Add to these sums the amounts invested in flouring mills and other machines for converting the grains (cereals) into thousands of different usable articles. Then the sums invested in the woolen mills and other great factories for the conversion of raw farm products into articles for use, as well as the, we presume, equally great investments in the manufacture of the machinery used in all these great enterprises.

These references open up a line of investments stupendous in the sum of money involved, in the number of people employed, and in the amount and importance of the work done. Every part and particle of these great investments depends for success, for existence, upon the work of the farmer and the products of the farm. Were these withheld by a failure of the soil to produce, or the refusal of the farmer to furnish them for a single year, each of these enterprises must cease to operate and go into bankruptcy, and a continuation of such failure or refusal would make all this valuable machinery worth no more than old iron at the junk shop.

And now must come in another long line of sufferers—those engaged in transportation, in providing fuel, in building cars, and in making the machinery that builds them. Also those engaged in the distribution of the finished products—wholesalers, jobbers, merchants.

What, then, should be the relation existing between the farmers and all this vast line of investments? That of the closest friendship certainly—the friendship of absolute dependence and mutual interest.

But an element coming between the two, has for its own selfish interest, inculcated a feeling of antagonism that is harmful to both interests. This midway element, by the most hellish means, has so long sought to rob the producer by forcing the price to him down, and then to rob the manufacturer by forcing the price to him up, that a feeling has been engendered in the breast of the manufacturer that to succeed he must get the producers' goods at the lowest possible price, and he feels that he must oppose every effort of the farmer to increase the reward for his labor.

In this the manufacturer is mistaken. His best interest lies in reasonable and STEADY prices—prices that enable him to make his own prices with safety, and to gauge his output with certainty. Thus is the farmer's movement to control the prices of his products as much in the interest of the consumer of those products as it is in his own, and should cement the friendship between them that would never have been broken but for the Godless greed that came between them. The producer of the raw material and the manufacturer that converts it into things of use are logical friends, and their friendship must be restored, and it will be by the controlled marketing proposed by the farmers, and the steady prices that must result therefrom.

### The Sale of Nothing

The man who sells a horse when he has no horse to sell, commits a crime, and the courts, enforcing the law, punish him for it. So also if he sell a piece of land he does not own, or if he thus pretend to sell any other commodity when he does not own the commodity. Both honesty and intelligence approve the law and commend the punishment in the interest of society.

Yet things are sold every day which the seller does not possess, which he does not pretend to possess, which he does not expect to possess, and

the world looks on without a protest, the law quietly sleeps in the midst of it, and the courts take no notice of it. We refer to the so-called option selling of grain and other products or dealing in "futures," as it is otherwise called.

It may be claimed to escape the penalties of the law, that in these transactions the element of criminality is absent, that there is no intention to defraud because the purchaser knows the seller does not possess the commodities sold, he does not expect him to deliver them, and does not desire that they be delivered at the time of purchase or at any other time.

But these sales of nothing in the name of a great commodity do injuriously affect a nation of producers, since they bring these imaginary products in direct competition with the real products upon which the producers depend for their living, the support of their families and the maintenance of their homes. If a transaction which injuriously affects an individual is a crime, how much greater crime is the transaction which injuriously affects an entire people!

We believe we may say, and challenge contradiction, that State Legislatures fail in their duty when they refuse to prohibit these transactions within their borders, and that the National Congress owes it to the people and to civilization to take cognizance of them under the clause of the constitution which authorizes it to regulate commerce between the States. And the people themselves come far short of their privilege so long as they neglect to urge this before the Legislatures and Congress.

### Wheat Tariff and Canada

The wheat situation is leading to some rather peculiar developments. The great export mills of the northwest don't like to pay Equity prices for wheat, which range around \$1.21 at those points for the desirable milling grades. Across the line in Canada the same grade is offered at 98 cents, but a tariff of 25 cents per bushel must be paid for the privilege of bringing it across the line. This, we believe, is the only tariff we ever heard of that afforded any protection to the American farmer, and it, perhaps, was never expected to do so, since America has always been a large wheat exporting country, and it was naturally supposed that American prices could be kept down to a satisfactory basis. But the A. S. of E. had not been reckoned with.

Millers may ship wheat across the line without paying the tariff, but, if they do so, they must give bond that the entire product, including the by-products, must be exported—none of the flour nor the resulting feedstuffs must be sold in this country.

Some of the mills are doing this. The Washburn-Crosby Company is reported to have bought a million bushels of Canadian wheat, and has bonded one of its mills and an elevator as security that the entire product will be exported. The Pillsbury-Washburn Company is said to have done the same, and the Northwestern Consolidated expresses the intention to do likewise.

In view of the fact that the Canadian price is now within about two cents of the American price (the tariff included), it is presumed that the mills will soon choose to pay the tariff rather than to give bond under the other provision.

We urge the farmers to watch Congress next winter. Indeed, they should take occasion to express themselves in advance of the assembling of Congress. There will be a movement on foot early in the session to remove the tariff on wheat—especially Canadian wheat. Were that tariff removed to-day the price of American wheat would drop 25

cents on the bushel. Of course, the farmers, by refusing to sell, could compel the equity price in spite of all the wheat fields of the world, but the new situation would be as indicated above.

Up-to-Date Farming, as a non-partisan journal of independent thought and purpose, does not care to discuss the tariff question, but so far as the effect of it upon the American farmer is concerned, this part of it is very clear, and if the farmer surrenders the little benefit he derives from it he may well discuss for himself the necessity for a guardian. The tariff is essentially a system of protection. That is what its advocates call it, and the manufacturers demand it as a means of protecting them from the cheaper goods in their line that may come from abroad. In other words, a system that enables them to charge more for their products than they could sell for were like products admitted free from other lands.

Farmers may very safely take the position, and stick to it, that if manufacturers are thus protected in their products, the farmers must be likewise protected in theirs; and if this protection is to be taken from farm products, it must likewise be taken from all other products. This is a fair stand to take. It is tenable and equitable, and no one can say it is unjust. Make it known to your Congressman with the emphasis of a thunderclap, and Up-to-Date Farming will carry with it on this subject a kind of sulphurous odor to Washington.

### Farm Organization and Fraternity

There are many different farm organizations in the United States. They have different forms of organization, perhaps, different officers, different headquarters and different methods of procedure; but they are now all clustering around the idea of equitable prices for farm products. That the country is indebted to the American Society of Equity for this latter crystallization there can be no doubt, but this Society is not at all jealous. We are glad other societies have taken the matter up, and we trust they will stand their ground valiantly, render material aid in the great accomplishment, and reap a full share of the glory of victory.

But we note with regret that there is a disposition on the part of some of the societies to throw dirt at others—to insinuate, abuse, nag, and otherwise impede the progress of other societies. For this there can be no excuse. While we believe it might be better for this great effort to improve the condition of agriculture to be more concentrated so as to speak more nearly as a unit, yet this country is large, and there is room for all. What suits one in detail might not suit another. One society may have the support of some who could not be reached by others. Let each one, therefore, fill its mission and do its best for the one common cause, justice for the farmer. In this we may, and must, all co-operate. If farm societies can not co-operate, how can we expect individual farmers to co-operate? We hope all farm societies, great and small, will at once dismiss their petty jealousies, quit firing at each other, raise high the standard of fraternity, bid each a God-speed, and extend a helping hand to all, to the end that victory may the sooner come, with relief to a people that have so long suffered such great disadvantages as the farmers have suffered. Those who can not do that are the only ones for whom there is no room in this country. Co-operation, fraternity and success are the words that should guide us.

### Large Wheat Deal

One of the largest deals in actual wheat was recently consummated in Chicago for the millers of Louisville, Ky. The deal covered 1,000,000 bushels of actual wheat, representing an investment of \$1,250,000, and requiring 1,000 cars to move it.

While such actual deals as this are made, farmers need not be afraid to hold their wheat. One of the men who made this purchase declared that he "expected to see soft winter wheat sell at \$1.50 before another crop," and gave that as his reason for buying a million bushels now at \$1.25 delivered in Louisville.

# MONEY AND CROPS

The need for money in handling the great corn crop is taking currency in large amount from the New York banks to the "corn belt" in the West. The transfer of money to the cotton-growing section of the South and Southwest is not diminished, so that the drain upon the New York banks is heavy. Without the large receipts of gold from the Pacific coast and without the large disbursement on balance by the government that helped the banks last week, it would seem that the banks must this week have sustained a considerable reduction of net cash.

The above is an authoritative financial dispatch that recently went the rounds of the press. Every time a crop is harvested like dispatches appear, and they prove a financial situation not conducive to general prosperity—one that shows the producers of crops are laid under tribute every year by the financial institutions of the country just as certainly as are the tenants of unfortunate Ireland laid under tribute by the landlords. It is not enough to say the farmers do not borrow this money and that they therefore pay no interest (tribute) upon it. Each year it is heralded that the money goes to the producing regions "to move the crops." If the farmers do not borrow it, those who buy and handle the farmers' crops do, and prices are made low enough to pay these interest charges. **THE FARMER PAYS IT ALL**, and being the first seller with some one else to make prices for him, he finds it impossible to recoup his losses—he can not charge them up to any subsequent buyer as every other seller does.

So the financial institutions watch the crops with as keen interest as does the farmer himself. The farmers' harvest is the Eastern bankers' harvest also, and the greater the crop the greater the harvest for the money furnisher. The price paid the farmer is of little moment to him, the yield, the bulk, the increased cost of transportation and handling, are what he is most interested in; hence he can join with and support the old line agricultural press in their constant appeal for increased yields without a word about price.

Are the farmers tired of this tribute they are annually compelled to pay? The law-created taxes they are called upon to meet; and which they often feel are grievous, are small compared with those laid upon them by the money furnishing institutions without warrant of law and without notice or name, but taxes just as surely levied and enforced by the conditions of a ruinous commercial system.

But again we are compelled to place the responsibility for the wrong at the farmer's own door. He can right it, and that speedily. His miserable practice of throwing his crops in bulk upon the market direct from the harvest, invited not only the speculator's manipulation, but it called for the hoarder's money to meet the cost of moving so tremendous a bulk in so short a time, and enabled him to make his own charges for the use of his money, which as we have shown, the farmer must pay in the smaller price received for the results of his toil.

The same action which saves to the farmer the exorbitant profits of the market manipulator, will also save to him the tribute he pays to the money

manipulator—the man whose "money goes West and South to move the crops."

## IT IS CONTROLLED MARKETING.

When the farmer learns to control the marketing of his products (a lesson which he is rapidly learning), his crops will go to market gradually as consumption requires them. They will tax neither the capacity of the handlers, storers or transportation companies. There will be a smooth but steady flow of products inward to the consumers and of money outward to the producers—no flood, stagnation or taxing of capacities, and no money will be needed from the Eastern centers of money congestion to move the crops from the broad fields of production.

We do not see how a proposition could be plainer or more reasonable, how one could appeal more definitely to the producer, handler, dealer, transporter and storer, nor one that would more certainly redound to the benefit of all. The farmer would get his price, the others would do their business within their own means and normal capacities, extended as it would be throughout the entire year, and the people would no longer be under tribute to private financial corporations.

May He who marks the destinies of men and nations give us eyes to see, and hearts to feel, and minds to discriminate between the wise and the unwise, the true and the false, and then give us the nerve to do the things that we must know to be for the good of the toiler and the prosperity of the country. Give us

## CONTROLLED MARKETING.

## Defeating a Monopoly

Palermo is a city in Italy. The flour trade of Palermo had for some time been monopolized by a single firm which bought out or froze out all opposition, something on the style of the American beef trust. Of course the monopoly fixed its own prices and taxed the people at its own will. The people of Palermo daily consume about 260,000 pounds of bread and 110,000 pounds of macaroni, the population being about 325,000. The price of bread was made exorbitantly high. Then the municipality began by establishing standard rates for the sale of bread and macaroni. But as the prices of bread depend upon the cost of wheat, the municipality soon discovered that it must control the price of flour. Undaunted by the fierce opposition of the milling trade and by the fate of a former syndic who lost his life in a revolt of the people against similar action, the municipality proclaimed standard prices for flour, and, in order to prove that these were neither excessive nor ruinous to private industry and enterprise, promptly collected grain from all parts of the island and set up a flour mill and bakery of its own.

In March, 1903, the municipality began baking its first bread at the rate of about 20,000 pounds daily. During the initial stages of this venture,

before there had been time for full preparation, municipal officials had charge of the work in almost all its branches, and the police retailed the bread in huts placed in the principal streets. The municipality now produces about 44,000 pounds of bread daily—a sixth of the daily consumption of the city. It has succeeded in maintaining the standard rates, and allowing a fair profit to the trade. The net result has been a reduction of the prices of the different qualities of bread, the breaking of a monopoly, and the saving to the people of thousands of dollars.

So it is a fact that some governments can make prices and defeat monopoly.

## Cotton Situation

The cotton situation is quite encouraging to planters. After a recent slump in the New York market, prices quickly rallied, and the following unusual statement was made:

"Farmers more independent this year than ever before, and are refusing to sell for less than 10 cents."

In a market article a few days ago, the New Orleans Times-Democrat had such expressions as the following: "Farmers are standing resolutely to their guns," "If the producers persist in holding back," etc." "It may happen that the farmer has a certain price at which he is willing to sell." Such expressions prove that the farmer is a factor in the cotton market, and it only remains for him to show one-half of the pluck he displayed in planting and growing the crop to give him a complete victory, and guarantee to himself profitable prices in the future. The teachings of Up-to-Date Farming and the American Society of Equity have not been in vain. Organization, co-operation and controlled marketing solve the problem of price.

## Good Move in Minnesota

Rochester Local No. 1 is doing a good work for the barley growers, and incidentally for the growers of all other crops. Mr. W. C. Webber, of that union, has issued a letter to barley growers asking each of them to report the amount of barley they have to sell, and their choice of certain dates on which to sell. Each grower may put his whole crop on a certain date, or he may divide it among several dates. On each day of sale he expects the growers to meet to agree upon a price and to confer with buyers. The idea is to divide up the crop so as not to congest the market, and yet what they sell to sell in bulk so as to make a more attractive sale and to secure the attention of the best buyers. It is proposed to treat other crops in the same way and the plan is a good one, especially for local application.

While Up-to-Date Farming is entirely non-partisan, and takes no part in political campaigns, we are by no means indifferent as to the result of elections, and regret our inability to give the result of the recent Presidential contest. But as our paper goes to press on Friday before the election, we are, of course, unable to do so.

# Will Hold Cotton Until the Bagging Rots

I have been reading Up-to-Date Farming all day, and I have learned so much from it that I cannot help writing. Up-to-Date is in the homes of nearly everybody in this settlement, and it has started everybody to thinking, and not only that, it has prompted him to action in what it advocates. This county is pretty well organized in the Farmers' Co-operative and Educational Union, but Up-to-Date was the cause. I never saw the producers any more interested in my life. Nearly every farmer is coming in. At every meeting we receive applications, but as John was the forerunner of Christ, I claim that Up-to-Date is the forerunner of the unions. All the talk is organization and co-operation and

sticking together and setting a price on our produce.

Through Up-to-Date we realized \$1 for wheat, and at present we are getting \$1.13 to \$1.17. All believe if it had not been for Up-to-Date we would not have got these prices.

The following incident shows that the farmers here mean to do business. Three or four counties bulked 1,500 bales of cotton at Hico, Texas, set their price and notified the buyers that they were ready to receive sealed bids. The highest bid offered was \$9.65. That was below the farmers' price, and the result was such a sight as was never seen in this country before—the farmers with their fine teams driving down the streets of Hico, their wagons loaded with cotton, taking it back home, and declaring they will hold it till the

bagging rots off before they will take less than their price.

I have lived in this country for fifty years, and I never saw a more determined set of farmers in my life. Go where you may, the cry is, hold your cotton. We meet in our lodges every Saturday night somewhere in our district, and what a time we have! We are not such fools as some think we are. I sent Up-to-Date to a friend at a neighboring union meeting, and he got several subscribers at the meeting. We meet in our lodges regularly, and I wish you could be with us at some of our meetings.

R. A. EUBANK.

Meridian, Tex.

[Note.—Farmers of Texas, the spirit among you, as shown by the above let-

ter, is what I have long been working and praying for. With that spirit, farmers are invincible, and can just as surely price their products as can the maker of any other article of use. But we must always observe equity; must be reasonable in our demands as others have been unreasonable. We must remember, too, that success depends not upon individuals, but upon the united whole, co-operating together in the same way for the same purpose. We believe, though, sincerely that if three-fourths, or even a less percentage of the cotton growers of the country do as those of Hico, Texas, have done, there isn't a particle of doubt but that they will gain their price; and they will not have to wait long for it. Accept the congratulations of Up-to-Date Farming.—Editor.]

**[THE THIRD POWER, (Farmers to the Front)]** is a book of 275 pages, by J. A. EVERITT, President of the American Society of Equity. It began in June 15th issue and will continue until completed. Back numbers may be obtained by embracing the special three months offer in this number for 10c. The book may be obtained complete at \$1.00 in handsome cloth binding, 50c in paper cover, 10c extra for postage. Send orders to the publisher of UP-TO-DATE FARMING.]

## CHAPTER XXIII.

The plan outlined ought to appeal to European farmers quite as much as to their American brethren. With the cheap land in America, and boundless quantities of it, and by the large use of machinery, the farmers of the United States have forced the price of European wheat, and farm products generally, to an extremely low price. So all the farmers, and not merely those in the United States, have suffered from low prices and inadequately rewarded labor. This American invasion has not been a good thing for any of the farmers. For they have been engaged in a competition that was hurtful to all. Of course the farmers of Europe can not possibly raise prices as long as they are subjected to the competition of American products at the present low prices. The thing to do is, manifestly, to combine to raise prices. Restrictive legislation will accomplish little. In resorting to this, there is, too, the further danger of raising prices so high that people can not or will not buy. The farmers can check the present competition by combination more easily, and more effectively, than governments can kill it by law.

And the key to the situation is in the hands of the Americans. If they will refuse to compete with Europeans on the present basis, and will combine with them to lift the price of farm products all over the world, it is clear that, though competition will not be destroyed, it will be put on such a basis as to make it possible for all to profit. Every advance of price here, provided it be firmly held, will raise the price of the competing product abroad.

A combination among American farmers even without help from abroad would have that effect. It would establish a level below which the European farmers would not need to go in competing with one another. But with all the farmers in the combination the effect would be much more marked.

It seems strange that the European farmers should look for salvation to their most dreaded competitors, but it is from these latter that salvation must come. For they have found that in beating their European rivals they have also injured themselves. Now they propose to take themselves out of the unprofitable struggle for cheapness. And until they do withdraw from that struggle there will be no hope for any one. So this chance is offered to the farmers of Canada, France, Austria-Hungary, Russia, the Argentine, far-off India, and, in short, the world where food for man and beast are grown, in the confident expectation that they will eagerly embrace it. The arguments that prove that organization will be a good thing for the American farmers prove, also, that it will be a good thing for the farmers everywhere. For the same conditions that operate against the former operate against the latter, and there is the additional element of American competition.

Let it be distinctly understood that the organization proposed is industrial rather than political. For nations differ in their forms of government and in their political institutions, and a political program that would work well in one country might not work at all in another. Production, however, is the same the world over. Everywhere it depends on the three factors, land, labor, and capital, and the problem is

the same everywhere, namely, to secure a fair reward to all three. There is no reason why the Third Power should not operate as effectively and beneficently in Russia as in the United States, in India as in the Argentine. The farmers in all these countries are interested in checking speculation, in preventing the speculators from playing off the products of one against the other, and in securing fair prices for what they raise. In a word, their interests are identical. Therefore, all can easily co-operate.

The farmers of other countries need the society even worse than those of the United States do. They have smaller farms and they work dearer land—and land that is more in need of constant renewing and fertilizing. They need to make even a higher interest on their investment than is necessary in this country, in order to be sure of a decent living. When they come in competition with American wheat, grown on large farms and on land that is yet cheap, they are at a serious disadvantage. There is not a farmer in Russia who does not know that it would be easier for him to compete with American wheat at a dollar than with American wheat at fifty, sixty or seventy cents. And if the Russian buyer were unable to get wheat from abroad at a lower price than that established by the Russian farmers, he would be compelled to take Russian wheat. Nor are the American farmers at all disturbed at the prospect of all farmers getting good prices for their products. They know that there is a demand for all the staple crops that is ever likely to be raised—that the market is big enough for all. The trouble is that the crop of one country is used to depress the price of the crops of other countries, and thus all have suffered.

It is this well known fact that makes international co-operation desirable, and to make the benefits of the society world wide. Buyers operate on an international basis. Sellers must, if they would protect themselves against imposition, do the same thing. Thus business, and not politics, is the object of the organization. The question is not whether a man is a Republican or a Democrat, a Liberal or a Conservative, a supporter or an opponent of the government, but simply and solely whether he wants to end the bad, uncertain and unprofitable system of the past, elevate his business on a plane with the best of others, and make the best possible man out of himself. It is from this point of view that rulers and people alike are asked to consider this plan. The combination is one of the world's producers for their own, and so for the world's good. It is proposed to antagonize nothing except unfair commercial and industrial conditions. And when it is known that those conditions operate to injure by far the largest class of people in the world, surely no one can object to having them removed.

So the organization will be, and indeed has been, extended to other countries than the United States. The Russian farmers are aroused, and are moving in the same path which the American farmers are asked to tread. Societies similar to the American Society of Equity will soon be organized in the Czar's dominions and other countries. The interest is intense wherever the plan has been developed. No man to whom it has been explained has failed to be convinced. Its simplicity, and, at the same time, its wide scope, its effectiveness, its justice, and its equity, have all served to commend it to reasonable men. Whether a man lives in Russia or India, the United States or elsewhere, he wants at least a fair chance to make his living and care properly for his family. On this platform all can stand. It is the platform of the American Society of Equity. And this is the reason why it is so well adapted to act internationally. The invitation, therefore, is as broad as humanity. The call goes to all, and from all. For their own good a favorable response is earnestly desired. It comes from men who are firmly determined to control their own business in their own interest, and to

quit paying unfair toll to the speculators and middlemen who so long preyed on the productive industries of the world.

## CHAPTER XXIV.

As a final word, it seems to be necessary to urge the thought that success would not involve the enslavement or control of any one class, but the freedom of all the people. It has been said that the struggle to which the farmer is invited is one for emancipation. What is sought is as little government regulation as possible, and the widest possible opportunity for each one to work out his own destiny. The removal of obstacles rather than the imposition of new restrictions is the end sought. Undoubtedly men who prey on others must be restrained, but even this restraint will be in the interest of general liberty. That man is not free who does not get a fair reward for his own toil undiminished by tax for the benefit of his fellow citizens. So the vice of our present system is, that it is not based on liberty. And the farmers are those from whom liberty is withheld. So it all comes to a question of freedom. In doing away with the present abuses we are attacking not simply commercial and industrial unfairness and oppression, but tyranny. It is not insisted that any man shall have less than he is entitled to, but that all men shall have all that they are entitled to. Liberty, then, is the great aim of the American Society of Equity.

And there can be no real justice where there is not liberty. For justice is, by its very nature, something that is due to a man; a debt owing to him; something to which he is entitled. When it is given or conceded to him as a favor or privilege coming from a benevolent despot, it is not really justice at all. Justice is not a thing to be granted, but one to be demanded. So when the American people came to frame their new and free government under the constitution they declared that one of their purposes was to "establish justice." They knew that a government could not be free unless it was just, or just unless it was free. And they were right. Surely this is a good precedent—one to which every American citizen should bow in reverence. But the appeal is not to one people, but to all people. The greatest merit of the plan is that it does not antagonize any government. It seeks the co-operation of all governments, which, no matter what their form, are without exception based on the idea that the good and prosperity of the subject or the citizen, must be their chief consideration.

If the rulers of the earth believe this, and they all profess to do so, they will find a valuable and useful ally in the American Society of Equity. All that is asked is that the men who feed the world should themselves be decently fed. Even in the most absolute monarchies it is of the first importance that the people should be happy, contented and prosperous. And that government is wise which exerts itself to the utmost to secure that result. When this can be achieved without cost or peril to the government, it would seem as though no objection could be raised even by the most absolute ruler to any plan that appeared likely to bring the result to pass. Kingdoms have been known to go to war for the sake of diverting the attention of the people away from ill conditions at home. There have, in the history of the race, been many wars prompted by this motive. But such relief is only temporary. For after the war is over we find that the same evils exist, and that the burden of taxation imposed by the war only makes them worse and increases the discontent of the people. So, at most, war undertaken for this purpose is a mere palliative. What is wanted is a permanent remedy.

And the true remedy is one which is not only consistent with peace, but one which demands peace. The late Lord Tennyson wrote of his vision of what the earth was one day to be:

"Robed in universal harvest, up to either side she smiles,  
Universal ocean softly washing all her warless isles."

That is the ideal. Abundance for all, general content, the greatest productivity, justice, honest pay for honest toil, and universal peace—these are the things that the American Society of Equity would have the world enjoy. To keep the people happy is better than going to war to make them forget their unhappiness. It is in this direction that we must look for federation, not

of Europe against America, not of one class against another, not of the people against their government—but of all people, of all the nations for the general good. It is through such industrial and commercial alliance that political alliances must come. The Russian, the American, the Argentine, the Indian, and all other farmers ought to be friends, not enemies. They will be friends when relieved from the spell of the speculators and gamblers in farm products, the market manipulators and false crop reporters. And when they are friends their governments will be friends.

So this society is not American except as it is domiciled in America. It is world-wide, and there is not a toiler in the world who will not be benefited by it. What has been said to, and of, American farmers applies to all farmers, and this organization is meant for all farmers. It all comes to the Scriptural doctrine that the laborer is worthy of his hire. To withhold his hire from him, or any part of it, is to weaken all government and to impair the foundations on which society must rest. While to insure him his just reward is to strengthen the social order and to build anew the foundations of the political structures of the world.

Years before it came to pass, Arthur Young, traveling in France, predicted the great revolution that took place in that country more than a hundred years ago. He based his prophecy simply on the fact that the people were being robbed by the church and the nobility, and robbed to such an extent that they did not have enough left to live on. We are wiser in our generation, in that we do not push our spoliation to such an extreme point. But we want, not simply to avoid revolution, but to make all the people happy. The question is, not how much we can safely take from them, but how much we can give them. And when we are asked to give them only what is already theirs, in equity, with the assurance that by doing so we shall make them happy, shall we hesitate?

Peace, happiness, truth, justice, order, the death of anarchy, firmly established governments, the reign of law, contentment and satisfaction, together with real and widely diffused prosperity, and to crown it all a real federation of the nations—surely these are things worth striving for. St. Paul said: "Who planteth a vineyard, and eateth not of the fruit thereof? Or who feedeth a flock, and eateth not of the milk of the flock?" And the Psalmist wrote to his people in their captivity: "For thou shalt eat the labors of thine hands; O well is thee and happy shalt thou be." We seek the fulfillment of these prophecies. There is not a human being in the world, and not a government in the world that will not be better because of the triumph of the Third Power through the American Society of Equity.

NOTE.—This is the closing chapter of Part One of the Third Power, which is the part we proposed to publish as a serial. The series comprises eleven numbers, from June 15 to November 15, inclusive, and we will send the eleven numbers, with all the other good things they contain, for 20 cents. Address Up-to-Date Farming.

## ST. LOUIS EXPOSITION CREAM SEPARATOR AWARDS.

The De Laval Company comes out in this issue with the announcement of its Grand Prize award just given at the St. Louis Exposition. The New York Sun, in reviewing the Exposition awards, pertinently says:

"The Grand Prize for Centrifugal Cream Separators has been awarded to The De Laval Separator Company, showing that there has been no material change in the relative position of the separator manufacturers since the making of similar awards at Buffalo, Paris, Chicago and other previous World's Expositions. The De Laval exhibit at St. Louis is a handsome one, in keeping with these well-known creaming machines, which have done so much for modern dairying and its products."

The De Laval machines are very much in evidence at St. Louis. Aside from their own large display one is used in the operation of the Exposition Model Dairy, one in the Jersey Barn, one with the Shorthorn Herd, another is found in the Educational Building, and still another in the United States Experimentation Station.

What do you want to be, anyhow, when you strike out for yourself? The International Correspondence Schools, Box 927, Scranton, Pa., claim that they can qualify people for almost any position and good wages. It might pay to write for their "1001 Stories of Success," mentioning Up-to-Date Farming. It don't cost anything.

# WE HAVE The Names of 1,800,000 PEOPLE

## Who Are Users of Liquozone

All of these people asked us to buy the first bottle—a 50c. bottle—and give it to them free. We did it—and we will do it for you

There are millions of other users of whom we don't know. We learn only of those who write us. But each user tells others about it, and those tell others. Ask your friends if they use it, and you will be surprised at the number who do.

Your own neighborhood is full of Liquozone users. Ask a few what they think of it—ask them what it does. If they say it is wonderful—that it does what we claim—then let us buy *you* a 50c. bottle. Try it at our expense; see what it does for you. If you find it effective and needful, tell others about it, as we have told you.

### Not Medicine

Liquozone is not a medicine. It is not made by compounding drugs, nor is there any alcohol in it. It is made solely from gas—largely oxygen gas—by a process requiring immense apparatus and 14 days' time.

This product has, for more than 20 years, been the constant subject of scientific and chemical research. The object of its discoverers was to get the virtues of oxygen in stable form into the blood. Their reason was that oxygen alone can kill disease germs without harm to the living tissues.

Each cubic inch of Liquozone requires the use of 1,250 cubic inches of the gas. And that is all that goes into it—the gas, and the liquid used to absorb it. The result—after 14 days—is a germicide so certain that we publish on every bottle an offer of \$1,000 for a disease germ that it cannot kill.

### Acts Like Oxygen

The virtue of Liquozone lies in the fact that it does what oxygen does. Oxygen is the vital part of air, the very source of vitality, the most essential element of life. Oxygen is also Nature's greatest tonic, the blood food, the nerve food, the scavenger of the blood. It is oxygen that turns the blue blood to red in the lungs. It is oxygen that eliminates the waste tissue and builds up the new. You could not live three minutes without it. And half the sickness in the world is caused by having too little.

Liquozone acts like oxygen. It gives to every nerve center just the food that it needs. It gives new power to every function of nature. It brings back vitality at once. No other known product can compare with it as a vitalizer. And Liquozone is the only tonic that never leads to reaction.

### Kills All Germs

Another fact is that an excess of oxygen destroys any disease germ. The reason is that germs are vegetables; and an excess of oxygen—the

very life of an animal—is deadly to vegetable matter.

So with Liquozone, but the vital difference is this: Oxygen is a gas, and an excess of it can not be maintained in the blood. Liquozone is a liquid, concentrated, stable and powerful. It goes wherever the blood goes; and, as no germ can escape it, and none can resist it, the results are inevitable.

To the human body Liquozone is the most helpful thing in the world. But anything vegetable instantly perishes wherever Liquozone goes. The fact that germs are vegetables has enabled the discoverers of Liquozone to solve the great problem of killing germs in the body without killing the tissues, too. And there is no other way. Any drug that kills germs is a poison, and it can not be taken internally. In that fact lies the great value of Liquozone. It is the only product known—the only product man can conceive of—that can destroy the cause of a germ trouble without harm to the living tissues.

### We Paid \$100,000

For the American rights of Liquozone, and the British Liquid Ozone Co. paid the same sum for the rights in Great Britain. That is the highest price ever paid for similar rights on any scientific discovery.

We tell you this fact because it best indicates the value of Liquozone. Claims are easily made, but men of our class don't pay a price like that save for a product of very great worth to humanity.

Before making this purchase, we tested Liquozone for two years through physicians and hospitals in this country and others. We tried it in all kinds of germ diseases, in thousands of the most difficult cases obtainable. We saw it cure hundreds of sick ones with whom everything else had failed. And we saw many a patient brought back from the verge of the grave by it.

We proved, to the satisfaction of the best physicians, that in germ troubles Liquozone did what nothing else could accomplish. We proved it to be of more value to sick humanity

than all the drugs in the world, combined. Then we staked our fortunes and our reputations on it.

Each of those 1,800,000 people suffered from a germ disease. Ask some of them if Liquozone cured them—if it destroyed the germs. Ask if they advise you to take Liquozone, then do as they say. Half the people you meet know someone whom Liquozone has cured.

Millions of the people use Liquozone constantly. Yet we have never asked a person to buy it. We have asked them only to let us buy the first bottle—just as we ask you. They have continued its use because of what Liquozone did for them—just as you would. Won't you—for your own sake—be one of those millions? Won't you write for a bottle today?

Every member of this company uses Liquozone daily in his family to prevent sickness, and millions of others are learning to do likewise. Liquozone is now employed by hospitals everywhere, and by the physicians of nearly every nation.

### Germ Diseases

We give here a list of the known germ diseases. Each of these diseases is caused by germ attacks, or by poisons which germs create. A cure can come only through killing the germs.

All that medicine can do for these troubles is to help Nature overcome the germs, and those results are indirect and uncertain. They depend on the patient's condition. There are some of these diseases which medicine never cures. In all of them, the results from drugs are doubtful and slow. Medicine is not proper treatment for any form of germ attack.

Liquozone goes directly to the cause of these troubles. It attacks the

germs, wherever they exist. A germ disease must end when the germs are killed; nothing is more certain than that. Then Liquozone, acting as a tonic, quickly repairs the damage done, and restores a condition of perfect health. Diseases which have resisted medicine for years yield at once to Liquozone. And it cures diseases which medicine never cures. In any stages of any disease in this list, the results are so certain that we will gladly send to any patient who asks it an absolute guaranty.

Asthma	Hay Fever—Influenza
Abscess—Anemia	Leucorrhea
Bronchitis	Kidney Diseases
Blood Poison	LaGrippe
Bright's Disease	Liver Troubles
Bowel Trouble	Malaria—Neuralgia
Coughs—Colds	Many Heart Troubles
Consumption	Flies—Pneumonia
Colic—Croup	Pleurisy—Quinsy
Constipation	Rheumatism
Catarrh—Cancer	Scrofula—Syphilis
Dysentery—Diarrhea	Skin Diseases
Dandruff—Dropsy	Stomach Troubles
Dyspepsia	Throat Troubles
Eczema—Erysipelas	Tuberculosis
Fevers—Gall Stones	Tumors—Ulcers
Goutre—Gout	Varicose
Gonorrhea—Gleet	Women's Diseases

All diseases that begin with fever—all inflammation—all catarrh—all contagious diseases—all the results of impure or poisoned blood.

In nervous debility Liquozone acts as a vitalizer, accomplishing what no drugs can do.

## One Full-Size Bottle Free

If you need Liquozone, and have never tried it, we ask you to send us the coupon below. We will then send you an order on a local druggist for a 50c bottle, and will pay the druggist ourselves for it.

We have already done this with 1,800,000 people, and it has cost us over one million dollars to announce and fulfill the offer. Don't you realize that a product must have wonderful merit when we spend \$1,000,000 just to let the sick try it?

That is our only method of making Liquozone known. We publish no testimonials; we tell you of none it has cured; we use no physician's endorsement. We prefer to ask you to try it, at our expense. Then judge for yourself what it does.

If you have already used Liquozone, this offer, of course, does not apply to you. But if you have not used it—if you don't know its results—please

send us this coupon to-day. Do that in justice to yourself. The acceptance of this offer places you under no obligations; and it will introduce to you a product better than anything else in the world for you.

Liquozone costs 50c and \$1.

### CUT OUT THIS COUPON

for this offer may not appear again. Fill out the blanks and mail it to the Liquid Ozone Co. 458-464 Wabash Ave., Chicago.

My disease is .....  
I have never tried Liquozone, but if you will supply me a 50c. bottle free, I will take it.

Any physician or hospital not yet using Liquozone will be gladly supplied for a test.

## U. S. DEPARTMENT OF AGRICULTURE

## What It Is and What It Should Be

(This article is based on tables and statistical research by Eugene Matrows, D. C. L.)

The laws of the United States thus define duties and powers of the United States Department of Agriculture:

"There shall be at the seat of government a Department of Agriculture, the general design and duties of which shall be to acquire and to diffuse among the people of the United States useful information on subjects connected with the agriculture, in the most general and comprehensive sense of that word, and to procure, propagate and distribute among the people new and valuable seeds and plants." (Compiled Statutes of the United States, 1901, Vol. 1, Sec. 520.)

"The Secretary of Agriculture shall procure and preserve all information concerning agriculture which he can obtain by means of books and correspondence and by practical and scientific experiments, accurate records of which experiments shall be kept in his office by the collection of statistics, and by any other appropriate means within his power; he shall collect new and valuable seeds and plants; shall test by cultivation, the value of such of them as may require such tests; shall propagate such as may be worthy of propagation, and shall distribute them among agriculturists." (Ibidem, Sec. 526.)

The foregoing provisions of the United States laws, establishing the United States Department of Agriculture and defining the scope of its activity, are so general and so indefinite that though they have been supplemented afterwards by many appropriation acts of Congress granting to the Secretary of Agriculture a new authority, the definition of duties and powers of what is supposed to be a national department of applied science, wholly belongs to the Secretary of Agriculture within the limitations imposed on his immense discretion in this respect by appropriation acts for the department. It appears, therefore, that in order to arrive at proper comprehension of the scope and the character of activity of the United States Department of Agriculture, one has to turn not to the laws establishing the said department and defining its duties and powers, which are presumed to constitute the basis of such activity, but to the annual reports of the Secretary of Agriculture. As the law stands at present, the department is charged with transaction, and the Secretary with supervision of all public business relating to agricultural industry. What kind of public business is considered relating to the industry within the limitations of appropriation acts and how exactly this business is conducted can be seen just from the annual reports of the Secretary.

The last annual report submitted by the Secretary of Agriculture to the President of the United States, Nov. 28th, 1903, consisting fully of 100 pages, begins with the following introductory statement:

"The research work of the Department of Agriculture, covering the sciences of production in the fields and other laboratories where the crops of the country are grown and where they are made more valuable by skill, has required a class of experts not educated by the institutions of learning where our people have hitherto been prepared for their life work. The development of the department toward doing all that should be done to help our people secure a greater yield from the soil and enhance the value of its products, made the training of experts in the department a necessity."

From the foregoing introductory statement of the last annual report of the Secretary it will be seen that as the chief and paramount duty of the United States Department of Agriculture he considers and establishes the securing of a greater yield from the soil and enhancing the value of its products. Thus the organization and activity of the United States Department of Agriculture are wholly and exclusively based on the theory that greater yields from the soil enhance the value of its products. But is that so? Is this theory correct or sound? Let us see.

As the period from 1879 to 1882 was one of the most remarkable general prosperity ever known to this country, and the period from 1892 to 1897 equally was one of the most remarkable general depression known to the country, it would be extremely important

and instructive to compare these two periods as to the size of their crops in order to make proper conclusions whether greater yields from the soil really enhance the value of its products or not. Taking in consideration just the five principal crops of the country—corn, wheat, oats, barley and rye—we present the average annual production, total annual farm value and average annual farm price per bushel of each of these five crops during the period of the utmost prosperity (1879-1882) as compared with the same during the period of the utmost depression (1892-1897), in the following tabular statement compiled and composed by us from the Reports of the Bureau of Statistics of the United States Department of Agriculture:

Periods and Crops.	Average annual production.	Increase (+), or Decrease (-)		Average annual farm value.	Increase (+), or Decrease (-)		Average annual farm price per bushel.	Increase (+), or Decrease (-)	
		Per cent.	Dollars.	Per cent.	Cents.	Per cent.	Dollars.	Per cent.	Cents.
Corn—1882	1,513,319,358		700,887,515		52.3		46.3		88.5
1897	1,564,049,572	+3.3	536,682,048	+23.4	31.0		31.0		31.0
Difference	+50,730,214	+3.3	+164,205,467		-21.3		-15.3		-57.5
Wheat—1882	458,693,014		468,428,636		78.4		78.4		78.4
1897	456,257,120	-0.5	283,232,412	-39.5	61.4		61.4		61.4
Difference	-2,435,894	-0.5	-185,196,224		-17.0		-17.0		-17.0
Oats—1882	421,594,577		161,738,462		37.1		37.1		37.1
1897	706,289,912	+67.4	169,841,565	+4.6	24.3		24.3		24.3
Difference	+284,695,335	+67.4	+7,603,104		-12.8		-12.8		-12.8
Barley—1882	43,879,675		29,606,928		67.6		67.6		67.6
1897	70,944,610	+61.6	26,551,861	-10.2	37.8		37.8		37.8
Difference	+27,064,935	+61.6	-3,047,067		-29.8		-29.8		-29.8
Rye—1882	24,711,319		17,959,650		74.0		74.0		74.0
1897	26,446,100	+7.0	12,234,588	-31.8	46.2		46.2		46.2
Difference	+1,734,781	+7.0	-5,724,062		-27.8		-27.8		-27.8
Av. inc. (+), or dec. (-)		+31.5			-20.1				-20.1

From the foregoing table it will be seen that the increase in the average annual production of the five principal American crops received together during the period of 1892-1897 as compared with the same during the period of 1879-1882, amounting to 31.5 per cent., caused the decrease of 20.0 per cent. on their average total annual farm value as well as decrease of 34.4 per cent. in their average annual farm price per bushel. It appears, therefore, that "greater yields from the soil" does not "enhance the value of its products," but, on the contrary, lowers this value total as well as per unit (bushel) most considerably.

Now taking up just the most important American staple, corn, we will present its annual production, total annual farm value and annual farm price per bushel during the same years of general depression in the United States as compared with its annual production, total annual farm value, and annual farm price per bushel during the other years of general prosperity in the following table compiled and composed by us from the Statistical Abstract for 1903. In order to equalize the both of the periods, year 1898 is included in the period of depression, although it was the year of the beginning of the general improvement of economic condition of the country:

1890	1,489,970,000	\$754,433,451	\$0.50.6
1891	2,060,154,000	836,439,228	40.6
1892	1,682,464,000	642,146,630	39.4
1893	2,078,143,000	629,210,110	30.3
1900	2,105,102,000	751,220,034	35.7
1901	1,522,000,000	921,000,000	60.1
Av'ge ..	1,822,972,000	\$755,741,575	\$0.42.7
1893	1,619,496,000	\$596,625,627	\$0.36.5
1894	1,212,770,000	554,719,162	45.7
1895	2,151,138,000	544,985,534	25.3
1896	2,283,875,000	491,006,967	21.5
1897	1,902,967,000	501,072,952	26.3
1898	1,924,984,000	552,023,428	28.7
Av'ge ..	1,849,971,000	\$540,072,278	\$0.30.6
	+26,999,000	-\$215,669,297	-\$0.12.1

Increase (+) or decrease (-).

From the foregoing table it will be seen that while the average annual production of corn in the United States during the second period of six years

(1893-1898) increased just 1.4 per cent., such comparatively insignificant increase in production caused the decrease of fully 28.5 per cent. in the average total annual farm value of the staple as compared with its average annual farm value during the first period of six years (1890-1892 and 1899-1901) as well as the decrease of fully 28.3 per cent. in its average annual price per bushel. Here we see again that using the mode of expression of the Secretary, "greater yield from the soil" does not "enhance the value of its products," but, on the contrary, lowers their value total as well as per unit, most considerably.

Turning now from the periods of years and the series of crops to individual crops for separate years, we find the following: The shortest American corn crop since the closing of the civil war, that of 1867, which amounted to 768,320,000 bushels only, was worth to the farmers of the country nearly as much as the largest American corn crop except one, the crop exceeding the former almost three times, that of 1896 (2,283,875,165 bushels), their respective total farm values being \$437,769,763 and \$491,006,967, while their respective farm prices per bushel, 57 and 21.5 cents. Next shortest American corn crop for the last 38 years, that of 1874 (850,148,500 bushels), was worth to the farmers of the country a little more than the said largest American corn crop except one, that of 1896 (2,283,875,165 bushels), or, in other words, second by shortness corn crop of the United States was worth to the producers a little more than the second by largeness corn crop of the country, their respective total farm values being \$496,271,255 and \$491,006,967, while their respective farm prices per bushel 58.4 and 21.5 cents. The American corn crop market by the highest average yield per acre, that of 1872, was worth to the farmers of the country nearly half as much per bushel as the American corn crop marked by the lowest average yield per acre, that of 1881. It is most significant and strikingly instructive indeed that while the first of these two crops raised on 35,526,836 acres and presenting the average yield of 30.8 bushels per acre, was worth to the farmers of the country just 35.3 cents per bushel, the second one, raised on 64,262,025 acres and presenting the average yield of 18.6 per acre, was worth to the farmers of the country fully 63.6 cents per bushel. In other words, though the acreage of the corn crop of 1872 was nearly twice smaller than the average of the corn crop of 1881, as the average yield of the first per acre was almost twice larger than the average yield of the second per acre, the farm price of the first per bushel was nearly twice lower than the farm price of the second per bushel, and consequently the total farm value of the first was almost twice lower than the total farm value of the second, while the absolute quantities of both of the corn crops were almost the same (\$385,736,210 and \$759,482,170 respectively; 1,092,719,000 and 1,194,916,000 bushels respectively). While the largest wheat crop ever raised in the United States, that of 1901 (748,460,218 bushels), five times exceeded the smallest American wheat crop during the last 38 years, that of 1866 (151,999,906 bushels), the total farm value of the former was just twice greater than the total farm value of the latter, while farm price of the former per bushel amounted just to nearly one-third of farm price of the latter per bushel (62.4 and 152.7 cents respectively). From the first table in this short article it appears that while the average annual production of oats in this country during the period of depression (1893-1897) increased fully 17.4 per cent., its total average annual farm value as compared with the same of the period of prosperity (1879-1882) increased just 46 per cent., while its average annual farm price per bushel decreased fully 34.5 per cent. It should be explained in this connection that if the decrease of 0.4 per cent. in the average annual production of wheat in the United States during the period of 1893-1897 as compared with the same production during the period of 1879-1882 did not cause the increase in the average annual farm price of the staple and consequently in its total average annual value it was because in the first place, the said decrease was too insignificant and in the second place, it was fully offset by proportionately very large production of wheat in all other wheat producing countries during the second period (1893-1897), while the European wheat crops of 1879 were the worst on record.

(Continued on page 15.)

Appealing to Sportsmen of a true type

# STEVENS

## RIFLES AND SHOTGUNS

are perfect in every respect. The sportsman is never disappointed in the working of his gun if it's a "Stevens"—they are safe, strong, accurate, durable and convenient to handle. We will send you our valuable 140-page book, telling all about "Stevens" guns, shooting, hunting, notes on the proper care of a gun, sights, etc. If you will send 4c. in stamps.

**FREE PUZZLE:** Write for the rifle puzzle, it will be sent free, postpaid—most fascinating; "easy when you know how."

Ask your dealer and insist on the "Stevens." If you cannot obtain them, we ship direct express prepaid on receipt of catalogue price.

**J. STEVENS ARMS AND TOOL CO.,**  
365 Pine Street,  
Chicopee Falls, Mass., U. S. A.

## Raise Your Own Salary

You can easily raise your own salary any amount up to \$50 per week, as hundreds of young men are doing who create a demand for their services, and demand larger pay. You can do so by becoming a Show Card Writer, Advertisement Writer, Newspaper Illustrator, Mechanical Draughtsman, Surveyor, Stenographer or Book-keeper. If you can read and write and will study as we direct, we will guarantee to qualify you for a good paying position. We have successful students in your neighborhood to whom we can refer you. Write for "1001 Stories of Success," stating what you want to become.

**INTERNATIONAL CORRESPONDENCE SCHOOLS,**  
Box 927, Scranton, Pa.

IT IS LOADED with AGENTS WANTED. Does all kinds of Light and Heavy Stitching. Does all kinds of light and heavy riveting. Will save the price of iron. Make Ties & Yarn. A Perfect Hand Sewing Machine and Riveter combined. To show it means a sale. Agents make from \$8 to \$15 a day. One agent made \$20 first day and writes to hurry more machines to him. Write for special agent's price.

**J. J. Foote Foundry Co., Fredericktown, O.,**  
The Great Agents Supply House.

[Note—We have used the "Mend-A-Rip" outfit and find it as represented. This advertiser is reliable.—Ed.]

**BEAN GROWERS, ATTENTION!**

The Smith Patent Roller Bean Separator is the only Roller Bean Separator manufactured in the world; will lessen the work of picking Beans 75 per cent. over any other machine manufactured. Will more than save its cost in a single season. Send for illustrated catalogue.

**SMITH MFG. CO., VALOIS, NEW YORK.**

The **CLIPPER** Well Drill. The Drill That DRILLS. LATEST BEST. Made at TIFFIN OHIO. **LOOMIS MACHINE CO.**

**DE LOACH PAT. Variable Friction Feed SAWMILL S.**

Save Power and Repairs. Make Smooth Lumber Suited to 4 H. P. up—for the farmer or the lumber man. Also Shingle Mills, Lath Mills, Burr Mills, Planers and Hay Presses. Catalog FREE. **DE LOACH MILL MFG. CO.,** Box 850 Atlanta, Ga.—N. Y., St. Louis

**O. K. SEEDS** are reliable. Flower, Vegetable and Field Seeds.

**J. A. Everitt, Seedsman, Inc. Indianapolis**

**WEEKS SCALE WORKS** BUFFALO, N. Y. The leading scale at moderate price. Will outwear any other. RELIABLE, LASTING, CONVENIENT. Does away with all loose weights. Send for catalogue and prices.

**BOOK FREE FARM TELEPHONES** How put up, their cost, why they save money. Write for Free Book. **J. ANDRAE & SONS,** 868 W. Water St., Milwaukee, Wis.

### THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

#### The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

#### The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shaped the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where co-operation may be facilitated and strengthened thereby

#### County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

#### The Emblem

of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

#### The Membership Fee

Is \$1.00, and each member is entitled to receive a certificate and manual, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, one year, paid for by the National Union.

#### The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc.

It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. They are supplied on gummed paper and on tags.

#### How to Organize a Local Union

We assume a meeting is assembled for the purpose of organization. Some one will call the meeting to order and move that another person be chosen temporary chairman. This motion will be seconded and put to vote. The person elected will take the chair. On assuming the chair, he may speak, explaining the object of the meeting, or may at once declare that the choice of a temporary secretary is in order, whereupon one should be chosen as above. It will now be in order for those present to discuss the object of the meeting, and to choose permanent officers as soon as possible. The by-laws provide for officers to be filled. Elections may be made by ballot or by acclamation, that is by aye and no votes.

It would then be in order to call upon some one to speak. This may be done by a motion and a second, or by merely calling the proposed speaker's name. If desired, several may be so called upon in turn. It is not best, however, at this stage of the proceedings, to take up too much time in discussion, for we assume that those present are already convinced of the necessity of forming a local union, and that they have met for that purpose.

A motion to choose permanent officers, a president, treasurer and secretary, or a president, vice-president, secretary and treasurer, would now be in order. This may be done by taking up each office separately and calling for nominations therefor. Should only one nomination be made, election may be had by acclamation.

This completes the organization of the union. It is now in order to adopt a name (see directions in by-laws) and fix the time and place of subsequent meetings, and any other action may be taken which may be deemed of special interest to the union. The organization must be reported to the National Union by the organizer or secretary. Members may be admitted at any meeting and reported by the organizer in charge of district or the secretary. Reports must be clear and explicit, giving name and number of union, name and address of members. If complimentary, write comp. in space for fee. The membership fee is \$1.00. Study the by-laws carefully.

#### How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness or distress in the neighborhood that needs especial attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood?
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting?
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

Don't neglect the local union meetings.

Imitate the Local at the Crossing. Keep something doing.

What kind of program did you have at last meeting? Send us a copy of it; it may be good for others to follow.

Don't neglect the renewals. Up-to-Date is doing a great work that everybody appreciates. Keep it coming.

Note the A. S. of E. election blank on next page. Every local union ought to vote, and so ought every individual member. By the way, this is a splendid time to send in your renewal to the official paper. Of course, you are not going to delay that.

In writing to headquarters, always mention the name of your county as well as your postoffice and State. We are now organizing by school districts, and we wish to keep our records by counties.

Those red subscription blanks. Each one invites you to get a list of subscribers for Up-to-Date. We are urging this now because this is the time of year when people subscribe for papers—the time to get annual subscriptions.

The fellow in trouble as shown by his picture elsewhere is not one of Our Up-to-Date People. He may have refused to subscribe when asked to do so and lost a lot of money because he didn't read Up-to-Date, or he may have failed to join a local union and lost all the benefits secured by those who did join. Something is wrong with him.

Few things are done as they used to be. In timber cutting there is as great a difference as in almost anything else. You will be surprised at the improvements made as shown by the catalogue of Folding Sawing Machine Co., 16 and 18 S. Clinton St., Chicago. Send for it, mentioning Up-to-Date Farming.

Do you think we talk too much about getting subscribers for Up-to-Date Farming? That is the only way we have of reaching the people. Not one farmer in a thousand believes the farmers can control the markets and make prices on their products when it is first mentioned to him. Not one in a thousand but what knows it can be done after we have had a chance to talk with him about it. That is why we want more, and more, and more subscribers. We want to talk with them about this thing, and secure perpetual prosperity for agriculture.

## THE LOCAL AT THE CROSSING Another Meeting

Sue sang. I knew she would. I've lots of faith in Sue. I wanted to print her song. But she said no. Then I said no, too. I find it is happier to say what Sue says. It was a good song. I may print it some time when she don't care. It reads this way:

#### AN UP-TO-DATE GIRL

Oh, I'm a farmer girl, you see,  
As gay as the larks that sing;  
I'm always on the stir at home,  
Ere the birds are on the wing.  
I listen to the whistled tune  
Of the boys in the field,  
And feel a thrill of joy when  
There's sure to be a yield.  
And as the harvest golden grows,  
And sheaves are gathered in,  
'Tis sweet to see the sons of toil  
Blessed with reward again.  
But then to see those golden fruits  
Be taken at a price  
The grower had no chance to make  
Or even give advice!

I tell you what, my farmer boys,  
While things like these I see,  
The one that sells at others' price  
Is too cheap a man for me.

That last line was just about the whole song. I never sell at the other fellow's price. But Bill Smith does. I don't like Bill.

We put Jim Denny up for a speech. Jim is too slow to make a speech, but sometimes he says things, and we didn't want to slight him. We told him to speak on potatoes. He spoke:

#### JIM DENNY'S SPEECH.

Potatoes grow in the ground. The nearer you get the ground to the condition of a manure heap, the bigger they'll grow, and the more you'll get to the acre. Then the only way to tell which is potato and which is manure is by the looks and the taste. Potatoes are good to eat when they are cooked right.

JIM DENNY.

It takes a bushel and a half to make a bushel if you are selling them at the store, and it takes more than that if you are selling to a board of trade.

Potatoes are of several kinds—big and little, good and bad, early and late, round and long, Irish and sweet. They are called Irish because they raise big crops of potatoes and trouble in Ireland. But potatoes are no akin to the trouble, for when they don't raise man ypotatoes they raise more trouble. Some people are so soft they eat soft potatoes without chewing, and then, in about an hour, they feel hot inside, and want to take some soda or something.

Potatoes ain't like corn; they grow on the other end of the stalk. You have to dig to plant 'em, and you have to dig to gather 'em, but the women do the huskin'.

There are more varieties than there are kinds. Many of them look so near alike that there ain't any difference except in price and name.

I know a heap more about potatoes, but I won't tell any more now, except that they've got more eyes than any other beast, but they never see anything that's none of their business.

We had to laugh. You would have laughed, too, Mr. Everitt, if you had heard the long, droll way he spoke it. Sue tittered when he said they never see anything that is none of their business. She was thinking of the people that laughed at her and me.

The President thinks we must get down to more sober work. He says we must stand pat with the cotton planters. The buyers are telling awful tales down South about cotton—try to make the planters believe it grows on hickory bushes everywhere else but in America, and that there is so much cotton in the world the mills are going to stop and everybody will quit buying. Their object is to make the people think now is their last chance to sell. But they will never scare the A. S. of E., if they are all like the Local at the Crossing.

The President says we must watch Up-to-Date, and renew our subscriptions a few weeks before our time is out. I guess that is about right, ain't it, Mr. Everitt, so that we may be sure not to miss any? That was good advice. We can't afford to miss Up-to-Date.

As a part of the program I read that piece about the Department of Agriculture figuring out a price and knock-

ing out the Board of Trade speculators, and the Local at the Crossing unanimously voted that you are right again. Joe Riley says we ought to warm things up this winter over towards Washington. I don't much like Bill Smith.

## FOR ALL MIXED FEEDS

Unhusked corn, husked ears, shelled corn and all grains there is no mill made that for speed, easy running and complete grinding equals the

THE O. S. KELLY CO., 181 N. Lima St., Springfield, Ohio

LET NO FARMER MISS THIS

Successful Farming, Des Moines, Iowa, one of the best agricultural papers published, has just closed arrangements for a series of articles which will prove one of the biggest features and one of the most valuable contributions along agricultural lines put out by any agricultural paper for many years. Last spring the railroads of Iowa chartered special trains and turned them over to Prof. P. G. Holden, of Ames Agricultural College, who is undoubtedly the greatest corn expert in the world, that he might cover the State talking corn to the farmers. Ever since then Successful Farming has been urging Prof. Holden to write them a series of Corn articles.

Prof. Holden felt the charge he was obliged to make for this series would be prohibitive, but finally set a price, and Successful Farming, true to their policy of not allowing any expense to stand in the way of making the best agricultural paper published, immediately accepted at the price quoted. Every single reader of this paper should have these articles. The articles will be copyrighted and there is no other source through which they can be secured. The regular subscription price of Successful Farming is 50 cents per year, but in order that these articles may be widely circulated they are making a special rate to our subscribers of 25 cents for a full year's subscription, including the Holden articles. In addition to the Holden articles many valuable features will be given. The Poultry Department alone is worth several times the regular price, to say nothing of their special half rate. Every person reading this should at once enclose 25 cents in silver or stamps and address to Successful Farming, 108 Seventh St., Des Moines, Iowa, that they may receive the first article of this special Holden series, and a copy of the next issue which will contain a world of information from leading educators along agricultural lines. Successful Farming cheerfully refunds the subscription if any subscriber is not wonderfully well pleased, and feels that they are getting many times the value of the subscription price. It is a fact that not a single subscriber has yet asked his money back, so do not delay but forward your name together with 25 cents at once.

# NOMINATIONS

## For Officers of the National Union

The following named persons have been placed in nomination for the offices named in the National Union of the American Society of Equity. The requirements, as published, that all the officers should be in a position to give their time to the affairs of the Society operated against a large number of nominations being made. Also delay in mailing October number containing blank for nominations had an effect. The delay was caused by an accident to our new press. The election will be held at headquarters in Indianapolis, December 9, 1904. A ballot will be printed in November 15 and Dec. 1 issues of this paper, which can be voted by an individual or by a local union. If by a local union the number of members voting must be indicated.

### FOR PRESIDENT.

J. A. Everitt, of Indianapolis, Ind., present officer.

### FOR VICE-PRESIDENTS.

The following active workers in the cause of Equity have been placed in nomination for Vice-Presidents to represent their respective States. They all come well recommended, and the records in the office of the National Union show results entitling them to the honor. They are all farmers or are very closely identified with farming, and have the interests of the Society at heart. Nearly all of them have had experience in organizing local unions and will work untiringly to build up the Society. The nominations follow:

Alabama—John W. Green, Clarence.  
Arkansas—J. R. Johnson, Crossett; C. C. Simpson, Russellville.  
California—J. W. Bullett, Bishop.  
Colorado—Jacob Gilstrak, Lansing.  
Florida—A. R. Carhart, Bartow.  
Georgia—W. E. Johns, Tifton.  
Idaho—W. F. Ringer, New Plymouth;  
W. H. Light, Moscow.  
Illinois—C. O. Drayton, Greenville; H. C. Potthast, Hookdale.  
Indiana—H. B. Sherman, Greensburg;  
G. W. White, Boonville.  
Indian Territory—Sam J. Hampton, Durant; W. H. Winters, Wister.  
Iowa—Walter Newby, Woodward; Don M. Leach, Ackley.  
Kansas—A. S. Cook, Chitapa; J. W. Stinson, Beaver.  
Kentucky—Hon. D. T. Hamill, Guthrie;  
F. B. McCann, Kirkmansville; Jas. W. Lee, Morganfield.  
Louisiana—J. C. Williams, Walker.  
Maryland—Chas. C. Willson, Queens-town.  
Michigan—Milo E. Marsh, Lansing; A. J. Andrews, Schoolcraft.  
Minnesota—W. C. Webber, Rochester.  
Mississippi—T. J. Walsh, O'Neals.  
Missouri—C. E. Dothe, Argo.  
Montana—M. H. Poole, Geyser.  
Nebraska—D. Phillips, Pool Siding; Jno. Kutsch, Sr., Pool Siding.  
New Hampshire—Wm. E. Smallcon, West Rochester.  
New Jersey—S. W. K. Sexton, Wrightstown.  
New York—A. T. White, Macedon.  
North Carolina—J. B. Lutz, Newton.  
North Dakota—Chas. H. Olive, Reno;  
Mrs. A. V. Dennis, Lansing; Ole Oakland, Balton.  
Oklahoma—R. H. Molden, O'Kenne; A. Wood, Sayre.

Ohio—Chas. H. Newton, Amanda; Wm. Borchers, Amanda.  
Oregon—C. S. Hammond, Newberg.  
Pennsylvania—J. C. Everitt, Watson-town; John J. Erford, Carlisle.  
South Carolina—J. Lewis Lee, Conway.  
South Dakota—Walter H. Engle, Windom.  
Tennessee—A. L. Morris, Sattilo.  
Texas—B. M. Thompson, Freeland; Dr. C. W. Bowman, Caddo Mills; Welton Winn, Santa Anna.  
Virginia—E. E. Gay, Vulton's Creek; C. Hayes Taylor, Gillespie.  
Washington—Karl Meyers, Ritzville.  
West Virginia—Riley Pritt, Beverly.  
Wisconsin—N. C. Crawley, Baraboo.  
Wyoming—E. F. Hurdle, Guernsey.

Note.—It will be noticed that in some States where the development of the Society is quite great more than one nomination has been received. As it is only desired to have one Vice-President for each State write the name of the nominee representing your choice in the blank space provided in ballot. It is expected that only members in any State will vote for the Vice-President to represent that State.

### FOR SECRETARY.

M. W. Tubbs, Indianapolis, Ind. Mr. Tubbs has been acting Secretary of the Society for a year because the elected Secretary resided in Illinois and it was impossible for him to leave his home and business.

J. H. Harpster, Millersburg, O. Mr. Harpster has been a deputy president for a number of months. He has done good service for the Society. He is also a publisher of a newspaper.

### FOR TREASURER.

Andrew Smith, Indianapolis, Ind. Mr. Smith is Vice-President of the Capital National Bank of Indianapolis, and eminently qualified for the position. He is an energetic man and can be of much service in directing the affairs of the Society. The former Treasurer, Mr. Miller, does not seek a re-election on account of numerous business enterprises that prevent him giving the time necessary for the Society.

### FOR NATIONAL ORGANIZER.

Hon. H. B. Sherman, Greensburg, Ind. Mr. Sherman is known to a great many of the members. He has been active in the work of the Society from the time of its organization. He has visited several States and addressed meetings, but his greatest efforts and most notable victories are in evidence in the tobacco districts.

George G. Winans, Lakeland, Mich. Mr. Winans is and has been State Organizer for Michigan. His name has appeared in this paper frequently, and he scarcely needs an introduction. Suffice it to say that if it is the will of the members of the A. S. of E. to elect him National Organizer he is sure to fill the office with credit.

### FOR GENERAL COUNSEL.

Mark P. Turner, of Indianapolis. Mr. Turner is present counsel.

### OFFICIAL BALLOT

President.	Vice President.	Secretary.	Treasurer.	Counsel.	National Organizer.
J. A. EVERITT.	Write name of Candidate here.	M. W. Tubbs. J. H. Harpster.	Andrew Smith.	Mark P. Turner.	H. B. Sherman. Geo. G. Winans.

NOTE No. 1.—If from an individual member, write "1" in each column under the name voted for. If from a local union, write the number of votes cast for each candidate.

NOTE No. 2.—For Vice President, write name of candidate representing your choice in your State in blank space and indicate number of votes as in Note No. 1.

NOTE No. 3.—Any suggestions or recommendations from any member or any Local Union will be carefully considered at the annual meeting. Please write them on separate sheets from other matters.

This ballot is from Member National Union.....

.....P. O. ....County.....State

If a member of a Local Union, give Local Union information on blank below.

This ballot is from.....Postoffice.....State

## UP-TO-DATE Field Crops PRODUCTION AND MARKETING

The fields have changed from green to brown.  
Before they don the robe of death;  
May we be thus as well prepared,  
Before shall come our final breath.  
—J. P. S.

Haul out the field pumpkins. Jack frost is gaining strength.

The pastures will thank you next year if you will take the stock off of them now.

Boys, gather the walnuts. You'll want some to crack during the winter evenings, and somebody else will swap money for the surplus you have.

Don't let any of the hickory nuts go to waste. They are worth more in the market than walnuts, and most people prefer them for home crackings.

Don't you like to walk out over the fields? Keep your eyes open when you take such walks. Something of importance may need your attention.

How about the manure piles? If exposed to the freezings and thawings and leachings of winter, get them out on the fields right now.

Scatter the manure on the meadows, put it on the potato ground and plow it under, or use it as a mulch under the orchard trees. Don't let it remain in the barn yard to be in the way all winter, and of less than half its present value next spring.

As usual, Uncle Threadbare neglected to sow his rye pasture field, and he is now vexed because Neighbor Thrifty has a green field for his stock to nibble on whenever it is proper to turn them in.

Look after the drainage of the new sown wheat fields and meadows. A little neglect in this regard may lead to some complaints next spring of "winter killing."

"Vest pocket fertilizers!" Who ever heard of such a thing? Well, we have reached it. Carry enough in the vest pocket to fertilize an acre, or ten acres, or the whole farm, if managed properly. Legumes. Bacteria. Nitrogen. That's the way it comes about. From the vest pocket package propagate the bacteria, infest the seeds of the legumes (clover, alfalfa, peas, etc.) with them, plant the seeds, raise big crops, and the bacteria do the rest. It is a fact. Uncle Threadbare is to be crowded off the earth.

What do you think of these letters: "By your advice, I held 900 bushels of wheat, and made \$240 above what I would have got at threshing time.—William Crawford, Valley Center, Kas. "I want to thank Up-to-Date Farming for what it has done for me. Last year I raised 4,100 bushels of wheat and 1,700 bushels of oats. I had to sell 1,500 bushels of wheat to meet expenses, but I held the balance as advised by you, and made \$910 by doing so. I also got 40 cents a bushel for my oats, though my neighbors sold for much less."—Henry Scheetz, Jennings, Kas. "I have been a subscriber to Up-to-Date Farming only 18 months, but in that time I have actually gained \$350 by following its advice in marketing my crops."—R. D. Gibson, Meridian, Texas. "I actually knew a man living less than three miles from me, who sold his entire crop of wheat for 58 cents a bushel, when he could have got \$1.15 a bushel had he known and followed your advice."—A. E. Hancock, Girdletree, Md. "We are delighted with Up-to-Date Farming."—Alice C. Erashers, Chester Co., Tenn. "Since I have read Up-to-Date Farming I pre-

fer your way of writing, for you certainly are doing more for the farmers than all the other farm papers have done or ever will do."—J. E. Metzger, Sullivan Co., N. Y. "Up-to-Date Farming is revolutionizing the farming industry."—W. S. Walker, Red Eye, Va. "We (husband and I) have just devoured our first copy of Up-to-Date Farming, and we believe it is the medium through which the salvation of the farmer is to be wrought."—Mrs. J. B. Ames, Stanislaus Co., Calif. "Up-to-Date Farming is a paper that surprises its readers by the greatness of its ideas, the simplicity of their truth, and the importance of their results. It is the only true farm paper that is published. It teaches farming as well as other farm papers, and it teaches a solution of the farmers' troubles which no other farm paper does."—A. A. Dion, Grand Harbor, N. D. Read these letters to your neighbors, and then ask them to subscribe. Every one is genuine and the first we knew of their coming was their receipt.

## The Rice Situation

The rice crop of two States, Louisiana and Texas, last year, is given as follows: Louisiana, 3,515,258 sacks; Texas, 1,705,030 sacks; total, 5,220,288 sacks.

The outlook in these States for the present year is considered favorable, though the department of agriculture is warning the growers to be watchful of a destructive disease known as "rotten neck," and for which no remedy has yet been found.

Texas as a rice-producing State, is comparatively new, but it is already demonstrated that it is to become an important factor in rice production. Immense rice lands, it is reported, have recently been opened there, as also in Louisiana; hence the future rice supply may be looked for from the Southwest rather than from the Southeast. A few years ago South Carolina was an important rice producer. A tract in that State known as the Delta, comprising some 15,000 acres of land, was once a center of rice production, but it is not so now, there not being more than 100 acres of all this tract now growing that crop, and the entire State has almost dropped out of that industry.

That same disease of rotten neck is what drove rice out of the Carolinas, and its appearance in the new fields of Louisiana and Texas may well claim the attention of the agricultural department, which it is receiving.

## Broom Corn and Potatoes

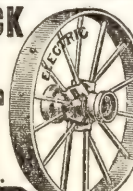

The broom corn situation in Oklahoma, as we learn it from an interesting letter from Mr. Roper (and we suppose it is much the same in other regions of the new West), is critical. Buyers have been sent there with offers of \$20 and slightly higher, while the market in the centers of distribution are firm at from \$60 to \$90 per ton. These people have staked all upon broom corn, and have made a fair success of its production. The world needs and wants their product at fairly remunerative prices, but the question of reaching the market is not so easily solved. Shipments by unskilled handlers are hardly to be commended on account of the grading. The plan that most directly appeals to us now, is for the farmers to bulk their product and ship a trial carload, and await the result of that before shipping more. St. Louis or Chicago are the logical points to ship to, unless favorable markets could be found at the nearer points of Kansas City or Omaha, preferring, of course, shipments direct to manufacturers where that can be done.

A like condition is discovered in the potato situation. Advances indicate a larger crop than last year, but when we remember last year's spring prices we may well conclude that prices now offered are too low, and advise growers to winter their potatoes at home, where it is possible to do so. A probable export demand may relieve the potato situation.

# Bone Spavin

Know it by the lump and the limp—a hard, bony growth on the inner side of the hock joint, usually low down and a little forward of the center of the leg—a quick hitch with the sound leg, and a stiff movement of the lame leg, bearing the weight on the toe, most noticeable in starting.

Now cases, old and bad cases, the very worst cases, cases where firing has failed, are cured by **Fleming's Spavin and Ringbone Paste**. Guaranteed to cure the lameness for good—may or may not take off the lump. Easily used by anybody, and a single 45-minute application usually does the work—occasionally two required. Write for Free Horse Book before ordering. It gives all the particulars, and tells you what to do for other kinds of blemishes.

## UP-TO-DATE Live Stock and Dairying PRODUCTION AND MARKETING

Uncle Threadbare leaves his cattle  
Where the winds do fiercely blow,  
And is mad when Neighbor Thrifty's,  
Housed in winter, beat them so.  
—J. P. S.

Are the barns and sheds ready?

We don't much favor winter pigs, but if they are to come, be prepared for them.

Have you arranged the conveniences about feeding you promised yourself last winter?

Are the colts getting along satisfactorily? Don't let them get long haired and shaggy.

Don't keep any stock through the winter that won't pay their board; you can't afford it.

I'm glad this country don't raise strawstack calves any more. Even Uncle Threadbare has quit that.

Good horses are in fair demand and the market is not crowded. We do not hesitate to recommend the breeding of good horses. Bad ones are already too plenty.

Cattle prices are low in the country. Has any one heard of cheaper beef in the cities? It is wonderful how such things increase in value as they pass from the farm to the meatshop.

Some very fine stock of all kinds, especially of hogs, have been exhibited at the fairs this fall. But none of these animals were so fine they can not be equaled. Try if you can't beat them.

In breeding stock aim for uniformity of type and color. The ring, streaked and striped of Jacob's day are out of date, and the 700-pound cow, and the steer with an inverted slope for its base line, have no place among Our Up-to-Date People.

Cattle men are still urged to not rush their stock to market on certain unfavorable days—days made unfavorable by a prevalent but mistaken notion that they are most favorable. Marketing should be distributed throughout at least five days of the week. How sadly is organization needed among cattlemen!

Though low cattle prices prevail at the time of this writing, the outlook is not discouraging to cattle feeders. As we have elsewhere intimated, the "warmed over" stuff from the ranges and pastures is now pretty well unloaded, and real good beef cattle is scarce. Those who hold have very good reason to expect better prices.

## Sour Milk for Old People

Microbes and bacteria figure now in almost everything. The failing strength and general debility that is expected to accompany old age are now attributed to the alleged fact that a certain destructive microbe gains mastery in the system, and overcomes the vigor and strength of the body, and brings about the feebleness of age.

Prof. Metchnikoff, of the Pasteur Institute, London, claims to have discovered a bacillus in sour milk that preys upon the microbes which is held responsible for the phenomena we note in old age, and from this he declares that sour milk is the nearest approach to the elixir of life that has yet been discovered. This would indicate the plentiful use of sour milk by aged people, and those who are approaching old age. This view is being held by other distinguished authorities, as appears from articles previously published in this department, and who knows but that an article now generally thrown away or fed to the pigs, may become one of the greatest blessings to the human race? Certain it is, that the Bulgarians and the Irish, who, in their native land, are great consumers of buttermilk, are noted for their longevity.

## UP-TO-DATE Poultry and Bees PRODUCTION AND MARKETING

Sat the hawk upon the treetop;  
How he watched the poultry yard,  
But the watchful eye of biddy,  
Kept her flock well under guard.  
The hawk now eager for the poultry,  
Sits in speculative hall;  
Well for you the price is guarded  
As the chicks while they were small.  
—J. P. S.

Early pullets—warm quarters—winter eggs.

No use to feed a lot of surplus roosters this winter.

Chickens need gravel in winter as well as in summer.

Clean out and whitewash the poultry house before everything freezes up.

The goose is going to be worth a half dollar or more between now and Christmas.

A few meat scraps make the hens forget the bugs and beetles they can't find any more.

You'll miss some eggs if you don't provide a dust bath in the poultry house or under a nearby shed.

Some may think poultry will rule low this fall because beef is so cheap, but beef is not cheap in the cities where

the poultry is eaten. It is only beef cattle that are cheap.

Neighbor Thrifty has a nice patch of rye for the poultry to pick during the nice days of winter. His folks always get winter eggs.

The hog must be fed very carefully if he pays for his meals, but the hen is very likely to pay for hers, and is generally left to hustle around and get it herself.

Do you count on learning anything about poultry this winter? The person who "knows it all" has most to learn, and winter is a very good time to take lessons. Up-to-Date is a splendid textbook.

Fear in mind that your best winter layers are not likely to be your best spring layers of eggs for hatching. Eggs from hens that have not laid much during the winter are likely to produce most vigorous chicks.

If any of Our Up-to-Date People have put up eggs by the water glass process, we would like to be informed of the result. Prices were so well maintained during the summer there was really not much inducement to store eggs.

## Learn Practical Bee-keeping by Mail

Planned especially for men and women seeking a livelihood that is not only fascinating but profitable; it also offers persons who desire to obtain a more perfect knowledge of the science of practical bee culture the best opportunity ever presented by means of correspondence. Prospectus and bee-book free if you mention this paper. Address **The Root Correspondence School of Bee Culture, Medina, Ohio, U. S. A.**

THIS IS OUR FIFTY-FIRST YEAR.

## UP-TO-DATE

# Home on the Farm

HOW TO KEEP IT BRIGHT, HAPPY AND CHEERFUL

Although 'tis dark and chill without, It should be warm within the home; Where Love's bright sun perpetual shines, The frosts of discord may not come.  
—J. P. S.

Winter is coming. Are the home conveniences all arranged?

The home is the unit of society, and it should be a center of purity and happiness.

Woman is the central ideal of home, and it is well, but man's responsibility for what the home should be increases rather than diminishes when he enters the home door.

It is fortunate, perhaps, that the young cannot realize how brief is the tenure of home. The knowledge would doubtless cast a shadow on many a moment of sunshine. But it would close the lips on many a harsh and hasty word, and the heart to many an evil thought.

Isn't it strange that the ideal home is so different from the real one? The ideal is too apt to absorb the mind after the real one has gone forever. Life is a wonderful net work of contradictions and inconsistencies.

The winter home on the farm, the summer life of the family circle, must find its reality after the sun has gone down in the dull and cheerless west. Then the family find themselves together in what ought to be a cheerful living-room. And this room may be cheerful if a part of a mansion or the only room of a cabin home. The cheerfulness of a room depends upon those who occupy it, not upon the furnishings or the surroundings.

No man should live for himself alone. This is a good rule for society, and it is a good rule for the home. Parents should not be cross, fretful or selfish either toward each other or their children, and children should not be peevish and ill-tempered toward one another or their parents. Let every one try to make all the others happy, and to be happy, too. You may all live the allotted time of man, but still you will not stay together long in the family home.

These thoughts may have a tinge of sadness, but it is not for that they are written. It is to impress upon all the beauty and sacredness of home, especially the home on the farm where school and cares so fully occupy the day, and it takes the shades of night to bring the family together. Be happy, light hearted, gay and joyous and paint nothing but bright pictures to look back to by and by.

Boys and girls, how is it in school? There is just as earnest a work for you there as there was in the fields and the home during the summer months. If you distinguish yourselves in any field of learning, or be what you ought to be in society, the foundation must be laid in these auspicious school days. Get the very best there is in your opportunities, and pass as lightly as possible over the unpleasant or unfavorable conditions.

The best way we know to make the long winter evenings pleasant and profitable in the home on the farm is in reading, family reading, reading in which all may be interested, and about which all may join in conversation. Next is simple parlor games in which all may take a part, the working of puzzles, etc. The school lessons must come in for a share of attention, though, and as these are generally individual matters, they necessarily break into the family circle program, but their importance gives them the right of way.

It is seldom indeed that we trouble our readers with apologies, but our

Home on the Farm department is not all we wish to make it. We desire it shall be the most cheerful, helpful spot for the farm home, that which shall bring with it enough light and sunshine to drive away the shadows of care that are so likely to gather in the home, and to carry such sentiment and truth, simply expressed, as to cement the home circle, and make every inmate of the home better and happier. Watch for additions and improvements.

## What's the Trouble?

If this is a farmer, he is badly worried over something. He has evidently made a serious mistake of some kind—has neglected a good opportunity, or was offered a good thing and failed to accept it. Whatever he did, or failed to do, it seems like he can't get over it. The publisher of Up-to-Date Farming will give \$1 in subscriptions, annual or trial, to the person who writes the best letter, not to exceed 100 words, describing this man's case, award to be made December 1, and subscriptions to be placed by winner after announcement of award.

## Here Is What You Want

And you want it now, because it is sausage time. It is the celebrated

## ROLLMAN FOOD CHOPPER.

It will chop a given quantity of meat or other food with less labor than any other machine, and it will do it more quickly and with less waste. It is small, strong, convenient to handle, opens with a hinge and is easily cleaned, has steel cutters, and is readily adjusted to cut, not only meat, but vegetables, fruits, etc. It is the most useful household article of the kind we have yet seen—just the thing for Our Up-to-Date People.

Here is the way to get it: Of course you are a subscriber to Up-to-Date Farming. Send us 75 cents, the price of the machine, and we will send you one of these Food Cutters and extend your subscription for one year from the date of your present expiration. Or, get four of your neighbors to subscribe for Up-to-Date Farming one year, sending us \$2 therefor, and we will send you one of the machines as a premium. For 25 cents extra we will prepay all charges. Give us express office as well as postoffice.

This is not an advertisement; it is simply an offer to Our Up-to-Date People, and it may not appear again.

## Free Stencil of Your Name and Address

A remarkable offer, for purpose of introducing their 100 page catalogue, that if you send your name and address, with 12c in stamps to cover cost of mailing to W. D. Carroll Iron Works, Station D, Chicago, they will immediately send you a 4x12 inch stencil of your full name and address similar to this: **W. D. CARROLL**  
A stencil is very useful in marking your Produce Shipments, Grain Bags, Tools, etc.

Write your name plainly and they will send your stencil promptly.

**C. L. BOWES**  
CHICAGO  
R. F. D. 1. ILL.

## 68-PAGE BOOK AND TRIAL FREE

**Cures All Uric Acid Diseases—Kidneys, Bladder, Rheumatism**

**Free Treatment Proves the Cure; Free Illustrated Book Tells all About It—Send For Them Both Today**

To readers of Up-to-Date Farming: If you or anyone you know of is suffering from a disease of the kidneys, the bladder or any form of rheumatism, you are urgently invited to send name and address to get a free trial treatment of a wonderful non-alcoholic discovery by the celebrated French-American spe-

## Kidney Disease Bladder Trouble Rheumatism

Are you in the grip of a Uric Acid Disease? This will cure you; prove it free

cialist, Dr. Edwin Turnock, by which you can cure yourself of any Uric Acid disease in a short time in your own home and save the necessity of an operation and the expense of doctors and druggists. Send for it if you have Bright's disease, diabetes, dropsy, gravel, weak back, stone in the bladder, enlarged prostate, frequent desire to urinate, pains in the back, legs, sides and over the kidneys, swelling of the feet and ankles, retention of urine, wetting the bed, or such rheumatic affections as chronic, muscular or inflammatory rheumatism, sciatica, rheumatic neuralgia, lumbago, gout, etc. It will promptly remove every trace of uric acid poison and its complications, stop all aches, pains and swellings, strengthen the kidneys and the bladder so that they will become normal again, and so revitalize the entire constitution as to make you feel healthy and strong as in your prime.

It did this for legions of others, among them such well-known persons as Mrs. Martha Coker, Tyler, Tex.; G. G. Rector, Marshall, N. C.; Mrs. Mack Deveau, Noank, Conn.; Archibald Ritchie, Mt. Forest, Ont., Can.; Mrs. C. H. Sweetland, Webster City, Iowa; Ph. J. Brown, Kells, Mont., and it will surely do it for you. Write to the Turnock Medical Co., 2140 Bush Temple, Chicago, Ill., and since every free treatment is accompanied by a 68-page illustrated book going fully into all the details, it behooves you to send your name and address promptly for these free offerings. Do so today sure, for you cannot justly say you are incurable until you have tried this really remarkable treatment, and as neither money nor even stamps are asked for, you should certainly make a free test of it at once.

**RURAL MAIL BOX FREE** To the first person sending us the address of any one canvassing for petitions for a new route we will give an approved, galvanized, steel mail box free. **OAKES MFG. CO.**, Box 27, Bloomington, Ind.

**GINSENG** Fortune in little gardens.—Easily grown everywhere. Sells at \$8 to \$14 a pound; costs to grow less than \$1. Room in your garden to grow thousands of dollars worth. Roots and seed for sale. Plant in Fall or Spring. Booklet free. Write today. **CHARL GINSENG CO.**, 544 Main St., Joplin, Mo.

**916 CARDS** NEW Sample Styles ENVELOPE, Silk Fringe Jokes, 1 Post Fun Cards, Escort, and 1 Acquaintance Cards, Standard Best Catalogue, All for 2 Cents. **CROWN CARD CO.**, Columbus, Ohio.

## RUPTURE

I was helpless and bed-ridden for years from a double rupture. No truss could hold. Doctors said I would die if not operated upon. I fooled them all and cured myself by a simple discovery. I will send the cure free by mail if you write for it. It cured me and has since cured thousands. It will cure you. Write today. **Capt. W. A. Collings**, Box 316, Watertown, N. Y.

## "THE CURE THAT'S CURED" CATARRH

Cold in the Head, Headache or Loss of Smell, Dizziness and Ringing in the Ears FOR SEVENTY YEARS IS **Dr. Marshall's CATARRH SNUFF.** Contains no Cocaine or other Injurious Drugs. 25c. Per Bottle at All Druggists' or by Mail, Postpaid. **F. C. KEITH, Prop.**, Cleveland, O. Dept. A-22 Write for Booklet.

**DO THIS NOW**

And I Will Give You a Pair of my Handsome  
**Gold Spectacles**

Just send me five names of spectacle wearers and I will do this:—First, I will mail you my Perfect Home Eye Tester, free. Then (after you have sent me your test), I will mail you a

perfect-fitting five dollar family set of Spectacles for only \$1, which will include a pair of my handsome Rolled

Gold Spectacles, absolutely free of charge. This set will last a family a lifetime. I have never sold this family set for less than \$5 and you could not buy spectacles anywhere near as good as these, even for \$10 a pair. I am really charging you nothing for them now, as the dollar I will ask you to send with your test is only to help pay for this announcement. This very remarkable but honest offer (to send a five dollar set of spectacles for only \$1) is open to everyone (my old customers also), but only for a short time, as I am just doing this to prove to every spectacle wearer in the world the following two very important facts: First, that my Perfect Home Eye Tester is positively accurate and reliable and with it you will be able to give your own eyes a perfect test in your own home and thereby I fit you with absolutely perfect fitting spectacles by mail, which could not be improved on even if you had undergone a personal examination in any oculist's office, at a cost of \$10 or more. Second, and most important of all, that on account of my latest improvements, my spectacles have become known the world over as the "Dr. Haux Famous Perfect Vision Reading and Sewing Spectacles" and they are now greatly superior to all others on the market. With them you will be able to thread the finest needle and read the smallest print, day and night, with perfect ease and comfort, just as you did in your younger days, and this, even if your eyes are so very weak now that you cannot read the largest print in this paper. In fact the large number of physicians who have for years and years used and recommended my spectacles to their weak-eyed patients will tell you that they are the most perfect fitting, clearest and best in the world today, and I will give you your dollar back and let you keep the five dollar set of spectacles also, if you yourself don't find them to be the finest, clearest and best you have ever bought anywhere at any price. I can only send one set to a family at this price, and this only for a short time, so write me **right now** for my free Perfect Home Eye Tester, and address my company as follows:—

DR. HAUX SPECTACLE CO.,  
Haux Building, ST. LOUIS, MO.

**I WANT AGENTS ALSO** And any man or woman (also storekeepers), without any previous experience whatever, can fit the weakest eyes with my Perfect Home Eye Tester, which is so simple that any one can work it and easily earn from \$25 to \$100 weekly selling my famous spectacles, either in their own homes, travelling or in stores. My agents need no license anywhere as I furnish the necessary documents with the Agent's Outfit.

**NOTE:**—The above is the largest mail spectacle house in the United States and perfectly reliable.

**DEPARTMENT OF AGRICULTURE**

(Concluded from Page 9)

It should be remembered that the economic factors which regulate the values of these two great American staples—corn and wheat—are not identical. Although the home market is the prime factor regulating these values, its paramount importance in this respect applies much more to corn than to wheat, because, while a small portion of the American corn crop, from 5 to 10 per cent., is exported, the exports of the American wheat amount to an annual average of 30 per cent. Therefore, the American corn crop presents in this country the very best indicator possible of the influence of the increase of production of agricultural products on their farm values immeasurably better indeed than wheat or any other American crop.

The foregoing inferences demonstrate quite conclusively, and prove beyond any dispute, that the increase in production of agricultural products beyond certain more or less narrow limits, like the mere succession of several bountiful crops, the increase not regulated by proper and legitimate economic factors, the increase not adjusted to the international or at least national consumption, not only does not increase the value of these products, or, as the Secretary of Agriculture puts it, "enhance the value of the products," but on the contrary, lowers this value, seemingly in proportion to a double amount of the said increase. Meanwhile, in the introductory declaration of his last annual report, constituting his confession of faith, presenting profession de foi of his department, explaining "the theory of his duty," the Secretary of Agriculture of the United States set forth such "securing of a greater yield from the soil," this very blind, so to speak, increase in production, increase for and by itself, increase constituting not a means but a purpose, increase irrespective of anything else in the universe, as a fundamental basis of all the activity of his department. The trouble with the United States Department of Agriculture, which is supposed to be a national department of applied science, is that it does not apply and utterly ignores one science and the most important one at that, namely: Political or social economy. Therefore the activity of the department being a merely technical mechanical and automatic one, unguided by the higher human intellect, unadjusted to the local conditions of the American Commonwealth, unapplied to the needs of the agricultural producer, not only does not benefit the American farmer, but on the contrary, persistently undermines his economic condition and continually shatters and eats up the foundation of his industry. We have proved furthermore that increase in agricultural production beyond moderate crops not only causes agricultural prices to fall not unfrequently below costs of production, but produces general economic depression all over the country; that, in other words, agricultural depressions are invariably inevitably followed by depressions in all other national industries. The latter or general depression usually cause a contraction of currency and such a monetary stringency that the consumers of agricultural products are unable to derive any benefit whatsoever from the low prices of the products. Thus it appears that this blind, unintelligent,

automatic work of the United States Department of Agriculture for the increase of agricultural production irrespective of all cosmic and sociological laws not only causes an irreparable injury to the economic status of the American farmer, but as its second and more remote result, produces general depression in the country. This activity can be likened to a powerful and fully equipped agricultural machine set up in full motion on an extensive farm and left to work by itself without guiding and adjusting hand of the man which, instead of performing the work for which it has been constructed, breaks the fences, uproots the trees, etc. Therefore, neither farmers nor representatives of all other industries of the country, nor consumers even, are "the people" which derive any benefit from the secretary's "help to secure greater yield from the soil." The question naturally arises: Who this people are? After most diligent and laborious survey of all the body social of the United States we have been able to find among the whole of the American people only two economic elements which are benefitted by this mad increase in agricultural production, namely: Railroads and gamblers in agricultural products of all kinds. As corn and wheat are still the mainstays of the railroads of this country, the failure, shortness or even mere moderate size of these two crops have more or less disastrous effect on their revenues. What concerns gamblers of all kinds, greater amounts of produce or cotton handle, larger commissions they get. Thus it is self-evident that the present policy of the United States Department of Agriculture has only one result, namely: Enrichment of mere carriers and irresponsible social parasites at the expense of all the American people generally and of the agricultural producer in particular.

**GOOD NEWS FOR ASTHMA SUFFERERS.**

We are glad to announce that the Kola Plant, recently discovered on the Congo River, West Africa, has proved itself a sure cure for Asthma, as claimed at the time. We have received the testimony of ministers of the gospel, doctors, business men and farmers, all speaking of the marvelous curative power of this new discovery.

Mrs. L. D. York, of Henderson, Me., writes, thanks be to my God and the Kola Compound I am now completely cured of Asthma after many years of suffering. Hon. L. C. Clute, of Manchester, Iowa, writes, was permanently cured of Asthma after eighteen years severe suffering, and want other sufferers to know that the Kola Compound did it. Mr. E. B. Hume, 1345 Arch St., Philadelphia, Pa., a widely-known traveler, writes, was cured after physicians and everything else failed, and I tried all so-called remedies known. Mrs. Sadie Montgomery, Lapel, Ind., writes, I could not lie down or walk fast for several years, but the Kola Compound cured me, although every other remedy failed.

To prove to you beyond doubt its wonderful curative power, the Kola Importing Co., No. 1164 Broadway, New York, will send a large case of the Kola Compound free by mail to every reader of Up-to-Date Farming who suffers from any form of Asthma. This is very fair, and we advise sufferers to send for a case. It costs you nothing, and you should surely try it.

**VIRGINIA FARMS** \$5 per acre and up with improvements  
Address, Farm Dept., N. & W. Ry., Roanoke, Va.

**CANCER** 30 years experience enables us to scientifically treat and effectually cure cancer and tumors without the knife. 78 page book sent free. Address Drs. GRATIGNY & BUSH, 7 Odd Fellows Temple, 7th & Elm Sts., Cincinnati, O.

**FREE TRUSS**

I have a truss that's cured hundreds of ruptures. It's safe, sure and easy as an old stocking. No elastic or steel band around the body or between the legs. Holds any rupture. To introduce it every sufferer who answers this ad. can get one free. The U. S. Gov. has granted me a patent. ALEX. SPEIRS, 765 Main St., Westbrook, Maine.

**I Cure Women OF FEMALE DISEASE AND PILES**

**I Will Cure You So That You Should Stay Cured—Women No Longer Need Submit to Embarrassing Examinations and Big Doctor Bills.**

**To Show Good Faith and to Prove to You That I Can Cure You I Will Send Free a Package of My Remedy to Every Sufferer.**

I hold the secret of a discovery which has seldom failed to cure women of piles or female weakness. Falling of the womb, painful menstrual periods, leucorrhea, granulation, ulceration, etc., are very readily cured by my treatment.

I now offer this priceless secret to the women of America, believing that it will effect a cure in almost any case, no matter how long you have suffered or how many doctors have failed.

I do not ask any sufferer to take my unsupported word for this, so will send you some of the medicine free. If you will send me your name and address I will mail you a trial package absolutely free, which will show you that you can be cured. Do not suffer another day, but just sit down and write me for it right now.

Mrs. Cora B. Miller, Box No. 137 Kokomo, Ind.

**Brooks' Sure Cure FOR RUPTURE**

Brooks' Appliances. New discovery. Wonderful. No obnoxious springs or pads. Automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No lymphol. No lies. Durable, cheap. Pat. Sept. 10, '01. **SENT ON TRIAL.** CATALOGUE FREE. BROOKS APPLIANCE CO., Box 908, MARSHALL, MICH.

**TO WOMEN WHO DREAD MOTHERHOOD!**

**Information How They May Give Birth to Happy, Healthy Children Absolutely Without Pain—Sent Free.**

No woman need any longer dread the pains of child-birth or remain childless. Dr. J. H. Dye has devoted his life to relieving the sorrows of women. He has proved that all pain at child-birth may be entirely banished, and he will gladly tell you how it may be done absolutely free of charge. Send your name and address to Dr. J. H. Dye, 112 Lewis Block, Buffalo, N. Y., and he will send you postpaid, his wonderful book which tells how to give birth to happy, healthy children, absolutely without pain; also, how to cure sterility. Do not delay but write today.

**Cancer of the Breast no Longer Incurable—How Mrs. Geo. Ampt, of Aurora, Ind., Was Cured**

Aurora, Ind., June 29, 1904.

Dr. D. M. Bye Co., Indianapolis, Ind.  
DEAR SIRS—I am glad to be able to testify as to the merits of your Cancer Cure, for today I am entirely well of my cancer of the breast, thanks to your Combination Oil Cure. Any one wishing to hear from me will be promptly answered.

Yours respectfully,  
MRS. GEORGE AMPT, Aurora, Ind.  
No need of cutting off a woman's breast or a man's cheek or nose in a vain attempt to cure cancer. No need of applying burning plasters to the flesh and torturing those already weak from suffering. Soothing, balmy, aromatic oils give safe, speedy and certain cure. The most horrible forms of cancer of the face, breast, womb, mouth, stomach; large tumors, ugly ulcers, fistula, catarrh; terrible skin diseases, etc., are all successfully treated by the application of various forms of simple oils. Send for a book, mailed free, giving particulars and prices of Oils. Address Dr. D. M. Bye Co., Drawer 505, Dept 26, Indianapolis, Ind.

**The War Cry—"A Million, A Million United"****BUGLE**

NATIONAL UNION of A. S. of E.  
INDIANAPOLIS, INDIANA.

GENTLEMEN:

Please enrol my name in the army for A Million United Farmers and send me the Official Paper one year, certificate and emblem.

Name \_\_\_\_\_

P. O. \_\_\_\_\_

Rural Route \_\_\_\_\_ State \_\_\_\_\_

Will you organize a Local Union in your school

district? \_\_\_\_\_

In the November 15th issue last year first appeared the now famous war cry: "A MILLION, A MILLION UNITED." We use a little space in this issue to reproduce it and to urge every member to secure one new member. Use the "Bugle Appended" in sending in their application. You can send it in for them when sending in your ballot.

To all readers of Up-to-Date who are not members we extend the most earnest invitation to join with us now in our fight for better prices. Use the "Bugle Appended" and tell us if you will organize a Local Union in your own school district. If so, we will send you necessary supplies and some sample copies of the Official Paper.

Yours for profitable prices, controlled marketing, co-operation and A Million, A Million United Farmers.

THE AMERICAN SOCIETY OF EQUITY,  
INDIANAPOLIS, INDIANA.

Up, farmer, up; the bugle has sounded  
The war cry: "A Million, A Million United."  
To arms, then, to arms; use the pen for your sword.  
'Tis the mightiest weapon when backed by your word.

Write, farmer, write; the signal has sounded  
The war cry: "A Million, A Million United."  
To the ink, to the ink; your duty demands it.  
Equity, justice, fair prices command it.

Shout, farmer, shout; the army has shouted  
The war cry: "A Million, A Million United."  
Your neighbor, your neighbor, your neighbor must hear it  
And work with a will. "We shall win, never fear it."

Work, farmer, work; the bugle that sounded  
The war cry: "A Million, A Million United."  
Commands you, demands you to be up and doing  
While the current of life in your veins is still flowing.

Here, farmer, here; a BUGLE'S appended.  
The war cry: "A Million, A Million United."  
To the ink, to the post; your influence, we need it.  
The bugle is sounding! Awake ye, and heed it.

# Here's My Hand

## Give me Yours

### We can go hand in hand to greater success for all

UP-TO-DATE FARMING wants to help farmers. It will help them if they accept the help.

It has helped hundreds of thousands to make more money. It can help every farmer in the land.

Readers of UP-TO-DATE FARMING get better prices for their crops than any other set of farmers in the country. No farmer will get as much for his crops, as he may get, unless he reads this paper.

You cannot read this paper without being impressed with the fact that we are sincere in wanting to help you.

But, no matter how hard we strive, we cannot help you unless you help yourself. There are three ways as follows:

#### ONE WAY

If you are a subscriber for this paper you can help by renewing promptly.

#### ANOTHER WAY

If you are not a subscriber you can help by becoming one at once

#### STILL ANOTHER WAY

Whether subscriber or not you can help immensely by sending a club of Subscribers.

**The Price is 50 cents a year; or a trial  
Subscription — 3 Months 10 cents**

I have worked hard for one year to perfect a plan that would guarantee farmers profitable prices always, and nearly two years to establish it.

Marketing of Farm Products has been nearly revolutionized already, but more farmers must join and read this paper to get the perfect results. Help in one of the ways above.

This is a critical time as prices of crops are going down. We can stop the decline and force them back if you help.

**I give you my hand on it that I mean every  
word I say**

#### FILL OUT AND SEND AT ONCE

##### Publisher of UP-TO-DATE FARMING;

DEAR SIR:—Here is my  and..... cents. I want to go hand in hand with you until farmers come to the front to stay and until farming is as certain for profits as any business in the country. You will please send Up-to-Date Farming to me..... so I may know every movement that is made to help farmers to market their crops and get good prices.

Name.....

Address.....

### Extra Special

Keep your eye on the star. Controlled marketing is everything. Hundreds of thousands of farmers have made more money by partial control. Perfect control and steady prices will come when we have the million readers and members. The cause must not lose a single convert, but each should bring more.

If an ugly mark is on the star it means that you should renew your subscription. Remove this blot on controlled marketing by sending your renewal at once and include 50 cents more to make you a full co-operating member of the American Society of Equity if not a member already. In return we will send you Member's Manual, Badge, etc.

Don't let it be said or thought that you will cause a blot to appear on controlled marketing which will be the case if you fail to respond to this notice.

**J. A. Everitt,**

**Publisher of UP-TO-DATE FARMING**

**Indianapolis, Ind.**

## Incidental Mention

The American Seeding Machine Co.'s 1905 Almanac, a Household Encyclopedia, is an advertising document, of course; but it is a real almanac for the approaching year, but it contains quite a treasury of useful things and many a hearty laugh. Send a postal card addressed as above to Springfield, Ohio, and get one free.

Page Woven Wire Fence Co., Adrian, Mich., need no introduction to readers of UP-TO-DATE FARMING, but they have this season adopted a novel method to convince the public of the superior quality of their goods. They have had a handy and useful paring knife made from a sample of the top wire of their celebrated woven wire fence. They will send one of these knives free to any of our readers who wish to know more about the Page fence, and will ask for it, mentioning UP-TO-DATE FARMING

Readers will notice in this issue an advertisement of Andersch Bros., Dept. 98, Minneapolis, Minn. To any reader of Up-to-Date Farming interested in hunting or trapping they will send a large cloth bound book telling all about this business for \$1.00. The regular price of the work is \$1.50 and it is well worth that amount. The book has pictures and descriptions of all the fur bearing animals. It is well worth \$1.00 of anyone's money if they want to learn all about hunting, trading and trapping. Send for a copy.

## CAN BOYS BE TRUSTED WITH GUNS?

At a meeting of the Benedict's Club in Philadelphia the other day, a heated discussion arose over the question of whether boys should be allowed to handle firearms. The argument was precipitated by one of the members, who owned a country residence, remarking that he would not trust his youngsters with guns. This brought an energetic looking member to his feet with the reply, "I can't say I agree with my friend \* \* \* I wouldn't give a snap for a boy that couldn't be trusted with a

gun. As for me, I want to see my boys grow up into men—responsible, clear eyed and steady of nerve, and I don't believe there is anything more potent to this end than to give a boy a good, reliable gun and turn him loose in the open country. I have three boys, ranging in years from eight to fifteen, and each has his rifle and shotgun. The oldest has used his for five years and has not done any damage yet, and in that time, my acres have never required a scarecrow."

This point of view is on a line with the educational movement being carried on by the J. Stevens Arms and Tool Company, 365 Pine street, Chicopee Falls, Mass., manufacturers of the famous Stevens Rifles, Shotguns and Pistols. We have just received a copy of their "Book of Out-door Sports" which deals not only with Stevens Arms, but contains many valuable articles on various subjects of interest to lovers of out-door life. We understand these people are charging nothing for the book, but send it to applicants upon receipt of four cents in stamps to cover postage.

## THESE GO TOGETHER

and make

## A VALUABLE PAIR

Farmers often need to shell corn. The old way of shelling by hand is entirely out of date. It no longer satisfies our up-to-date people. But here is what does. It is the—

This is absolutely the highest grade hand corn sheller on the market. It runs easily and is practically indestructible. Price, \$1.75, but we will send one of these shellers and UP-TO-DATE FARMING one year, new or renewal, for \$2. For a club of eight at 50 cents each, we will send a sheller free.

The Black Hawk Sheller's Companion is the—

## BLACK HAWK GRIST MILL

This is a very popular machine. It grinds corn, oats, wheat, etc. It makes the nicest kind of graham flour and corn-meal for table use. It is light and easily handled, and does satisfactory work in every respect. Price, \$2.90, but for \$3 we will send one of these mills and UP-TO-DATE FARMING, new or renewal, for one year. Or we will give one free for a club of ten at 50 cents each. A club of eighteen will get them both.

## AMUSEMENTS

—FOR—

## YOUNG AND OLD

We have a few hundred copies of Wehman's Wizard's Manual, Secrets of Mind Reading, Magic, Ventriloquism, etc., which we propose to give to our friends.

We do not regard the book as of very great intrinsic value, but it is quite a storehouse of harmless amusements, startling surprises, tricks, magic, etc., and explains almost all the great tricks that have astonished and almost startled the world.

We will send one of these books (while they last) by mail postpaid, absolutely FREE, to any one who will send us 50 cents for one new subscriber to UP-TO-DATE FARMING for one year. Young people can learn tricks in this book which will put them far ahead of any of their associates in amusement circles. You must ask for the book when you send.

Perhaps as useful a feed cooker as has yet had our attention is one manufactured by the Electric Wheel Co., Box 170, Quincy, Ill. The idea of this age, in fact, its necessity, is to save as well as to make, and if the nutritive value of feed may be increased by cooking, whatever that increase is represents the amount of feed saved in the operation. That the saving amounts to more than the cost of the cooking is evidenced by the increased number of feeders that are adopting the method. It would be well to write the manufacturer for a description of their cooker, with as account of what it may accomplish.

Entered at the Indianapolis  
Post-Office as Second-Class Matter

Number 23

We have had numerous letters setting forth the benefits received through the A. S. of E. by reason of increased prices and maintained prices. We now ask for expressions as to whether land has increased in value on account of its increased earning power. If a farm is worth \$50 or \$100 an acre when it produces 60c to 75c wheat, what is it worth now when it is producing \$1.00 to \$1.20 wheat? Also other crops can be referred to in the same way. Send reply to the publisher of this paper.

# OTHER YEARS AND NOW

## Overzealous Bear in the "Soup"

The Northwestern Miller is just now on a very hot griddle. Of course it is devoted to the great milling interests, and is thoroughly imbued with the mistaken idea that the cheaper the grain in the farmers' hands the better it is for the miller. Acting upon the history of past years, when the farmers have put their grain on sale as fast as it was ready for market, the Northwestern Miller has advised its clients not to buy wheat at the prices that have prevailed this year, but to wait until the break came, and then get it at the lowest price.

But the break has failed to come, and the mills find they cannot get enough wheat at all without going to Canada for it, and paying a duty of 25 cents a bushel, or bonding their mills to secure compliance with the law forbidding them to sell the product of the imported wheat in this country.

So the Northwestern Miller finds itself in bad odor, and, as it admits, is the recipient of "unsolicited testimonials in the shape of deceased felines, soup bunches, and ancient eggs."

But the Northwestern Miller still whistles to keep its courage up, and draws a parallel between 1888 and the present year. In October, 1888, number one Northern wheat sold in Minneapolis at \$1.20, but in the following June it had fallen to 80 cents. This the Northwestern Miller claims to believe, will be the situation to which present market conditions will lead. It reasons thus:

The population of the United States in 1883 was 63,000,000; the wheat crop of that year was 416,000,000, or 6.6 bushels per capita, and the average price was \$1.12. In 1904 the population is estimated to be 80,000,000, the wheat crop 526,000,000, the per capita 6.57 bushels, and the price \$1.20. This figuring makes the per capita supply of wheat this year only three one-hundredths bushel less than in 1888, when prices eventually dropped to a much lower level. Hence it argues that prices now must fall as they fell in 1888.

But there are several conditions now which did not exist in 1888, and which the Northwestern Miller does not take into account. The requirement for seed wheat in 1904-5 is much greater than it was in 1888, and per capita consumption is also greater now than it was then. Besides the ordinary consumption in the various forms of bread and pastries, there are many articles made of it, thousands of uses, that were entirely unknown fifteen years ago. Note that the per capita above is not the per capita of consumption, but the per capita of total supply.

We must also take into consideration the fact that general prices are on a much higher level in 1904 than they were in 1888, which makes the equitable price of wheat, even if all other conditions were the same, much higher now than in 1888.

Last, but not least, as the orators say, farmers are not marketing their wheat as they did in 1888. Their minds are now centered upon a price. They are selling when they get the price, and they are not selling when they don't get it. In the far Northwest shipments show there is still some reckless selling, but not in the great centers of production. The result must be a steady supply at the equitable price, but no glut of the market. In 1888 the crop went from the threshing machine into the elevators, where it was held for speculative prices on an advancing market until the promise of the crop of 1889 caused a panic on 'Change, and it was hurled upon the market, and the slump came. No matter what the promise of the crop of 1905 may be, with the wheat in the farmers' hands and going constantly into consumption at the equitable price, the market panic of the spring of 1889 cannot recur.

The above course of reasoning, which the most careful review compels us to consider sound, enables us to answer without difficulty, the three conundrums proposed by the Northwestern Miller, to wit:

"When will the flour market be congested in 1904?"

"When will present inflated prices topple to their fall?"

"How far will prices have to decline in order to find a legitimate basis?"

1. When the millers ignorantly lay in a year's supply of grain in a few months, and then tumble a year's supply of flour upon the market in a few months, there will be a congested flour market.

2. If there are inflated values they are not alone in the line of farm products, but they cover the entire range of values, and grain and other farm product values should not go down until all other values go down in the same proportion.

3. A legitimate basis is one that rests upon cost of production, including a fair remuneration for labor and means employed, equitably compared with the general reward accorded human effort. This may enable us to know when prices have reached a legitimate basis.

It is our opinion that the Northwestern Miller would act wisely in preparing additional receptacles for "deceased felines, soup bunches, and ancient eggs."

## Annual Car Famine

The Farmers' and Grain Dealers' Association of Illinois recently met in Springfield, and among other questions discussed was, "What is the grain shipper's remedy for the annual car famine?"

We do not know how those scholarly people handled the subject, but Up-to-Date Farming could have answered it for them very quickly. The shipping facilities of the transportation lines are abundant to meet the demands of consumption, and if farm products were shipped only in quantities to meet the demand, there could be no car famine. On the contrary, the railroads would be given business all the year; there would be no floods of freight, and no necessity for investment in rolling stock to be taxed to its utmost during a brief period but to remain idle all the rest of the year.

Up-to-Date's answer to the above question is Controlled Marketing—marketing the crops of a year through the space of a year to supply the needs of a year. This established, and all dangers of a car famine disappear.

## Local Shipments

Mr. George G. Winans, State Organizer for Michigan, who is an earnest and effective worker, and has done much for the cause of Equity in the Peninsular State, suggests that "each local union whose members want to sell at once, set a minimum price on their products, and then combine to ship in car load lots to commission houses that are thoroughly reliable." He further suggests that certain commission houses in convenient cities be designated, and required to give bond, and that the National Union thereupon guarantee honesty and fair treatment.

This is bordering upon the plan that we have suggested to the broom corn growers of the West, except that we advise them to first make a trial shipment, the society, of course, assuming no responsibility for results.

It is well for us all to be constantly on the lookout for every possible advance that can be made in securing equitable prices for farm products, but we must move cautiously. In many places the local unions are uniting in county unions, a plan we highly commend. The plan suggested could then be much more effectively worked, as the combined effort of a county than as the work of a single local union.

But even then there are serious difficulties not easily overcome. Very few farm products are of uniform grade. They are, therefore, subject to grading at some point between the producer and the consumer. This grading is necessary, and it is demanded by equity itself, but, at the same time, it constitutes one of the most doubtful elements in local shipments, or in shipping the combined products of a county or neighborhood. And commission houses of doubtful honesty make it one of their most fruitful avenues of plunder, and one which is most difficult to detect. The great elevator combine of the Northwest has been openly charged by high official authority with having received grain at one grade and discharged it at another and higher grade; but the grain trust is still "doing business at the same old stand" and in the same old way.

But the houses to receive these shipments are to be bonded. There is a general impression that bonds are an infallible guarantee of performance. Results show that they are far from being so. In the first place, one cannot always know that a bond is good, and amid the business mutations of these days a bond entirely good to-day may be worthless to-morrow. In the second place, to make a bond available, default must be proven, which is frequently a much more tedious and difficult process than a simple action in assumption, the bond becoming an instrument of delay rather than an element of security. Hence for the society as a whole to assume responsibility for these shipments would be entirely impracticable.

But there are honest commission men, though it is to be feared the percentage is not large. The well known "old and reliable" ones are the safest.

Our conclusion, therefore, is that shipments as suggested are proper enough, and may result in increased profits, but they must be done with an understanding of the exigencies of grading, with ordinary business caution, and with the risks necessarily assumed by all shippers.

The real solution of the matter is the establishment of receiving and distributing agencies in all the market centers. Until that can be done controlled marketing must be our principal reliance. With controlled marketing and the equitable price secured, shipments may well be left to the local buyers.

## Don't Invest in Great Stock Companies

We feel it our duty to again urge farmers to be very careful about investing their hard earnings in great stock companies of whose management they can know but little. A glib tongue can make things appear very attractive, and future results can be made magnificent on paper; but money in the pocket or deposited in some safe bank is a far better asset for the farmer and his family than if invested in the brightest corporation scheme yet devised. It means nothing to say that each investing farmer is a stockholder, and that each stockholder has a voice in controlling the business. The farmer out at home on the farm may have the voice all right, but it cannot be heard at the center of operations. The business must of necessity be managed there, and the farmer stockholder can exercise no influence upon it and can know but little about it.

A concern of this character, to which we have referred in former issues of this paper, known as the Farmers' Co-operating Harvesting Machine Company of North America, is still being exploited among the farmers of Ohio, and perhaps other States. An article, but recently sent to the press as a promoter of the concern, really shows it up in a more unfavorable light than we would care to do, yet it might deceive the unsuspecting. It is to be a \$5,000,000 concern, and claims to be now getting money from Ohio farmers at the rate of \$20,000 per county, and expects \$1,760,000 from the farmers of that State.

We do not care to say a word as to the honesty of the concern or its promoters. They may be as honest as humanity gets, and yet the scheme is not a safe or profitable one for farmers to invest in. It proposes to manufacture all kinds of machinery, and thus destroy the farm implement trust by building up another one at the expense of the farmers, and all the benefit it promises the farmers is implements *ten per cent cheaper than the trust prices*. Is any farmer so stupid as not to know that the trust could promptly meet that reduction, and go far enough below it to drive the "farmers' concern" out of business in less than a year? And then where would be the farmers' investment? Besides it seems strange that farmers should be asked to furnish the money to make machines in order to buy them ten per cent below the price charged for machines made with other peoples' money!

One reason given in the article referred to, which seems to have been written in all seriousness, why the chief of this scheme should be trusted with such an enterprise is, that he is "more than six feet high and weighs 200 pounds." Another is that he was once a man of splendid business qualifications, but went broke, because he had placed too much confidence in some one else. But the article we are discussing declares his "friends contend that it is but a question of time until he again resumes the proud position he once occupied in the industrial world." We should think not at the rate of \$20,000 a county from the farmers of Ohio.

Now, it is not at all pleasant to us to speak thus of any business enterprise. We prefer at all times to encourage and build up. But our first duty is to the farmers who are our patrons and supporters, and we feel it to be our sacred duty to speak to them this word of warning, not only in regard to this Ohio enterprise, but as to all other concerns that ask the farmers to buy stock in enterprises which, at best, can result in very little benefit to themselves, but which most likely will prove sink holes for the capital invested.

## Watch With Anxiety

The Post, Washington, D. C., says: "Every summer the financial markets of the world watch with anxiety the growth of the crops in America."

Why? Because there is nothing else of equal value so easily exploited. The unorganized farmer furnishes a luxuriant pasture ground for the crows and vultures of exploitation. Organization must change this. Co-operation must defeat speculation. Controlled marketing must bring just wages to the farmer.

# Enemies or Friends, Which?

In their reasonable struggle for equitable prices for farm products, it is questionable whether the old line agricultural papers are the friends of the farmers or their enemies. This article is not prompted by any feeling of jealousy on the part of Up-to-Date Farming. We have often appealed to the agricultural press to aid in this work in behalf of the farmers, have more than once proposed to share with them any advantage we may have as the chosen promoter of the movement, have offered to share with them the honors of the struggle and the glory of victory. But they seem to have got into a rut so deep that they cannot see changed conditions that are being recognized by the traders themselves; or their relations with the speculative interests are so close that they cannot, or dare not, break them off.

A paper now lies before us which, in reply to a request, tells its readers it believes wheat prices will stay up, but—there is always a "but" or an "if." In the case before us, the farmers are admonished to not be too sure of good prices, that in spite of reports to the contrary, "other countries may come forward with a crop that would cause prices to drop; that wheat harvest in foreign countries takes place the first of the year, and there is no telling what the developments may be. The old warning comes to us forcibly that "the cow may eat up the grindstone." The trend of the whole thing, the purpose of it, is to cause the farmer to rush his grain into the market, as he has always done, for the benefit of the "scalpers."

The fact is, and our editorial friends ought to know it, that the world's wheat belt lies in the north temperate zone, and the harvest is approximately in the same season that ours is. This is true of both domestic and foreign countries. Only a small portion of the world's wheat is produced in the south temperate zone, including only the

fields of South America and Australia, and a few other minor points, which have their harvest at a season opposite from ours.

The same paper in the same article, seriously answering a serious question, reminds its readers that there is great danger that people may learn to make biscuits of—beans! and thus knock the price of wheat into smithereens, not only for the present, but for all time, for "when a substitute is found it is used largely for the original when the price is reduced."

In other words, when people learn to use bean biscuits, they are not likely to return to the old-fashioned biscuits "our mothers used to make" of common wheat flour. Therefore, farmers had better sell their wheat a little lower, and save themselves the dire calamity of being driven out of business by bean biscuits!

These things would be amusing if they were not serious—not serious in the thing itself, but as showing the standing and animus of at least a portion of the agricultural press. Why should farm journals begrudge the farmer a fair price for his products? Why should they begrudge him the right to estimate the value of his stuff and hold it till he gets the price, just as everybody else does? Why are these papers so fearful that the venomous serpent of speculation in staple products may be scotched, wounded or killed?

We say to planters in the most emphatic language, Hold your cotton until you get your price. To the corn growers and tobacco growers, Hold your crops until you get your price. To the wheat raisers, Hold your wheat until you get your price. If these editors and their unhappy readers learn to eat bean biscuits, it will be their misfortune, and not your fault. Besides that may help our friends, the bean growers. See? But don't be uneasy about your wheat.

## How Farmers Pay Others' Debts

A paper published at the National Capital has this to say of what the farmer does for the country:

It is the American farmer who has the proud distinction of paying off Uncle Sam's huge indebtedness in Europe, who has brought securities from foreign banks, and who has sent American capital around the world looking for investment. The farmer and his stupendous volume of products are America's real bulwark.

That brief paragraph contains much food for thought. It is nothing new to be told that the weight of national prosperity rests upon the shoulders of the farmer; but that reference to "Uncle Sam's huge indebtedness to Europe" may well claim attention. This does not mean that the United States government is, or has been, indebted to any of the European governments; it refers to investments made by foreign capitalists in American securities—bonds and mortgages of corporations and municipalities, and in some cases of the government itself. The farmer is not responsible for any of these debts or obligations, has never been consulted about them, has never given his sanction to them, has derived no personal benefit from them, and has no personal interest in them, if we except the government bonds, which he is said to endorse by his votes at elections, and for which he is responsible as one of the many citizens. Yet, "it is the American farmer who has the proud distinction of paying off" this huge indebtedness to Europe—of paying off these great debts contracted not only by his government, but by the thousands of corporations which were created to bleed and oppress him rather than to benefit and uplift.

If the farmer has paid these great debts, he has done it by his labor. He had no other means of payment. His labor produced crops. Those crops, in accordance with the teaching he has had, went recklessly into the market at the lowest possible price. They were exploited by the corporations which sat, vulture-like, upon the Chimborazo of commercial spoliation, and, when out of the farmers' hands, were hurried abroad to "pay off this huge indebtedness to Europe!"

If the farmer were not himself to blame for his method of marketing, which makes such things possible, the very announcement would be nearly sufficient to lead to open revolt against the system. But as he himself, by his inexcusable method of marketing his products, has created, encouraged and built up the system, and laid the foundation for his own plundering, for taking of the fruits of his toil to pay the debts of others, it is now up to him, since he has learned better, to change his methods and make such exploitation impossible.

If any one says the farmer was paid for such of his products as went abroad to pay this indebtedness, we say NO. There was a pretense of paying him, but he was not paid what his products were

worth. If he had been there would have been no advantage in paying the foreign debts with the products. The debtor would just as well have sent the money instead. It was the part that was not paid for, the excess of the value over the price, that paid the foreign debts. Let the corporation and trust apologist put that in his pipe and smoke it.

## The Hold Monopoly Has

Mr. Joseph Struthers, of the United States Geological Survey, in making his report on the "Production of Aluminum and Bauxite in 1903," admits that it has not been possible to obtain exact statistics of the production of aluminum for the reason that the sole producer in the United States, the Pittsburgh Reduction Company, declines to state, even approximately, its output.

This brief official statement contains much food for serious thought. Aluminum is one of the newly discovered metals, and it is one of the lightest metals known. Its weight is one-fourth that of silver—a disk of aluminum the size of a silver dollar would weigh (approximately) only as much as a silver quarter dollar. It is white like silver, but it has a bluish tint which readily distinguishes it from that metal. It does not oxidize nor tarnish; chemicals to which even silver yields do not affect aluminum. It is a very useful metal, being valuable in the arts and in mechanics. It is found in clay, granite and other rocky substance, and is, therefore, abundant in nature, but the process of extracting it is controlled by patents.

Aluminum is now principally obtained from bauxite, rich deposits of which are found in various portions of the eastern hemisphere, and in Virginia, Tennessee, the Carolinas, Georgia, Alabama, and Arkansas in the United States.

But, as we have seen, its manufacture in this country is monopolized by a single firm, the Pittsburgh Reduction Company, and this monopoly feels itself sufficiently powerful to refuse to furnish the government of the United States so much as an approximate report of its output.

Previous to October, 1903, there was a rival company, the Electric Smelting and Aluminum Company, of Cleveland, Ohio, operating, it was claimed, by slightly different processes, and under different patents. But these companies were in constant litigation, the Cleveland Company finally getting a decision against the Pittsburgh Company involving some three million dollars. The Pittsburgh Company then made terms with the Cleveland Company, and secured the sole right to manufacture this useful article and furnish it to the American people.

The point is this: Here is a substance of general utility, the natural supply of which is almost as inexhaustible as the air itself, held under letters

patent as a close monopoly by a single firm, which defies the authority of the government, not only as to its method of operation, and its prices and cost, but as to the amount of its annual output.

This monopoly thus has the power to arbitrarily and secretly levy tribute on every user of aluminum in the United States, and, as the metal enters more and more every year into implements and articles in common use, it may be easily understood that the tax is an annually increasing one, and that, even now, it has attained gigantic proportions.

It is proper that the people should know these things, though the press seems loth to give them publicity. The people themselves are the sufferers, and yet they are the power behind them. There may come a time when a thoroughly aroused public will see to it that the whole patent system, beneficent in some of its features, shall tumble about the heads of its arrogant and exacting beneficiaries.

## A Question of Lunacy

The American Miller (newspaper) holds an *inquiring lunatic* on the editor of Up-to-Date Farming, and decides that we are fully qualified for a berth in an institution to which people generally go with reluctance.

Our offending is that we were so daft as to enter a protest against Secretary Bradley's contention that the American farmer should voluntarily lower the price of his entire wheat crop in order to induce foreign countries to take an imaginary few thousand bushels of surplus. On that point we are just as crazy as ever. The American farmer is under no obligation to lower the price of his wheat to accommodate anybody.

But the American Miller says we teach "the absurd doctrine that American farmers have only to hold their produce to get any price he may arbitrarily fix as a proper minimum."

Yes, we teach it. Can the American Miller prove that it is an "absurd doctrine?" Let's see about it. To begin with, the farmer's produce is his own, isn't it? It belongs to him by right of production. Suppose he should decide to keep it absolutely. Is there any power that can legally compel him to sell it, or to part with it in any other way? Yes, you say, the world needs it and must have it. Very well. There are but two ways it can be got from that farmer—it must be had either with his consent or without it. If it be procured with his consent, the consent must first be secured, and that can be done only by complying with his terms—paying his price. And there you are! If you get it without his consent, you must take it by force or by stealth, either of which is criminal under the law.

Which method does the American Miller advocate? As the first method, advocated by us, is an "absurd doctrine," we must conclude that the American Miller, which would not advocate an "absurd doctrine," advocates the second method, and would have it by stealth or by force, if the farmer should fix a "proper minimum" and be real stubborn about sticking to it. Happily, there are public institutions for the class of people who take property that belongs to others without their consent, as well as for those who teach the "absurd doctrine" that farmers co-operating together, not one nor all, but enough to control the market, can fix a "proper minimum" price on their produce and secure it. The inmates of the one are looked on with pity, those of the other with scorn and contempt. Which does the American Miller prefer?

And we repeat what we said in a former issue of Up-to-Date Farming, that it would be better for the American farmer to burn his little export surplus to ashes rather than "purchase its export at such a price!" What price? Not the price offered for the wheat in Europe, but the price, the terms, on which alone, it was contended he could secure its export, the loss to him of reducing the price of the entire crop to the proposed export basis. Better lose the whole of the little surplus than to suffer the loss that would be entailed by the proposed reduction of the price of the whole crop. We stick to that, and sensible farmers endorse it by holding their wheat and getting the "proper minimum" price in spite of Secretary Bradley and the American Miller.

## Some Interesting Figures

England paid for United States crops last year as follows: For wheat, \$73,000,000; for corn, \$17,000,000; cotton, \$124,000,000. Total, \$214,000,000.

Now, there are some other figures that would be still more interesting, but nobody has made them, and nobody will make them—figures to show how much the farmer actually received for this \$214,000,000 worth of products.

## Better Prices, Better Farms, More Products

The government reports the smallest percentage of corn in farmers' hands ever known at this time of the year. The 1903 crop sold for twice as much to the farmer as any crop of approximately the same size ever raised before. This was because farmers controlled their marketing and at no time was there a large surplus in the hands of manipulators to be used as a club to beat prices down. It is an incontrovertible proof of our theory that the world must have all the crops farmers grow, and if it can't get them at prices made by the buyers it will take them at prices made by the seller. In fact, the price is the least consideration when it comes to farmers' stuff. The other people must have them at some price, or any price.

In this connection the following report from Chicago is interesting.

### RECEIPTS LIGHTEST IN TEN YEARS.

Receipts of old corn at Chicago during the last week have not been so light in ten years, showing depleted supplies. Stocks of contract there have been sold except 300,000 bushels, mostly on the basis of 7 cents over May in store, and at the rate it is being shipped out there will be little left in two weeks. Stocks of all grades unsold are not to exceed 600,000 bushels, and are going out faster than the corn comes in. Under such conditions there is a demand for new corn as fast as it is moved in the next two months, which is expected to sustain prices for May close to a 45c basis. Even with the crop of 2,500,000,000 bushels there will be no excess of supplies.

Also the following:

### AMERICA TO SUPPLY WORLD.

The new corn just preparing for market finds the old crop swept away. The East is as bare of corn as the West and South are overflowing with the grain. Argentina, the only competitor of the United States in the Western Hemisphere, is almost through with its shipping, and must await another crop ere it again becomes a competitor in the markets of Europe. Central and southeastern Europe, heretofore this country's sole competitor in the Eastern Hemisphere, this time becomes a consumer rather than a producer owing to a disastrous drought. For all practical purposes America has the corn market of the world alone with the product to fill all orders.

Realizing his advantage, confident of his position, American farmer is selling slowly. As a result the marketings from the crop of 1904 are far behind those in the years when a much smaller output was tallied.

And still another:

### FARMERS HOLD TRUMP CARD.

The consumer appears to be more than anxious and it is up to the farmer to say whether he shall be supplied liberally enough to break the price of the agarian's own product. With the keen merchandising proclivity displayed by the agriculturist in selling his last two crops it is more than likely that the supply will be plentiful only when the real anxiety of the buyer is reflected by his willingness to pay a good price.

All that farmers need to do is to control marketing and keep the demand seeking the supply. This is easily accomplished by setting your mind on the A. S. of E. minimum price and letting none go for less. It will be easier to maintain prices than to raise them. Cash No. 2 corn was worth 56½ cents at Chicago when this article was written, November 15th.

Corn sold in the Indianapolis market as high as 68 cents last summer, which should not have been the case if enough corn was raised. The plain truth is, it is becoming difficult for farmers to raise enough grain, and this difficulty will prevail until through the stimulant of good prices they build up their ground and raise larger average yields.

## The Label and Its Effects

People have various ideas of the effect of the use of the farmers' union label. In the first place it serves as a bond of union between all classes of organized labor. If union farmers give preference in their purchases and use to articles bearing the label of organized labor, then union labor will give preference to articles bearing the label of the organized farmers. This does not mean that farmers will pay more for the articles made by union labor, nor that laboring people will pay more for products bearing the stamp of the organized farmers. This is not to be expected, nor would it be equitable.

The effect and benefits are these: The union marked goods will find the readiest sale, and will be taken first, so that if there is a surplus left to be a drug upon the market, it will be a "scab" made article or a "dumper's" product. When the dumper finds that his products are being left all the time while those of his union neighbor are being eagerly sought and taken, he'll begin to wonder what is the matter. And when the dealer notes the same thing, which he will very quickly do, he'll look for the union label in making his purchases, and will politely refuse articles without the label with the very reasonable excuse, "They will not sell." Hence the label brings about the Scriptural difference, "One shall be taken and the other left." The dumper will be left.

Subscribers and correspondents will help our office work very much if they will give their country every time they write to us. Please remember this.

## The Tobacco Convention

The report given elsewhere of the convention of tobacco growers recently held at Lynchburg, Va., under the auspices of the American Society of Equity, cannot escape the attention of a single reader of Up-to-Date Farming. The success of this convention marks an era in the price making and marketing of American farm products. Such conventions will be held every year, not, perhaps, separate for each product, but great national conventions representing ALL THE PRODUCTS. The growers of each, then, from every section of the country, can confer and agree upon equitable prices for all products. Those prices will be ratified by the producers everywhere and they will be maintained, consigning to eternal oblivion the ruinous system that so long prevailed without a protest.

## The Presidential Election

Little remains to be said about the late presidential election. The daily and weekly press has long since given all the particulars. The result was no great surprise except in its overwhelming character. In this it was a surprise to people and politicians alike.

The victorious party will make a great mistake if it considers the vote of 1904 as an endorsement of all it has done, or as a license to do what its leaders please. This fact has been pointed out with gratifying clearness by some of the strongest partisan papers. But the alleged beneficiaries of certain policies of the party in power, are very likely to so construe it, and take steps for still further advantages in their respective lines of special privilege, and the monopoly of great public interests. We may see the first cropping out of this in the rumors, started very soon after the election, of the most gigantic railroad merger yet conceived; one calculated to place the transportation of the country virtually under the control of Standard Oil.

Such things as these, as we view them from a nonpartisan standpoint, constitute the greatest danger that lurks in the path of the vote. But President Roosevelt's prompt announcement that he will not under any circumstances stand for another term, and the declaration by some of his closest friends that his administration will be absolutely of the people and not of the politicians, are reassuring. Let us hope that it may be so, and that there may be no mistake as to who are "the people."

But there are lessons also for the defeated party; but it is not our province to point out political mistakes, and we shall refer to but one phase of the campaign—that clustering around Judge Parker's closing speeches. Slander, though too often indulged, is abominated by the more enlightened of civilized peoples. It may still pass without serious notice among contestants for petty offices, where the candidates are personally known to the voters, but on the part of a candidate for the highest office in the gift of any people, it could not be expected to go unrebuked. With all of Judge Parker's greatness, he is evidently not acquainted with the temper of the masses of the American people, or he never would have been misled into making the personal assaults now familiar to the reading, even to the listening public. The success of his "gold telegram" may have misled him, but that was delivered after the votes had been cast, and the voters, tired and many of them, already disgusted, were starting for home. The personal attacks on the president of the nation came while the votes were yet in the hands of the people, while many were in doubt and felt little concern. The rebuke, we take it, was swift and emphatic.

We do not assume that the result would have been different had those closing speeches of Judge Parker never been made, but they lent activity to a singularly apathetic campaign, and closed it in a blaze of fire and a whirlwind of enthusiasm, which swept almost every doubter and many others into the victorious column. It is regretted that Judge Parker set such a precedent, but it is one not likely to be followed.

But the campaign is over. The election is unmistakably decided. Let all once more turn their faces to the front, and step forward until each foot is firmly placed upon the most advanced line of progress, not to remain there, however, any longer than another forward step may be taken. Let us hope that corruption may be rebuked in high and low places, that abuses may be corrected, wrongs righted, evils averted, justice impartially administered, and Equity firmly established. May the ensuing four years of the nation's official life witness such development as the country never saw before, and that its agricultural life, bursting the shell of customs old and ruinous, may emerge into a brighter day than ever dawned upon a people.

## Misunderstood

The Dakota Farmer, Aberdeen, S. D., misunderstands our position in regard to the prices of farm products. We agree that a farmer's failing is to hold on a rising market and to sell at a loss on a falling one. We have constantly advised against that, but the difficult thing is to determine just what is the proper selling point. To aid in that determination is the object of the minimum prices named by the American Society of Equity. These prices are not fixed arbitrarily. They are determined by the most careful and exhaustive study of the crop situation, aided by the most perfect system of crop reports and investigation ever devised and put into practice, all equitably compared with and adjusted to the general level of prices covering the period for which the prices are made. They are given as the minimum price at the most prominent market center for the article named, and producers are advised to hold if necessary for that price less reasonable cost of getting the product to that market. This is so plain that it need not be misunderstood, and farmers who hold for more than that do so on their own judgment.

There are localities, however, where the local price of some articles is equal to or greater than the normal price at the point named. In such cases the producer must exercise his judgment in selling. But he should not sell below the minimum price less cost of getting to the market center.

## What to Do With the Corn

We have been asked many times, "What shall I do with my corn, sell it at what the market will pay, feed it, or hold it?"

We have only one reply to all and our advice now given will hold good until another corn crop is grown. It is as follows:

If you can realize the minimum price as printed in every issue of Up-to-Date Farming, either by direct sale or feeding, let it go. If you cannot, then hold it until you can get this price. We would not let a bushel of corn go on the market for less if we could build cribs or rail pens to hold it.

Now you have our advice. Those who follow it will have no cause for regret.

1,000,000

**AMERICAN**  
**≡SOCIETY≡**  
**OF EQUITY**

See extraordinary appeal elsewhere in this issue. Also see the picture of the farmer's Christmas turkey on first page. Should we ask in vain when you know that this society and UP-TO-DATE FARMING are responsible for these good things that farmers are enjoying. If it had not been for the work done by these institutions you positively would not have had such a fat turkey. You never had it before when all the other conditions were the same. Controlled marketing is everything. You know who taught it. Come, now, give credit where credit is due and let us have that MIL-LION NOW.

1,000,000

# AT LYNCHBURG

## The First Convention by American Farmers to Establish Prices

The American Society of Equity was formed for a definite purpose, and it had a definite purpose in calling together the growers of tobacco, and holding a convention. This purpose was, simply told, to establish an equitable price, a minimum price, for the present crop of tobacco. With this purpose in view, delegates representing the bright and dark tobacco districts of Virginia and Kentucky, met in Lynchburg. As a result of this meeting, the convention announced to the tobacco growers everywhere, and to the tobacco buyers in every market, that every hundred pounds of dark tobacco, averaging the prime leaf with the lugs, is worth \$9.00; that the average dark tobacco grown in Kentucky is worth \$8.00 per hundred pounds; that the bright tobacco of Virginia is worth an average price of \$12.00 per hundred pounds; that the Burley tobacco of Kentucky is worth \$12.00 per hundred pounds.

This scale of prices is not a hasty conclusion. It was the best judgment of a convention of tobacco growers who have produced thousands of pounds of tobacco annually, and many of whom have grown old and gray-headed in the cultivation of the crop. These prices were set after careful and earnest deliberation and consultation, and we challenge the world—growers, buyers, manufacturers and retailers of tobacco included—to show good reason why these prices shall not be maintained.

Mr. S. J. Baker, of Hawesville, Ky., who opened the convention, was forceful in his remarks concerning the marketing of the crop. "We will set a price," said he, "and if we have judgment enough to put a fair, equitable price upon the tobacco, we will have backbone enough to stand behind our judgment, and compel the buyers to pay the price, or go without tobacco."

Hon. Wm. A. Goad, of Bedford County, Va., was made chairman of the convention, and the writer was chosen secretary; and from the minutes of the meeting, I wish to report how the work of the convention was carried on and received. After the enrollment of the delegates present Mr. E. L. Davenport, of Cisney, Muhlenburg County, Ky., spoke for some time upon the workings of the American Society of Equity. He clearly demonstrated that wheat reached the price set by the Society for two years, and sold at that price. The way to create a demand for dollar wheat, or at any other equitable price, is to refuse absolutely and at all times to sell a bushel of wheat for less than the price. This the farmers are doing and will continue to do. What has been done with wheat can be done with tobacco, and the purpose of the convention is to reach a definite conclusion in regard to what should be the minimum price of tobacco.

About 4 o'clock, Hon. H. B. Sherman, Assistant National Organizer of the A. S. of E., and representing the National Union, arrived at the hall. Mr. Sherman is well known to the readers of Up-to-Date, and his work in Kentucky in the interest of the American Society of Equity has been far reaching and successful.

Mr. Sherman was given the closest attention. He demonstrated the futility of trying to accomplish any great or lasting good through small organizations, and the necessity of a large number of the tobacco growers becoming participants in a single plan upon which to act, and the great power they could wield by acting upon that plan. "There is no other plan under heaven whereby we farmers may be saved except the plan represented by the Society of Equity," said Mr. Sherman, and then he gave proof of this assertion by showing how other plans have failed in the past and must fail in the future. It is true that recently other organizations have adopted similar plans to that of this society, but how much more readily would these plans be carried out if they were all working in one great national organization,

from one headquarters. Mr. Sherman suggested that a committee of tobacco growers, experienced enough to be experts, be appointed to ascertain what the lowest price should be on the tobacco crop, and leave the farmer a fair margin of profit. The chairman then appointed, after due consideration, the following committee: Otho Hull, Bedford County; Geo. N. Parker, Pittsylvania County; R. J. Narshall, Campbell County; W. W. Hobson, Powhattan County; H. F. Marcuson, Brunswick County; E. T. Bondurant, Farmville, Prince Edward County; W. J. Elam, Amelia County; S. B. Elam, Cumberland County; W. D. Rice, Charlotte County, all of Virginia, and S. J. Baker, Hancock County; M. F. Sharp, Ohio County; M. Shrewsbury, Kreckenridge County; Dr. W. N. Short, McLean County; L. N. Robertson, Davis County, and E. S. Davenport, Muhlenburg County, all of Kentucky.

This committee went into night session at 8 o'clock and continued until 11 o'clock, when they adjourned until 8 o'clock the next morning. Every phase of the pricing and selling of tobacco was taken up and considered carefully.

While the committee was at work, the convention listened to speeches by Dr. Evans of Campbell County, and Mr. Sherman, of Indiana. Dr. Evans, who belongs to a local organization, spoke earnestly, urging every farmer to join some organization at once, and then stand by it. Carefully consider the different organizations, and then unite with the one that promises the best things for the farmers and promises them soonest.

Mr. Sherman then addressed the convention at length. He gave the plans of the A. S. of E. so lucidly that all delegates present were most favorably impressed with the simplicity of the plan, and the strength of the society in Kentucky. Members of other organizations expressed their satisfaction, and showed a determination to co-operate to bring about the results desired.

On the morning of the 11th, the committee on prices met at 8 o'clock and continued their deliberations. The convention was called to order at 10 o'clock by the chair, and after an invocation by D. G. C. Butts, of Lynchburg, awaited the report of the committee. At 10:15 the committee appeared, and presented the following report: We, the committee on prices report that the average prices of tobacco all around shall be as follows: For Virginia, a minimum of \$9.00 per hundred for dark tobacco; \$12.00 per hundred for bright tobacco. For Kentucky, \$8.00 per hundred for dark tobacco, and \$12.00 per hundred for the Burley tobacco. W. D. Rice, who represented the Dark Tobacco Growers' Association of Virginia, and was a member of the committee, acquiesced in the above prices. Signed: W. W. Hobson, chairman; E. L. Davenport, secretary.

With very little debate or parleying the convention took action upon the report of the committee and adopted it unanimously.

It was decided to make the convention of Tobacco Growers' Associations a permanent thing, under the name of the American Tobacco Growers' Association of the American Society of Equity. The officers elected for the ensuing year are: E. L. Davenport, Cisney, Ky., president; C. Hayes Taylor, Bedford City, Va., secretary. Hon. H. B. Sherman of Greenburg, Ind., W. D. Rice, Tola, Charlotte County, Va., and L. N. Robertson, Owensboro, Davis County, Ky., were elected the executive committee. The next meeting will be held in Owensboro, Ky., some time next October.

The business of the convention was then practically completed, and adjournment was made, sine die.

Respectfully submitted to the tobacco growers and to the American Society of Equity.

C. HAYES TAYLOR, Secretary.

## Tobacco Convention Notes

The work of the tobacco convention at Lynchburg, Va., will stand in history as the first convention of farmers ever held in America to determine prices of farm crops. But it will not be the last. What the tobacco growers have done, the growers of all other crops can do. And instead of a convention representing a single crop, we can have national conventions representing all the crops. In these national conventions expert committees representing each crop will be appointed, who will do just as the tobacco committee at Lynchburg did—after due deliberation report to the general convention, where each report can be considered and acted upon, all interests taking part. Could there be more important conventions?

The tobacco situation is somewhat like the cotton situation, many of the crops are mortgaged in advance to dealers for means for the growers to live upon while making the crop. It is right to pay these debts, as nearly on time as possible, but do as the cotton growers are doing, ask the indulgence of your merchants as far as possible. But we believe enough can hold to affect the price.

The convention has given tremendous impetus to the work of organization in Virginia, North Carolina, Kentucky and Tennessee, and Organizer Sherman has work laid out for all the rest of the year.

Mr. Sherman declares that no hall will be found in Owensboro large enough to hold the next annual convention of tobacco growers.

The only complaint of the business men of Lynchburg was that they did not know in advance more of the nature of the convention, so that they could have given the tobacco growers a royal welcome.

Tobacco growers must remember that this is their first effort, and that there is still a great lack of organization among them, and a great many things lie between them and complete success, but under existing conditions they must not be easily discouraged nor seriously disappointed. Stick to it, and do your best.

The effect of organization is clearly shown in the attendance at the convention. Notice how prominently Kentucky figures, and then look at the map of Kentucky given elsewhere in this issue.

## An Appeal

To the Tobacco Growers of America: Elsewhere in this issue is an account of the National Tobacco Growers' Convention. Read it carefully. This convention has established a price on the present crop of tobacco. They have decreed that no delegate, or tobacco grower represented by these delegates, should allow a pound of their tobacco to be placed upon the market at an average price of less than \$9 in Virginia or \$8 in Kentucky for dark tobacco and \$12 for bright tobacco in Virginia and \$12 for the Burley tobacco grown in Kentucky? Isn't it worth it? Then why not get it? Remember these are minimum prices. No tobacco should be sold for less.

The Interstate Tobacco Growers' Protective Association of Virginia and North Carolina has already arranged a scale of prices which fixes as the average minimum price for tobacco, \$12.50 per hundred pounds.

Now, friends it will only require a little patience, a little determination, a little persistency and a little co-operation to accomplish the objects of these associations.

Let us consider the steps to be taken and all the while remember that there are nearly or perhaps over 20,000 tobacco planters now organized.

The first thing to do is to make up your mind that not a pound of your tobacco shall be placed in the hands of the buyers at a price below the prices enumerated.

The second thing to do is to go over and tell those neighbors joining farms with yours what you have decided to do and to ask them to do the same thing.

The third thing is to keep in touch with the markets through the official

society organs, and to keep in touch with each other through local unions.

The fourth thing is to leave your tobacco hang in the barns; go to town and inform the warehouse men and the buyers that not a pound of your tobacco goes out of your barn until they guarantee you the prices above enumerated, and then show them you mean what you say by sticking to it.

Now, don't imagine that this means that you will be compelled to sell your tobacco at those prices to the first buyer that offers it. Far from it. It means that the buyer will be compelled to pay at least that much before he can secure a pound. Don't imagine that buyers will pay no more for the high grade if they can get the low grades at those prices. Fine tobacco will always bring higher prices than medium and low grade tobacco, and when the low grades are high the high grades will go higher. It is as reasonable to suppose that as long as the buyers can purchase a low grade of tobacco today for \$5 per hundred they will offer no more for fine wrappers and fillers. If they give \$3 for trash, and \$20 for wrappers NOW, when they have everything their own way, it is reasonable to suppose that if trash is worth \$6, wrappers will be worth \$20 or more just the same. There is always a demand for, but never an overproduction of the best. And the grower who has the extra grades knows it or should.

The Lynchburg convention was called by the American Society of Equity. Other associations were invited to attend, and now other associations are not only invited but earnestly urged to help in spreading the gospel of profitable prices. Any society without this for its chief object is not for the farmers at all.

The men who attended the convention were in earnest. They meant all they said. They intend to hang on for a just and equitable price for their crop. If it were possible for every tobacco grower to be notified today that all his brother farmers would hold their tobacco until a profitable price be secured, we would have the thing accomplished. The quickest way to do this is to tell all your neighbors that YOU are going to hold, and that 20,000 other planters are going to hold, and that if they will join with you and hold, too, the profitable price will be forthcoming in a very short time.

A good plan to help this along (and by helping this you are only helping yourself), is to put in your local paper something like this:

### FARMERS WILL HOLD TOBACCO.

The farmers of this county, of adjoining counties and all throughout the tobacco districts, are holding their tobacco in their barns until the average price is

**\$8.00 PER HUNDRED POUNDS.**

20,000 have agreed to it. We agree to it. We want every farmer in this county to agree to it. This same notice is being published all through the tobacco districts and thousands of farmers are agreeing to it daily. For full information address American Society of Equity, Indianapolis, Indiana. Signed:

HARRY HOE,  
RICHARD ROE,  
JOHN DOE,

Buy advertising space in your local paper, and put this announcement therein. Make it double column, at the top of the page. Run this advertisement for three months. It will pay, and if you divide the cost among half a dozen or a dozen men the individual expense will be very small. The local union should do this. Then call upon your editor, half a dozen of you, and request that he publish, each week, as a matter of news, a bulletin giving the latest tobacco news, this bulletin to be furnished him weekly. Ask him if he does not believe that you are as much entitled to his support in business matters as he is to yours. Publishers in the tobacco belt will give the space cheerfully. The form of the bulletin may be something like the following, every statement the truth, of course:

### TOBACCO BULLETIN.

Very little tobacco has been sold during the past week. Farmers seem determined to hold their tobacco until the buyers offer satisfactory prices.

(Concluded on Page 21.)

# We Offer \$1,000

**For a Disease Germ That Liquozone Can't Kill. A 50c. Bottle Free**

Don't you know that a germ disease must end when the germ is killed? And that it cannot be cured until then? Then why use medicine for what medicine cannot do? Liquozone alone can kill germs. Will you let us buy you a 50c. bottle to try?

On every bottle of Liquozone we publish an offer of \$1,000 for a disease germ that it cannot kill. We do that to convince you that Liquozone does kill germs.

Think what that means. Every modern physician knows that nearly all sickness—the little ills and the big ones—are caused by germ attacks. They know that those germs must be destroyed before the sickness can end. And they know that drugs never kill inside germs.

Those modern physicians are now using Liquozone. And millions who were sick—like you, perhaps—are well today because of it. The cured ones are everywhere; some are your neighbors, your friends. Won't you ask them about Liquozone?

Don't cling to the old ways blindly, when your health is at stake. There is a new way to cure sickness, by destroying the cause. And we will gladly pay the cost while you try it.

## What Liquozone Is

Liquozone is not a medicine. It is not made by compounding acids or drugs, nor is there any alcohol in it. Its virtues are derived solely from gas—largely oxygen gas—by a process requiring immense apparatus and 14 days' time. Each cubic inch of Liquozone requires the use of 1,250 cubic inches of the gas.

Liquozone is the result of a process, which, for more than 20 years, has been the constant subject of scientific and chemical research. The main result is to get into a liquid, and thus into the blood, a powerful, yet harmless, germicide. Another result is to create a vitalizing tonic with which no other known product can compare.

## Acts Like Oxygen

The great value of Liquozone lies in the fact that it does what oxygen does. Oxygen is the vital part of air, the very source of vitality, the most essential element of life. It is the blood food, the nerve food, the

scavenger of the blood. It is oxygen that turns the blue blood to red in the lungs; that eliminates the waste tissue and builds up the new. Too little oxygen always causes lack of vitality. An excess of it gives strength to every function of Nature.

Oxygen is also a germicide. The reason is that germs are vegetables; and an excess of oxygen—the very life of an animal—is deadly to vegetable matter. Liquozone acts like oxygen. But it does more than oxygen, because it is stable. It carries its virtues into the blood to go wherever the blood goes. It is a remarkable tonic—the best thing in the world for you.

The discoverer of Liquozone has solved the great problem of killing germs in the body without killing the tissues, too. And there is no other way. Any drug that kills germs is a poison, and it cannot be taken internally. Liquozone is the only way that any man knows to end the cause of any germ disease.

## We Paid \$100,000

For the American rights of Liquozone, and the British Liquid Ozone Co. paid the same sum for the rights in Great Britain. That is the highest price ever paid for similar rights on any scientific discovery.

We tell you this fact because it best indicates the value of Liquozone. Claims are easily made, but men of our class don't pay a price like that save for a product of very great worth to humanity.

Before making this purchase, we tested Liquozone for two years through physicians and hospitals in this country and others. We tried it in all kinds of germ diseases, in thousands of the most difficult cases obtainable. We saw it cure hundreds of sick ones with whom everything else had failed. And we saw many a patient brought back from the verge of the grave by it.

We proved, to the satisfaction of the best physicians, that in germ

troubles Liquozone did what nothing else could accomplish. We proved it to be of more value to sick humanity than all the drugs in the world combined. Then we staked our fortunes and our reputations on it.

Every member of this company uses Liquozone daily in his family to prevent sickness, and millions of others are learning to do likewise. Liquozone is now employed by hospitals everywhere, and by the physicians of nearly every nation.

## One Million Dollars

Have been spent by us to give Liquozone away. Our offer to buy the first bottle has been accepted by 1,800,000 people. And we have spent this vast sum to publish the offer and to fulfill it.

The result is that millions now use it. These people have told others. Your own neighborhood, wherever you are, is full of Liquozone users. And half the people you meet know some one whom Liquozone has cured. Ask a few what they think of it—ask them what it does. If they say it is wonderful—that it does all we claim—then let us buy you a 50c bottle. Try it at our expense; see what it does for you. If you find it effective and needful, tell others about it, as we have told you.

## Germ Diseases

These are the known germ diseases; all due to germs, or the poisons which germs create. These are the diseases to which medicine does not apply, for drugs cannot kill inside germs.

All that medicine can do for these troubles is to act as a tonic, aiding Nature to overcome the germs. But those results are indirect and uncertain. They depend on the patient's condition. When drugs were prescribed for these troubles, nobody knew of germs. Now every good physician knows that they call for a germicide.

Liquozone alone can destroy the cause of these troubles. It goes wherever the blood goes. No germ can escape it, and we have found no disease germ which can resist it. Diseases which have resisted medicine

for years yield at once to Liquozone, and it cures diseases which medicine never cures. In any stage of any disease in this list, the results are so certain that we will gladly send to any patient who asks it an absolute guaranty.

Asthma  
Abscess—Anæmia  
Bronchitis  
Blood Poison  
Bright's Disease  
Bowel Trouble  
Coughs—Colds  
Consumption  
Colic—Croup  
Constipation  
Catarrh—Cancer  
Dysentery—Diarrhea  
Dandruff—Dropsy  
Dyspepsia  
Eczema—Erysipelas  
Fever—Gall Stones  
Goitre—Gout  
Gonorrhea—Gleet

Hay Fever—Influenza  
Leucorrhœa  
Kidney Diseases  
LaGrippe  
Liver Troubles  
Malaria—Neuralgia  
Many Heart Troubles  
Piles—Pneumonia  
Pleurisy—Quinsy  
Rheumatism  
Scrofula—Syphilis  
Skin Diseases  
Stomach Troubles  
Throat Troubles  
Tuberculosis  
Tumors—Ulcers  
Varicocele  
Women's Diseases

All diseases that begin with fever—all inflammation—all catarrh—all contagious diseases—all the results of impure or poisoned blood.

In nervous debility Liquozone acts as a vitalizer accomplishing what no drugs can do.

## CUT OUT THIS COUPON

For this offer may not appear again. Fill out the blanks and mail it to the Liquid Ozone Co. 458-464 Wabash Ave., Chicago.

My disease is .....  
I have never tried Liquozone, but if you will supply me a 50c. bottle free, I will take it.

M 115

Give full address—write plainly

Any physician or hospital not yet using Liquozone will be gladly supplied for a test.

## First Bottle Free

If you need Liquozone, and have never used it, please send us the coupon below. We will then send you an order on a local druggist for a full-sized bottle—a 50c. bottle—and will pay the druggist ourselves for it. This applies only to the first bottle, of course—to those who have never used it.

The acceptance of this offer places you under no obligations. We simply wish to convince you, to let the product itself show you what it can do. Then you can judge by results as to whether you wish to continue.

This offer itself should convince you that Liquozone does as we claim. We would certainly not buy a bottle and give it to you, if there was any doubt of results. You want these results; you want to be well and to keep well. Then be fair enough to yourself to accept our offer today. Let us show you, at our expense, what this wonderful product means to you.

Liquozone costs 50c. and \$1.

# THE LOCAL UNION

FOR THE DISCUSSION OF ALL FARM PROBLEMS  
FOR THE ADVANCEMENT OF CO-OPERATIVE FARMING

## THE AMERICAN SOCIETY OF EQUITY

Is an international organization, incorporated, with headquarters at Indianapolis, Indiana, and whose first and principal object is: "TO OBTAIN PROFITABLE PRICES FOR ALL PRODUCTS OF THE FARM, GARDEN AND ORCHARD." It also has other objects of great importance to agricultural interests, which will be worked out as the organized farmers desire to take them up. The supreme body is

### The National Union

Composed of the officers, directors and accredited representatives from subordinate bodies. The unit of organization is

### The Local Union

This is the home workshop of the American Society of Equity. In it, must be forged and shaped the interests that shall revolutionize agriculture, and usher in the time when the soil tiller shall no longer be a "hewer of wood and a drawer of water" for other classes, but when he shall stand erect, an important and independent member of society. Where co-operation may be facilitated and strengthened thereby

### County or District Unions

May be formed, to be composed of representatives from the local unions of the county, and to be organized and officered the same as local unions.

### The Emblem

of the American Society of Equity as here shown, is symbolical of PRICE, being on an equality with PRODUCTION AND CONSUMPTION.

### The Membership Fee

Is \$1.00, and each member is entitled to receive a certificate and manual, a badge, all bulletins and other public documents issued from headquarters, and Up-to-Date Farming, the official paper, one year, paid for by the National Union.

### The Union Label

Is intended to designate the products of Union or Co-operative farmers. It should be used wherever possible on farm produce, crates, on letters, advertising matter, etc.

It will be supplied to members of the A. S. of E. and members of other farmers' organizations that have for their chief object Profitable Prices for Farm Products. They are supplied on gummed paper and on tags.

### How to Conduct a Meeting—Order of Business

We must have system, an orderly proceeding in our local meetings. A certain amount of parliamentary dignity is necessary to the maintenance of good order and decorum. With this object in view, we would suggest the following system of conducting a meeting of the local union:

1. Call to order by the president.
2. Call the roll of officers, and note those present. The president will fill vacancies.
3. Call the roll of members, noting those present.
4. Reading and disposing of the minutes of the preceding meeting.
5. Call for applications for membership.
6. Reports of committees.
7. Does any member know of a case of sickness or distress in the neighborhood that needs special attention?
8. Has any member anything that he wishes to sell?
9. Does any member wish to buy something which might be obtained in the neighborhood?
10. Does any member wish to employ a hand to work?
11. Does any member wish a job of work or know of a person who does?
12. Have any communications been received of interest to the members?
13. What is the condition of the markets affecting products of the neighborhood?
14. What are the general crop prospects of the neighborhood?
15. Is there any unfinished business to be attended to?
16. Is there any new business to be taken up at this meeting?
17. Discussion of special topics for the good of the farmers and the society.
18. Adjournment.

### \$5.00—PRIZE OFFER—\$5.00.

The time has arrived when the local unions must be holding regular meetings. These meetings must be made interesting to keep them up. If made interesting they will be the bright social spot in any community, and outsiders will be attracted. This is what the National Union seeks for.

To accomplish this end we will offer \$5.00 for the best program for a local union meeting sent in to us during December. Also we will pay a fair price for others than "first best" to the extent that they will be useful.

We will not throw out any hints of what we want, more than to suggest that business and entertainment should be combined.

Send your offerings to Local Union Department,  
UP-TO-DATE FARMING  
Indianapolis, Ind.

Don't neglect to vote for National Union officers.

Have you filled and returned the election blanks?

While sending in the report of the vote for officers of the National Union, speak about the renewals.

In these paragraphs it is our purpose to give you facts, figures and hints that may be used to advantage in the local union meetings.

The A. S. of E. contemplate bringing the question of speculative price making and dealing in "futures" directly before President Roosevelt during the approaching session of Congress.

How about the program of your local union meetings? To have interesting meetings you should have regular programs, and carry them out in parliamentary style. Send us some of your best programs and we will publish them for the benefit of others.

Sometimes apathy follows success. The A. S. of E. has succeeded in its first object to an extent that no young society ever did before, but this must not be followed by a relaxation of effort. Farmers must do as did the Japanese before Port Arthur, constantly push forward and hold every point gained.

We urge members of the A. S. of E. to preserve their copies of Up-to-Date Farming. They find arguments in the paper to meet almost every conceivable question, but as these cannot all appear in each issue, every copy should be kept handy for reference.

Does prosperity breed indifference? We should certainly hope not. Thinking farmers will consider what brought the prosperity. It was good crops successfully marketed, and by this alone can it be maintained. The thoughtful farmer has no place in his makeup for indifference.

Note the method of the Local at the Crossing for increasing their membership. Show the neighbors those letters members have written, giving facts and figures as to what the Society and Up-to-Date Farming have actually made them in dollars and cents. These are arguments which cannot be "downed."

The work is progressing finely. This is to be a season of great growth and development. The political campaign is now out of the way, and people are turning to more personal things. Brighten up the emblem of Equity and Controlled Marketing, and make permanent the prosperity that has come with good crops and equitable prices.

## THE LOCAL AT THE CROSSING

People ain't like other animals. They don't laugh when there's nothing to laugh at. People do. I intended to make a speech, but I forgot it, and they laughed. Sue laughed a little. Bill Smith laughed lots.

The president didn't intend to call on Jim Denny, but the boys did. We had hardly come to order when they began to yell, "Denny," "Denny."

Jim rose. Then they yelled "Corn," "Corn." Jim looked confused, but he struck out off hand like.

### JIM DENNY ON CORN.

Corn used to belong to the Indians. I don't know whether they got an equitable price or not. I think our old fore-father farmers parched the corn and planted the Indians. I guess then is when it got its war habits that stick to it until this day. It has kernels, waves its blades and shoots, and is often shelled out of the field.

Corn is a high-toned thing, and proudly flaunts its silks and waves its tassels over us all. It's a big pile, though. Two billion bushels is a heap. If a horse should eat two bushels a week, it would take him nineteen million years to eat this year's crop. Brother farmers, he'd never do it.

Corn is good, bad, worse, and worst. Good corn is like a mule; it has long ears. But it never hears what ain't any of its business. The worst corn don't grow on stalks, it grows on feet, and ain't even worth shucks and fodder. But it has been known to yield a good crop of profanity to the acher. You don't hold it for the minimum price.

Corn is good feed for horses, hogs and other people. If you don't know how to raise corn now, you'd better raise another speaker.

And Jim sat down. The boys giggled and the girls tittered, but the president looked like he hadn't learned a thing. I looked at Sue and Bill Smith.

"Now," said the president, and he looked stern, "if the house is relieved, we'll hear reports upon the prospect of doubling our membership before the close of the year. But if you will notice our charter, you will see this is the anniversary of our organization. That means something to every one of us, and that is that it is time to renew our subscriptions to Up-to-Date Farming. I think we should take that up at once. What say you?"

George Bowers. I am in favor of it. We ought to have done it a week or so back; but since we didn't let us take it up now. I suggest that the secretary call the roll, and that each one, in answer to his name, pass to the desk and hand in his 50 cents. The secretary can make the necessary credit and forward the money to the publisher.

The President. If no objection, the secretary will call the roll. None is offered and the secretary will proceed.

All came forward as called until Abe Burns was reached. He said he didn't want to miss the paper nor to drop out of the society, but it seemed like he could not, just then, spare the money. Joe Riley asked when he thought he could. "In a few weeks, I am sure," said Mr. Burns.

Joe Riley. Mr. Secretary, here is half a dollar for Abe Burns.

The call proceeded with only one other interruption. Sam Stevens was in Mr. Burns' situation, and George Bowers promptly came to his relief.

The President. I congratulate this local union on the proud showing it has made tonight. Now what can we do to double our membership?

Joe Riley. I believe we should make a systematic canvass. We can take Up-to-Date and show those letters that appear in it telling what members have actually made as the result of the Society and the teaching of the paper, and it does seem to me that we can get every farmer in the country. I move that we take up this plan at once and push it vigorously.

The motion was seconded and carried unanimously, and the meeting adjourned in the very best of spirits.

The government corn reports indicate a yield of 2,453,000,000 bushels for 1904, which is 453 millions more than the A. S. of E. estimate, but we see no reason to change our figures, or to deviate from the minimum prices quoted. Those prices are equitable compared with the general level of other prices, and farmers are urged to hold for them, remembering, however, that the prices quoted are for the Chicago market, with which local prices are to be gauged.

## STYLISH SUITS Made To Order \$10

Do you want an up-to-date All-Wool Suit or Overcoat, made to your measure that will fit you perfectly, from the newest most fashionable fabrics? Do you want to be absolutely satisfied in regard to the style, fit, quality and value we give you before you pay for the garments? We will give you a pair of All-Wool Tailor-Made \$5 Trousers Free with your first suit or overcoat order

providing you will hand our Samples, Style Book and Offer to ten of your friends whom you have good reasons to believe will buy clothing this season. We know we can fit you and save you money. In order to prove it to you, we will make you a suit or overcoat to your order, from your choice of any of our \$10, \$12.50, \$15 or \$18 samples, and send it to you together with the \$5.00 Free Trousers and give you 5 days, under our guarantee, to decide whether or not you wish to keep the garments. Isn't that a fair offer? Write to-day for our full line of Suit Samples in Clay Worsteds, Flannels, Serges, Tweeds and Cassimeres, in all colors, including the new brown; also Overcoat Samples in Irish Frieze and Kersey, and our New Style Book, showing life-like half tones of the latest style Suits, Overcoats and Trousers. ALL SENT FREE, together with order blank, instructions for taking measurements, tape measure, etc. We will also send you a list of the persons in your own town for whom we have made suits. Be sure to write today and ask for samples and our Free Trousers Offer.

OWEN T. MOSES & CO., 228 MOSES BLDG., CHICAGO

CHRISTMAS**

# STEVENS

Don't disappoint the lad. Every boy wants to be a man, and there is no outdoor sport that will develop the manly traits of a boy's character and give him more real enjoyment than the ownership of a good gun—it gives him confidence, readiness and steadiness of hand, eye and judgment. A "molly-coddled" boy makes a weak, vacillating man. Help the boy to be self-reliant, responsible and strong. Give him a "Stevens," show him how to use it, and your confidence in the lad won't be misplaced.

## Book of Outdoor Sports, Free

It contains not only a full description of "Stevens" Guns and Pistols, but valuable information on hunting, the proper care of a firearm, notes on sights and ammunition, etc. Every lover of outdoor sports should have it. We will send it for two 2-cent stamps to cover postage.

# NOMINATIONS

## For Officers of the National Union

The following named persons have been placed in nomination for the offices named in the National Union of the American Society of Equity. The requirements, as published, that all the officers should be in a position to give their time to the affairs of the Society operated against a large number of nominations being made. Also delay in mailing October number containing blank for nominations had an effect. The delay was caused by an accident to our new press. The election will be held at headquarters in Indianapolis, December 9, 1904. A ballot will be printed in November 15 and December 1 issues of this paper, which can be voted by an individual or by a local union. If by a local union the number of members voting must be indicated.

Ohio—Chas. H. Newton, Amanda; Wm. Borchers, Amanda.  
Oregon—C. S. Hamond, Newberg.  
Pennsylvania—J. C. Everitt, Watsonstown; John J. Erford, Carlisle.  
South Carolina—J. Lewis Lee, Conway.  
South Dakota—Walter H. Engle, Windom.  
Tennessee—A. L. Morris, Sattilo.  
Texas—B. M. Thompson, Freeland; Dr. C. W. Bowman, Caddo Mills; Welton Winn, Santa Anna.  
Virginia—E. E. Gay, Vulton's Creek; C. Hayes Taylor, Gillaspie.  
Washington—Karl Meyers, Ritzville.  
West Virginia—Riley Pritt, Beverly.  
Wisconsin—N. C. Crawley, Baraboo.  
Wyoming—E. F. Hurdle, Guernsey.

### FOR PRESIDENT.

J. A. Everitt, of Indianapolis, Ind., present officer.

### FOR VICE-PRESIDENTS.

The following active workers in the cause of Equity have been placed in nomination for Vice-Presidents to represent their respective States. They all come well recommended, and the records in the office of the National Union show results entitling them to the honor. They are all farmers or are very closely identified with farming, and have the interests of the Society at heart. Nearly all of them have had experience in organizing local unions and will work untiringly to build up the Society. The nominations follow:

Alabama—John W. Green, Clarence.  
Arkansas—J. R. Johnson, Crossett; C. C. Simpson, Russellville.  
California—J. W. Bullett, Bishop.  
Colorado—Jacob Gilstrak, Lansing.  
Florida—A. R. Carhart, Bartow.  
Georgia—W. E. Johns, Tifton.  
Idaho—W. F. Ringer, New Plymouth; W. H. Light, Moscow.  
Illinois—C. O. Drayton, Greenville; H. C. Potthast, Hookdale.  
Indiana—H. B. Sherman, Greensburg; G. W. White, Boonville.  
Indian Territory—Sam J. Hampton, Durant; W. H. Winters, Wister.  
Iowa—Walter Newby, Woodward; Don M. Leach, Ackley.  
Kansas—A. S. Cook, Chitapa; J. W. Stinson, Beaver.  
Kentucky—Hon. D. T. Hamill, Guthrie; F. B. McCann, Kirkmansville; Jas. W. Lee, Morganfield.  
Louisiana—J. C. Williams, Walker.  
Maryland—Chas. C. Willson, Queens-town.  
Michigan—Milo E. Marsh, Lansing; A. J. Andrews, Schoolcraft.  
Minnesota—W. C. Webber, Rochester.  
Mississippi—T. J. Walsh, O'Neals.  
Missouri—C. E. Dothe, Argo.  
Montana—M. H. Poole, Geysers.  
Nebraska—D. Phillips, Pool Siding; Jno. Kutsch, Sr., Pool Siding.  
New Hampshire—Wm. E. Smallcon, West Rochester.  
New Jersey—S. W. K. Sexton, Wrightstown.  
New York—A. T. White, Macedon.  
North Carolina—J. B. Lutz, Newton.  
North Dakota—Chas. H. Olive, Reno; Mrs. A. V. Dennis, Lansing; Ole Oakland, Balton.  
Oklahoma—R. H. Molden, O'Kenne; A. Wood, Sayre.

Note.—It will be noticed that in some States where the development of the Society is quite great more than one nomination has been received. As it is only desired to have one Vice-President for each State write the name of the nominee representing your choice in the blank space provided in ballot. It is expected that only members in any State will vote for the Vice-President to represent that State.

### FOR SECRETARY.

M. W. Tubbs, Indianapolis, Ind. Mr. Tubbs has been acting Secretary of the Society for a year because the elected Secretary resided in Illinois and it was impossible for him to leave his home and business.  
J. H. Harpster, Millersburg, O. Mr. Harpster has been a deputy president for a number of months. He has done good service for the Society. He is also a publisher of a newspaper.

### FOR TREASURER.

Andrew Smith, Indianapolis, Ind. Mr. Smith is Vice-President of the Capital National Bank of Indianapolis, and eminently qualified for the position. He is an energetic man and can be of much service in directing the affairs of the Society. The former Treasurer, Mr. Miller, does not seek a re-election on account of numerous business enterprises that prevent him giving the time necessary for the Society.

### FOR NATIONAL ORGANIZER.

Hon. H. B. Sherman, Greensburg, Ind. Mr. Sherman is known to a great many of the members. He has been active in the work of the Society from the time of its organization. He has visited several States and addressed meetings, but his greatest efforts and most notable victories are in evidence in the tobacco districts.  
George G. Winans, Lakeland, Mich. Mr. Winans is and has been State Organizer for Michigan. His name has appeared in this paper frequently, and he scarcely needs an introduction. Suffice it to say that if it is the will of the members of the A. S. of E. to elect him National Organizer he is sure to fill the office with credit.

### FOR GENERAL COUNSEL.

Mark P. Turner, of Indianapolis. Mr. Turner is present counsel.

## OFFICIAL BALLOT

President.	Vice President.	Secretary.	Treasurer.	Counsel.	National Organizer.
J. A. EVERITT.	Write name of Candidate here.	M. W. Tubbs. J. H. Harpster.	Andrew Smith.	Mark P. Turner.	H. B. Sherman. Geo. G. Winans.

NOTE No. 1.—If from an individual member, write "1" in each column under the name voted for. If from a local union, write the number of votes cast for each candidate.

NOTE No. 2.—For Vice President, write name of candidate representing your choice in your State in blank space and indicate number of votes as in Note No. 1.

NOTE No. 3.—Any suggestions or recommendations from any member or any Local Union will be carefully considered at the annual meeting. Please write them on separate sheets from other matters.

This ballot is from Member National Union.....

..... P. O. .... County. .... State

If a member of a Local Union, give Local Union information on blank below.

This ballot is from.....Postoffice.....State

Local Union.....No. .... Number of members Nov. 15, 1904.....

Signed.....Secretary.

**\$7.95** for this large handsome steel range

without high closet or reservoir. With large, high, roomy, warming closet and reservoir, just shown in cut, \$11.95. Reservoir is porcelain on inside, asbestos covered on outside. Heavy cast top with 6 full size cooking holes. Large roomy oven, regular 8-18 size. (We have 9 styles of steel and cast ranges with much larger and smaller ovens, sizes to suit all.)

**\$2.95** for this Oak Heater

just as illustrated. Burns hard or soft coal or wood. Has drawn center grate, corrugated fire pot, cold rolled sheet steel body, heavy cast base, large cast feed door, ash pit door and ash pan, swing top, screw draft-regulator. Polished urn, nickel top ring, name plate, foot rails, etc.

**OUR TERMS** are the most liberal ever made. We will ship you any range or stove, guarantee it to be perfect in construction and material and we guarantee it to reach you in perfect condition. You can pay for it after you receive it. You can take it in every way, and the biggest bargain in a stove you ever saw or heard of and equal to stoves that retail for \$3.00, for \$2.00. Base burners at 1/2 the regular price.

Write for CATALOGUE

into your own home and use it 30 full days. If you do not find it to be exactly as represented and perfectly satisfactory you can return it to us and we will pay freight both ways, so you won't be out one single cent. CUT THIS "AD" OUT tells you how to order. Don't buy a stove of any kind until you get our new large Stove Catalogue for 1904 and 1905 and see our liberal terms and the lowest prices ever made.

**MARVIN SMITH CO. CHICAGO.**

## SIMPSON-EDDYSTONE PRINTS

The standard calicoes of America for more than half a century. Your grandmother used Simpson Prints. They were good then because the character of the manufacturer was stamped on the materials and entered into their making. To-day they are better than ever before—the old-time high ideals have been maintained and Eddystone improved art and machinery have raised the standard of Simpson Prints still higher.

Ask your dealer for Simpson-Eddystone Prints.

In Blacks, Black-and-Whites, Light Indigo-Blues, and Silver-Greys; Shepherd Plaid effects and a large variety of new and beautiful designs.

Thousands of dealers sell them.

**Sole Makers, Eddystone Manufacturing Co., Philadelphia**

## If You Want a FENCE

SEE THAT TWIST!!!

That is made from the best High Carbon Steel Wire. That is heavily galvanized to prevent rust or corrosion. That is COILED to provide for contraction and expansion. That is Strong Enough to turn the most vicious animal. That is Woven Closely to turn chickens and small pigs. That staples to the posts as you would nail a board. That easily adjusts itself to all uneven surfaces. That is woven in such a manner that compels every wire to bear its portion of strain. That you can Buy Direct from the firm that makes it, with Freight Prepaid to your nearest railroad station. That you can examine at your railroad station and return it if it displeases you in any particular. That you can erect and Use for Thirty Days, and if unsatisfactory return at our expense and get your money. Write for Free Catalog giving full information, Address, **KITSELMAN BROS., Box 299 MUNCIE, INDIANA.**

## LETTER FROM DAVID DOBETTER

Number 47

Near Williamsport, Ind.  
Nov. 25, 1904.

Dear Mr. Everitt—Creeping along toward winter, and to-night I am sitting by the fireplace at my desk writing to you. It is decidedly comfortable in here, with the warm light flickering over everything; but stick your head out of doors and you would get a pretty cool sniff of air. Feels like a hard frost, and no mistake. But we have had a splendid fall and can't complain now if things do get nipped a little. Most everything is out of the way, though, so that we are not worrying.

Speaking about frosts, however, we had one here in this township on election day and no mistake. I have been thinking about it a good deal ever since. Such things are calculated to make a man thoughtful. The fact is—well, you see, I didn't get there the other day! That is the long and the short of it. Cut me a little at first. I suppose that was natural, especially when a man had been so sure of his election as I was. Why, if anybody had told me the morning of the election what was going to happen, I would have been tempted to call him a fool or crazy. But there it is; nobody can tell a day ahead what men will do when it comes to voting.

Probably it hurt me worse because I had such faith in men. Why, it seems to me about every voter in the township had come to me of his own free will and accord and pledged himself to support me at the polls. I really do not think it necessary to get out and hustle as most of the men who were in the field as candidates did. I took it for granted that men will do as they say they will; and I believe now they will, if you can take away the awful temptation of money. That was what defeated me. Money! Nothing else. I never fairly realized what a power it is in a time like this. The age seems cursed with the love of money.

And they fairly poured it into our township. Where it came from I do not know; it does not matter much. It did the work, and a man was elected who will do the will of the ring politicians. The people will have to pay for the election after all, and it will cost them pretty dearly. Those fellows don't spend money without a prospect of getting it back. And so I am here at home to-night, still plain David Dobetter. It is all right. I see it now. I presume it would not have been worth while for me to have won out. Though I would have done my best to do the people's business faithfully.

Some things happened that day that did me good. The way men did work for me! Some of them drove their horses all day long, bringing in voters that were old or not very well and never charged a cent for their services. The boys came home from school and worked as hard as they could. John hustled old Billy and Nellie over the township from early morning till the polls closed. I did not think anyone could get Uncle Tom out. He has been sore for a good many years, disgusted with the way things have been running, and has refused to vote; but John got there, and he talked and yelled the loudest of any man in town. And they got out men who never had been seen at the polls for years before.

Along in the afternoon, when the excitement was the highest, some fellow on the other side that had been putting some of the money they gave him down his throat, shouted out that any fool could see that Dave Dobetter was licked; and he ought to be. What business had he going into politics! At that Uncle Tom jumped right up and gave it back to the fellow that Dave Dobetter had just as good a right to be a candidate as anybody; and what was more, he wasn't licked, and wasn't going to be licked either. They clinched and for a minute the fur flew, but I got in between them as quick as I could and put a stop to it. I never want any man to fight that way for me, especially for a little town office!

But when the votes had been counted up and they found that they really had elected their man, whiskey did run like water. How is it that whiskey and success go together with such men? But the men who had been supporting me were true to the last. They just took me up in their arms and carried me around the town, shouting for "Honest Dave Dobetter! He is our man, and we'll elect him yet!" till I

felt that I was just as well thought of as the man who was elected. You didn't see anything of him. He dropped out of sight and I don't blame him.

The boys felt terribly disappointed about it. I believe they took it to heart more than I did. I suppose young folks do feel defeat more keenly than we who have grown a little older. Ben was so mad he was fairly white. John took it more philosophically after the first disappointment was over.

"Keep up your grit, Father," he said. "You're a better man than they've got and they'll find it out after a little, and then they'll flock to you. They have got to suffer for it a little, that is all. We know how it was done, and all such things work out right in the end."

And that is sure. Wife and I talked it over that night when the children had gone to bed. She is just as cheery as ever. I wish I had her even disposition in a great many ways! If ever I am in a tight spot, she comes to the rescue and lifts me right out with her bright and sunny way of looking at things. She says now that it is the best thing that could have happened for me to get whipped.

"Don't you know that a great many times folks will sit down after such a thing is all over and think what a mistake they have made, especially if they see that the man they used so mean takes it without whining? And it makes him stronger than he was before. You are not the man to be kept down that way, David! You'll come out at the head of the heap yet! I have faith in you, husband! It does hurt, of course; but sometimes a man must be hurt for his own good!"

Now, wasn't that good of her? It touched me in a pretty tender spot, and if I am not mistaken she will prove to be a prophet.

Now, to speak of other things. We have been getting things into shape for winter. When the teams have been drawing stuff off to market, they have brought back coal, so that we are all right for cold weather. When we built the house we put in two or three fireplaces, not so much to heat the rooms as to look bright and comfortable. And we have hauled up a lot of fine logs for this winter. As I write, the flames of some of them are throwing great shadows over the rooms where I sit. Wife sits reading near me. The old clock ticks dreamily. The only sound besides that is the scratching of my pen as I put down these words. I am very thankful to-night that things are as well with us as they are. It is not so very long ago that these things seemed wonderfully far out of reach to us. It just shows what farmers can do if they get their hearts set the right way. I never have been sorry I turned over that new leaf, Mr. Everitt. I don't believe any man who starts that way will be sorry.

The clock strikes ten and I think I will say good-night.

Yours sincerely,  
DAVID DOBETTER.

## Farmers' Unions

A recent issue of the Little Rock, Ark., Gazette, has this to say of the wonderful growth of farm organizations in that State:

Farmers to the number of 20,000 or more in Arkansas have joined the union within the past twelve months, that is, that many agriculturists in this State have become members of the several organizations started for the purpose of benefiting the tillers of the soil. One of the various unions designed to hold up the farmers' hands and bring to his aid both the social advantages of brotherhood and the material benefits of better markets, is the American Society of Equity.

And this of like tenor from the Saginaw, Mich., Courier-Herald:

There are 15,000,000 farmers and farm laborers in the United States, 20,000 of whom are members of the society (American Society of Equity) in this State alone. These members believe that, organized, they are assured prices, and that better farming will result, higher wages can be paid farm hands and general benefit to the nation will result.

And this from the Owensboro, Ky., Messenger:

Various lodges of the American Society of Equity were organized into a county union at the court house on Friday afternoon. All the lodges of the county were represented and the county court room, in which the meeting was held, was filled. A number of farmers not members of the order, attended the meeting.

## Stick to the Farm

We believe sincerely there are bright days for the farm life—days when the longing of youth will be toward the farm rather than from it. Speaking of the advice so tersely given in the heading of this article, and in an article bearing the same head, one of our local dailies expresses the following very sensible thoughts:

"Many men there are who wish they were 'cribbed, cabined and confined,' and as a thing from which to escape. They go eagerly away, not necessarily to sorrow and death, to be sure, for many attain wealth and fame, but whether they miss or gain prizes in the big outside world the time comes when they look yearningly back to the farm where boyhood days were spent. The one who is poor regrets the lost independence of the life there and has visions of even yet becoming the possessor of a few acres and of getting back to the soil. If he is rich he buys a farm and equips it to suit his taste and his purse, deriving what pleasure he may from his occasional visits there.

Perhaps no one appreciates rural life as he that absence is needed to prove its advantages and its charms. But it is a pity that when the lesson is learned while one is yet young that the wanderer does not make haste to return and remedy his mistake. The time will yet arrive when farming will be recognized as an art and will be followed as a profession. The things that the young find irksome will be fewer than now. The restless boy will make his journey while his years are few and will return satisfied with his home.

# You Have Waited For

I want to have a heart to heart talk with every man out on the farm all over the United States and Canada. I also invite the wives and sons and daughters and hired men to listen.

If I would come right to your home and tell you that Mr. Crawford, or Mr. Cook or Mr. Miller, or any other of your brother farmers had doubled their profits by following my advice, and to prove it would produce letters from these people and photographs, and from many other farmers stating that what I say is the truth, would you not listen attentively to what I have to say? More than this, would you not also follow my advice if it looked very reasonable that you could do as well as they did?

If I would come to you with figures taken from the U. S. Department of Agriculture reports and from other reliable sources proving that by adopting a simple, improved plan of marketing, all the farmers of the country could get twice as much for their crops as by the old plan, would you not be willing to hear me? And if I would show you beyond doubt that the farmers of the United States HAVE SOLD one set of crops under the new plan of marketing for practically double as much as crops of the same size brought them before under the old plan, would you not follow my advice and market that way in the future?

I do say these things to you and I produce the letters and figures. Read some letters on the following pages. You know such letters were never written before. You know they came from the hearts of the people writing them and they should go to the hearts of every reader and appeal to him to follow the writer's example.

The figures given in the accompanying table speak volumes. Never before was it possible to place before the farmers and the world such an object lesson. They are really the key to the wonderful prosperity of this country. Politicians may tell you that prosperity comes through the factories. But don't believe them. Who ever knew a factory to start up until the demand came? When farmers are getting good prices then they buy. Then the factories want to manufacture and the laboring men are employed. Ask yourself, "Would I buy many things if wheat was selling at 60 cents, corn at 30 cents, oats at 20 cents, hogs at 3 cents, cattle at 3 cents, cotton at 6 cents, and other things in proportion?" Now would you? How would the business of the country be if such prices prevailed? Prosperity starts on the farms. Good prices for farm products will insure continued prosperity. We all want prosperity to continue; therefore let us do the only thing that will guarantee it. It is to complete

J. A. EVERITT

Founder of The American Society of Equity

## The American Society of Equity With One Million Members

When you let speculators price your crops your hands are tied, but when you price them yourselves it is very different. Try to imagine what it means to farmers and to our country

if good prices can be maintained always in the future. Suppose you were to add over ONE BILLION DOLLARS extra to your wealth each year in the future would not agriculture be revolutionized and the whole country be transformed? Is this not exactly what I predicted two years ago when I started The American Society of Equity? Has not every promise I made been fulfilled, has not every prediction I made come true?

Farming, with the new plan of marketing in operation, takes on new attractions. No matter how pleasant and profitable farming may have been with any of you in the past you will not object to taking price making out of the hands of other people who produce nothing, and assuming this important part of your business yourself. This is what the A. S. of E. guarantees to you. This is what this paper teaches you. Instead of

## Working Like a Horse

all summer and then letting some other people set your wages at the end of the season you will make your own price just like other people do, and you will know, when you plant a crop, that you will get a fair price for it whether it is a large crop or a small one.

## There is no Guessing

about prices when you are in the A. S. of E. You know your price and you know the world must have all the crops that are grown. *Not part of any crop, but all of it.* It has been so in the past and will be so in the future. Consumption is increasing faster than production. This is very plain to any person who will take the trouble to look up statistics. Therefore if your crop don't sell the first time you offer it at your price, wait a while. The demand is bound to have it

and if it can't be had at the buyers' price they will pay your price. When in the A. S. of E. the lies and false reports that originate on the boards of trade need not concern you. Your price is known and holds good a year. Reports of frosts, heat, wet, drought, bugs, or blight, have no effect on the price of the legitimate supply which you control. And your price is always a profitable price.

I am speaking as the founder of The American Society of Equity, it's president and editor of it's official paper. Two years have almost passed since this society was launched. In that time agriculture in America has been revolutionized in its marketing end. This is a wonderful achievement. But it is not of the past that I would refer to. But let us look to the future. The future, bright with hope of uninterrupted prosperity for farmers. All old members and readers understand the plan of the A. S. of E., but there are many hundred thousands more to educate. There are hundreds of thousands of farmers, who, having learned of Controlled Marketing, have profited by the work of the A. S. of E. These we want to secure as full Co-operating Members of the Army of **A Million United Farmers.** Therefore I make this appeal to all who have not heard of this movement before, or having heard of it, have not heeded. We want to convince them of the necessity of getting into the society. Any farmer outside of the A. S. of E. cannot realize as much for his crops as if he was a full member and followed every move of the society in crop reporting and price making. The letters printed should convince. Read them on next page.

Dec 1, 1904

# This Many Years

You are teaching just what I have ad-

vocated for years. I held over 900 bushels of wheat from last year until this spring, and I made \$240 above what I would have got threshing time. That would build a pretty good granary, would it not? WM. CRAWFORD, Valley

Center, Kas.

I have been benefited by reading your paper. Before I joined the A. S. of E. I had determined to sell my wheat direct from the machine, and did sell the product of one field that way at 88 1-2 cents per bushel, but I believed in your judgment and held the other three weeks and sold 425 bushels for \$1.05 per bushel, and I still have 600 bushels and I want you to tell me when to sell it. If I had not read UP-TO-DATE FARMING my entire crop would have been sold at 88 or 89 cents. Many thanks to you, Mr. Everitt, for what you are doing for the farmers.—W. P. McGEHEE, Hickman, Ky.

I am very anxious to have this county organize on the plan of the A. S. of E., for it is one of the best agricultural counties in Indiana, and the people are anxious to co-operate with us. I met a miller today out in the country hunting for wheat. The demand is seeking the supply, and that settles the question of price.—S. L. SNYDER, Gibson County, Ind.

UP-TO-DATE FARMING comes regularly, and is of much value to me. I take two other farm papers, and it is interesting to note the difference between UP-TO-DATE and them. The enlargement of your paper is fine—up-to-date.—ALBERT BAILLEY, Martin County, Minn.

He who fails to see the power of the co-operation of farmers to secure a fair price for his produce, as taught by Up-to-Date Farming, makes an unconditional surrender to a soulless speculative monopoly, and has abandoned all hope of liberty, justice and all the desirable fruits of civilization.—THOS. W. BREWSTER, Ed. Livingston Herald, Howell, Mich.

I don't want to miss a single copy of UP-TO-DATE, for each copy is well worth a year's subscription to me.—G. LEN HUNGATE, Franklin County, Ill.

Some months ago I began to investigate the great farmers' movement put on foot by you. For several weeks I spent much time in perusing the columns, and especially the editorials, of UP-TO-DATE FARMING. Your logical and unanswerable arguments presented you to me as none other than a modern Moses to deliver the much oppressed farming element from the yoke of bondage and galling fetters of selfdom that has been welded upon them by the gentlemen of the Boards of Trade. \* \* \* Before the present wheat crop is harvested we will have our county thoroughly organized.—A. S. COOK, Chetopa, Kas.

Language fails me in attempting to express my appreciation of UP-TO-DATE FARMING. We may be a little behind other classes, but it is our own fault. We realize there is something wrong, but we have not been making much effort to correct it. I am sure by joining the A. S. of E. which this paper represents we will conquer soon.—C. T. CLARKE, Livingston County, Ky.

## Before and After Controlled Marketing

EXPLANATION—The second row of years (1902 and 1904) and figures are the results when the new plan of marketing (the A. S. of E. plan) was in operation. The first row of years and figures show the results of equal size crops under the old system. The last column shows the increase on each of the six crops and the total increase.

CROP	* Crops Dumped—The Old System			* Crops Controlled—The New System			In Favor of Controlled Marketing INCREASE
	YEAR	BUSHEL	FARM VALUE	YEAR	BUSHEL	FARM VALUE	
CORN .....	1896	2,283,875,165	\$461,006,967	1903	2,244,176,925	\$952,868,801	\$491,861,834
WHEAT .....	1899	547,393,846	319,545,295	1904	550,000,000	550,000,000	230,454,705
OATS .....	1899	796,177,713	198,167,975	1903	734,094,199	267,661,665	69,493,690
POTATOES .....	1896	252,234,540	72,182,350	1903	247,127,880	185,346,000	113,163,650
COTTON .....	1898	BALES	905,487,041	1904	11,200,000	560,000,000	254,532,965
TOBACCO .....	1899						

Total for six

NOTE—We put the farm value of the 1904 crop of at Chicago for some time. This is the minimum price. Cotton and Tobacco are rated at present prices, but

JUST THINK! Farmers have received One Billion teen Dollars more for six (6) crops when marketed under the new plan and don't again believe you can't be a factor in shaping

I have been a constant reader of — for over half a century, and it is a paper that I have always thought a great deal of, but since I have read UP-TO-DATE FARMING I prefer your way of teaching. You are certainly doing more for farmers than all other farm papers have done or ever will do, and I heartily enjoy your fearless way of telling what you know to be the truth. I hope and believe all farmers will aid you to accomplish what you are working so hard for.—J. C. METZGER, Sullivan County, N. Y.

The work you have undertaken to accomplish is in its infancy yet. We have been long in this rut. You are almost alone in prying us out, and powerful and successful enemies opposing every step. I would encourage you to forge ahead, faithfully and honestly, for I am sure the cause is a just one, and all just causes must succeed in the end. My heart is with you in your efforts. In farming we have everything except profits; and I suppose if we had the profits everybody would be farmers. I again urge you to forge ahead, and help save the American farmer from being squeezed to death.—FRANCIS W. HICKS, Avondale, Pa.

You certainly have the gift of stirring people up. I had become disgusted with farm papers with their endless repetition and puttering, and above all, the constant assurance that the farmer would come out all right if he would only "tote" his load and stop his grumbling. UP-TO-DATE FARMING was something new; it had life and blood, and a cause worth fighting for. I have done all I could to interest every one who might be of some help in this cause which stands for the farmers' temporal salvation.—MRS. W. A. BANDAEN, North Vernon, Ind.

The farmers must do as the speculators have done, form so solid a union that the exigencies of business cannot effect it. We can do this by joining the A. S. of E. and reading UP-TO-DATE FARMING. Each must help each other. This is something the farmers must do for themselves. No one else will do it for us. Thus we may better our condition. I am glad we have such a society as the A. S. of E. to help us to come to the front, and not be in the rear all the time.—J. J. SCHNEIDER, Renville County, Minn.

the only one that is fearlessly advocating the right of the farmer to set the price on his own products, and if other farm journals do not take this up, they will be dropped by the farmers.—J. T. INGRAM, McLeansboro, Ill.

I have been greatly benefited by reading UP-TO-DATE FARMING—morally, because the society has brought me in contact with my neighbors, and to know them better; intellectually, because it has helped me to solve the farmers' problem; financially, by acting co-operatively with my neighbors in selling. I have also benefited financially by buying co-operatively.—C. C. CRENSHAW, Boonville, Ind.

I want to thank UP-TO-DATE FARMING for what it has done for me. Last year I raised 4,100 bushels of wheat and 1,700 bushels of oats. I was compelled to sell 1,500 bushels of wheat to meet current expenses. For this I received 52 to 57 cents a bushel. At this time I became a reader of your paper and a member of the A. S. of E. I was convinced of the wisdom of holding wheat for \$1.00 at Chicago, which would make it about 75c here. I held on to my wheat, kept my eyes on the market and UP-TO-DATE FARMING very closely, as advised by you, and made \$910 by doing so. I also got 40c a bushel for my oats, though my neighbors sold for much less.—HENRY SCHEETZ, Jennings, Kas.

I am an ardent reader of UP-TO-DATE FARMING. I have been benefited by reading it and following its advice. If more farmers, or all farmers, would read this paper they would be greatly benefited. I appeal to my brother farmers to support this paper and follow its teachings. It is working for your interests, and the only one trying to lead you to permanent prosperity. UP-TO-DATE FARMING is the peer of all papers. It is the first and only one that has dared to come out boldly and demand a profitable price for all farm products and has taught us how to get it.—R. C. SAUNDERS, Cifax, Va.

read several copies of UP-TO-DATE FARMING. I am enthused with the grand idea involved in your proposition, and your manner of treating it. Your speech in Minnesota, to my mind, is an incontrovertible argument as to the possibilities that lie around our farming millions. Be encouraged and prosper in your good work.—H. S. PERROW, Perrowville, Va.

The last issue of UP-TO-DATE FARMING is a clincher on the Board of Trade people. Fire it into them. It is like spraying with vitrol to kill San Jose scale. It hits the spot exactly. UP-TO-DATE FARMING is the best paper printed, not excepting any, and the farmers are fast getting onto it. Let the good work go on, is my prayer.—A. A. BELL, West York, Ill.

I believe UP-TO-DATE FARMING is the best paper ever read on the labor question. I would freely lose a crop and live on scant rations if thereby I could organize this State into a solid union for the marketing of farm produce.—G. M. BUCKANAN, Hempstead County, Ark.

Surely the millenium has come. At least wonderful things are happening that never happened before. Just think of it. Twelve months ago the farmers here were asking the local millers to take their wheat at 68 to 70 cents. To day they are taking it at 90 cents from the machine, and are anxious to get it. Wonders will never cease. Our president of Hodgenville local union asked this man, "What is the matter with you fellows? Last year we had to beg you to take our wheat at 70 cents." His reply was honest and emphatic: "The Society of Equity man is in the saddle this year." Our union has upward of 80 members.—T. H. MILLER, Hodgenville, Ky.

## I Want You To Think Seriously

Where is there a farmer who will refuse to come into this movement where each helps the others and where a million farmers will hold up the hands and back up the demands of each individual farmer for profitable prices?

Where is there a farmer with so little concern for the future of his sons and daughters who will refuse to help all he can to put farming on a certain basis for profit always in the future?

You know that under the old plan you would get ahead some years only to slip back other years. You know that only a few years ago mortgages were plastered all over the farms of this country. There is positively no guarantee that this will not be repeated in the future if you let other people make your prices. No set of non-producers can be trusted to make prices for you. They are sure to make them just as low as they can and not actually crowd you out of business. Without the power within yourselves to regulate, make and maintain prices there is absolutely no certainty of continuous prosperity for farmers and you know it. But the American Society of Equity supplies a plan that has been tried and found sufficient. All that remains is to complete the organization which means every farmer in the country. Every farmer is not needed to accomplish all the society aims at, but as the society is built for benefits every farmer needs to come in to get his share of the benefits.

The American Society of Equity and Up-to-Date Farming have done more for the farmers of America than all other influences combined. They have taught how to compel good prices and all that is necessary to perpetuate the successful plan is for the farmers to rally to the support of their society and their journal. There is no alternative, as the A. S. of E. is the only society ever offered to farmers that has a practical plan and Up-to-Date Farming is the only paper that has taught the plan or even claimed that farmers had a right to, or could price their own stuff.

Those farmers who followed the advice of the Society have not had cause for regret. The National Union has never made a mistake in the recommending of minimum prices and members have got them. All that is lacking to establish the minimum prices as soon as announced is more members, so the control of large crops may be sufficient the first part of the season.

price when marketing, yet they will not be compelled to hold for it, also they may hold for more if in their judgment prices will go higher.

The members will be directed and advised by the official paper which will reach each member twice a month at present and four times a month later.

This official paper is Up-to-Date Farming. It will give all members the same advice about prices, crops, markets, etc., at the same time, so unity of action may be had.

Each member becomes a crop reporter. This feature alone is worth all it will cost to build the machine of co-operation. The false crop reports that are now circulated are against the farmers and to the advantage of the speculators.

Members will be organized in local unions where ten or more are in a community. But any farmer can belong to the National Union without joining a local union. A farmer no matter where located can cooperate with farmers in all other parts of the country in marketing and maintaining prices on principal crops if he belongs to the National union only. The membership fee is \$1.00, which includes a year's subscription to the official paper.

Each member of the A. S. of E. will also receive a manual containing full instructions, records, constitution and by-laws, etc., so he or she may realize the full benefits of the society.

### THE A. S. OF E. KNOWS

The A. S. of E. knows that if marketing is controlled prices can be made and maintained.

That the people who produce the stuff should control it until the demand is ready to use it, instead of dumping the bulk of a crop on the market as soon as raised. By the old plan a large temporary surplus was created, called "visible supply" which was used as a club by speculators to beat the price of the balance down all the year.

That if farmers can, (and they do) to a large extent control their marketing and regulate prices when organized to a very limited extent, they will be an irresistible force, when organized on this plan, even to a moderate extent.

That if farmers under the old order of things did have any influence on the market, notwithstanding the false crop reports, uncertainties and opposition of speculators and gamblers in farm pro-

ducts; they will simply be irresistible when they have reliable information about crops, prices and markets and a known price to all of them.

That farmers, like other people, will do those things that are to their interest to do. Therefore they will do the reasonable things recommended to get profitable prices for their crops. The reasonable thing in this movement is to CONTROL MARKETING.

That the markets will take an enormous amount of supplies every day and that a little more control will be sufficient.

That only a small portion of the farmers need to make an effort to maintain prices by holding back that portion of their crops which otherwise, if marketed, would produce the temporary surplus that causes daily fluctuations on the old plan.

That the consumption will be as large at a fair price as at an unfairly low price.

That when a large number of farmers each have the same price before them, and the same impulse to market when the buyers will pay their price and stop as soon as they won't take more; enough will hold because they can and want to so prices will be maintained, and none will know that any particular effort was made.

That the incentive of profit is the greatest argument and few can resist it.

That each additional person who holds under the new system will make a better market for the farmers who cannot hold.

That one of the greatest troubles with farmers under the old system has been to hold too long. Without a definite price in view they did not know when to sell, and it is a fact that the freest deliveries came on a falling market. Millers and shippers have been known to put the price down to frighten farmers into selling. These conditions will be impossible with a fair price known over the length and breadth of our land, and benefits will come to all farmers, fair middlemen, millers, merchants, etc.

Finally, we submit to our friends and critics, the claims for the American Society of Equity and all of our predictions as made two years ago; as well as the record of our work in the two years, and ask if the condition of agriculture in America today does not abundantly and absolutely verify every claim and reflect every prediction. Needs this society any other recommendation to gain your hearty support and co-operation?

Are these things worth striving for? The American farmer can accomplish them, and they will never come except through them.

For the information of new readers we will give in brief the objects and plan of the A. S. of E. as follows:

### THE OBJECTS.

1. To obtain profitable prices for all products of the farm, garden and orchard.

This is the first and great object.

2. To build and maintain, or cause to be built and maintained, elevators, warehouses and cold storage houses in principal market cities or in all localities where necessary, so that farm produce may be held for advantageous prices instead of passing into the hands of middlemen and trusts.

3. To secure equitable rates of transportation.

4. To secure legislation in the interest of agriculture.

5. To open up new markets and enlarge old ones.

6. To secure new seeds, grain, fruit, vegetables, etc., from foreign countries, with the view of improving present crops and giving a greater diversity.

7. To report crops in this and foreign countries, so that farmers may operate intelligently in planting and marketing.

8. To provide institutions of learning, so that farmers and their sons and daughters may be educated in scientific and intensive farming and for the general advancement of agriculture.

9. To improve our highways.

10. To irrigate our land.

11. To prevent adulteration of food and marketing of same.

12. To promote social intercourse.

13. To settle disputes without recourse to law.

14. To borrow and loan money and do a banking business.

15. To do an insurance business, both life and fire.

16. To establish similar societies in foreign countries.

All these objects can be realized after the first one is completely accomplished.

### THE PLAN.

The plan of the A. S. of E. is very simple as follows:

Farmers all over the country will be enrolled. They will represent every crop that is grown on the farm, in the garden or orchard.

Values and a minimum (lowest) price will be decided by the board of directors of the National union. This price will be communicated at once to members everywhere. Every crop will be affected. Members will be expected to ask this

You Are INTERESTED In The  
SUCCESS of  
The AMERICAN SOCIETY  
of EQUITY

BECAUSE it is the only society for farmers that has a practical plan, and inducements strong enough to hold members. The inducements are financial profits.

BECAUSE farmers must co-operate to raise their business to a level with others. They never can do it individually, and no other class will do it for them.

BECAUSE you are now working for other people at wages set by them. (you get your wages through the price of your crops.) The A. S. of E. will allow you to make your own prices and wages.

BECAUSE this is the only plan that will ever enable you to set your own price and get it.

BECAUSE you are absolutely not required to do anything that is not agreeable, profitable and to your interest to do.

BECAUSE it is not necessary to go to any meetings or lodge if you have not the time or inclination.

BECAUSE you can be a member and co-operate with other members no matter where you live, if reached by the U. S. mail.

BECAUSE it is not a secret society.

BECAUSE it antagonizes no people, class or legitimate business.

BECAUSE it benefits every legitimate business and every person, no difference what his or her business or condition.

BECAUSE it never fails to benefit every member from a few dollars to hundreds of dollars every year.

BECAUSE it has made hundreds of millions of dollars for farmers already in increased and maintained prices and in advice to farmers when to market.

BECAUSE it is non-political, and because it has the strongest safeguards to keep it out of politics.

BECAUSE there is no capital stock to buy and no intricate machinery.

BECAUSE every member gets advice from headquarters, and all get the same advice at the same time.

BECAUSE this one society is for all farmers, and one society for all crops.

BECAUSE its crop estimates are the most reliable and it has never made a mistake in its recommendation of prices.

BECAUSE it will insure you a profitable price on every crop whether large or small.

BECAUSE through its workings you will increase your crops and enlarge your markets, as well as increase your price and profits.

BECAUSE it will insure a steady flow of crops to market over the whole year, instead of a flood at one time and a dearth at another.

BECAUSE it will kill speculation in farm products.

BECAUSE it will double the value of your farm and decrease the drudgery of farming.

BECAUSE it will solve all the difficult farm problems that have bothered farmers for years, and which are getting more serious every year.

BECAUSE it will be the greatest and strongest society or union on earth, and you will be proud to belong to it.

BECAUSE every member will receive the most helpful farm paper printed, and the only one in the world that teaches how to get profitable prices for farm crops.

BECAUSE every person who joins brings the time nearer when perfect results will be realized. Numbers make strength. A large number of farmers in the A. S. of E., and reading one paper that gives them the truth about crops, markets and prices will be irresistible.

BECAUSE it has already done agriculture more good through education than all other farmers' societies combined.

BECAUSE it has taught farmers CONTROLLED MARKETING, which has made for them hundreds of millions of dollars.

If these reasons are not enough there are others. But will you ask for more? Will you still hesitate?

# Some of the Benefits That will be Realized

The American Society of Equity in successful operation will increase the farmers' income and always guarantee him a profit on every crop he grows.

On account of increased earning power of the farms, every acre of ground will increase in value from 25 to 100 per cent.

Farmers will come to the front and stay there as they should. There is the most useful industry as everybody admits, therefore why should they not be the most important people? Who will answer? They will be. It is their natural, Divine right, as owners and possessors of all the property bequeathed to humanity by the God of creation.

Agriculture will be elevated until it is on a level with, and above, any other industry.

Farming will be a profession more sought than any other. Doctors, lawyers, merchants, bankers and others will want to quit their professions and become farmers.

With profitable prices assured, farmers will begin to make improvements that they could not safely undertake under the old uncertain system and in a comparatively short time the whole country will change.

Farmers will have much more money and will spend it for needed improvements and even for luxuries. The demand for material, supplies, machines, etc., will put such demands on the factories of the country as they never experienced before. Thus the prosperity of the farmers will spread to every other class and industry. Uncertainty of prices of agricultural products is always a menace to the National prosperity. Certainty of profitable prices for farm crops will mean unprecedented and uninterrupted National prosperity.

The farmers' families will then enjoy comforts and advantages that under the old plan was almost unknown. With the ability to put prices on their own products, their income will be certain and ample. They can have good furniture, pianos, books, education, etc., and entertain as well as the city people. And why not? Tell me if you can what is wrong with this program. Tell me why the people who produce the things that are the foundation of all industries, and that are the foundation of nearly all fortunes, should not enjoy the fruits of production as much as other classes do the fruits of manipulation?

With uncertainty of values removed, trading will be stimulated because the fear of decline will not be present. Buyers will buy more liberally and consumers will take with less hesitation. There will be a constant stream flowing through the legitimate channels of trade to the consumers, causing greater consumption and benefitting every individual and class. Consumers also may be benefitted by lower prices, because, the mountains of profits between producers and consumers can be regulated to a fair margin only.

All farmers' problems will be solved. With steady prices and certain profits, farmers can pay the market price for labor made by organized laborers. They can pay the price for machines set by organized manufacturers. They can pay the taxes imposed by organized politicians and meet every other demand because they have the ability to shove their own prices up on goods they first possess and which the other people cannot possibly do with it.

The boy-on-the-farm problem will be solved, because then there will not be another business that will yield better returns than farming. The farm boy will not only want to remain on the farm, but other boys will want to go to the farm.

Good roads; irrigation in the old sections of the country; post currency; parcels post; postal telegraphy or a farmers' national telephone or telegraph system; and all the

other things that farmers want can quickly be secured. While an hundred years may not secure them if farmers do not organize on the plan of the A. S. of E. /

Such are some of the benefits that the A. S. of E. promises, and some of them are already secured. The only questions for the American farmer to decide is: Do I want them? Will I take them? You can refuse them and perpetuate the old system that guarantees uncertainty and which is responsible for more misery than any other curse that afflicts this country. Or you can end the bad, vicious system and establish the new one that means fairness, equity, happiness and prosperity to everybody; in perfect working order in a few months. Will you do it?

## THE KEY TO SUCCESS

We leave it with every reader if what we say is not true. If there is any other key to unlock the treasures that every farmer and his family desires we challenge you to produce it. Call up all your friends to aid you and see if the plan covered by the A. S. of E. does not fill the requirements entirely. See if it is not the only one ever devised. If there is any other road to prosperity on the farm than the one pointed out by Up-to-Date Farming we challenge you to show it. There is not. Therefore, every farmer in America owes it to himself, to his family, to his brother farmers, to the future agriculture in America, to his country and to his God to embrace the opportunity now offered to end the uncertainty of values; to kill gambling in farm products; to elevate agriculture where it belongs and to insure continuous prosperity to the Nation.

## THE AMERICAN SOCIETY OF EQUITY

appeals to farmers from many vantage points as we have already shown. But in no sense does it appeal stronger than from a financial point of view. The time is past when farmers will be content with hard work and a mere living in return from the farm. This kind of independence has lost its attractions, also the fear of a return to low prices and all the resultant evils including mortgages is so strong that farmers will embrace any plan that will insure against it. The A. S. of E. plan does insure against these things and does guarantee financial benefits. There are no stronger inducements than profits. Therefore we appeal to you to join this movement on account of the financial benefits that are sure to come. While it is not intended to make all farmers rich, yet it is intended to give all farmers opportunities for profit equal to those enjoyed by any other class of citizens; investments, skill and effort put forth being considered. If you know of no other reason why you should join the A. S. of E. come because you will make more money by belonging. It matters not how much you farm nor how little, nor what you raise. The A. S. of E. is for every section of the country; for every crop; and for every individual engaged in any kind of agricultural pursuits.

# The War Cry—"A Million, A Million United"

It should be understood without saying it, that this movement deserves the hearty support and co-operation of every farmer and friend of farmers in the country. We are going to assume that they will give it. There are various ways that they can help and each one can help in one way or more. We append a blank for convenience in filling out, and we will expect this blank returned by every person who receives this paper. Each in this way will contribute their mite to Establish the greatest and best society on earth, that we believe will go on distributing benefits forever.

Cut Out. Write full address plainly, and mail.

<b>Coupon No. 1</b> I am a subscriber to Up-to-Date Farming, but not a member of the A. S. of E. Therefore I enclose 50 cents to make me a full co-operating member. Please send Member's Manual, Certificate, Records, Badge, etc. to address below.	<b>Coupon No. 4</b> I want to help this movement for fair and profitable prices all I can. Therefore if you will send to me necessary blanks and instructions I will try to organize a local union in our school district. (To any person who will undertake this we will send full instructions so any person can succeed together with a supply of circulars and notices of meeting that may be sent to the various families by the school teacher through the scholars. You should mention how many families are to be supplied. Anybody can organize a local union anywhere with our help. There is no good reason why you should not. Therefore mark this coupon.) J. A. EVERITT, President

## CONTROLLED MARKETING

### The Whole Country Is Already Inoculated with the Idea

When UP-TO-DATE FARMING two years ago proclaimed the doctrine that farmers could hold their products and control the prices, we were ridiculed from "Dan to Beersheba," but in these

short two years the farming world has accepted the idea and it has become the slogan everywhere. The millions who are benefited by this doctrine may "forget the singer," but they will never again "forget the song." Hence-

forth the farmer will price his products.

To show that the doctrine is accepted, and for the benefit of our patrons in the South, we publish the following address issued a few days ago:

To Southern Cotton Producers: Prompt and definite action on the part of producers and holders of spot cotton all over the cotton belt is absolutely essential at this time to break the present powerful "Bear" combinations that are so perfectly organ-

ized to depress prices. The open season has permitted the farmers to gather and gin fully 80 per cent of the crop by Nov. 1, and enough cotton has been rushed upon the markets to largely meet all demands of the speculators. While it is true more of the staple has been held back this year than ever before, the daily receipts at interior markets and ports are still too heavy to force an advance in prices equivalent to the true value of the staple. The producers are to be congratulated for the firm stand they have already taken to market the crop slowly, and that fact alone has prevented the price from falling to eight cents during the month of October. The crop is about gathered, debts generally are paid and it is no longer absolutely necessary to sell the balance of the crop. The Ginn's report recently issued from the U. S. Census Bureau indicated that up to October 18, only 6400,000 bales of cotton had been ginned. This report clearly indicates that this crop will not exceed 11,000,000 bales, if it reaches that figure. The spinners can well afford to pay the producers 12 cents per pound for every bale of American short staple cotton made this season and do a profitable business. for the stockholders. The price of yarns has advanced 3 cents per pound within the past 60 days and an unprecedented demand for cotton goods exists while stocks generally are lower than they have been for the past twenty years. The duty of the producers is plain and simple. They have crowded the markets for the past two months, congesting every facility for handling cotton and playing into the hands of the Bear speculators and spinners. The thing to do now is to give the markets and shippers a rest during the next 60 days and allow present stocks of spot cotton to be gotten out of the way. Let the spinners who are living from hand to mouth run short of cotton and force them into the markets as active buyers. Let the Bear speculators begin to feel the lash of the Bull operators when the latter call for the deliveries of spot cotton which the former will be unable to deliver.

Let every holder of cotton absolutely stop selling and sit down at home and quietly contemplate results. Let each holder determine to put no more cotton on the market until prices advance and never sell a bale on a depressed market.

Port receipts are already falling off due to the resistance offered by the producers and if united concert of action is secured all along the line the fight will be whipped and Southern farmers will demonstrate their ability to become important and dominant factors in fixing the price at which their staple shall be sold.

Let county meetings be held all over the belt and strong and active steps be taken to defend this most valuable agricultural product from the rapacity of the selfish speculator. Let every man who still holds a bale of cotton in his possession join in these county, or local meetings, and agitate the importance of this step among his neighbors to the end that success in the near future will be assured. We have held our own well so far but we can do much better and easily advance the price from two to three cents by persistently refusing to sell and lightening up present receipts. We fixed our minimum at ten cents for this season and maintained the price within half a cent of that figure through October, the heaviest month. Now let the price be fixed at 12 cents for the remainder of the crop and the world will accept it at that price which will mean an additional gain of nearly fifty million dollars.

I will be pleased to have reports of all county meetings and from individual farmers throughout the belt endorsing the above position taken and guaranteeing their active co-operation. State Vice Presidents of the Association are urged to push this matter actively in their respective States. Farmers' Unions and Agricultural Clubs generally are earnestly requested to give their valued aid and co-operation to the movement and the Daily and Weekly Press of the South is respectfully requested to use the power and influence of their columns to disseminate this circular letter and give such other aid as they may feel disposed.

A determined stand will bring victory.

Very respectfully,

HARVIE JORDAN,  
Pres. Southern Cotton Growers' Protective Association.

All sorts of tales are being circulated among the cotton growers in an effort to break the intention to hold cotton. Don't be scared. You can get the minimum price if you hold for it. Don't sell until you get it.

Receipts of corn are put by a prominent market letter at 400,000 bushels less than last year, and shipments at 600,000 bushels less. Don't forget the minimum prices.

"36 YEARS A STANDARD PIANO"

# The Wing Piano

A Wing style—45 other styles to select from

## You need this book

If you intend to buy a piano, a book—not a catalogue—that gives you all the information possessed by experts. It makes the selection of a piano easy. If read carefully it will make you a judge of tone, action, workmanship and finish; will tell you how to know good from bad. It describes the materials used; gives pictures of all the different parts, and tells how they should be made and put together. It is the only book of its kind ever published. It contains 116 large pages, and is named "THE BOOK OF COMPLETE INFORMATION ABOUT PIANOS." We send it free to any one wishing to buy a piano. Write for it.

**SAVE FROM \$100 to \$200** We make the WING PIANO and sell it ourselves. It goes direct from our factory to your home. We do not employ any agents or salesmen. When you buy the WING PIANO you pay the actual cost of construction and our wholesale profit. This profit is small because we sell thousands of pianos yearly. Most retail stores sell no more than twelve to twenty pianos yearly, and must charge from \$100 to \$200 profit on each. They can't help it.

## This Piano

is a representative Wing style, being our concert grand, with longest strings, largest size sound-board and most powerful action, giving the greatest volume and power of tone. It has  $7\frac{1}{2}$  octaves, with overstrung scale, copper-wound bass strings; three strings in the middle and treble registers; "built-up" wrest plank, "dove-tailed" top and bottom frame, "built-up" end case construction; extra heavy metal plate; solid maple frame; Canadian spruce sound-board; noiseless pedal action; ivory and ebony keys, highly polished; hammers treated by our special tone regulating device, making them elastic and very durable; grand revolving fall-board; full quiet music desk.

Case made in Circassian walnut, figured mahogany, genuine quartered oak, and ebonized; ornamented with handsome carved top mouldings and handcarving on the music desk, trusses, pilasters and bottom frame.

In 35 Years 36,000 Pianos

We refer to over 36,000 satisfied purchasers in every part of the United States. WING PIANOS are guaranteed for 12 years against any defect in tone, action, workmanship or material.

## WING ORGANS

are just as carefully made as Wing Pianos. They have a sweet, powerful, lasting tone, easy action, very handsome appearance, need no tuning. WING ORGANS are sold direct from the factory, sent on trial; are sold on easy monthly payments.

For catalogue and prices write us

## SENT ON TRIAL

We Pay Freight. No Money in Advance

We will send any WING PIANO to any part of the United States on trial. We pay freight in advance and do not ask any advance payment or deposit. If the piano is not satisfactory *after twenty days' trial in your home, we take it back entirely at our expense.* You pay us nothing unless you keep the piano. There is absolutely no risk or expense to you.

**EASY MONTHLY PAYMENTS**

## Instrumental Attachments

A special feature of the Wing Piano; it imitates perfectly the tone of the mandolin, guitar, harp, zither and banjo. Music written for these instruments, with and without piano accompaniment, can be played just as perfectly by a single player on the piano as though rendered by an entire orchestra. The original instrumental attachments has been patented by us, and cannot be had in any other piano, although there are several imitations of it.

# WING & SON

## UP-TO-DATE Field Crops

PRODUCTION AND MARKETING

When the Northern breezes wander,  
O'er the fields becoming gray,  
And the glittering icy daggers  
Fright the pretty flowers away;  
Then we know that hoary Winter,  
With his spiteful, chilling breath,  
Is on his way to rudely greet us,  
As with the frozen hand of death.  
—J. P. S.

The fields are sleeping. Let them rest.

Ponder the mistakes of the last season.

Don't be discouraged by failures. Make teachers of them.

Did the early or late crops do the best, and what conclusion have you come to from the results?

Did you use fertilizers? How did you apply them, and to what crops? Balance the cost against what you believe to be the gains. Did it pay?

In what did the climatic conditions of the past season differ from those of average seasons? How have you profited by the advantages, and how have you overcome the disadvantages?

After all is summed up, what crop has paid you most per acre, labor and other expenses considered?

From the experiences of the past and previous seasons, what crops seem best adapted to your farm, and returns you the greatest profits at the least cost?

To keep the plows and other tools from getting rusty during the winter, oil them and put them under shelter. To keep from getting rusty yourself, read Up-to-date Farming.

Indiana crop reports show a smaller corn yield than that of 1903.

What publication has been most helpful to you, has done most to lighten your burdens, and to entertain and instruct both yourself and the family, during the now waning year, and what one do you intend to read during the year next to come?

We are not compiling a catechism, but December is a splendid time to ask yourself and personally answer all these questions. When the farmer's work is over, and he is driven to the house by inclement weather, a good portion of his time should be devoted to a review of the season just past, a gathering of the lessons it has presented, and a storing up of the truths gathered by the way. We have asked the foregoing questions merely as hints for such a course of study. Follow them up.

A dispatch from Minneapolis says the receipts of wheat at the trust elevators "have decreased to almost nothing. The people of the northwest are testing controlled marketing, and they have already found it as "just the thing."

"The millers of the country are pretty well stocked with wheat," says A. W. Thompson, a market bear, who wishes to pull down the price of wheat. "The milling demand strengthens wheat," says the display headline of the market report. Between these two what is the farmer to do? Simply stick to the minimum price, no matter what either "bulls" or "bears" may say.

The government reports the potato crop considerably larger than that of a year ago, and the hay crop a little smaller. The tobacco crop is above that of last year. Bear in mind, though, that, so far as price is concerned, no crop is larger than the quantity put upon the market. Control the marketing.

### Still After Alfalfa

The farmers of the central union are not yet willing to give up alfalfa. And, indeed, some notable successes have been made which would seem to justify continued effort to grow it.

But alfalfa cannot be grown without the bacteria peculiar to that plant in the soil, and it is not naturally in the soil of the States of the middle union. That it flourishes in these soils, however, once it is introduced, is thought now to be an established fact, and that alfalfa then flourishes also. That the bacteria may be artificially introduced is also proven. And this offers a fine opportunity for imposing upon farmers. Dr. George T. Moore, of the United States Department of Agriculture, has discovered a process of inoculation very simple, and said to be very effective. He had the process patented, not for his own aggrandizement, but to secure its use for the people, and prevent less scrupulous persons from securing a monopoly of it. This act shows Dr. Moore in a bright light as one of the world's rare benefactors.

### Agriculture and Bacteria

It is evident that during the years to come as much attention will be given to the bacteria in the soil as has heretofore been given to the chemical constituents of it. Plants cannot grow without something to subsist upon. This is just as much a fact in the vegetable kingdom as it is in the animal kingdom, with this difference, that the necessary food must be placed in easy reach of the plant, while the animal may travel in search of food.

Chemists have discovered that three kinds of food are necessary to make a "balanced ration" for most plants—potash, phosphorus and nitrogen. The two first are quite abundant in most soils, and they are cheaply and easily applied where deficient. But these, however abundant, will not produce best results in plant growth in the absence of the third, nitrogen. It is seldom that nitrogen is found abundantly in the soil, and it is more easily exhausted than the other elements, while its return in an artificial way is so expensive as to be impracticable.

But nature in this respect has been kind. The earth is wrapped in a thick blanket rich in nitrogen—the air we breathe—affording an inexhaustible supply. Men have long known this, but their ingenuity has been inadequate to the devising of a means for capturing and applying this aerial nitrogen. But nature again supplies strength to man's weakness. The means had been abundantly provided, but he did not know it. Millions, billions, trillions (numbers become completely exhausted in their presence), of minute organisms were all the time at work in the soil to catch from the air and hold in the soil, the fugitive nitrogen.

But these little organisms need encouragement. Here is where man's part of the work comes in. They flourish best, and do their work most perfectly at the roots of certain plants, legumes, pod bearers—peas, beans, clovers, alfalfa and a very large number of similar plants.

Man's work is very simple. Where these bacteria do not exist they must be introduced. Then they must be assisted by giving them the benefit of the plants best suited to aid them—to encourage their propagation, multiplication and most effective work. The bacteria are various almost as the plants are various. But after successful crops of these bacteria aiding plants, other crops, nitrogen exhausting crops, may be planted with assurance of success. This course pursued, and the simple elements of potash and phosphorus attended to, soil exhaustion need not be feared so long as the earth is surrounded by atmosphere as at present.

Immediately after the election, crude oil went up from two to four cents. Does this indicate that the people are required to make good some misapplied campaign money?

**FREE** **DEAR MADAM:** When we say Free we mean Free no "ifs," no "ands," no "buts," no "strings," about this—we will do just what we agree. Send your Name and Address, and give Freight Office. An opportunity like this comes once only. **DON'T MISS IT. DON'T DELAY. WRITE NOW.** Crockery House Dep Y 2334 Third Av. New York

Where is the woman whose heart does not go out to beautiful china-ware? A fine set of dishes ornaments the table, decorates the home, adorns the china cabinet and side-board. Here is a grand set of dishes full size for family use; any housewife would be proud to own one to use for all occasions.

GIVEN AWAY

Mention whether Ladies' or Gen's size is desired.

### A WATCH WITHOUT COST

FOR SELLING 20 FAST SELLING ARTICLES  
WATCH, Stem Winding and Set, beautifully finished in 14-k Gold; guarantee sent with every watch. American movement, dust-proof case. Runs 30 to 36 hours with one winding. Has hour, minute and second hands. Fully timed and regulated. Given for the sale of 20 Fast-selling articles. You probably know of people who have sold goods to earn a watch, which, when received, was not as promised; but they were forced to keep it. You don't have to keep our watch; if not satisfactory, return it and get \$2.00, all the money paid. We want you to sell our goods. To each one of our agents who sells twenty of our fast-selling articles at ten cents each, we are offering an **AMERICAN WATCH IN GOLD FINISHED CASE.** Each and every watch is guaranteed a perfect timekeeper, and is accompanied with our guarantee for 20 years. Think of it—a genuine American Style Movement Watch in Gold finished Case and Guaranteed for 20 years. Never was such an opportunity offered to any one wishing a first-class, reliable timepiece. These watches are brand new, without a

scratch or tarnish on them, but just as they leave the workmen's hands, oiled, adjusted, and timed ready for instant wear. The movement is an American style, expansion balance, quick train, and you can rely upon it that when you own one of these watches you will always have the correct time in your possession. Just the watch for railroad men or those who need a very close timer. The new 1905 Thin Model. This is the watch you can secure **WITHOUT ONE CENT OF EXPENSE** if you sell 20 of our fast-selling articles at 10 cents each. Simply send your name and address, and we will send you the 20 articles post-paid. When sold, send us the \$2.00, and we will send you the handsome Gold Finished Watch. We trust you and will take back what we pay you.

**A \$50.00 SOLID GOLD WATCH** for you, or we will pay you \$50.00 Spot Cash to buy a SOLID GOLD Watch from your own jeweler, if the watch we send to every person answering this advertisement is not found exactly what we claim. We intend by our liberality to rapidly introduce our goods. Now is your chance to get a fine watch without spending a cent and you will never regret having helped to introduce our goods. Here is an advertisement that is fair and square, and, as we said before, we will pay you \$50.00 in cash to buy a Solid Gold Watch from your own jeweler, if you find that that the watch we send you is not exactly what we claim. We propose to give away these watches simply to advertise our business. No catch-words not exactly what we mean. You require no capital while working for us. We will send you the watch as soon as you send us the money for the goods. Mention whether you want ladies' or gen's size. Our 10-cent Offer: Out this out, enclose 10 cents, and we will send you the Watch, by express, C. O. D., with the 20 fast-selling articles, subject to examination. You can examine it at your nearest express office and if found perfectly satisfactory, exactly as represented, and such as never offered or bought by anyone for less than double the price spot cash, you can then pay the express agent the balance, \$4.90 and express charges. **SAFE DEPOSIT WATCH CO., 19 Warren St., New York.**

ONLY \$1.98

articles in the housefurnishing line at Factory Wholesale Prices.

### SPECIAL XMAS OFFER

Either or both of these splendid articles would make a superb Christmas Gift for children from one to 12 years of age. The chair is 17 inches high, and 12 inches wide between the arms. 1905 Catalog now ready for mailing south. Garden, Field and Flower Seeds. J.A. EVERITT, Inc., Indianapolis.

## UP-TO-DATE Live Stock and Dairying

PRODUCTION AND MARKETING

The poet finds it rather dull,  
When cattle browse in pastures bare,  
No matter how he woo the muse,  
He finds no inspiration there.

—J. P. S.

There's no money in merely "keeping" stock through the winter.

The thoroughbreds and high grades ought to show their points now.

Often the profits are in the by-products. Let hogs run with the grain-fed cattle.

The cattle and hogs will pay for the pumpkins. Did you feed them to Jack Frost? Uncle Threadbare's way.

Some storms are coming. Will your stock be sheltered?

Well wintered sheep produce the best wool, and the strongest lambs.

Don't try to winter the sheep on timothy hay. It's an established failure.

A feed cutter will pay if you use it.

It is an easy matter to feed horses too much hay. It is a waste when they get it out of the manger and under their feet.

Cattle prices have been discouraging all this fall, but no matter, "stick to your bush." The farmer that is constantly jumping from one thing to another is the one that travels a rocky road.

The man that feeds hogs nothing but corn all their lives is very likely to put his money in the same bank where the man that depends upon grass alone puts his.

Small potatoes cooked make good pig and chicken feed. Some chopped corn or mill stuff mixed in and the potatoes mashed, make it an ideal feed.

Remember that a part of the feed consumed by stock is employed by the animal mechanism to keep up warmth, and the colder the animal's surroundings the more feed is required. Animal heat may be maintained more cheaply by comfortable housing.

At night is the time to give the work horse his main feed of hay. Hay is bulky, dry and slow to digest. Give him the whole night for the performance of this necessary part of alimentation. The morning and noon feed of hay should be light. With a crowded stomach the horse is not in the best condition for work.

Feed the milch cow nothing but good, wholesome feed. Musty hay, though the cattle may eat it, and the farmer may think he is making gains by using cheap feed, he is losing seriously in the quality of milk. In fact, he is getting milk that is not fit for human food.

Again we urge, don't keep a cow that does not pay for her feed and care. Loss from feeding an unprofitable cow should be considered the same as any other loss.

Don't value sour milk too lightly; it is really a useful article of food. Buttermilk especially is now thought to be a valuable health preserving food.

Mixed feeds are to be commended, perhaps, but not a mixture of corn and mud. If you feed your hogs by throwing the corn carelessly into a mud hole for the hogs to dive after, don't be surprised if you get your profits in mud.

Experts now concede that the reduction of the actual wheat crop made by the A. S. of E. of 50,000,000 bushels on account of low grade wheat, is correct. Another triumph for the A. S. of E.

The cotton situation is unchanged. Heavy exports have already been made materially lightening the home supply. The minimum price is not too high. Recent reports tell us that at least 50 per cent. of the crop is being held in the farms.

The Cudahy Packing Company at Omaha, Neb., is filling an order for 3,000,000 pounds of beef to be shipped to the far East, presumably to the Japanese army. That will take 3,000 1,000-pound steers, counting hair, hide, hoofs and all, but, as mess beef is called for, it will take at least 6,000 such steers to fill the order.

The cotton planter that sells his cotton for less than 10 or 11 cents is like the foolish wheat grower that sold his wheat for 75 or 80 cents. Quit all such foolishness.

What about the beef trust investigation? Has Commissioner Garfield made any discoveries? Representative Martin declared the packers met to fix the price that should be paid the stock raisers, and also fixed the price that should be charged the meat eaters. Let us hear about the investigation.

## Butter as a Health Food

It is evident that the dairy is not to suffer on account of sanitary scientific research. Science Siftings declares that butter fat is as valuable as the dearer cod liver oil for weakly, thin people, and that doctors have frequently recommended the eating of many thin slices of bread thickly spread with butter as a means of pleasantly taking into the bodily tissues one of the purest forms of fat it is possible to get. Butter is a hydro-carbon, and all excess of it is stored up as fat in the body. It gives energy and power to work to those who eat heartily of it. So it is not economy at table to spare the butter, even to the healthy folk. For any one afflicted with consumption butter cookery, if plenty of fat can be digested, is one of the best ways of curing the disease, should it be in its early stages, or of keeping it at bay if advanced.

## How Many Cows

There are not so many cows to the square mile as people who have not looked into the matter closely, may think.

New York, Connecticut, Vermont and Iowa are great dairying States, and they have more than 25 cows to the square mile, but they are the only States that have.

Massachusetts, Rhode Island, New Jersey, Pennsylvania and Ohio have less than 25, but more than 20.

New Hampshire, Delaware, Maryland, Indiana, Illinois and Wisconsin, have less than 20 but more than 12.

Virginia, Kentucky, Tennessee, Michigan, Missouri, Minnesota and Kansas have from 8 to 12.

Maine, North and South Carolina, Georgia, Alabama, Mississippi, Louisiana, Arkansas, Oklahoma and Nebraska have less than 8 cows to the square mile, and all other States and Territories have 5 or less. Florida has fewer cows than any other State east of the Mississippi.

So, it is seen, the United States is not overstocked with cows, and the country could easily support many more than it now has, and, possibly, to the great benefit of the people.

## MONEY IN RAISING SUGAR BEETS!

Farmers in this section are netting on Beets from \$30 to \$70 an Acre. Twenty thousand acres to be cultivated this and every season. Magnificent climate. Perfect system of irrigation. No failure of crops. Another immense Beet Sugar Factory in course of construction. Send us a postal card, and we will send you full particulars. Address,

AMERICAN BEET SUGAR COMPANY, Box A, Rocky Ford, Colo.

## Fistula and Poll Evil

Do yourself what horse doctors charge big prices for trying to do. Cure Fistula or Poll Evil in 15 to 30 days. Fleming's **Fistula and Poll Evil Cure** is a guaranteed cure in any case—money back if it fails. No cutting—no scar. Leaves the horse sound and smooth. Free Book tells all about it—a good book for any horse owner to have. Write for it. FLEMING BROS., Chemists, 307 Union Stock Yards, Chicago, Ill.

## ONYX HILL HERD of Large English Berkshire Hogs and Jersey Cattle

Improve your stock by buying prize winning pigs out of prize winning sows, sired by prize winning boars or a young sow bred to a prize winner. Write for what you want or come and see our stock. Satisfaction guaranteed. Prices right. Hammack & Sons, R. R. 4, Pluckneyville, Ill.

**FREE TRIAL** of the BEERY BIT FOUR BITS IN ONE Cures Kickers, Runaways, Pullers, Shyers, etc. Send for Bit on Ten Days' Trial and circular showing the four distinct ways of using it. Prof. J. M. Beery, Pleasant Hill, Ohio. A Lady can hold him.

## Poland China Boars

AUGUST POST, Moulton, Iowa

No More Blind Horses For Specific Ophthalmia, sore eyes, Berry Co., Iowa City, Ia., have sure cure.

**Farmers' Sons Wanted** with knowledge of farm edge of farm advancement, steady employment, must be honest and reliable. Branch offices of the association are being established in each state. Apply at once, giving full particulars. The Veterinary Science Association, Dept. 12, London, Canada.

## GEO. G. WINANS

State organizer for Michigan, of the American Society of Equity, has opened at Lakeland, Michigan, a bureau for registry of farms that are for sale in his own and adjoining states. So many inquiries have reached him from prospective purchasers, that the establishment of this bureau became a necessity and must result in good to sellers and buyers through cooperation. Address, GEO. G. WINANS, Lakeland, Mich.

**RENTERS** If you will send us your name and address, telling how much land you are renting and how long you have been a renter; we will give you **Absolutely Free** a year's subscription to a fine story paper. The premium is a nice one, well worth asking for and a postal card with this information will bring it to you. Address, **Farmers' Tribune Pub. Co.** Desk D Sioux City, Iowa

## ALL ABOUT THE NEW SOUTH

The Bedford Breeze, a monthly magazine published at Bedford City, Va., by a former Iowa farmer, tells the exact truth about the Agricultural conditions in the South and gives special attention to the making of new homes by Western and Northern Farmers. It is one of the most sprightly and readable magazines devoted to the up-building of farms in the South. 25c per Year—Send for a sample copy free. The Bedford Breeze, BEDFORD CITY, Va.

**VIRGINIA FARMS** \$5 per acre and up with improvements Address, Farm Dept., N. & W. Ky, Roanoke, Va.

We also send at once free a package of perfumes. Enclose stamp for postage. Address ORIENTAL CO., N. Y. City, 27 Third Ave., Dept. 72

## UP-TO-DATE Poultry and Bees PRODUCTION AND MARKETING

Eggs or no eggs! That's the question. As the price begins to soar, And you wander 'mong the hens' nests—

Finding eggs and wanting more.  
—J. P. S.

Eggs getting scarce. Demand good.

That was the headline of the market report several days ago.

Do you suppose the hens are "holding for the price?"

If they are they'll get it. Already above 20 cents in this market.

How do you like the farmers Christmas turkey on first page?

Controlled marketing put in the "filling."

We have only this advice to those who want winter eggs: Surround the hens with conditions as near like springtime as possible, both as to temperature and feed.

The Thanksgiving turkey has "paid the penalty." Now for the Christmas goose. Get her fat.

Lay your plans for next year's poultry business. Our Up-to-Date People are not satisfied to merely drift in anything.

Don't forget that the winter layers need dry, trashy places to scratch and wallow in no matter how inclement the weather may be outside. Wheat, rye, oats or shelled corn scattered in the trash every few days stimulates the fowls to exercise, and makes them think they get paid for their work. And they do. So do you.

We are in no hurry to give you remedies for roup. "Sufficient unto the day is the evil thereof." The best remedy of all is prevention. Shut off the leaks and shut out the drafts from the henhouse. But you must have some ventilation. Close under the eaves on the south side is the safest place for ventilation.

I want to say another word for the guinea hen. That is a fowl which is not sufficiently appreciated. The guinea is very hardy, easily raised, requires no attention scarcely when growing up, and none at all after it is grown. It is a very watchful fowl, seldom bothered by hawks, and if there is anything strange about the place, dog, cat, or even person, the male guinea is sure to make it known. The hen has not a very long laying season, but while she does lay she is an everlasting hustler, and few fowls lay more eggs. When she gets broody she is easily broken up, and soon has another nest which she tries her best to fill, and generally succeeds.

What do you think of the farmer that pays \$100 for an improved male, and objects to his wife paying \$1 for an improved rooster? Answer this question early next spring.

If the winter laying hens could be kept separate from the hens from which we expect eggs for hatching in the spring, it would be a good thing. Their ration should be quite different. The ones for spring laying I would allow to become slightly lean—that is, I would not have them fat. I would increase their feed in February, and have them in a thoroughly thriving condition early in March, when I would expect an abundance of eggs that would hatch vigorous and thrifty chicks.

### ORCHARD

The sere and yellow leaf has come, The orchard trees are bare; Their luscious freight has gone to town, To bless the people there.  
—J. P. S.

Renovate the old orchards.

It will pay to mulch the orchard trees.

See to it that the strawberry beds go into winter quarters in good shape.

I suppose you have kept all blighted twigs cut from the pear and apple trees. If you have not done it as fast as they appeared, do it now.

Examine all sickly looking twigs for scale insects. You can easily detect them with the naked eye—small scales attached to the limbs—though you may not be able to distinguish the kind. No matter. Give them a dose of the lime and sulphur mixture.

There should be a clearing in most orchards between now and spring. Clear out the sprouts, brush, briars, weeds, and rabbit and insect harbors; and take a great deal of brush out of the tops of the trees. They'll stand the storms of winter better, and they'll most likely give you more and better fruit next year.

Don't think of cutting down the orchard trees because they are getting old, that is, if they have sound trunks. Put young heads on old shoulders, so to speak. Trim out all the moss-grown and sickly branches now, and in the spring take out others and graft in them. A few years ago the writer gathered and ate bell flower apples from trees that had been set in New Jersey by his grandfather more than a hundred years before.

We have many inquiries about the apple market, but we can give no very satisfactory replies, for that trade is well under the control of the manipulators. The orchardists are not well enough organized to exercise much influence on the market. It is true there are many and various so-called fruit associations, but not one of them makes any effort to control the market. In this respect the A. S. of E. stands alone, and its energies have so far been directed more to the larger crops.

### Black Ben and Gano

If there was still a lingering notion among fruit men that the Black Ben Davis and Gano, are the same, it was certainly dispelled in the minds of those who visited the various fruit displays made by Stark Brothers, of Louisiana, Missouri, at the World's Fair at St. Louis, especially in the Iowa exhibit, where the two fruits were sharply contrasted. The fact is, the Black Ben Davis, as propagated by the Stark Bros., is a distinct fruit, with a distinct history, different both in fruit and growth of tree, and is superior in many respects to the Gano.

## MAGNUS, New Tomato

The originator of the Magnus is the greatest tomato expert of the world and his claims are entitled to every consideration. We know all who have not grown the Magnus Tomato will be pleased with it if they plant it this season. His claims are as follows: "This very distinct and most promising new variety, of the color of Beauty and Acme, is the latest addition by Livingston to the Tomato family. It is thicker, heavier and more solid than either Acme or Beauty, making it easily the most handsome sort in cultivation. It is unsurpassed in quality and in the production of fine, large fruits. While perfectly adapted to main crop planting, yet it matures so quickly that it will take first rank for early market. The form is perfect, uniform, large and attractive. Flesh is very firm. It is a robust grower, with short joints, setting its fruit clusters closer together than most varieties, and is therefore a heavy cropper. The fruits are very deep from stem to blossom end, many of them being almost globe-shaped. It ripens evenly, does not crack about the stem and the flavor is most desirable. We have tested it for several years for staking up in the open field, as well as for forcing in greenhouses, and we believe it to be entirely unequalled for such purposes."

Pkt. 10c, oz. 25c, 1/2 lb. 75c, lb. \$2.00.

**VALE SEED CO., 150 N. Delaware St., Indianapolis, Ind.**

### Fence Reasoning

When you buy such an important thing as a fence you should reason out which one is the best.

## UP-TO-DATE

# Home on the Farm

### HOW TO KEEP IT BRIGHT, HAPPY AND CHEERFUL

Have you ever thought, dear,  
How a sulky frown,  
Like a chilly rain cloud,  
Bends the spirit down?  
Smile, and as the sunlight  
Drives away the rain,  
Gone will be your grievance  
And its bitter pain.

—A. E. Beck.

Light in the home, and sunshine in the heart.

"Love thy neighbor as thyself."

What has become of the sports of childhood? The eyes of the old see them but dimly.

In many a home a mother's chair is vacant. Was she appreciated while she occupied it? We ask the question not for the benefit of the mother that's gone, but for the one that still remains.

Now is the time to draw the link closer between the separate homes on the farm. Smooth and inviting paths should connect them. In other words, farmers should mingle together and be sociable.

We know quite a prominent man who lived in a neighborhood more than twenty years, and there were dwellings in sight of his own home that he had never entered. He loved his neighbors, was of a kind and sociable turn, not a bit stuck up, and was public spirited, but a strange diffidence and fear of bothering people had warped his whole nature. Too bad. Be sociable. Life is too short to waste it alone.

Tidy up the premises for winter, and live in an atmosphere of sunshine, no matter how dreary it may be without.

Winter on the old-time farm was the season of sport and good cheer. The roasting potatoes under the long fore-stick, the sputtering apples on the stone hearth, the merry Christmas time and the happy New Year! Ah, they are only in memory now. But the young people of to-day have their jolly, laughing times that they will look back to with the same longing a few years hence. Take advantage of the fleeting hours, and all do the best you can.

Boys and girls, if mother does the cooking and housekeeping, don't think of starting to school until everything belonging to you is in its proper place, and the wood and water for the day are ready and handy. This is good advice. Don't neglect it.

## A Company Dinner

A thoughtful writer who sees things has this to say about a company dinner. Brain, muscle, temper and good friendship may be preserved by taking the suggestions given:

So many women, especially those in the country, overdo a company dinner. They seem to think that in order to serve a nice meal, the table must be loaded with a great variety of things. This is a mistaken idea, for often a table groaning with its contents will take one's appetite so that the meal is not enjoyed.

Much time could be saved and the company enjoyed much more, if the work of preparing the meals could be reduced. I visited in the country not long ago where I had Irish potatoes served in three different ways, beside sweet potatoes and other vegetables, all at the same meal. How foolish it was of the good housewife, and imagine the work in preparing all of these unnecessary dishes.

The preparing of a meal is an art and should be carefully considered. Don't think that to have your company enjoy the meal, you must have two kinds of meat, four or five vegetables, two kinds of salad, three or four kinds of jelly and jams, and the same variety of pickles and finish with pudding, pie and cake for dessert. It is all unnecessary.

The farmer's wife for ages, because of her abundant supplies and very generous hospitality, has spent too much time and energy in cooking for her friends. After preparing a great big meal for two or three hours she is exhausted and unfitted to enjoy the company of her friends, beside marring their pleasure with her tired, exhausted appearance.

Visitors are always made uncomfortable when they feel that they are causing extra trouble. Try having a simple meal the next time and greet your friends after its preparation, without that look of exhaustion which comes from hours over a hot stove, and see if the day is not looked on by all as a pleasant one.

## Some Simple Rules of Politeness

We have heretofore emphasized the importance of politeness in every home and in every individual. All ambitious young people love to appear well both at home and abroad, especially abroad. Let us urge upon you once more the importance of appearing natural—unostentatious. We append a few simple rules that may well be observed:

Keep step with any you walk with. Hat lifted in saying "goodby" or "how do you do?"

Hat lifted when offering a seat in a car, or in acknowledging a favor.

Always precede a lady upstairs, and ask her whether you may precede her in passing through a crowd or public place.

Let ladies pass through a door first, standing aside for them.

Let a lady pass first always, unless she asks you to precede her.

Look people straight in the face when speaking or being spoken to.

In the parlor, stand till every lady in the room is seated, also older people.

Rise if a lady comes in after you are seated, and stand till she takes a seat.

Hat off the moment you enter a street door, and when you step into a private hall or office.

Never play with knife, fork or spoon. Use your handkerchief unobtrusively always.

In the dining-room take your seat after ladies and elders.

Rise when ladies leave the room, and stand till they are out.

Eat as fast or as slowly as others, and finish the course when they do.

In passing out of a room, let the ladies pass first.

Do not look toward a bedroom door when passing. Always knock at any private room door.

Special rules for the mouth are that all noise in eating and smacking of the lips should be avoided.

Advices from the Northwest say farmers are holding their wheat back now. They were late in getting the word, and later still in acting upon it, but when we understand that threshing is not yet done, we may realize that those far away farmers may yet benefit by the minimum price.

## Christmas Cards, Etc.

There are no more beautiful Christmas cards made than those manufactured by Raphael Tuck & Sons, of New York City. Each year they make numerous new designs that are most beautiful works of art. This firm also makes calendars that are exquisite in design. The products of this company cannot be described. They must be seen to be appreciated.

If you desire appropriate gifts for friends or relatives there is nothing better. All best dealers sell them. If your dealer does not send to Raphael Tuck & Sons, N. Y. City, mentioning Up-to-Date Farming.

## DO THIS NOW

And I Will Give You a Pair of my Handsome Gold Spectacles

Just send me five names of spectacle wearers and I will do this:—First, I will mail you my Perfect Home Eye Tester, free. Then (after you have sent me your test), I will mail you a

perfect-fitting five dollar family set of Spectacles for only \$1, which will include a pair of my handsome Rolled

Gold Spectacles, absolutely free of charge. This set will last a family a lifetime. I have never sold this family set for less than \$5 and you could not buy spectacles anywhere near as good as these, even for \$10 a pair. I am really charging you nothing for them now, as the dollar I will ask you to send with your test is only to help pay for this announcement. This very remarkable but honest offer (to send a five dollar set of spectacles for only \$1) is open to everyone (my old customers also), but only for a short time, as I am just doing this to prove to every spectacle wearer in the world the following two very important facts: First, that my Perfect Home Eye Tester is positively accurate and reliable and with it you will be able to give your own eyes a perfect test in your own home and thereby I fit you with absolutely perfect fitting spectacles by mail, which could not be improved on even if you had undergone a personal examination in any oculist's office, at a cost of \$10 or more. Second, and most important of all, that on account of my latest improvements, my spectacles have become known the world over as the "Dr. Haux Famous Perfect Vision Reading and Sewing Spectacles" and they are now greatly superior to all others on the market. With them you will be able to thread the finest needle and read the smallest print, day and night, with perfect ease and comfort, just as you did in your younger days, and this, even if your eyes are so very weak now that you cannot read the largest print in this paper. In fact the large number of physicians who have for years and years used and recommended my spectacles to their weak-eyed patients will tell you that they are the most perfect fitting, clearest and best in the world today, and I will give you your dollar back and let you keep the five dollar set of spectacles also, if you yourself don't find them to be the finest, clearest and best you have ever bought anywhere at any price. I can only send one set to a family at this price, and this only for a short time, so write me right now for my free Perfect Home Eye Tester, and address my company as follows:—

DR. HAUX SPECTACLE CO.,  
Haux Building, ST. LOUIS, MO.

**I WANT AGENTS ALSO** And any man or woman (also storekeepers), without any previous experience whatever, can fit the weakest eyes with my Perfect Home Eye Tester, which is so simple that any one can work it and easily earn from \$25 to \$100 weekly selling my famous spectacles, either in their own homes, travelling or in stores. My agents need no license anywhere as I furnish the necessary documents with the Agent's Outfit.

**NOTE:**—The above is the largest mail spectacle house in the United States and perfectly reliable.

**A GENUINE 21 JEWELLED \$50.00 GOLD WATCH.** \$3.75

Send this to us and write if you want Ladies Watch and "Gold" Jorgnetto chain or Gentle Watch and vest chain, and we will send them for FREE EXAMINATION and if after examining the watch at your express office you consider it equal to a 21 Jewelled \$50.00 Gold Watch pay \$3.75 and express charges and they are yours. **RELIABLE WATCH CO., Dept. 112 Chicago**

## A NEW SANITARIUM TREATMENT FOR VARICOCELE

My "Direct Method" of Sanitarium treatment for Varicocele, Associated Pelvic and Reflex Nervous diseases, assures a permanent and speedy cure. It is free from danger to the most delicate. My life-long study has been the cause and cure of nervous diseases in men. I have solved the problem. My discovery of toxins, (poisons), in stagnant circulation explains why Nervo-Vital diseases were not cured by the old-time drugging and cutting methods. My treatment takes the poisons out of the system and restores new nerve power.

**Kidney, Liver and Bladder diseases** are cured by removing the poisons that result from stagnant circulation. Heart as well as Stomach troubles are caused by these poisons. Do not permit these toxins

**D. D. Richardson, M. D., 123 Michigan Avenue, Special Carrier 206 Chicago.**

## Lynchburg Convention

(Concluded from Page 7.)

Prices offered this week in Lynchburg were slightly in advance of last week, bright wrappers receiving a bid of 30c, dark wrappers 20c, fillers, bright 12 1-2c, dark 11c, shipping tobacco 7c. The farmers are holding for 8c on shipping tobacco, 15c on fillers, 30c on dark wrappers, and 40c on bright wrappers. John Doe of Podunk County, Ky., declares that his neighborhood is solid for these prices and that as the prices keep coming up victory seems certain.

K. O. OPERATOR,  
Correspondent.

Now, friends, you want good prices. Bestir yourself, take advantage of these helps and opportunities and you will secure them. They're worth going after and going hard. If any of you wish to know how to operate these helps in keeping the price and the purposes of our organization constantly before the people of your county, until every substantial farmer becomes a member and receives the official paper and bulletins, write me at once, addressing me at Bedford City, Va., enclosing stamp, and I will aid you in getting local newspaper publicity. I will send you a copy of the Bedford Democrat, which is now doing this for Bedford County, and you can see for yourself how it can be done. It isn't going to take much time or money. You can easily do it, and there is no good reason under the sun why you should not.

Write to Mr. Everitt for twenty copies of this issue. Give one to every farmer in your neighborhood who doesn't read it. Spread the glad tidings throughout your county that the farmers have decided to manage their own business matters in a businesslike way, and that no more tobacco is to be sold at a loss to the planter.

Think on these things,  
Yours enthusiastically, but earnestly,  
C. HAYES TAYLOR.

Bedford City, Va.

As a part of the proceedings of the convention, the following was reported:

At this juncture a committee of Lynchburg Warehousemen consisting of Messrs. G. H. Nowlin, R. G. Robertson and George L. Fleming entered the hall and upon motion the chair appointed Messrs. R. J. Marshall, W. D. Rice and Otho Hull to confer with them. A conference lasting some time took place in an adjoining room after which both committees returned and Mr. R. G. Robertson, then read the following:

"Resolved, That we, the Warehousemen, agree not to force the sale of a patron's tobacco to pay advancements on a crop, and will do all we can to advance the interests of the farmers."

It has been reported that some of the Northwest mills are to shut down. Such reports are made solely for the purpose of frightening farmers into taking lower prices for their wheat. Like reports are being circulated regarding the cotton mills for the same effect upon the cotton growers. Farmers must not be too easily scared.

Mr. J. A. Patton, a big Chicago operator on "Trade," recently predicted that wheat would reach \$2. Since then he has made a trip through the West and Northwest, and declares the trip has only confirmed his belief in \$2 wheat. We are sorry for farmers who lose money by refusing to seek information, or by failing to act upon it when they have it; but we do not know that they are much to be pitied.

to remain in your system if you value your life. If you are sincere enough in your desire to be cured to write me your age, occupation, and complete history of your case with every symptom that gives you annoyance I will mail you in securely sealed, plain package my revised books which fully explain my successful treatment of Special Diseases. My professional opinion will enable you to decide whether you want me to treat you.

The expense is small compared to the value of health. I have patients in all parts of the world. See or write me before your case becomes more seriously complicated.

Richardson Sanitarium, where thousands have been cured.

## YOU CAN RAISE ALFALFA

with the  
"Vest Pocket Fertilizer"

—and—

### NEVER HAVE AN UNPRODUCTIVE FIELD

It has been demonstrated that alfalfa, the great hay and forage crop of the West, can be grown almost anywhere, but the soil must be infested with alfalfa bacteria. These bacteria are absent from the soil of the great middle agricultural region of the United States, but Dr. George T. Moore, of the United States Department of Agriculture, has discovered a process by which the soil may easily be inoculated with the bacteria, and the inoculation has resulted in the most luxuriant growths of alfalfa, where it would not grow at all before.

Dr. Moore has had the process patented, but we have his consent to offer the inoculation as a premium to subscribers to UP-TO-DATE FARMING. It is very simple and easily applied, and enough to inoculate an acre may be carried in the vest pocket, hence the name some one has applied to it, "Vest Pocket Fertilizer."

Get a neighbor to join with you and send us \$1 (50 cents each) for a year's subscription to UP-TO-DATE FARMING for each of you, and we will send each of you by mail postpaid and absolutely free, with full instructions for using and applying the same, enough of the culture to inoculate one acre each. The subscriptions may be for either new subscribers or renewals, but we prefer that at least one of them should be new.

Now is the time to get the free benefit of the most wonderful discovery ever made in the interest of agriculture, for when farmers can raise such crops as alfalfa and other self-fertilizers, they need never have an unproductive field. Send at once while we have permission to supply you. Address UP-TO-DATE FARMING, Indianapolis, Ind.

## Southern Press and Cotton Growers

It must be conceded that the press of the South is more devoted to the interests of the cotton growers than is the press of the North, especially of the Northwest, to the interests of the wheat growers; and Southern papers are doing much more to aid and encourage the cotton growers to secure reasonable prices for cotton, than the Northern papers did to secure reasonable prices for wheat. We scarcely receive a Southern paper now that has not a word of warning to their patrons of the forces at work against them and urging them to hold their crops for just and equitable prices. A writer in Farm and Ranch speaks thus emphatically:

"It now becomes necessary for the cotton growers to make the fight of their lives for a fair price for their cotton. If they weaken now the cause may be lost, as there never has been more powerful influences brought to bear to put down the price of cotton than is being used now. In my town f. o. b. buyers are now paying from 10 to 10 1-4 cents per pound for all cotton that is offered for sale and middling cotton is quoted at 9 15-16 in New Orleans. This shows at a glance how badly they need the cotton. Very few farmers are offering any cotton for sale even at these prices as they know that they will get a better price for it if they stand firm and demand it."

And this from the Manufacturers' Record:

"The Manufacturers' Record has also learned from other sources that the speculators have just formed a very powerful combination to force prices down, and as every bale of this year's crop will be needed and can go into consumption at a fair, not an extravagant price to the farmer, with profit to the spinners if the spinners will work as hard to advance cotton goods as many of them have worked to depress the price of cotton, it is important that the cotton planter should get the real value of his crop."

In the face of such positive declarations, the duty of the cotton planters is plain. They should hold their cotton for the equitable price, and secure the profits they have so long surrendered to others.

## I Cure Women

OF FEMALE DISEASE AND PILES

I Will Cure You So That You Should Stay Cured—Women No Longer Need Submit to Embarrassing Examinations and Big Doctor Bills.

To Show Good Faith and to Prove to You That I Can Cure You I Will Send Free a Package of My Remedy to Every Sufferer.

I hold the secret of a discovery which has seldom failed to cure women of piles or female weakness. Falling of the womb, painful menstrual periods, leucorrhoea, granulation, ulceration, etc., are very readily cured by my treatment.

I now offer this priceless secret to the women of America, believing that it will effect a cure in almost any case, no matter how long you have suffered or how many doctors have failed.

I do not ask any sufferer to take my unsupported word for this, so will send you some of the medicine free. If you will send me your name and address I will mail you a trial package absolutely free, which will show you that you can be cured. Do not suffer another day, but just sit down and write me for it right now.

Mrs. Cora R. Miller, Box No. 137 Kokomo, Ind.

## HOW IS YOUR STOMACH?

I CAN CURE YOU

I am a druggist of more than 20 years' experience. If I were offered \$1,000 I could not prepare a better prescription for a stomach remedy than my stomach tablets. I offer to send to all afflicted one month's treatment on trial. You pay when satisfied. My stomach tablets cure dyspepsia, indigestion, gas on the stomach, heart-burn, palpitation of the heart and ill caused by poor digestion. They assist the stomach to digest food. They create new life and energy by strengthening the stomach. Write for month's treatment. It will be sent by return mail. **JOHN MORROW, Chemist**  
138 Forest Bldg. Springfield, Ohio

## FALLING HAIR AND BALDNESS ABSOLUTELY CURED

There is but one way to tell the reason of baldness and falling hair, and that is by a microscopic examination of the hair itself. The particular disease with which your scalp is afflicted must be known before it can be intelligently treated. The use of dandruff cures and hair tonics, without knowing the specific cause of your disease, is like taking medicine without knowing what you are trying to cure. Send three fallen hairs from your combings, to Prof. J. H. Austin, the celebrated Bacteriologist, who will send you absolutely free a diagnosis of your case, a booklet on care of the hair and scalp, and a sample box of the remedy which he will prepare specially for you. Enclose 2c postage and write to-day.

PROF. J. H. AUSTIN, 158 McVicker's Bldg., Chicago, Ill.

## Brooks' Sure Cure

FOR RUPTURE  
Brooks' Appliance. New discovery. Wonderful. No obnoxious springs or pads. Automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No lymph. No lies. Durable, cheap. Pat. Sept. 10, '01. **SENT ON TRIAL. CATALOGUE FREE.**  
BROOKS APPLIANCE CO., Box 908, MARSHALL, MICH.

## FITS CURED

every one suffering with Fits, Epilepsy or Falling Sickness, to send for one of my large sized 16 FREE oz. bottles. My Remedy Has Cured, When All Others Failed.

DR. F. E. GRANT, Dept. 16, Kansas City, Mo.

## CANCER

30 years experience enables us to scientifically treat and effectually cure cancer and tumors without the knife. 73 page book sent free. Address **DRS. GRATIGNY & BUSH, 7 Odd Fellows Temple, 7th & Elm Sts. Cincinnati, O.**

## PILES

Sufferers read "Temple of Life" 24 pages about death, danger of operation. How to avoid by home cure. Book free. Write full particulars. Hermit Remedy Co., 102 Bell Bldg. Elkhart, Ind.

## FITS CURED

Permanently Cured. No fits or nervousness after first day's use of Dr. Kline's Great Nerve Restorer. Send for free \$2 trial bottle and treatise. Dr. R. H. Kline, Ltd. 931 Arch St. Philadelphia, Pa.

## Fits Cured

CASES OF 20 YEARS Best and cheapest remedy known. Trial package FREE. Dr. S. Perkey, Douglas Park Sta., Chicago.

## Plant O. K. SEEDS

Flower, Vegetable and Field Seeds. J. A. Everitt, Seedsman, Inc. Indianapolis

## GOOD NEWS FOR ASTHMA SUFFERERS.

We are glad to announce that the Kola Plant, recently discovered on the Congo River, West Africa, has proved itself a sure cure for Asthma, as claimed at the time. We have received the testimony of ministers of the gospel, doctors, business men and farmers, all speaking of the marvelous curative power of this new discovery.

Mrs. L. D. York, of Henderson, Me., writes, thanks be to my God and the Kola Compound I am now completely cured of Asthma after many years of suffering. Hon. L. C. Clute, of Manchester, Iowa, writes, was permanently cured of Asthma after eighteen years severe suffering, and want other sufferers to know that the Kola Compound did it. Mr. E. B. Hume, 1345 Arch St., Philadelphia, Pa., a widely-known traveler, writes, was cured after physicians and everything else failed, and I tried all so-called remedies known. Mrs. Sadie Montgomery, Lapel, Ind., writes, I could not lie down or walk fast for several years, but the Kola Compound cured me, although every other remedy failed.

To prove to you beyond doubt its wonderful curative power, the Kola Importing Co., No. 1164 Broadway, New York, will send a large case of the Kola Compound free by mail to every reader of UP-TO-DATE FARMING who suffers from any form of Asthma. This is very fair, and we advise sufferers to send for a case. It costs you nothing, and you should surely try it.

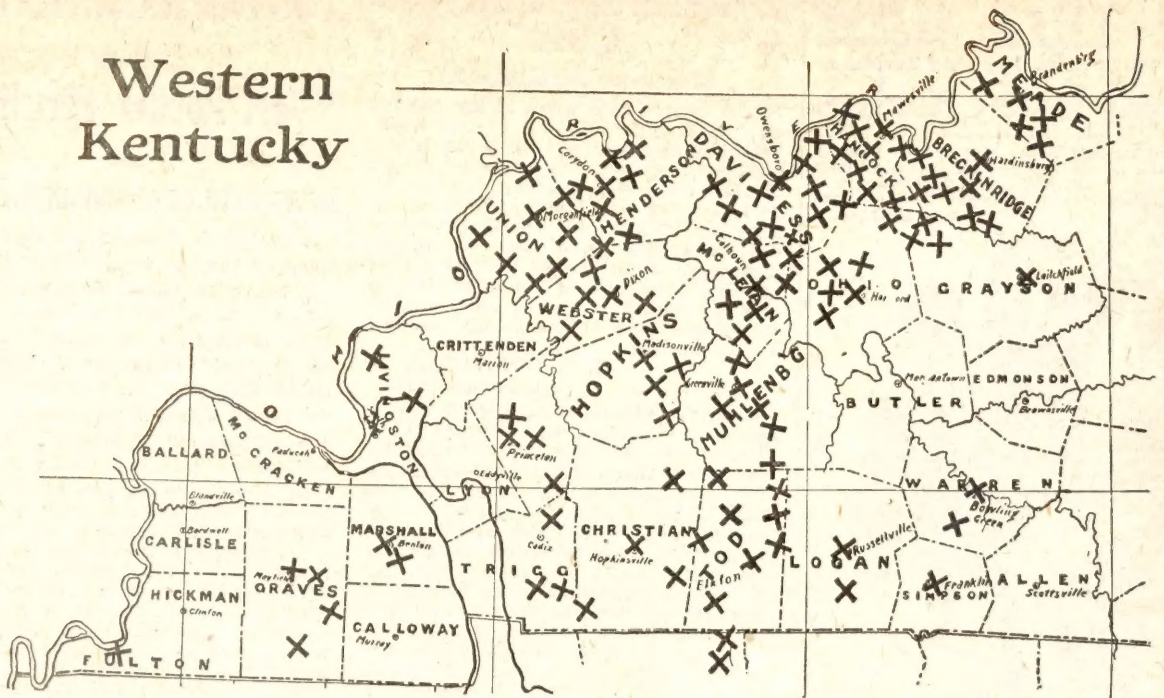

Holiday Novelties Send stamp for catalog. Globe Trading Co., Lebanon, Pa.

A plant worth its weight in silver—Ginseng. Farmers everywhere are making money raising it.

Price, Circulars and Full Particulars Free on Request. One-third acre produced \$15,000 worth.

J. A. Everitt, Seedsman, Inc., Indianapolis

## FREE SEED DISTRIBUTION REPORTS

## What Our Subscribers Say About the Premium Potatoes

Note.—The permanent name of this potato will be announced in UP-TO-DATE soon. More reports are solicited.

From one-half pound of UP-TO-DATE NO. 1 potato I raised 45 pounds. I am very well pleased with the amount.—Mary J. McClurkin, Oakdale, Ill.

UP-TO-DATE NO. 1 potatoes are fine. The largest one weighed one pound.—Walter Whitehead, Syracuse, Neb.

The one-half pound of UP-TO-DATE potatoes produced 30 pounds, many of them weighing one-half pound apiece.—J. G. Chambers, Lexington, Ind.

From the one-half pound of UP-TO-DATE NO. 1 potatoes I raised 24 pounds. Only one small one. I want to tell you they are just the finest I ever saw, large and solid.—J. N. Mills, Rice Lake, Wis.

From the two small UP-TO-DATE NO. 1 potatoes I raised 99 of the finest potatoes I ever saw. They weighed 48 pounds (about one-half pound average); only a few small ones. I would not take the price of the paper and seeds for these potatoes. If any one can beat me let us hear from them.—G. K. Arney, Gamewell, N. C.

All the people of my club are pleased with the seeds. I raised one-half bushel of potatoes from one-half pound. Mr. Josiah McGinnis raised five of the largest pumpkins I ever saw from one hill. They weighed 347 pounds.—D. E. Garret, Coal, Mo.

I planted the sample of UP-TO-DATE potato (weight three ounces in five hills, and dug 17 pounds. I consider the yield excellent. I gave them no fertilizer whatever.—W. H. Cross, Gravenhurst, Muskoka.

The one-half pound of UP-TO-DATE NO. 1 potatoes were cut one eye to a piece, and the yield was 20 pounds. Several of them weighed three-quarters of a pound each. I am very well pleased with them.—John W. Price, Breen, La Platte Co., Colo.

I received three small premium UP-TO-DATE NO. 1 potatoes, made 15 hills, and raised one-half bushel of good marketable potatoes. How is that for up-to-date potatoes?—Geo. Smith, Gameson, Mo.

The one-half pound of UP-TO-DATE NO. 1 potatoes yielded 58 potatoes and weighed 20 pounds. They were all fine tubers.—Varney Vanderhoof, Plymouth, Wis.

I received three small premium UP-TO-DATE potatoes, and from them I raised 42 pounds. I think this is hard to beat, and this is certainly a fine potato.—Jerry Cadway, Merrill, N. Y.

From the one-half pound of UP-TO-DATE NO. 1 potatoes I raised a half bushel.—James Moos, Green Bay, Wis.

We planted the Up-to-Date No. 1 potatoes on May 10th and dug Sept. 14th. There were 97 tubers from the half pound and weighed 32 pounds. We think the yield immense.

RALPH A. LEE, Glades Mill, Pa.

I planted the one-half pound of potatoes and raised 53 pounds of as nice, large, smooth potatoes as I ever saw. I am delighted with them. The yard long corn is just fine.

MRS. J. W. FEAR, Indianaola, Ia.

My half pound of potatoes yielded 36 pounds. If the weather had been favorable they would have yielded twice that much.

LOUIS H. GROSSE, Fon du Lac, Wis.

I planted the half pound of premium potatoes in 19 hills of one eye each, and raised 36 pounds of nice potatoes. All seeds a success.

G. W. MILLOWER, Watkins, N. Y.

I made 11 hills from the half pound of premium potatoes and dug 30 pounds (one-half bushel). One potato weighed one and one-fourth pounds.

THOMAS SWIFT, Windler, Pa.

From the premium potatoes sent me last spring I raised 38 pounds. Not a bad yield.

J. F. PLUMMER, Churdan, Ia.

From one-half pound of Up-to-Date potatoes I raised 26 pounds, all large and nice.

E. B. DUNN, Mankon, Ia.

Up-to-Date potatoes No. 1 yielded 32 nice large potatoes, averaging in size like a large goose egg. Who can beat it. I think this is the best report yet. Other seeds did equally as well.

MRS. MARTHA J. WEAVER, Waldwin, Ohio.

I planted my one-half pound of Up-to-Date No. 1 potatoes in 53 hills and raised 31 pounds of as nice potatoes as I ever saw. This is not a large yield, but considering the season we had here I think it is very good.

CARL C. CURRENT, Mooreland, Ind.

**BIG RETURNS IN EGGS.** Even if it does cost you a little money, you are not squandering it, but making a wise investment. Use the Prussian Lice Powder to keep the fowls free from vermin, and feed

## PRUSSIAN POULTRY FOOD

and you will be surprised at the great return you will receive in the form of eggs, or whatever else you are raising poultry for; and the cost is very little per hen after all—not a tithe of the returns you get. It is meat and medicine to your fowls. Prices, 25c and 50c. Get it from your dealer, or write to us. Book on poultry and stock feeding free.

PRUSSIAN REMEDY CO., ST. PAUL, MINN.

# UP-TO-DATE WRITERS

## TOBACCO—COST AND PRICE.

### To Up-to-Date Farming:

Our county is a dark tobacco county; we can not produce the Burley either light or dark. The light Burley men of the upper counties are organizing independent societies. This may and will help them, but not us directly, though it may indirectly. Our dark tobacco sold last year for 2 cents, 3½ cents and 5 cents. It costs 4 to 5 cents to make it ready for the local market. I will see what I can do toward representation in the Lynchburg, Va., convention. Tobacco in this county (Taylor) is only half a crop, three-fourths of it late, one-fourth very good. D. G. MITCHELL. Campbellsville, Ky.

## THINK MORE OF IT THAN EVER.

### To Up-to-Date Farming:

We are getting along nicely, and think more of the A. S. of E. than ever. I have found out that we have to educate ourselves in this work. But I can say this, that never in the history of civilization was there a step taken fraught with such benefits to agriculture as the A. S. of E. We had a picnic here Sept. 14, and our State organizer, George G. Winans, was here to speak, and he thoroughly aroused the people and gave them new ideas of the benefits to agriculture through the American Society of Equity. Mr. Winans is a gentleman of high standing, and I do not think we could find a better man for his position. He is full of energy and ambition, and is a hard worker, and we wish that all his undertakings for this cause may be fully accomplished. I think it stands us all in hand to do our utmost in these lines, and may we ever be imbued with the spirit of equity, justice and fair dealing to one and all.

OLIVER B. SCOTT.

## FROM ONE FIT INTO FORTY.

### To Up-to-Date Farming:

I see in a recent issue that the A. S. of E. is getting lively in old Kentucky, and I say amen, and hurrah for the A. S. of E. It has brought us \$1 wheat here in August and September, a thing that was never known here before during those months. If we will only stand pat, we can bring \$8 tobacco once more here in old Muhlenberg. No longer ago than last week three of my neighbor farmers sold 30,000 pounds of 1903 tobacco to a Hopkinsville buyer at an average of \$4.80 per hundred. Six weeks ago they could not have sold it for more than \$3.50 per hundred.

And that is not all. That 30,000 pounds of tobacco must all be delivered in Hopkinsville by Oct. 5. Why this hurry when all the buyers in this section told us last winter that there was an over-production and they had any where from three to five years' stock on hand, and prices would not go higher? I repeat, why the hurry for this tobacco, and at an advance of \$1.30 on the hundred pounds?

The fact is, the A. S. of E. right here in Kentucky is scaring the buyers out of one fit into forty, for they plainly see that the farmers are going to have better prices. E. L. DAVENPORT.

Cisney, Ky.

## READS IT THROUGH AND THEN SOME.

### To Up-to-Date Farming:

Your paper is interesting company to anybody that can read at all. I read it through, and then I read it some more. I think you are doing a great work for the farmers, and we are anxious to have the A. S. of E. organized here.

FRANK CHAMBERLIN.

La Fayette, Tenn.

## EAGER TO GET COPIES.

### To Up-to-Date Farming:

I enclose list for sample copies. Up-to-Date Farming is warmly welcomed in this vicinity; never saw farmers so eager to get copies, nor as seriously seeking information. I addressed a good meeting at Jordan Springs Saturday. Much enthusiasm was manifested, secured 21 members, but did not complete the organization. Will report in a few days. They wanted until next Monday to work the community more closely; they want to report a large charter list.

When you explain the plans of the A. S. of E., they see it is the remedy for their trouble. It meets all conditions—practicable and economical. It appeals to the farmers' common sense, and, in my judgment, one had as well try to check a thunderstorm as the spread of this society.

I am reliably informed the Tobacco Trust has already decided to raise the price \$2 per hundred over last year's prices. There is not over 65 per cent of a crop of dark tobacco this year, if there is that much.

D. T. HAMILL, Guthrie, Ky.

## BEATS THEM ALL.

### To Up-to-Date Farming:

The A. S. of E. beats them all; it is the best move that has ever been made for the farmer. May God speed you in your good work, for I feel that it is in the right and for the right.

SOL. W. MILLER, Elk City, Okla.

## FROM A HIGH AUTHORITY.

### To Up-to-Date Farming:

I read with much pleasure, the work that is being done and accomplished; and want to congratulate you in the results so far obtained. You cannot put a thought in motion, that is a good one, without its accomplishing something. So, the thought that the farmers should have better prices for their products, sent out has developed and grown, and will continue to bring larger and better results in the future.

D. W. WILSON, Elgin Dairy Report. Elgin, Ill.

## EXPECTS FINANCIAL BENEFITS.

### To Up-to-Date Farming:

I have been greatly benefited, and I think a great deal of Up-to-Date Farming. I think it is rightly named. I have been benefited morally and intellectually. I cannot say it has been a financial benefit as yet, but I expect to get a benefit when I dispose of my crop this fall. I wish the farmers in the United States would take to the A. S. of E. and readily as they did in this locality; I tell you things would come our way. C. B. HOLT.

Maurice, Mich.

## RATHER READ ABOUT A. S. OF E. THAN EAT.

### To Up-to-Date Farming:

I do not understand the A. S. of E. very well, but I would rather read about it than eat a meal of vitals. Up-to-Date Farming is the only paper that stands by the farmer for equitable prices. It tells what those prices should be, and what we will get if we hold our crops until the right time. It is the only up-to-date farm paper in existence, and I have learned many useful things about the farm by reading it. A great many around here like the paper and promised to subscribe after harvest, but now they put it off till after corn husking. I doubt if they will then. Uncle Threadbare has a large family of relations out here.

The three potatoes you sent me last spring yielded 217 potatoes, averaging as large as a goose egg. We cooked four of the largest ones, and they made enough for two meals for a family of eight. I will save the rest for seed next spring. J. PAUL.

Cedar, Iowa.

## MUCH GREATER BENEFITS.

### To Up-to-Date Farming:

I feel that I have been greatly benefited both intellectually and financially by having your paper a constant visitor in my home, and I look forward with faith unshaken for much greater benefits in the future. I feel that it is up to us as farmers to carry into effect the plan you so ably advance in securing to ourselves profitable prices on all farm products. You make it so plain the wayfarer though a fool need not err therein. We alone as farmers have the material to work with, and it must devolve upon us to secure the results.

Cloverport, Ky. R. H. McGAVOCK.

## WORDS CAN'T EXPRESS THE BENEFITS.

### To Up-to-Date Farming:

The benefits I have derived from reading Up-to-Date Farming are so great that they can not be expressed in words. They have been not only moral, intellectual and financial, but social also.

DR. L. N. BARTHOLOMEW.

Alvord, Tex.

## IT IS SIMPLY GRAND.

### To Up-to-Date Farming:

I write to let you know that our local union and neighborhood have been greatly benefited by the A. S. of E. All that would sell their wheat at \$1 have sold. Would like to see them get a good price for their tobacco. There is a short crop, and I don't think there will be any trouble if the growers hold for the set price. Your paper is simply grand. I don't see how any farmer can do without it. Our local union joins me in sending our sincere thanks to Mr. Everett for the noble work he has done for the farmers, and for the saving of millions of dollars which would have gone into the hands of the speculators. O. W. PLAIN.

Sacramento, Ky.

Advices from Louisiana are to the effect that rice is going into the market much more slowly than usual, which shows that controlled marketing has struck the rice fields. The yield of rice is reported 25 per cent. below the average, but the prices offered are low. We advise the rice growers to stay out of the market until they get a fair price.

# POPULAR MUSIC

## SHEET MUSIC

### 3½c a Copy

Each number contains one piece of full size Sheet Music, unabridged, consisting of from four to ten pages, and is in every particular the same quality of sheet music as is usually sold in music stores at from 80 cents to 75 cents per copy. The composers' names are household words all over the continent. None but high-priced copyright pieces, or the most popular reprints. It is printed on regular sheet music paper, from new plates made from large, clear type—including colored titles—and is in every way first-class and worthy of your home. 8,000,000 copies already sold!

# You Are to Be the Judge!

## Magnesium

Sulphate of Magnesia, as found in Vita-Ore is the most important of the Magnesian salts, and well-known for its value as a medicine. The Sulphate of Magnesia of ordinary commerce, that prescribed by doctors, is obtained from seawater or magnesium limestone, and much of the merit of Vita-Ore and its superiority to the regularly prescribed salts, may be attributed to the fact that the salts of magnesia found in Vita-Ore are in a rare state, easy of assimilation and having a quality due to the origin and formation of Vita-Ore which no product manufactured by chemical action has been able to duplicate.

Magnesia is of special value in Kidney Disorders, in preventing the red gravel or lithic gravel deposits which cause so much trouble. It is an anti-acid and shows quick results when used for heart-burn or undue acidity of the stomach or kidneys. In febrile affections or fevers it exerts a particularly corrective action and is also a mild but efficient laxative.

In Vita-Ore, Magnesia is present as a component part, combined by the Master Chemist in a way that man's inventive and creative genius cannot duplicate or counterfeit, allied in such manner with its sister elements that each cooperates with the other in doing its respective work in the system, a fair division of labor, the total result of which represents the goal for which all who read this are seeking—a complete and perfect health.

## Sulphur

In the olden days, before it was natural and usual to run for a doctor at the first rumblings of sickness, our grandmothers gave us our daily dose of Sulphur, at that time the universal tonic and blood purifier. It was also their remedy for Typhoid Fever, they placing the greatest dependence upon it when this dreaded disease attacked any member of the household, although the doctors laughed and called it "old woman's nonsense." Vita-Ore has been advertised and recommended for fevers and kindred troubles, from the day it was first offered to the public, because of this very quality of sulphur contained in its composition, and now in verification of our claim, the European doctors are prescribing Sulphur for Typhoid Fevers, and the foreign medical journals are advocating its universal use.

Vita-Ore contains a large proportion of sulphur in a highly concentrated form, surpassing as a natural compound and of a quality which seems impossible to duplicate in any manufactured or artificial product. It is easily assimilated by and affiliated with the blood, bringing about a speedy and efficient action which the artificial, unpalatable compounds of sulphur, of which a tablespoonful is necessary as a dose, cannot encompass. The sulphur in Vita-Ore acts directly upon the liver and excretory organs and purifies and enriches the blood by driving out the waste and refuse matter, aiding much in bringing about the sum total of curative power possessed by this remedy.

## SHOWING COON SKINS

An old Arkansas hunter, who was in the habit of taking his dogs and gun out for a solitary coon hunt almost every evening, weather permitting, also took himself to the cross-roads store each following morning, and to the neighbors assembled there, related miraculous stories of the still more miraculous numbers of coons he had annihilated the night before. These honest friends, with true Southern good nature, passively submitted to these wild tales from day to day, until the number grew to such magnitude as to surpass all belief, and then, rising in their righteous indignation, as one body, gave vent to their feelings in the following:

### "LOOK HERE, NEIGHBOR,

This talk of killing coons is all well and good. There are coons in the woods, and powder and shot can kill them, but if you want us to believe that you are such a mighty hunter, you have just got to show us those coon skins."

And that is just what Vita-Ore does every time. We want to show coon skins, ask only an opportunity to produce them before you. We don't ask you to believe, don't ask you to swallow our claims as true, just want you to INVESTIGATE BY SENDING FOR A PACKAGE ON TRIAL. The coon skin we will show you will be THE IMPROVEMENT, THE BENEFIT, THE CURE in your own case, a coon skin that you will quickly recognize as proving our case and claims. If you do not, it won't cost you a penny. We take all of the risk. You are to be the judge.

For every claim of a cure made, we produce the "coon skins," the actual living, breathing, walking, talking witness in the person of the cured one.

Medicines have come and gone, have sprung up in the night like mushrooms, have made broad claims and told of remarkable hunts and the capture of remarkable numbers of "coons," but when the time came, they could not show the "coon skins," and passed out into the night, to be heard of no more.

Not so with Vita-Ore! It has stood the test of over a generation of time and peoples, and has fully proven and substantiated its right to the title of the "Best thing in, on or out of the earth for the afflicted."

If you are sick and ailing, if you need the help which it offers, no matter what the trouble, no matter how long you have been ill, no matter what you have been told, you should send for it and give it a chance to show "coon skins" to prove that it is the right thing for your trouble, as it has proven to be right for the troubles of so many thousands of others. You have no excuse. One month's treatment will convince you. It will not cost you a penny unless you are sure you are benefited. You are to be the judge. IT WILL NOT FAIL YOU! READ OUR SPECIAL OFFER.

## SENT ON THIRTY DAYS TRIAL

READ THIS SPECIAL OFFER:

WE WILL SEND to every worthy sick and ailing person who writes us, mentioning UP-TO-DATE FARMING, a full-sized \$1.00 package of VITAE-ORE by mail, POST-PAID, sufficient for one month's treatment, to be paid for within one month's time after receipt, if the receiver can truthfully say that its use has done him or her more good than all the drugs and doses of quacks or good doctors or patent medicines he or she has ever used. Read this over again carefully, and understand that we ask our pay only when it has done you good, and not before. We take all the risk, you have nothing to lose. If it does not benefit you, you pay us nothing. We give you thirty days' time to try the medicine, thirty days to see results before you need pay us a cent, and you need not pay us the one cent unless you do see the results. You are to be the judge! We know that when this month's treatment of VITAE-ORE has either cured you or put you on the road to a cure, you will be more than willing to pay. We know Vita-Ore and are willing to take the risk.

## FROM THE EARTH'S VEINS TO YOUR VEINS

WHAT VITAE-ORE IS: Vita-Ore is a natural, hard, adamantine, mined from the ground like gold and silver in the neighborhood of a once powerful, but now extinct mineral spring. It requires twenty years for oxidation by exposure to the air, when it slacks down like lime, and is then of medicinal value. It contains free iron, free sulphur, and free magnesia, three properties which are most essential for the retention of health in the human system, and one package—one ounce—of the ORE, when mixed with a quart of water, will equal in medicinal strength and curative value 800 gallons of the most powerful mineral water drank from the springs. It is a geological discovery, in which there is nothing added or taken from. It is the marvel of the century for curing such diseases as

Rheumatism,  
Bright's Disease,  
Blood Poisoning,  
Heart Trouble,  
Dropsy,  
Catarrh and Throat  
Affections,  
Liver, Kidney and

Bladder Ailments,  
Stomach and  
Female Disorders,  
La Grippe,  
Malarial Fever,  
Nervous Prostration  
and  
General Debility.

as thousands testify, and as no one, answering this, writing for a package will deny after using. VITAE-ORE has cured more chronic, obstinate, pronounced incurable cases, than any other known medicine, and will reach such cases with a more rapid and powerful curative action than any medicine, combination of medicines, or doctor's prescriptions which it is possible to procure.

Vita-Ore will do the same for you as it has for hundreds of readers of UP-TO-DATE FARMING, if you will give it a trial. Send for a \$1 package at our risk. You have nothing to lose but the stamp to answer this announcement. We want no one's money whom Vita-Ore cannot benefit. You are to be the judge! Can anything be more fair? What sensible person, no matter how prejudiced he or she may be, who desires a cure and is willing to pay for it would hesitate to try Vita-Ore on this liberal offer? One package is usually sufficient to cure ordinary cases; but two or three for chronic, obstinate cases. We mean just what we say in this announcement, and will do just as we agree. Write to-day for a package at our risk and expense, giving age and ailments, and mention UP-TO-DATE FARMING, so we may know that you are entitled to this liberal offer.

**YOU ARE TO BE THE JUDGE.**

## Cured of Rheumatism

By a two month's treatment

At the Age of 80

About two years ago I had an attack of Rheumatism in my shoulder, which caused me considerable pain in my neck, and my arms were badly swollen even to the ends of my fingers. The pain passed to my other shoulder and I suffered so terribly I could hardly turn over in my bed and could not put on my clothes without great difficulty. I was troubled in this way for some time, until I saw the Vita-Ore advertisement, "You Are to Be the Judge." It attracted my attention and I read it and read the testimonials of people who had used Vita-Ore, and I came to the conclusion that it exactly suited my case and decided to try a package. Before I had used the entire package I felt much improved, and as I wanted to make a perfect cure entirely sure I sent for and used another package. Vita-Ore cured me, for which I am very thankful. I will do all I can to make it known and advertise it. This photograph was taken on my eightieth anniversary.

O. F. BUELL,  
Menominee, Mich.

## Cured of Indigestion

Backache and Heart

Fluttering

I have received a great and lasting benefit from using Vita-Ore. Before I had taken it for a full month it had done me more good than anything else I had used during my long spell of sickness, and I had used other treatments for a long time. It has relieved me of Rheumatism, Chronic Indigestion, Backache and Heart Fluttering. Nothing I eat now disagrees with me and my weight has increased considerably. When I began using Vita-Ore I was much emaciated and weighed only about 110 or 115 pounds and I now weigh about 150. I feel as though I was a living advertisement of the power of this remedy. Many of my friends have used Vita-Ore and they all join me in praising it.

Mrs. LULA G. WALTERS,  
La Grange, N. C.

**Women** Are you afflicted with any of the innumerable diseases which are so common and prevalent among your sex? We cannot mention them in this small space, but let us assure you that Vita-Ore is the true "Balm of Gilead" to every sufferer and the many diseased conditions which unfit women for the full enjoyment of life and its duties, may be at once alleviated and permanently eradicated by the use of this wonderful remedy.

**YOU ARE TO BE THE JUDGE!**

**Men** Are you afflicted with any of the diseases peculiar to men? Have you in ignorance wronged and abused your body so that nerve power and vitality are wasting? Is Debility taking the vim of and fire of youth? Above everything else you need Vita-Ore. In these conditions it proves to be a powerful tonic, a reviver, a vitalizer, restorer, forcebuilder. It is not a temporary stimulant, but builds up from the bottom by putting each organ, tissue, muscle and ligament in a healthy condition.

**YOU ARE TO BE THE JUDGE!**

**NOT A PENNY UNLESS BENEFITTED**—This offer will challenge the attention and consideration, and afterward the gratitude of every living person who has better health or who suffers pain, ills and diseases which have defied the medical world and grown worse with age. We care not for your skepticism, but ask only your personal investigation, and at our expense, regardless of what ills you have, by sending to us for a package.
